(1:18:26) I was too excited man Avi is the man dude how crazy is that dude that's a straight up that is a YSI dude Avi lobe that's what we need can you I can't I couldn't believe when he told me I was like wait what I don't know the full context of it but honestly anything him just saying that warp drive is possible is more than enough more than enough people are gonna it's going to break the internet the people that support us in this when I get that clip tomorrow if you see that clip the moment you see

(1:18:54) that podcast drop ping me on that podcast we're clipping that thing uh we're posting it reshare it wait Kim defended masks yikes Kim guys find me some posts of kim.com defending masks you guys find me uh DM me or post in the Discord of kim.com defending masks wow that's embarrassing I hope he didn't get too many boosters oh I got I got to see it again is that true that's the problem though too is that like there's a certain number of people that like once they get told that a mask is going to protect them they're

(1:19:36) never going to stop wearing masks the rest of their lives I was watching people wearing them in their cars the other other day it's like damn man a lot of people just love that government [REDACTED] they really do yeah but dude the avobe thing wow that'll be that'll be wild and yeah so I don't know the full context of it but let's let's watch that big big things podcast tomorrow with Avy Lo we're gonna be watching that bad boy um that should be great yikes yeah masks LMFO Kim Shapiro okay guys uh let's see what else

(1:20:17) we got oh boy do I still currently have a job yes but I I don't know for how long I don't know for how long guys this is uh this stuff is starting to escalate and I'm not so well off that I can just live without a job and I'm certainly not making enough money to from this some people think that I don't know people really think I'm making like hundreds of thousands of dollars or something from this like I've made like a couple thousand dollars total over like the last like eight months I would be like

(1:20:52) poorer than minimum wage people working at McDonald's like they're not I'm not doing this for money in fact the podcasters that I go on have been making tens of thousands of

dollars if not if combined hundreds of thousands of dollars from this and I've never never once gotten paid for it um even YouTube doesn't pay that much Guys YouTube doesn't even pay that much in fact the most I made was when kim.

(1:21:16) com retweeted my evidence review I think I got like maybe a thousand or 2,000 total that month from from YouTube at the most and that's like pre-tax so yeah okay um let me take a look yeah I mean is kim.com fully vaxed we might have to ask him that I'm looking at Shad I'm looking at the replies and that last post is just cracking me up guys I'm dropping the mic out here chat I I said I told Kim man yeah where's Kim been for months why is he interested all of a sudden you know exactly dude where's the

(1:22:20) uh is there one where they're sitting standing around I guess I gotta take that image hold on chat there we go God it's from I don't like what put images from **Reddit** okay yeah or like oh so let's also talk about yeah X drama at the best yo this drama could get even worse dude um Kim does not want to come up against me man and he's got way more money than me he could probably try to ruin my life if he wants but it doesn't matter anything this guy were to do to me we'll backfire on him 100% um kim.com basically offered

(1:23:13) me a job to help litigate or investigate the case against him for mega upload and that was super suspicious why was he even doing that and then he ghosted me on that as well afterwards where I was like hey even though I mean if I showed the DMs like you guys will see if I show the DMS Kim it's not gonna look great my bro I I was even still nice to him said I'm still willing to help him out on his thing just completely ghosted me on that like why is he honeypotting me telling me that like he wants me to help out in his

(1:23:45) case and then doing all this stuff saying that the videos are **debunked** and pressuring me into all that and why is he coming back now like just leave it leave it be bro leave it be there's no there's no way this comes out making kim.com look good in fact like the how suspicious that already is considering he's somebody that is like anti-america like dude you're gonna get exposed big time bro you're gonna get exposed big time okay are we good on that guys do we have to do any more of that I did not I did not see the kim.com

(1:24:28) thing happening today that was did not see that one coming chat did not see that one coming um 72,000 views in an hour brutal brutal chat um and I and I'm working on doing a **debunk** video as well it's probably going to take one day or two days so that we don't have to deal with like these kim.

(1:25:01) com or anybody else is talking about the cloud picture in the Pyromania VFX I'm going to do a video on that I'm going to keep it under 10 minutes and I'm gonna post it on my YouTube so everybody can just link it to other people we can uh Community note people if we need to I guess with it even though I don't like to do community notes I've literally never done one ever um so there we go we need to find your sh CH your Sherry to your Chad yeah dude Chad and Sherry of the investigator Earth are like the cutest couple ever they're so hilarious no wonder

(1:25:29) their podcast is so endearing is that they're they're just awesome um I am gonna talk to them as well uh in a couple days I think uh they want to do like another another thing with me because the stuff's been kind of blowing up out there so should be spicy okay now are we ready to go into the science guys yeah so 5% of this stream 75% of every stream is talking [REDACTED] I don't know who the hell kim.

(1:26:00) com is but he sucks yeah sorry about that Stephen uh I did not anticipate this but we got this kim.com beef came out of nowhere right before the stream was going to begin the plan tonight was just to look at this scientific paper that I've got literally pulled up right here in the background and to go over it and then we were gonna make our little clip to the physics Community to hopefully get them on board with the science including s uh Sabine I don't there's no R it's not Sabrina Sabine if I'm

(1:26:27) butchering her name I'm really really sorry I'm bad with names uh Sabine hossenfelder who is a physicist theoretical physicist she's got like 98 papers to her name I went and I looked it up earlier uh the plan was to make an appeal to her and to the other physicists that are out there because we're looking at the answers that they need and if she wants to make a **debunk** video about my content or whatever that's fine too good luck I would say look at how well it's going for kim.

(1:26:56) com but if you want to go for it uh because whoever comes out and does support this uh science is probably going to win a Nobel Prize I mean I don't know that for a fact but the science will check out I'm I'm very certain certain about it and that doesn't just come from the videos comes from the people that I've literally interviewed who are actual Navy engineers and DOD contractors who work on this kind of science so maybe I'm being fed disinformation for some weird reason that doesn't really make any sense CU

(1:27:28) nobody's controlling me um or it's just real I'll leave that for you guys to choose once yeah Ashton Forbes is not suicidal and he has gotten zero [REDACTED] from this well I wouldn't say zero but definitely no uh scaros I didn't get my scarjo clone and I didn't get my um that mfer is not real clone either what's her name Tiffany uh gas yeah she's super hot I'll set her for my Tiffany gas clone as well and yeah who's that God there's so many comments you you are not being

(1:28:17) misled it's real the science is real the phenomenon is real I agree and guys just as a quick reminder like I don't really care about aliens or anything of that stuff but this science will vindicate everybody when it comes to aliens too that's the beauty of it is that for the Jeremy Corbell even though he's kind of a douchebag and uh Ross kohart who's you know CNN brain and all these other guys who want disclosure or what have you for they want their alien cheeks to clap or whatever um hell even James Fox

(1:28:47) man you know what I I don't even have anything against James Fox even though he came out and polarized the community against me in these videos right away I got nothing against you bro I can probably help your your movie get a lot better if you want because you really should have somebody who talks about the science but if we can warp an object literally

just teleport it from one location to the other using warp drive now aliens can come here from I don't know the andromeda Galaxy maybe Ambassador beu is here so this will give you guys

(1:29:14) all the disclosure that you guys want for the UFO community and all that stuff too it's pretty much becomes like a certainty because most people think there's life everywhere I think there's life everywhere so if you say that now we can move faster than the speed of light now the idea that there alien beings are here is pretty much a foregone conclusion the question just becomes are they here right now actively or did they come here like thousands of years ago also this helps out the ancient civilization people the people

(1:29:40) that say that like the aliens built the pyramids or whatever or that we had some advanced technology no matter what like there's definitely there's like crossover potential with all this stuff my thing is just going to be showing this science to be real and then I'll leave it for every everybody else to figure out all the other stuff okay okay let's see what else we got Kim do Kardashian cheeks clapping to create an earthquake he's huge dude he's like six foot eight kim.com would absolutely

(1:30:20) destroy me in a physical contest there's no question what's whatever and he's a smart guy as well like smart enough that I'm smart enough to be like somewhat wary of him and this is why I didn't come out hard against him earlier on because I think he's a smart dude and he's very rich as well so um I've been very careful but he came at me man so don't get mad bro you came at me I just had to slap you down a little bit Yeah the science is real try researching it guys warp drive is not

(1:30:50) only possible but it is currently being used some people believe like if you believe in the secret space force or whatever SSP uh some people believe we're already using this and we're like flying to the moon and maybe going to Mars and all this stuff oh also just a quick reminder um Elon Musk replied to the Hodge twins and just didn't mention anything about what I was doing or the videos just had some weird like Sid stepping where he says that aliens aren't real what what was that that was so weird

(1:31:24) guys now I like before I just thought like Elon Musk was like just didn't think the stuff could be real like I just thought maybe he was like CNN braining or something even though I've literally seen him on podcast talking about like moving faster in the speed of light things like that like now I'm thinking like he knows dude I'm thinking like Elon Musk might actually know and he's just being quiet I think that most people who are like billionaires that are out there they know about this like kind of Technology

(1:31:52) because they get connections and he he has contracts with the government the dod but it is very compartmentalized so even that he may not know but if Elon Musk is out there watching this um you might want to hire me because this science is real and you you know SpaceX could be like literally building um ships that can actually just fly to the literal moon or to Mars like we can actually probably do that and go there like almost instantaneously you want to be a space fairing civilization you need to dream about it we've already

(1:32:26) got it this is how it works we're going to look at the paper right now um and the weird part is like Elon Musk also didn't reply to my post he replied to the Hodgkins hodg twins post which is I'll tell you why that's weird because if he replies to my post or one of my videos with the one of my posts with the videos on them I'm gonna instantly gain like maybe even like 50,000 followers like a lot like it's going to shine a huge light I always suspected that Elon was avoiding commenting on my posts because

(1:33:03) he's got like 120 million followers and so even like a random reply on one of my posts would like blow up any of my content to like millions and millions of views but he also removed the community notes so like I'm really not sure where Elon musk's head's at on this one but if he doesn't believe read the paper here we go okay this might go a little bit slower than last time but I have already read it so let's take a look okay so this is the same paper guys and I was like Hey I want to read

(1:33:39) through the rest of it earlier today and see if I pick out anything else that's important so the Kazmir effect is very important because it presents this idea of negative energy being possible very important to understand and we can pretty much explain the Casmir effect as well with the ether uh we can explain that as well wait we got we got Kim dark Kardashian in here yo Kim where I don't see his reply where oh there he is release the full call he says Kim bro dude I dude I was trying to be nice to you man I'm

(1:34:15) really really trying to be nice but like just let this go just go do something else man um the the full call doesn't make you look any better better dude you were like sucking off Jonas about his video game like just read the room man like I don't know what you're trying to do with respect to this whole situation but it's not going well for you and you know like your whole situation is extremely suspicious you have no reason whatsoever to be trying to poo poo on these videos none at all aren't you

(1:34:48) against the US government if you're against the US government why do you not want them to issue a statement about these videos what do you think happened to MH370 Kim you think it was some pilot suicide where they crash in the ocean without leaving a debris field and the United States government somehow wasn't tracking even though we have a uh surveillance system that can space surveillance system that can track every moment of every uh everything that's ever happening and has it recorded using literally Google Earth and something

(1:35:13) called quick train modeler do you I mean have you even looked through my work that's a serious question Kim have you actually looked through my work because I'm really starting to suspect like whose side are you even on here even if you think these videos are fake you should be wanting the US government to issue a statement on them why would you not want that like nobody should not want the government to issue a statement on this I've already given the information to the AO so they're going to be able to

(1:35:42) confirm the videos are real or fake one way or another like either Edward C Lyn leaked these videos and that's 100% proof doesn't matter how many cloud pictures you have if Edward

C Lyn actually leak these videos then they're 100 % real do you get that I've given them the videos and if that's the cber system there then it's definitely not a cloud picture like I don't think you're like really understanding the scope of what you're dealing with here man you know how it's going to look for you if these

(1:36:09) videos end up being real and you're sitting here out trying to convince people that they're fake because some random guy who claims to have taken a picture of it somehow has his old passport from 12 years ago and his uh old Cloud his old picture ready to go on his old hard drive and he is also connected to the corridor crew people that have had a vendetta against me like I I don't think you're like getting the the whole situation my man let me see if there's any more can I search the chat release the call you release it I

(1:36:40) sent it to you in an email man you want to release it you release it I'm literally not afraid of anything in that call I don't know what you think is in that call that like is going to make me look bad but there's nothing in that call when Jonas Doc is Jonas is reading out the random email got from a burner email account from a random redditor you think that's going to make this look better I don't know what you're talking about dude I don't know what you remember from it but hey you I I emailed it to you man

(1:37:06) you still have it go pick it up you're the one who told me to record the conversation kim.com you told me to record the conversation I emailed it to you right after that if you think that there's some gotcha in there go do it this guy's threatened to sue me multiple times I'm not really in a big rush to post more stuff about it I got a lot of [REDACTED] to do we're well past Some Cloud picture dude if you don't think the videos are real Kim go move on with your life bro go hang out with your children go get back

(1:37:36) to whatever your weird Vendetta like fake crap that you've got going on with the US government go get back to that like I don't believe a single thing you say about you being against the US government if for some reason you don't think that they should issue a statement about what happened to MH370 do you know that the French father was told that the Americans know exactly what happened to this plane that there were two awx in the area like do you know anything about the case there's no chance in hell this is

(1:38:01) going away Kim no matter what you say and anything you say about this is only going to increase my profile and get more eyeballs on this and I have nothing against that so if you want to make this a thing between us back and forth no problem man you got like 1.5 million followers or something like that it's not going to do any damage to me so I I've given you the best advice I can give you man which is go move on go do something else you don't think it's real I don't give a [REDACTED] I'm talking to

(1:38:27) actual scientists and Engineers that work for the government the US government real Engineers who know that this stuff is real you think I give a crap about whether or not you think there's a 2d Cloud picture in here you know what let's just let's just show kim.

(1:38:48) com let's just make this as clear as we can make this for everybody out there okay we have clouds actually evolving in these videos clouds don't evolve in 2D static pictures so let's start with this one Kim I'm just going to show you bro you can literally see the clouds evolving right here look right here literally see the clouds moving and evolving in this does that look like a 2d static picture to you Kim what do you guys think chat 2D static picture now I have eyeballs I can look with my eyeballs and I can see that there's no

(1:39:29) 2D picture in this you know the videos are fake Kim bro you are digging you're digging yourself into a hole my man you are really digging yourself into a hole I know the videos are fake what is the what did your eyes tell you Kim what do your eyes tell you Kim are those clouds moving what do you think Kim don't worry I'm not done not even by a long shot am I done uh let's look at this one look so first Cloud right here there's the first Cloud so this is the Drone video overlaid in sync with the satellite

(1:40:11) video you can see the first Cloud right here that's this Cloud right here in the background and then you can see the second Cloud right here second cloud is this one right here you can literally triangulate the position of the Drone from this do you think we could triangulate the position of the Drone from us 2D static Cloud picture how exactly does a 2d Cloud picture get turned into a 3D rendered environment you know what let's look at the next one um I feel bad for my man Kim this is a stereoscopic video 3D stereoscopic video

(1:40:48) These two images are from two different angles these are not the same image duplicat these are from two different angles out there now just to prove to you that it's 3D stereoscopic we were actually able to convert it into actual 3D where you can actually put on the red and blue glasses and watch this in 3D if you want and you can see it's literally 3D this is just hilarious dude Kim you are facing extradition to the United States and you get your money doled out to you by the United States that they took from you with mega

(1:41:36) upload like just let this go just let this go man or go hit up the email that I sent it to you and post the video if you want if it makes you feel good yeah let Kim keep it up we're getting tons of exposure I mean I again I don't have any problem with keeping this going if you want um how do I pretty embarrassing okay now don't worry we're not done yet yet this was a little bit over the top guys I don't think Kim deserves to go to prison uh I do think he's a smart guy but I think he's way outside of his

(1:42:19) depth on this one PJ Mike Kim is seeking the attention that you're getting uh I don't think so I don't think so yeah I I you know what I'll release the call whenever I want I've got it saved I sent it to kim.com it was his his his idea he was the one who literally had me record it he's got it he can release it if he wants why do I seem like I'm afraid of the phone call I know exactly what was said on that phone call I mean well I don't know even if even if for some reason like I said even

(1:42:53) any anything that was even remotely construed as saying that I'm satisfied with his thing like I already reene I already recanted everything related to that and deleted my whole

post about it so I'm not sure what that would prove I know for a fact well I don't know for a fact let's say but I know these videos are real I've said it like hundred times I don't know where Kim's been for the last six months also why is kim.

(1:43:17) com even getting involved in this right now why is he even getting involved in this right now like all of a sudden we get a huge amount of attention all of a sudden kim.com wants me to let this go how suspicious is that dude why are you getting so suspicious with this just go do something else man this is just getting sketchier sketchier if I have to later tonight if I have to later tonight the call that I'm going to release is your call with step Greer where you acted like a five-year-old and you're crying about

(1:43:45) how the aliens should release the the cure for cancer on the blockchain should we go back to that because that was embarrassing for you Kim like I had second hand embarrassment dude like obviously you don't realize how unification of quantum and macro or any of this stuff works but yikes dude yeah like are you actually working for the government here like what are you doing dude this is the weirdest stream ever I've got kim.

(1:44:13) com in my stream right now trying to tell me to release some the video that he told me to take that I already sent to him why doesn't he just release it yeah no no I like that we're getting more attention with this I the more eyeballs that come on to this the better it looks for me I'm I have nothing to hide whatsoever I'm not under extradition from the United States they're not paying me any money no government doesn't control me I'm not a disinformation operative or anything like that so uh my only goal has always

(1:44:42) been to get the the government to issue a statement about these videos so some beef between kim.com and Ashton Forbes will help to move that forward because the only way this gets settled the only way this gets settled is if the United States government issues a statement about these videos um let's let's show Kim more stuff and maybe Kim can explain to us how a 2d Cloud picture uh becomes a 3D rendered environment because I'm still pretty confused on that one uh so here we go maybe kim.com is now friends

(1:45:10) with **Mick** West I don't know I hope not **Mick** West so Kim let me help y' out bro this right here this alone proves there's no 2D Cloud picture in this video this is the literal zap from the the satellite video you can see that we've got let me pull this over this side here we've got front lit Cloud here where the light is hitting the zap onto this Cloud right here we can see that this Cloud that's also right next to it is not illuminated on that side this proves 3D lighting 3D lighting not lit down here there's a

(1:45:47) cloud down here that's not lit at all because of its distance from this cloud and because it's in the foreground and here there's a slight amount of back lit and a slight amount of back lit over here this proves what we're looking at is a full 3d rendered environment proves it Beyond any doubt not like opinion straight up fact this requires a full 3d render environment to get 3D Point lighting like this like do you get it I sent you this Kim like do you know what we might show the kim.

(1:46:16) com DMS guys we might have to show the kim.com DMS guys I'm exposing you as a scammer wow dude you're digging your own grave okay that's what exposing you as a scammer well I think we'll let the people decide that one Kim I don't know who am I scamming exactly here I think kim.

(1:46:37) com might literally work for the United States government I can't imagine making this statement about this like this is bizarre dude this is so bizarre I'm gonna clip this tomorrow Kim I'm gonna clip this dude I just showed you right here in the background of this with you posting this right here how this cannot be a 2d Cloud picture you're staring at it right here with kim.com the real kim.

(1:47:01) com in the foreground saying that he's going to expose me as a scammer admitted to me that the MH370 videos are fake Kim I'm gonna tell you this right now brother you should stop what you're doing man I'm gonna give you the best advice you're G to get today you should stop what you're doing man you have a lot more to lose than I do and you are making defamatory statements about me right now that are objectively true uh I'm in no way shape or form a scammer I've never asked anybody for money

(1:47:28) related to this whatsoever uh I'm not scamming anybody what I am trying to do is expose the truth about a plane where there is no official answer for what happened to it and we have two perfectly in sync videos with no discrepancies on them whatsoever you don't believe that they can be true that's your opinion but if you start personally attacking me and calling me a scammer don't come to the United States would be my opinion I'll take some of that mega upload money off your hands if you want man I could use

(1:47:51) it frankly if I had several million dollar of your money uh I would not be afraid at all about what I've been exposing here or potentially losing my job over this like I'm taking a lot of personal risk so you know best thing you should do is step away from this if you want to issue apology for the stuff that you're saying right now that would be a good idea as well um because honestly dude I've got the I've got the best affirmative defense which is the truth on my side and I'm not afraid of a courtroom I

(1:48:22) can convince a jury that these videos are real so good luck if you want to try to defame me to your 1.5 million followers doesn't sound like a good idea to me but maybe you can maybe you should go to the Jonas School of Law School you were the one who literally asked me to help you out with your law case remember Kim when you asked me to help you out with your law case kim.

(1:48:44) com literally asked me to help him out with his law case and then ghosted me about it afterwards why did you ghost me about that I thought you wanted me to help you out with your lock case Kim weird let me see if he's got any other DMS in here or messages I think we might have to go to the DMS so I think we we just proved that there is no 2D Cloud picture in here kim.

(1:49:10) com for some reason is defaming me in the comments claiming that I'm a scammer I'm

not sure what I'm **scam**ming people of Kim I've heard you tried to debate when you did with Steven Greer you like acted like you had a little child melt down so n I'm good man do whatever you want to do my bro I don't know what his what his play is right here but it's pretty sad hey Kim if you show your face if you show because on the recordings you're always too afraid to show your face I might let you on if you agree to show your face on the video but if you're too

(1:49:50) afraid because your face won't fit in the video then I don't know if I'm gonna be down to do it yeah why won't Kim release the call he's the one who told me to record it so I sent it to him why doesn't he just release it I'm gonna have more Martini well this is getting quite spicy I think we got to go to the DMs since Kim's calling me a **scam**mer we got kim.

(1:50:41) com calling me a **scam**mer funny okay here we go so kim.com thinks that because **Jonas** pulled out a plane ticket that that automatically means that the pictures have to be real that's kim.com real Logic for you guys **Jonas** provided a plane ticket for a plane that he was on therefore the pictures that he took must be real and couldn't be fake how does that logic work exactly um let me see if there's a way I can do this without revealing my other stuff how do I do this oh there we go I think that'll work okay okay I haven't even read through this

(1:51:29) guys so as always I'm 100% transparent I if this makes me look bad for some reason I haven't even reread through these comments yet and since I sent them like months ago that were out there so we're just going to look through the messages with kim.com uh live with you guys right now on stream yes oh the next Network this is the greatest live stream in the history of the interwebs I need to interview Ashton before YouTube deletes me thank you very much for that donation kim.

(1:51:54) com should send us a donation how funny would that be Kim I don't know if I can post your comments up anymore unless you send me a donation that's one person I I will take a donation from kim.com unlike **Jonas** I would have taken the \$10,000 no question asked and I would have signed any affidavits necessary hey Kim oh that's a great idea hey Kim you should offer me \$10,000 right now I will sign an affidavit that says that I am not **scam**ming anybody and that I 100% believe these videos are real great idea great idea Kim do you agree I tell you what I

(1:52:27) will give you unlike **Jonas** I will give you my blockchain thing you send me \$110,000 in Bitcoin right now I will sign an affidavit I will make a publicly legally binding statement right now on my stream uh and then we can settle this just like that and then that way you can stop defaming me saying that I'm **scam**ming isn't that win-win that's win-win I love it where'd he go he disappeared no it's even better I this is my stream I'll do whatever I want I think kim.com should send me \$10,000 and

(1:53:06) I'll sign the affidavit saying I'm not lying that I believe these videos are 100% real that solves all the problems oh actually you're right I probably should take a 100,000 he wanted to give **Jonas** 100,000 I'll take 100,000 Kim I know you're good for it you know what I will take the money I'll take the 100,000 Heck if you give me 150,000 I might even consider lying about it [ ] man that's a lot of money and I actually don't know if it's safe to reveal this technology to

the public so

(1:53:37) yo you better you got to really up them amount bro if you want me to to lie and say the videos are fake you need to U you know give me give me more it's funny okay um let's let's go to the dmss let's see how these DMS go man we're getting a public beef with kim.

(1:54:02) com did not think that was gonna happen tonight chat okay we're leaking the DMS chat here we go game on I'm sending you this because when Jonas said he got the message from that Reddit account which is a burner that sent the email from a burner it fit the story I was thinking which is exactly what this person just messaged me it's a sophisticated uh it's sophisticated but then I was just thinking about your case what if this is uh what they did is uploaded or changed a file on the net and Jonas's computer what if we can find

(1:54:30) those pired packs and it either misses this file or the picture looks different I'm literally telling kim.com right there that was that same day that same exact day I told kim.com we're going to look for the torrent I said said what if the torrent doesn't have the picture in it or the picture looks different the Torrance didn't end up having the picture in it sent this to kim.

(1:54:54) com completely ignored it well maybe didn't completely ignore it I said we need to find that textures pack from 2012 if the images don't match we win remember what Jonas said they pirated a lot hard to pull off kim.com says then he shows the ticket which means nothing at all just because Jonas took a flight to Japan doesn't mean these pictures are real that's not how logic and reason work whatsoever so I think kim.

(1:55:19) com is smarter than that he was on that plane I believe Jo bonus again doesn't matter if no one can find the CG textures torrent then they won but this situation just stinks to me a random account emailed him on a burner email using a Six-Day old Reddit account doesn't add up side note what do you what do you want me to do regarding your case what threads should I pull I'll be honest I want to bring down the corrupt institution that is my government I'll be reading the entire doc you sent me tonight I didn't read

(1:55:50) it Jonas is turning down the Ward wow I told him he should delete his YouTube video too affidavit scared him I think no one can find the old images we pulled a torrent from 2014 too and couldn't find the images we also pulled two we ended up getting another one from 2018 it also didn't have the images in it we're looking for more now too I've got strong evidence Jonas fabricated evidence now bottom line is these two images which show Cloud patterns are not from this set shared by Jonas but somehow Jonas is attempting to fabricate

(1:56:19) the evidence now I don't know there was a bunch of different things that came out this was like one of things I think I found on Reddit uh there's a I'm not going to get into the details but there's been a lot of forensic analysis into the pictures whether or not the metadata lines up or what have you I haven't really talked about a lot of that because I don't I don't really I'm not a technical expert on that what I do know is there's no 2D Cloud picture in a 3D video so we'll stick to that you

(1:56:41) seriously think that the Raw photos that Jonah shared with us were doctored he found a picture that he took from within the plane showing the wing tip he shared that with me again having a different picture of the wing tip does not mean that these pictures are not fake like I don't know kim.

(1:56:58) com I thought he was a smart guy but when I see stuff like this is weird because it feels like he's trying to pressure me into stuff that's not logical here um he found the ticket for the flight again that doesn't mean anything like this is actually making me question if kim.com is a literal agent just because he has a ticket for a flight doesn't mean that these pictures are real it has nothing to do with that I thought kim.

(1:57:22) com was smart there's no way evidence is fake why why why can it not why does that have to mean it's real it doesn't there's no that's logic and reason doesn't work you are going to lose all credibility why does kim.com care about my credibility I've never cared about my brand or anything related to this why was kim.

(1:57:41) com pressuring me like this guys I think people are egging you to keep going because they want to make a clown out of you this to me screams disinformation agent absolutely screams disinformation agent why would somebody be trying to pressure me this hard now you have absolute proof that kim.com was pressuring me to say that the pictures were fake I say no they aren't the plane didn't crash into the South Indian Ocean I'm a th% sure I'm going to come out of this hard this morning against the **debunk** and I regret even saying that I

(1:58:12) thought it was **debunked** sorry Kim this is a death blow to kim.com who was just in the chat here earlier this statement right here didn't he just say that I was a **scammer** and that I thought the pictures were fake wow this private DM I didn't even know this was in here this right here is 100% proof that I did not agree with what kim.

(1:58:33) com was pressuring me and 100% proof that I believe those videos are real and I was nice to him even said still appreciate you I don't care about being made into a clown or discredited that doesn't matter to me at all all that matters to me is the **truth** I'm surprised someone that has had the government spy on you that him having been on the flight and took the pictures as proof to you I've got an analyst who is telling me that the two pictures don't have accurate angles or light relative to the other pictures oh

(1:59:05) that was what the analysis was that supposedly the lighting doesn't even match the other pictures in the set this was before we found the Mount Fuji picture that has the exact same angle and exact same Shadow as the **Jonas** picture exact same like perfect overlay in fact I might have to p that up as well I'll look for that while uh wait I want to show this too let's look at this real quick as well what does that say this is the **Jonas** picture 84% AI 84% this image is highly likely to be AI generated that's **Jonas**'s picture right

(1:59:52) there that's picture img1 1844 obviously that's not proof but there you go I'm just going to post that for kim.com as well uh where is the cloud one that matches I may have to dig

through it and find that uh if um my boy what's his name uh W Street Journal guy is out there uh let me know guys we're going to body kim.

(2:00:21) com here tonight um okay Ashton I know what the government is capable of the evidence from Jonas is Rock Solid in my opinion wishing you the best sincerely so kim.com objectively knows that I'm not a scammer and objectively knows that I'm telling the truth here he got these DMS after the cloud picture came out after I already deleted the the post and he's in my chat earlier today defaming me making false statements about me that he knows objectively are false based on these comments why was kim.com doing that Kim do you

(2:00:56) want to be sued my man do you want to be sued you have a lot of money Kim people that are rich should not be defaming people that are poor like me that would be my opinion especially when you're making nobly false statements and I have the absolute receipts right in front of you right here Kim are you still here bro you still here where'd Kim go guys where's Kim at browser is having trouble sharing your video okay um hold on we'll come back to that chat don't worry [ ] I got to play damn I wish I

(2:01:47) had this queued up this one is especially for you Kim that one's for you bro hold on I got a better one bro you really trying to say that I'm scamming people and Faking It boy I hope you're looking for that uh video Kim taking big losses here tonight chat I didn't even think the I didn't even remember the DMS were this bad for kim.

(2:02:29) com he literally just made false statements about me in this stream that are provably false that we can prove that he knew were false when he made them yikes dude that's a big yikes my man don't worry let's finish these DMS up okay thanks man if I could come up with something that made more sense I wouldn't have a problem but the video has has too much going for them the debunk is too random and makes no sense how it was even found some burner account emails Jonas and wants him to make a video and he does it within a couple hours the whole thing stinks did

(2:03:04) the Rainman find the clouds Jonas didn't strike me as dishonest but I can't blindly trust anyone and the government could have easily modified the images on his computer he even admits it's possible in the recording I have of us I forgot about that I actually have Jonas on recording saying that they could have been modified I'm gonna I might go pull that clip later tonight guys God yo kim.

(2:03:28) com you just buried yourself holy [ ] yo Kim best advice anyone will give you tonight let this go go to sleep go do something else never comment or talk about me ever again if you make any more posts about me I'm gonna find the clip where Jonah says that anything could be modified anything could be fabricated I'm gonna find that clip and that'll be the next clip I post I remember it now he actually said that in the video that kim.

(2:03:51) com wants us to pull the full thing he think that video is going to look good look for him it's going to bury Jonas holy [ ] Bro Kim is getting boded dude where is his comments

Dude where's his body where's his comments dude I don't need to debate him I've got the DMS right here guys this is absolute proof kim.

(2:04:11) com is full of [REDACTED] 100% proof Kim bro read this part right here my man Kim read this are you reading the DMS you don't remember that remember when when Jonas said that anything could be faked Kim are you familiar with the Vault The Vault 7 Wikileaks where the CIA has potentially access to every single computer on the planet you're familiar with those uh Wikileaks Kim right boy you are I dude I gave you the best advice you could get my man I gave you the best advice that you could get I've got absolute this the call doesn't even

(2:04:47) matter because all this stuff postdates the call anyway so all these DMS by the way postdate the call so Kim you're getting absolutely crucified right now my man absolutely crucified no I'm gonna take Clips probably later tonight of Jonah saying that anything could be faked uh because I remember that now Kim is probably remembering it now as well I have connections of my own and they're legit they're telling me to press on that this is a planned operation to get me to stop it's hard to know who or what

(2:05:18) to trust and I don't trust kim.com at all I'll tell you guys that straight up I'm going to remove the Bounty because it may be incentivizing **debunkers** to fabricate false evidence but I thank you for your work and bringing attention to the MH370 you're of course free to do whatever you want with your offer leave it in place or not and if you do ever want to help out uh ever want help in your case I would be happy to help you sir feel free to hit me up anytime that was to kim.com look at how nice I was to

(2:05:43) kim.com this whole time guys um I would ask you nicely now not to condescend me or the case you're welcome to move on sir I guess he didn't take that advice man imagine being kim.com right now guys lastly the offer still stands to assist for you or your legal efforts in any way I still respect what you've done and what you're fighting against uh should we listen to this clip oh can you guys hear this you guys probably can't hear this you're going to want to hear this one chat actually very heavily relied on

[illegible]

(2:07:03) manipulation in the beginning so I actually very heavily relied on um photo manipulation in the beginning so I actually very heavily relied on um photo manipulation in the beginning so I actually very heavily relied on um photo manipulation in the beginning so actually very heavily relied on um photo manipulation in the beginning so I actually very heavily relied on um photo manipulation in the begin so I how's that that you guys got it we play it again does kim.

(2:07:37) com did he hear that guess not huh you guys could hear that right um this was the guy that was threatening to sue me by the way this guy Jonas d right here people literally found clips of him admitting that when he was struggling he uh relied on photo manipulation for one of his uh gigs is this the one and here's a different one where he this is this is a video of Jonas literally adding clouds within 30 seconds literally doing Cloud editing to the background of an image look how good he is he's really good he's really good at Cloud

(2:08:41) manipulation great job great job Jonas you're really good at manipulating clouds uh you want the contacts for the other one let me see if I can okay here's a full clip so just so you guys don't think that I'm uh being uneasy or whatever on J or being uh the you guys got the context oh we don't oh there's no context oh sorry you guys didn't hear that okay sorry I'll play it again God damn it I think it's this

(2:09:46) one thing I didn't like it I wanted to use my Mouse um I was studying anim at the time like I was really into the animation I you know um but the transition to digital was a little bit awkward for me um so I actually very heavily relied on um photo manipulation in the beginning because I didn't know how to utilize digital painting or I didn't actually hand thing I didn't like it I wanted to use my Mouse um I was studying animation at the time like I was really into 2D animation so I love drawing you know um

(2:10:22) but the transition to digital was a little bit awkward for me um so I actually very heavily relied on UMO photo manipulation in the beginning because I didn't know how to utilize digital painting or I didn't actually didn't even know digital amazing chat absolutely amazing oh hold on Bottoms Up chat Bottoms Up I think that's an appropriate reaction so have we oh no Jonas said he was not the creator of the videos um so you can rule that one out are we done with kim.

(2:11:24) com chat are we done with kim.com is he is he done now well I don't know what he thinks there's to debate if you want to keep this going on Twitter my bro um you saw the DMS everybody saw the DMS uh I'll I'll go through them one more time so people want to record the dmms or whatever they want to do these are my real DMS with uh kim.

(2:11:49) com they have dates on them timestamps you can see kim.com name in the the top um these are not fabricated in any way shape or form you know wherever we want to go oh that was a weird [ ] about qar on dude that was so weird so here's the part where the conversation begins after we had talked this is this all postdates the video that I clipped with kim.

(2:12:21) com where um uh Jonas had agreed to take the \$10,000 and signed the affidavit and then the next day was pretending like it never happened I don't know if he thought that we weren't recording or what have you kim.com told me to do the recording here's all the messages back and forth so this is all where kim.

(2:12:36) com knows 100% that I believe these videos are real he knows because he got these messages after the recording happened so anything that kim.com says about my opinion that if

he makes any claims that I'm a **scammer** or that um that I said the videos are fake well for first of all he's a liar and he uh know is knowingly lying because this this these DMS prove that he was told that I believe the videos are real uh even after the cloud **debunk** um so I'm not sure why he would keep burying himself on this but it's up

(2:13:07) to him yeah night Amanda if you're going to sleep appreciate you have a good night pretty wild man and I was even nice to him still appreciated him told him that I'd be willing to still help out with his case everything out there I mean I didn't want to make an enemy of kim.

(2:13:28) com I know he's a smart guy and he's very well connected and I would have liked to help out with his case he offered me like I I don't know if he said specifically he would give me like a six figure salary for IT um but I remember that so maybe that was true maybe not I don't have proof of that necessarily um so there you guys go wow chat what a live stream tonight pretty yeah so how did kim.

(2:13:54) com get started in the in the beginning of this great question randomly one day um I get a a message DM from kim.com and he sets up a call with me and he says I'm not really in the UFO Community but I like what you're doing and I want to help you out I think and he we talked for like how long did we talk Kim like two hours or I went over all the evidence with you like two hours I talked to him for like two hours and uh went through the evidence explained why the videos are real this is back in what November Kim probably

(2:14:27) November and explained why the videos were real explain the evidence and this is not even we didn't even have the science figured out back then uh so before even all that that was just with the evidence around MH370 at this point I'm I'm a thousand per sure they're real and the science is real too um but you know we've come along way since November and then he wanted to support me and I was I was I was like a little kid where like you know your your hero is coming down to help you out so I loved it I was like oh

(2:14:56) thank you very much Kim I put a bunch of **[REDACTED]** gushy stuff out there about how Kim was supporting me but then he never really retweeted any of my content he also took my cbers video and didn't even retweet me on the cbers video he just did one of those things where like you take you post the video as your own and he posted the video as his own and it does say like from Ashton Forbes but it wasn't like he was saying hey everybody should come follow this guy Ashton Forbes and retweeting me or anything

(2:15:21) like that which was also pretty weird so you know right off the bat I had weird vibes from him because he wasn't retweeting all my content and stuff like that um I don't really want to you know disparage kim.com anymore but I have the **truth** on my side so I'm happy to if he wants to keep it going oh Kim can post a call I'm I'm not going to post it I'm not interested I what do I have to post the call for nothing there's nothing in there I'm worried about if kim.com thinks there is

(2:15:53) I I literally told him I already emailed it to him he can go find it and he can download it

himself if he wants to doesn't matter to me he's the one who thinks that the the video is gon to say something um I might clip the part where Jonas says that anything can be fake though I remember that now maybe I'll clip the part where Jon where kim.

(2:16:11) com is talking about wanting to invest in Jonas's video game company too that was kind of weird so yeah so I don't know we know that now if kim.com makes any objectively false statements about me being a scammer we know that he knows those statements are false as he makes them because I just showed you guys the absolute proof of our DMS that postate any other those were the last conversations Kim and I ever had before today by the way guys um those DMS that I just showed you those were the very last conversations Kim has

(2:16:39) never reached out to me since then until all of a sudden today now he's up in my replies uh trying to make false statements about me in in the Stream I'm not sure why uh weird stuff man I'm not really on your side anymore Kim not really on your side anymore also mods real quick if anyone is in um the YouTube channel and anyone's making disparaging comments just ban them permanently ban them we don't we got 10,000 people following uh so if you never want to be able to post again in the YouTube

(2:17:13) channel uh go ahead and make your disparaging comments I'm giving the mods free reign so uh we're not going to deal with any trolling tonight so this person says makes no sense why would I care about releasing the call there's I really have I have absolutely I just showed all the DMS do what do you guys think that I have to fear exactly I have nothing to fear he said you said well he can say whatever he wants he can go take the call if he thinks that I said that even if I even if I said that which

(2:17:46) I don't remember saying that at all and I think I would probably remember my own statements even if I said that you can see my DMs that postate that call where I said that the videos are real I just showed the I just showed it so it literally doesn't even matter even if he posts something like that and if he does do something like that out of context then he's defaming me because I've the DMs I just showed you postate that and he's making up knowingly false statements so Kim please I'm begging you

(2:18:13) man Kim I don't want to get in a legal battle with you I know you have a lot of money um and I don't want to take your money either so please don't don't defame me anymore kim.com please just go away I mean please just like this is what I told Jonas this is what I tell all the trolls who come after me and [ ] like that is like don't come at me it's not going to go well for you and I don't mean that as a threat it's just straight up it's never gone well for anybody who's come at me because I have

(2:18:37) the truth on my side I have people that know that I have the truth on my side you on the other hand your background is sketchy as [ ] super sketchy the fact that you're trying to make these videos go away all of a sudden is really sketchy really really sketchy dude and the fact that you're making knowingly false claims about me being a scammer in my in my stream is beyond sketchy and might be liable I might talk to a lawyer and just find out because I think you

have money to give no and and if I need to Kim I will

(2:19:12) post the other DMS as well where I clarified with you that the \$10,000 the \$100,000 reward was only for the hoaxter to come forward the hoaxter not **Jonas** the hoaxter to come forward with evidence that they made the videos do I need to go find those DMS too Kim have I not put you to buried you enough tonight I have like 10 posts and I'm on the record on like 10 different podcasts saying that the hoaxter must come forward with the proof that they made the videos you were the one you were the one who said that you wanted a copy of the

(2:19:50) videos without orbs in them that's what you said and then I came into the DMS and corrected you and said no the Bounty needs to be for the person to come forth to hoax the videos the person who made the videos and they need to have proof with it you are lying right now kim.com what you're posting right here what you guys see right here is objectively a lie kim.

(2:20:19) com is lying provable lie Kim the best thing you can do right now is stop lying my bro stop lying in fact I'm probably going to pull it off I'm probably going to pull the DMS up right now this is crazy I didn't think kim.com was this much of a **[REDACTED]** douchebag we're we're exposing kim.com live on stream right now as a liar as a potential agent of the government holy **[REDACTED]** guys I thought exposing the videos was big but we we might be exposing kim.

(2:20:47) com as a government agent at he's definitely a liar I'm going to find the let me go pull up the DMS where I talk about the the Bounty holy **[REDACTED]** guys wow I mean I'm I have like 10 podcasts I can pull up any of them where I've uh said that the Bounty is for literally coming the hoaxter coming forward you guys all know this the hoaxter coming forward with proof that they hoax the videos not for somebody to come forward with some random picture Cloud picture Kim are you mentally disabled are you a **[REDACTED]** him are you actually

(2:21:23) **[REDACTED]** I can't believe he's actually making this false statement like this are you just spreading disinformation I have 100% proof and the **truth** on my side wow yo you're just destroying your credibility you a **scam**mer Sumi wow kim.com is a straightup liar the only thing we can assume from this is that kim.

(2:21:55) com is literally a federal agent of the US government kim.com is facing extradition literally got all his money from mega upload taken by the US government and told me firsthand that they pay him back an allowance and this guy is objectively lying making defamatory statements about me live on stream that he knows are false that we already prove that he knows are false wow man that's that's straight up liable you should never come back to this country Kim I'll be happy to take your money from you my man yeah you owe me a yo just give me

(2:22:28) the 100,000 honestly just give it to me I could probably take a lot more from that from you from this Kim go away yeah Kim's probably getting paid for what he's doing right now that's just my opinion but what he's doing right now is the sketchiest **[REDACTED]** ever dude kim.

(2:22:53) com is compromised in bad news avoid him man talk about destroying your credibility kim.com I'm somebody I'm just some random dude I have no credibility to have and no brand to have you on the other hand are somebody that pretends to be against the US government you're a total phony and a fraud kim.com is a phony and a fraud don't trust a single thing kim.

(2:23:16) com says guys you've seen him lie right now in our stream he he said knowingly false lies he's trying to make these videos go away and there's no reason for him to even be here no reason for him to even be here this is wild man uh where's the Thing Man Kim I liked you too man I liked you I don't know what your problem is why you're trying to come out so hard um you know what I don't really want to do the rest of this tonight but I'm probably going to uh find the part where we talk about

(2:23:52) the Bounty I think we talked about in DMS I'll post that too so that so that everybody knows you're lying about the Bounty as well um so just to be a yeah Kim just got cook I've never seen somebody actually just destroy themselves in a live stream as hard as kim.com just did in this chat it's hard to believe this guy destroyed himself harder than some of these people some of these UFO losers doing these like spaces man straight up cooked my man okay yeah and I I corrected you because the reward that you posted is not the reward

(2:24:26) that I promoted so kim.com and we can go to your Tweet your Tweet was for somebody to come forward with the videos without the orbs in them that's what you said that's what you said objectively and then I corrected you and you know this and I said that no the Bounty needs to be for somebody to come forward with the videos as the hoaxter with their Source material I correct did this for you we talked about it you know that um so I'm not sure why you're lying about this I'm not sure why you're lying about

(2:24:58) so much stuff it's really weird man very very bizarre that you're acting like this man and you libl me tonight too even though you know objectively false statements that you knew were false at the time that you made them I is Kim I don't know I'm not sure if he's just uh I'm not sure if Kim's just [redacted] or like what his deal is but this is honestly just getting embarrassing for him I can't I don't think Kim's ever lost as much credibility as he's lost tonight in his whole

(2:25:37) life crazy bro crazy he's got a lot of money to lose too this is It's defin this is definitely weird double agent for sure mad sussy Baka vibes from Kim I don't know man they're not I don't think they're digging your stuff Kim yeah Kim take the L and go look for jellyfish my bro Kim is so dumb dude he believes Iran State propaganda LMFAO o huge Kim loss Kim why did jinda visit your house why do you kiss the ass of that dictator she delivers the CIA terms that you agree to is that is that true

(2:26:21) did did jinda actually visit you Kim jinda horseface New Zealand uh authoritarian that promoted covid uh restrictions did she really visit your house wow is that true Kim absolutely destroyed his credibility [redacted] around Greer that's true as well this is a just a straight up huge loss for kim.com tonight guys wow uh somebody wants to know if you actually had \$100,000 bounty to pay up my the debunkers want to know too Kim the debunkers want to know if you

really had the 100,000 to pay to pay up is kim.com okay yeah I'm not sure if

(2:26:56) he's okay dude Kim's taking L's to the face like that hot dog girl hot dog girl GI Hot Dog girl what a stream tonight chat uh is this the one oh wait that's not it I can't find the hot dog girl gift guys I don't know the one where they she just getting pumm with hot dogs yeah it's pretty good um yeah what the [REDACTED] happened to you Kim this is the CRA this is like the biggest heel turn ever this is like WWE Heel ter I appreciate you hanging around wait is is keemstar in the chat wow keemstar is probably gonna

(2:27:39) be reporting on this keemstar loves the drama wow keemstar so here's the think uh Kim for you man more advice keemstar knows I'm 100% truthfull man I've passed keemstar Joe Rogan DMS so keemstar knows I don't lie so keemstar is happy to blow up this drama and I'm happy to blow it up too because I have the truth 100% on my side in fact I can make like five Clips out of this stream tonight just alone just completely destroying kim.

(2:28:09) com just use it to elevate my status to get more views on the MH370 videos want to hear a debate what what kind of debate does Kim have Sho guys tomorrow can somebody go find the uh somebody go find the space between kim.com and uh Steven Greer if you go back to December 15th or 16th on my Twitter profile you should be able to find uh a replay of the stream let's clip the part where kim.

(2:28:35) com loses his mind like a little child and starts overt talking Dr Steven Greer and talking about how he wants the aliens to uh put the cure for cancer on the blockchain somebody find that clip I'll post it tomorrow uh when we beef more with kim.com which I'm at this point I'm sure is going to happen uh we're going to bury kim.

(2:28:55) com on social media yeah stop hitting yourself Kim I told him dude I told kim.com I warned him this never goes well for people to come against me doesn't matter if you have a million followers it doesn't matter bro you're just going to embarrass and Sh yourself to your followers in fact the fact that you are now coming out and support the US government when you are claiming to be against them pretty much just shows that you're completely 100% full of [REDACTED] it just shows you're completely full of [REDACTED] uh like the the definition of controlled

(2:29:22) opposition should have a picture of kim.com right there literally controlled opposition US Government just says wears him like a puppet wears this dude like a puppet open your mouth and say something Kim go after Ashton Forbes we don't want these videos to come out here's some more money Kim we'll give you more of your mega upload money what is there's nothing to Kim there's nothing to debate with kim.

(2:29:46) com guys kim.com doesn't have any useful thoughts that need to be debated we just saw everything that's out there it's all in the open there's literally nothing to debate what what am I going to debate him on kim.com is not an expert of the MH370 videos he's not an expert on even the MH370 case he's certainly not a VFX expert he's not a science expert I have no reason to talk to g.

(2:30:12) com I wouldn't even interview him on my on my podcast he has literally nothing to tell me kim.com is probably not even as smart as I am uh if he was as smart as am he wouldn't be here in this live stream right now like just destroying his credibility in real time your **scam** world just blew up Ashton Kim you're the biggest fraud on the face of the Earth bro like you would know **scams** because your whole life is a **scam** I hope the US government extradites you bro but I I have a feeling that you have a deal with them and that's why

(2:30:44) you're not going to get extradited to the United States but um yikes man yikes okay should we move on to the science guys or should we just keep uh dunking on kim.com what do you guys think science should we teach kim.com how Sciences yeah Kim was always a grifter that's what honestly a lot of people warned me about kim.

(2:31:10) com and about how he was a grifter and a con man um and I probably should have listened to them as you can see now he clearly is um you know I don't know he's probably sucking CIA dick that wouldn't surprise me at all the irony here is that I am not controlled by the government whatsoever and kim.

(2:31:28) com probably is because otherwise he has no reason to even be here right now literally no reason to be here I'm not sure Kim why don't you tell us why you're even here why are you even here dude can we get an answer to that guys can you guys ask kim.com whenever kim.com posts on Twitter ask him why he's even talking about this what why is he invested in something that he should have no reason to be invested in whatsoever why is doing that so when people are like uh disinformation agents they and when somebody's guilty of

(2:31:57) something they have they they act like they have skin in the game when they shouldn't have any skin in the game kim.com is acting like he has skin in the game for something that doesn't impact him whatsoever it seems like kim.com is a literal government CIA disinformation agent trying to make this case go away libling me in real time which we've got proof of right now um which he making knowingly false statements that we already proved from the DMS um why is this guy doing this why is this guy burying this is the question

(2:32:28) you should ask yourself especially when we're talking about uh the most important videos potentially in the history of man which are the MH370 videos so if people are not familiar with these videos you should watch them again these videos are 100% real uh people like kim.com who are trying to hide them uh are probably government disinformation agents I would have to I just have to speculate that because otherwise there's no reason to try to hide these if you're somebody who's against the government the only thing

(2:32:52) you should want is the government to issue a statement about these videos because it implicates them in the biggest cover up of all time so if you're against the United States government you want to get the government to expose these videos if you are a disinformation agent that works for the CIA and the government then you are trying to convince people these videos are fake and you're trying to convince them to stop looking at these videos so if kim.

(2:33:15) com continues to make false statements about these videos then you know that he is 100% a CIA operative um and that you know the United States government has him by the balls which we know they have him by the balls we know they do they've got his money they're they've got him under a legal threat of extradition I think isn't Kim isn't your Kim do your mega upload case a criminal case too like it's not even a civil case like isn't it a criminal case against you that you said so not only is it like they're just trying to take his money

(2:33:39) they're trying to put him in prison they're actually trying to put kim.com in prison the CIA has kim.com by his [redacted] balls this guy is a [redacted] that has his ball in the vice by the US government these videos are real by the way 100% that's my true opinion these videos are real anything kim.

(2:34:01) com says is fake don't listen to a word that guy says he's a phony and he's a fraud uh keemstar just con confirmed on the drama alert account this is keemstar by the way I can confirm Ashton Forbes is an honest man thank you Keem you're a good guy appreciate you bro boy Kim is taking L's Kim is just getting bodied tonight these are real videos the fact that kim.

(2:34:30) com can't tell that this is a real video makes me question his judgment it really does who looks at this video and thinks that this is fake this is a real drone video you can literally see the Drone in the in the beginning of it do you think somebody came up with the heat signatures on these orbs and the forward- facing gravity engines Kim and they they every single frame they made the heat signature in the belly of the plane perfectly accurate you think they manually added that like what what are you guys thinking how they made these

(2:34:56) videos for the person people that think these are fake these these videos are 100% real this is the biggest conspiracy in the history of the world kim.com is probably uh a spook that is underneath the federal government uh don't trust a single thing he says and once again these videos are real yeah kim.

(2:35:20) com scam SC all his life and he's calling other people scammers kim.com is literally facing criminal charges for stealing other people's intellectual property using mega upload from the United States government who took all his money and he's calling other people scammers dude who's literally facing extradition to the United States for criminal charges right now Kim you are a literal criminal and you are trying to call me a scammer you have literal charges against you they're trying to exate you for your criminal

(2:35:48) charges don't ever call anybody else a scammer ever again Kim yeah Kim maybe wear two masks maybe you cover up that double chin of yours as [Music] well isn't Kim a girl's name it's true it is only 10,000 viewers oh I'm laughing on the inside and on the outside guys this there's nothing about this that that works against me on this one too funny dude too funny yeah Kim is seething pretty hard dude maybe Kim is still playing Call of Duty One V one him uh uh Obama it wants to One V one Kim guys goddamn chat's moving too fast for

(2:36:41) me guys holy crap chat's moving too fast did I see someone say that kim.com was a rat

probably yeah let's ask Rick Dodie what he thinks about kim.com since kim.com was a uh disinformation Kim was a copyright lawsuit troll in the late n in the 90s in Germany too so kim.com is just a total piece of [REDACTED] wow dude uh Kim brother brother Kim best advice I can give you Kim uh this will not go well for you've seen my investigative prowess man there's a lot of people throwing a lot of dirt about you in here um

(2:37:21) you know I would stop dude it's hard to get people to legitimately debate Ashton because Ashton is by far uh the most known expert on the case like who could even debate him he's been studying this religiously more than anybody exactly Keem like who am I supposed to debate on this unless you're like an MH370 expert there's nobody to debate on on this like kim.

(2:37:44) com is not an expert I'd rather debate like average Chris or somebody like that like kim.com is like like dog [REDACTED] when it comes to respect of like where he is on the MH370 stuff like he's just some random loser influencer like he has no bearing on any of this stuff he's a rat yeah he's distracting us from the science no this is guys we are we are absolutely farming kim.

(2:38:10) com right now we're farming him for engagement at the moment actually um he's bringing more eyeballs to the case and he's bringing more uh people to look at the mh3 zero videos which is why we have to thank him thank you kim.com I appreciate that we are farming you uh like the troll that you are for your engagement uh I'm going to continue to farm you as long as you want to keep going at this I've got bunch of Clips I can post um yeah and I will Farm you to make sure that more and more people put their eyes on the MH370

(2:38:39) videos honestly getting into a beef with kim.com is like maybe the best thing that could happen to MH370 videos because that way people like Joe Rogan are probably going to start paying attention again like why is like a scammer like kim.com a guy who's a literal criminal uh why is he coming at the MH370 video so hard because smart people will go like this is weird like kim.

(2:39:00) com is like getting like railed in the butt by the CIA and the United States uh doj and all of a sudden he's supporting the doj and the government to try to make the m370 videos go away like normal people look at that and they go this is weird like this is very weird this not normal behavior for a guy that pretends to be against the United States government like he a bunch of fake propaganda against the United States government and now all of a sudden he's sucking them off trying to do them a huge favor like who called you kim.

(2:39:29) com like who actually called kim.com and told him to to come on to this it's really bizarre dude uh okay should we do the science real quick yeah Ashton dunks on all the debunkers I mean these guys know man people that have been around me know that like if you try to come at me as a debunker or any of these other people like you're going to get just get straight bodied I'm not I'm not some guy that you can bully around that's not who I am I don't care about my appearance or my brand or any of that stuff guys um we

(2:40:02) are going to get to the science here so let's go ahead and do the science here okay you

guys want the science guys I'm like a thousand mess there's so many people watching right now did we Farm kim.com enough I think we farmed him enough okay sweet damn we got Darren Reed in the chat Darren Reed Dazzle woke guy okay let's do some science guys okay enough of that that was fun but enough um oh oh one more guys so not only is Kim a fraud but Kim knows that the videos aren't **debunked** are you guys ready for

(2:40:57) this I forgot that he sent me this message Kim actually knows the videos aren't the bunks guys **Mick** West claims to have found the cloud textures that were used in the videos how lucky of him to find both the explosion and the cloud textures that seem to match the video seems like he SL his employers placing those textures onto the old archives then linking them as evidence that's how I would do it if I wanted to discredit your research what's your response kim.

(2:41:26) com knows the videos are real here guys I'm going to Let's Emoji kim.com here guys thank you kim.com thank you appreciate you here you guys go absolute proof right here guys kim.com knows the videos are real there it is kim.com is the one that called out **Mick** West as founding the cloud texture and that then he's the one who actually even before I brought it up realize that the whole situation was sketchy that every that **Mick** West every single **debunk** goes back to **Mick** West damn totally bodied dude okay when kim.com says his next

(2:42:01) thing I'm just gonna snip I'm gonna take a screenshot of this real quick I want to make sure this doesn't disappear wait let me make sure I got the kim.com thing at the top so people don't think I fabricated the picture love it guys love it I I did even go through all the DMS guys jeez okay let's put that in the I have a losers Discord I'm going to put kim.

(2:42:28) com right here there we go sweet yikes that's a yachi chat should we post it yeah should we post it on X post it on X yeah make sure you guys screenshotted that so when kim.com comes out and tries to claim that I think the videos are fake we ween sh kim.com knows the videos are real there's the DM right there that's the proof he never never once did he uh renege on that as far as I can tell kim.

(2:43:01) com was the very first person okay let's post it right now guys let GNA stop sharing for a second did he come out and make more statements against us let me see if we can find any replies oh kim.com is mad dude he's blocking people now he's getting mad he's getting mad chat uh okay yeah we're gonna post this and then we're going to go to uh yeah we're just going to drop the mic on this I dropped it I dropped it for you guys chat I said uh let me put I'll show you guys I've never bodied an influencer

(2:44:06) harder than we just bodied kim.com agent kim.com knows the MH370 videos are real my god dude my God why don't people just listen when I give them honest advice man I give people honest advice and they just bury themselves every single time every single time it's like they have to double down it's like why just it's like why do they have to double down every time the the bunker tears must flow the bunker tears must flow uh so I just want to State for the record officially one last time the MH370 videos are real I've always

(2:45:00) believed that they're real and even in the moment of Doubt when kim.com literally pressured me into making a statement that I didn't want to make about them being fake I ended up deleting that I've always believed the videos are real and I think we have 100% proof and anybody who uh doesn't who doesn't think the videos are real everybody should be asking for a response from the government we're now in beefs with kim.

(2:45:21) com and Twitter we're getting hundreds of thousands of views so at this point United States government can't pretend like they they don't know this is going on uh anyone who doesn't want the United States government to issue a statement on these videos is a liar and a fraud so don't trust them hopefully we've addressed that let's show kim.

(2:45:39) com how the science works okay we we buried kim.com tonight um totally exposed totally exposed Darren don't make me block you Darren man we got we are we are triggering people tonight this is a good stream chat this is a good stream okay I'm gonna repeat before we pull into this uh this thing um man we might be able to draw the attention of like actual physicists now on this so for the morons like kim.

(2:46:14) com and the other people who don't understand how science Works we're going to explain it to you okay Kim we we'll we'll let you come with us to Star Trek even though you acting like a douchebag um we have uh both what we would call anti-gravity which is a Force that repulses gravity so something if this makes my dog's treat fall to the ground then you can make a force that would allow it to float freely that's anti-gravity now warping SpaceTime warp drive is something completely different and it's like the next level now you're

(2:46:45) actually able to produce gravitons which is the idea that you can actually Bend SpaceTime in a warp bubble which we've already shown is possible so I'm going to go ahead and show that real quick because I want people to realize that this isn't just me talking this is actual hard science that's out there DARPA funded researchers accidentally discover the first warp bubble let's read some direct quotes from Harold Sunny White on here Harold Sunny White our detailed analysis of custom Casmir

(2:47:14) effects helped identify real and manufacturable Nano micro structure that is predicted to generate negative vacuum energy densities such that it would manifest a real nanoscale warp bubble not an analog but the real thing to be clear our finding is not a warp bubble analog it is a real albeit humble and Tiny warp bubble if you don't believe here's the actual experiment here's the actual proof you're staring at it right there warp bubbles are real you see the bend in these lines these are supposed to suppos to be perfectly

(2:47:50) parallel lines just to show you here's them before the bend here's the after with the bend in them even though this is a very small amount this shows that it is 100% possible this does require negative energy negative density if you want to think of it like that in order to pull off yeah the government is definitely scared now chat so we'll switch over to the other paper in a second but you know the government's scared when they're sending kim.

(2:48:19) com like dude that they've got over the barrel at you and like just actively defaming you to his 1.5 million followers knowingly to faming you uh you know that they're definitely scared these videos are real for everybody who's out there um you know these videos will change uh this science will change our entire civilization and anybody who's trying to cover this up is probably an enemy of humanity I think that some of them probably think that uh they want to hide this because the the world's not ready for it but people like

(2:48:52) kim.com here's the thing too guys I know this for a fact that the rich people of the world which kim.com is one of them they know this science is real and they profit off of it some of them actually have free energy devices in their homes and they don't talk about it because they're smart and they know not to talk about it we live in a world where rich douchebags like kim.

(2:49:18) com take advantage of all the rest of of us and they know this shit's real and they have no problem lying to the world about it and the rest of us poor normal [REDACTED] we get nothing we get absolutely nothing these people lie to us about it and they think that we're not worthy of it that we're just peasants we're just cattle to them and we're fighting back here we're making we're exposing this they [REDACTED] up they these videos got leaked probably by Edward C Lyn like 99.

(2:49:45) 999% chance and we this is our one chance to fight back and S steal that information that those Rich [REDACTED] Millionaires and billionaires know is real and steal it back for ourselves because this technology might end the world yes but it gives us back the power it decentralizes the power away from the government and that's what frauds like kim.

(2:50:08) com should be for so the fact that he's pushing back against stuff like free energy that would give back decentralized power to the people show that he's 100% a fraud piece of [REDACTED] go ahead and uh clip that for me guys if you don't mind yeah this is our time man this is the time for the people to finally fight back finally for us to get a freaking W for once for once man and for the record I don't know if kim.

(2:50:38) com goes on any podcasts but I go on a lot of podcasts so good luck okay let's get back to the science let's get that W big facts let's get that W yeah what was that two hours and 49 minutes okay let's take a look at this oops I already had it up can you guys see this sweet okay guys we might be going late tonight we might be going late tonight I don't even really care about work anymore worse comes to worst and I lose my job I can just sue the [REDACTED] out of kim.

(2:51:38) com guy just made knowingly false statements about me we have absolute proof that he knew were false when he made them hilarious okay extra spatial Dimensions I'm just going to read this out to you guys in connection with the Casmir effect extra Dimensions provide a rich arena for one to generate models that Explain the origin of dark energy so remember extra Dimensions is The Ether technically speaking the Casmir effect is a direct consequence of the non-trivial boundary conditions that uh in the presence of

(2:52:11) the conducting plates imposes upon the quantum vacuum the quantum modes on the

interior region of the plates are restricted and there is a pressure difference when compared to the quantum vacuum on the exterior of the plates so when you when you combine your plates together the wavelengths that are longer than the distance between the plates can't get in there anymore this is what causes it to push together this you could argue is already proof of an ether existing this is why the Casmir effect is so important so guys one thing that

(2:52:37) you guys need to remember is the Casmir effect okay Casmir effect a very similar phenomenon to the Casmir effect can occur when the quantum vacuum energy in extra spatial dimensions are considered the exploration of this idea is important ramifications in a context of explaining Dark Energy before one can address those ideas is necessary to review the role of higher space dimensions in physics it was rean with his development of differential geometry in the 19th century Who provided the necessary tools to study higher dimensional descriptions

(2:53:10) of the world rean held the belief that three-dimensional space was not enough to provide adequate description of nature improvements in physics led to Maxwell's unific a theory of electricity and magnetism and then general relativity which unified space and time with special relativity boom yatsi right there Maxwell's equations he had already unified electricity magnetism general relativity and special relativity so what happened we simplified down reduced Maxwell's equations and we forgot how to

(2:53:41) manipulate gravity inspired by these unifications physicists of the earliest 20th century wanted to unify gravity electromagnetism the first attempt was by Nordstrom in 1914 who used a scalar potential for the gravitational field let's go okay guys let's do our description right now for everybody uh kim.

(2:54:05) com I hope you're watching we're going to teach you a little bit of physics tonight you might be a [REDACTED] but we're going to teach you how physics really works okay so when they simplified the Maxwell equations here's the problem that they made okay you take this rubber band if we pull equally on both sides the physics equations the heavy side equations would argue that this is zero that there's we're equal in opposite reactions you cancel each other out that's zero I pull a little bit harder it doesn't matter because the equations

(2:54:36) both sides are pulling equally on both sides therefore it's zero if I keep pulling at some point this rubber band is going to snap why does it snap if the equation say there's Z Force if the forces are equal and opposite why is the rubber band snapping why would it snap why would it break the reason why it breaks is because the stress in the medium what is the stress in the medium of SpaceTime reality everything around me this area right here stress in the medium is the scalar potential that also equals gravity

(2:55:12) stress in the medium is gravity stretching the medium of SpaceTime the the interaction between The Ether and our reality is what causes gravity that's your unification Theory right there later wheel and Kusa using Einstein's tensor potential followed two separate paths wheel's attempt involved an alter alteration of the geometry of SpaceTime in four dimensions his early attempts had physical consequences which did not match the experimental

data however Wheeler's work was extended by Einstein and Schrodinger independently in

(2:55:48) the Einstein Schrodinger non-symmetric field Theory which is widely regarded as the most advanced unified field Theory based on classical physics but Kalos Klein theory in 1919 Kala offered a unique approach for unifying gravity and electromagnetism which involved adding an additional spatial Dimension to general relativity and populating this extra Dimension with two mathematical objects called the vector potential and the scalar potential there you go C boom there's your ether right there Kala literally added the extra dimension in

(2:56:26) 1919 105 years ago that's how long we've been having gravity manipulation suppressed that's how long um crafty Sasquatch douchebag I'm not the only one in fact I'm just an investigated journalist obviously I have not come up with any of this this paper has been out here if you were smart Maybe you would have pulled up the paper and figured it out the only reason why we can figure it out is because we have literally the answers we have proof in the MH370 videos if somebody faked the MH370 videos why did

(2:57:01) they fake them consistent with non-mainstream physics that shows how gravity manipulation is possible that's pretty weird oh the videos are real that's why okay um we're not going to do any more kim.com nonsense anymore we already dunked on kim.com for like two hours I'm done with him um ah it doesn't matter if he replied we'll get back to that we're busy uh we're teaching kim.

(2:57:28) com and everybody else physics yeah I don't know why Kley is also still super mad Kley is this girl that like I think is secretly in love with me you know like when you're in like middle school and like girls like try to hate on you all the time because they have like big crush on you like I think that's what her problem is she got like super butt hurt because we caught her like posting crap about me in the **debunker** Discord so we kicked her out cuz she didn't have a good explanation for it and she had a total meltdown I

(2:57:58) have those DMS as well but we're not going to show that I'm not trying to destroy somebody else's life tonight but this is what like I don't know there's a lot of weirdos who are like totally obsessed with me for some reason okay I think that like a lot of this just challenges people unfortunately because they I think in the inside they know that this is real because this physics wouldn't like exist and be out there there if these videos were fake we would never get this far with this if

(2:58:23) these videos were fake um so everybody who's out there there's like 12,000 people watching right now I just want you to know the MH370 videos are real this is this science this paper called warp drives and what what page are we on here warp drives dark energy and manipulation exion by literally the defense intelligence agency the DIA right up here 2010 it's been out there it's been out this this even predates to MH370 videos so um do we need to go through all this so blah blah blah long story short Kala had to step in because they

(2:58:59) did some observational stuff and they said it couldn't work and then CLE comes in and

says oh no if we look at it through this specific spatial Dimension and I don't know some kind of like specific geometry then it ends up working out again so one criticism is that the theory is non-predictive and it does not extend Max or Einstein's or Maxwell's Theory but merely synthesizes the form uh formalization within a new mathematical framework and this is actually a plus we are not recreating the laws of physics we're not recreating

(2:59:29) the laws of physics we are just understanding them through a new lens all we have to do is add The Ether add it to the existing laws of physics and then all we have to do is potentially change conservation of energy because now we have unlimited negative energy in The Ether and we have to re-understand the laws of thermodynamics that we can open up our system and now we can extract energy from SpaceTime and produce over unity and free energy this will be proven true in in the future and uh everybody who's trying

(3:00:03) to denounce it's going to look like a jackass so there you go and the reason why I know that is because I know the MH370 videos are real from my own investigation into them and the case around the plane like we definitely stole that plane what you see in there in those videos is what happened so um a more serious criticism regards the introduction of The Fifth Dimension which was and still is uh seen as an artificial construct since our universe is apparently four-dimensional so literally the criticism here is just

(3:00:39) what um what's her face uh hen Felder um for some reason I'm just first name is dra a blink anyway hustin Felder said you can't just add an extra Dimension we can and it actually solves like everything including it solves the problem of negative energy it helps us understand Symmetry and it solves the problem of dark energy as well adding The Ether solves like it also gets rid of all this [REDACTED] about virtual particles and Quantum fluctuations it explains all that too and they just don't like it because

(3:01:16) when we look around we see three spatial dimension we have up and down we have back and forth and we have left and right that's our three spatial dimensions and we have one more Dimension the fourth dimension is time time is Flowing forward this adds another dimension the people don't like it because they can't see it you can't see that Dimension so they don't like it we don't need to see that Dimension but you know what we can see it if we want to if we want to see that Dimension we can stare at it anytime we

(3:01:46) want now because the United States government did us a huge favor oh wait let me switch to the other one let me do slow motion app uh here we go that is a huge favor and they leaked these videos these videos show us the extra Dimension right there we're seeing it this negative energy this cold event the reason why the scientists saw this right away wanted to talk to me there's no such thing as this this is not a thing that exists in classical physics there is no cold explosions there is no endothermic events like this this is not

(3:02:32) something that classical physics mainstream classical physics can explain this can only be explained by The Ether with negative energy that's why everybody was all on on this these videos this is not Pyromania VFS nobody could even have thought of changing the Pyromania vx

to a cold event because that's not a mainstream philosophy you would have to be like a proponent of Thomas Bearden in order to even think this was possible and I didn't even know who Thomas Bearden was before this most people had no

(3:03:06) idea these videos are real and what you're looking at here is the real science and physics of our reality the United States government would probably do just about anything to keep this covered up the problem is the science is getting out there to the point now where even some random Twitter dude like me can figure it out So eventually it's going to be figured out my guess is most of these people thought that this would be hidden for another 20 or 30 years and that nobody would ever figure this out because they would just

(3:03:34) keep the science suppressed as long as possible and they are this is why they're losing their minds because I caught on way quicker than they expected and then I promoted it and I didn't let it go they never expected somebody would get this much attention so now they've sucked their attack dogs kim.

(3:03:51) com their little uh their little slave that they carry around on a whip in a chain and now they've got kim.com making false statements about me in the videos because they're desperately trying to make these go away so you know he's full of [REDACTED] because I'm literally showing you not just the videos but the science that proves it and this endothermic event right here is absolute proof that we have another dimension you are staring at the other dimension right here this does not mean you're going to

(3:04:16) another timeline or whatever you literally just use this as a shortcut like if I take a piece of paper this is a letter but and then I fold it in half and we puncture right through that's what you're looking at Einstein Rosen Bridge right there you're staring at it poof absolute proof we got it we got them boys and JK girls we got them the physics goes back to Kusa Klein uh all the all the physicists that are out there uh oh Sabine hosome Felder um Eric Weinstein anybody else who's out there do yourself a favor this science

(3:04:55) is going to check out I don't know if it's going to be another five years 10 years 100 years this will be proven to be true do yourself a favor just cash in on it cash in on it or make a **debunk** video if you want make a **debunk** video and I'll make a counter **debunk** video I've got all the evidence right here in front of me okay let's go to the next thing um then basically talks about how difficult it is to incorporate and and unify the forces and then they talk about String Theory but we string theory

(3:05:25) is some [REDACTED] we don't need string theory for any of this so then it talks about large extra spatial Dimensions um actually do we need any of this I think that's probably good actually oh although there's still no direct evidence of small spatial Dimensions there's a possibility that experiments planned at the Large Hadron col sler could detect particle decay signatures that would indicate the presence of higher dimensions in fact all the theoretical groundwork has been performed by the theorists and as soon

(3:05:58) as the LHC is running smoothly it could in principle demonstrate the existence of higher dimensions in a relatively short period of time um so the Large Hadron Collider is probably also uh being sabotaged because they could probably prove that the extra dimensions exist in the large hyron collider as well so CERN is probably full of [REDACTED] as well guys you can see it right here this paper from 2010 basically said we should find the extra Dimensions right away and We Know It exists because we're staring at it so CERN is probably also

(3:06:32) compromised as well yeah CERN is probably also being suppressed and compromised oh and here's the best as discussed earlier the vacuum of SpaceTime can be visualized as a sea of quantum Fields never fully at rest due to the Heisenberg un certainty principle uh the oscillations of the vacuum radiate energy over a range of frequencies much the same way that oscilla an electron emits Mass electromagnetic energy and in this way there exists a ground state energy associated with space itself the vacuum potential for a period uh periodic

(3:07:06) scalar field in the add model described as above is given by the reference 4850 um actually this is kind of boring oh so actually later on here as well oh many attempts have been made to relate this vacuum energy to Dark Energy however because these Quantum fields are free to oscillate over a wide aange of Po frequencies where one calculates the sum of all the contributions from all possible frequencies of the vacuum the energy density far in excess of that is seen in nature is recovered so long story short we don't need Dark Energy

(3:07:43) the um the the The Ether will provide us limited negative energy which will be able to explain why things can move faster than the speed of light um things can move faster than the speed of light in The Ether the speed of light is only limited to our reality because our reality slows down the speed of light to a constant so pretty simple it's actually really not even that complicated the funny part about physics is that the secrets of the universe aren't even that complicated everybody can understand this this is why I'm just

(3:08:12) telling to you guys all that's out there you doesn't require that much um oh this warp drive is really interesting as well because what it talks about here is let me see we don't need that much energy to create a warp bubble because you can create a thin shell around your object so you don't need like a really thick shell imagine like an orange you've got this orange and this Orange has uh you're going to rip the crust off the orange and if there's a large uh skin to the orange orange then you only get a

(3:08:49) tiny amount of fruit we don't need a large thick shell around our orange we need a very thin shell the thinner the shell is around our orange the less energy it's going to take to produce so when we make our bubble we don't need the bubble to have a really thick bubble the bubble can be really thin the thinner the bubble is the easier it is to produce our bubble this is where Sabine hossenfelder didn't quite understand that we don't care about conservation of momentum because within the bubble our plane is still flying

(3:09:17) normally and for respect to the plane it's going to appear instantly somewhere else and it's going to come out flying at normal speeds and that's pretty much what this next

paragraph talks about here um so there are like you would think very high energy densities that are required but in the end of the day if we make our bubble really thin we don't require that much of energy densities plus we basically have unlimited negative energy in The Ether itself so once again we have the answer to our video oh wait that's not what I

(3:09:52) wanted there it is we have the answer right here and we can see that they're actually using kum's law right here to increase their energy densities to the point where they break down the fabric of reality and they break through to The Ether and then at this point I think they essentially just have unlimited negative energy but this is why they're mapping the plane in the other video they're mapping the plane in the other video because they want to figure out how big the shell around the plane has

(3:10:17) has to be in order to warp the entire plane to its new location that's exactly why they're doing that before so people ask like why is this not here why is this not a um an Annihilation event because if it was an Annihilation event we wouldn't see the orbs doing what they're doing right here these orbs are mapping the plane they're trying to figure out where the bubble has to be around the plane and how they can make it so they can make the thinnest bubble necessary and achieve the energy densities that they need in

(3:10:48) order to just warp only the plane that's what they're doing right here pretty crazy that we can pull this off huh United States government has this technology and they're keeping it secret from us can you believe that [REDACTED] they have this technology literally warp technology is what we're staring at here in this video that plane just literally warped through a [REDACTED] Wormhole the when Edward C Linn saw this he probably lost his [REDACTED] he had no idea what he was looking at Edward C Lyn probably thought this just got

(3:11:22) annihilated because that's what I would think if I was recording this the dude this is definitely somebody who had like an emotional reaction right like you see this for the first time you see this for the first time and you're thinking like that plane just got zapped by some aliens like that's definitely what you think if you stare at this without knowing how the science works but we know how the science works it's literally warp drive we're staring at it here's the science that proves it

(3:11:48) we just read it um and then down here it shows uh the key to creating warp drive is to create a false vacuum minimum to modify the vacuum spectrum and inject the some field which creates desitter minimum the desitter minimum we may have to look at that as well that's something that uh Salvador Pas brought up at the re that the rear of the craft and the anti-d minimum at the front of the craft so creting your bubble around it also later on it actually talks about lasers in here somewhere yeah here we go oh this is also spicy

(3:12:23) chat in a handful of labs scattered around the country pentaat lasers are being built and tested these lasers are of profound capability able to generate short laser pulses of intensity of 10 to the 15 watts per meter squared which is energy density with Peak Focus power densities of 10 to the 27 remember to break the swinger limit it's only like 10 to 33 so this is

super powerful laser an energy density is of 10 to the 16 joules per meter cube so this is actually the energy density right here uh so if it were possible to

(3:13:01) construct an exotic device whose power output at  $w$  less than one then the calculations would be identical to those in table three it would seem straightforward to show that energy density produced by an analogous Dark Energy laser would translate into a local expansion of space a local expansion of space corresponding to 103 or 10 Theus 5 meters per second is that meters per second for every meter of space that the laser travels it may be possible to construct an experiment that could measure the modified expansion of space

(3:13:37) along the length of the laser to test the predictions of this paper chat YSI chat do you guys if you guys do not understand what this says right here I'm going to show you right now this is absolute proof that the MH370 videos are real this literally explains what we see in the videos chat if you don't understand this you're about to find out right now I couldn't believe when I read this chat you're staring at it right here see these lines in front of the orbs that is literally what we just read

(3:14:15) right there I'm going to reread it while you guys watch this video uh it would be straightforward to show that energy densities produced oh let me pull it over to the side so I can read it energy density is produced by the analogous Dark Energy laser would translate into a local expansion of space corresponding to some numbers here for every meter space that the laser travels they're literally this is a literal laser coming out of the orb shooting an expanding space in front of the orb it may be possible to construct

(3:14:53) an experiment that could measure the expansion of space along the length of such a laser to test the predictions of this paper that's it right there holy crap it is L literally a dark energy laser that's producing space in front of the plane right here holy crap I hope kim.com is still watching I hope he's learning some science right now if kim.

(3:15:23) com comes out even any more against these videos you know he's 100% a spook of the United States government which wouldn't surprise me at all but it would be disappointing because I thought he was not just like a total piece of [REDACTED] um I mean look at that that is the dark energy laser you can see the lines in front of the orbs they're literally creating space in front of the orbs and traveling along them like a gravitational well who would even have known about this in 2014 who the hell would even come up with this so who's

(3:15:57) the person that faked these videos some dude who is a VFX expert that knows about the aeronautical capabilities of a 777 that somehow knows about uh Thomas Bearden that knows about what a warp bubble would look like that knows what uh how to create a dark energy laser that expands space in front of the object because what these orbs are doing here is not alabar drive they're literally using a laser to produce Dark Energy in front of them Dark Energy ether whatever you want to call it they're producing a gravitational well

(3:16:30) that's it this is proof guys if you here tonight tonight this is this is just straight up

Kaboom this is absolute proof anybody who thinks these videos are still fake is in the biggest denial of their whole lives biggest denial of their whole lives I'm guessing the people that think these videos are fake like just don't understand science at this point you are literally like rejecting straight up science look at what you're looking at here look at what you're looking at Thomas Bearden explains the

(3:17:06) phenomenal these videos before they existed yeah he he explains this that's absolutely it right there Kaboom fire when I read that earlier today I was like holy [REDACTED] how did I miss that last time this paper is the Holy Grail this paper is the Holy Grail that we should be looking at all Dia papers because this apparently is where the secrets are at they're just hiding in plain sight hiding in plain sight there it is so when these physicists come back these social in these influencer physicists come back and say well there's no

(3:17:42) experimental proof that this is possible just show them this there it is there's your experimental proof right there Kaboom this will confirm that the videos are real 100% so I mean I I I don't even really care what people think at this point because this is going to go down in history as real videos this is going to go down in history as the moment where anti-gravity was proven to the public these videos were proven and at this point like the feds and the Spooks are freaking out what the [REDACTED] they're freaking out because these

(3:18:23) videos uh are the biggest exposure of uh anti-gravitational technology in the history of the world and I'm getting way too much attention now and now they know they can't keep this secret anymore so they're pulling out all the stops and they know they can't pull any more **debunks** out uh they know I've reported this to the AO four months ago and the AO has been ghosting me because there's nothing they can say we've got the AO dead to rights they know these videos are real they can't lie about them uh

(3:18:54) that's it man game over they have to go they probably already looked at the Edward C Linn case and found out that the videos were real so that's they probably already know honestly AO probably already knows these videos are real straight up YSI no denials game over Okay um let me see here yeah and these papers predate the MH370 videos by four years um and if they had these papers already out there then they most likely on the from the dark projects I'd already had it figured out okay I think that's good for that

(3:19:38) chat man crazy huh crazy I'm gonna finish my Coke although I'm not going to sleep tonight because of this yeah I ain't worried that they they probably will end up killing me I'm just going to be honest with you guys and if so I have no regrets whatsoever and if it happens then you guys know this is real anyway because I'm definitely never going to hurt myself guys I'm CH I'm chatting with uh another pretty big influencer tomorrow it's going to be fun especially because of the kim.com drama I'm going to chat

(3:20:17) with this other influencer tomorrow we're going to expose kim.com actually I might not even bother he's kim.com is actually below me at this point he's just like basically like a piece of [REDACTED] on my shoe at this point it's kind of embarrassing for him honestly that he has to

like try to punch down yeah Heather I know it's dark but it's true I mean a lot of people that talk about anti-gravity you have to realize like the defense contractors that know about this technology like lockie Martin

(3:20:51) and stuff like that that produced this because it's probably them um they probably want me dead pretty bad at this point they probably want me I mean I'm like really just like literally destroying them literally destroying them we're just expose all their secrets are just laid bare laid be right here in these videos absolutely incredible yeah we're not going to be silenced I'll post the link to the paper in the chat for you guys uh I'm also going to post a link to our Discord uh the only rules in

(3:21:24) the Discord guys is you can't be like a kim.com douchebag you gotta be a normal person otherwise my I'm gonna have my mods ban anybody who's doing any [ ] or anything like that in the Discord um I will make it up to uh 50 uses but it's only gonna last for one day you also have to verify when you join the Discord and introduce yourself otherwise you potentially will get booted uh and I I know that there's a lot of like disinfo people in my Discord I just don't really care I I say let the boy

(3:21:55) watch Let The Boy watch let them watch guys so there's the Discord right there it's in uh the Youtube you gotta be in the YouTube to see the Discord it doesn't I can't post in the X for some reason um so if you go to the Discord or the YouTube chat you can join the Discord if you want just don't be a douchebag appreciate you somebody in the Discord says how many scalps is Ashton taken now we need a running tally Jonas average Chris Lou reviews Kim Kardashian who else have I missed yeah I've been just somebody else

(3:22:31) in the Discord says Kim is projecting his entire life has been scamming people are profiting from other people's work he's never had a legitimate job his entire life yikes that's a that's a brutal attack um oh yeah Julian m Mitch West yeah Danny Jones like we bodied a lot of people Corridor crew yikes man yeah we we we actually like man we made a lot of people uh a lot of people have skin in the game on these videos now because when these videos get proven like it's the end of the career for corridor crew it's the

(3:23:06) end of the career for Mick West Mick West's career is completely over when these videos are proven uh he'll he'll be he'll be proven to be a fraud and a troll uh Corridor crew we you know have these get sued Jonas whatever [ ] career in video game he was working on that's over Danny Jones Julian Dory I'll never let them live this down um you know some of these other people I just don't even care about but now kim.

(3:23:32) com is going to look like a total government spook if these videos get proven to be real because guy's like a total phony and pretends to be against the United States government and he's just sucking them off in the background behind the on the corner yikes dude yikes man I didn't know he was such a fraud honestly L but people did warn me about kim.

(3:23:56) com a lot of people did yeah free by the way guys free energy is possible too so the

ultimate conclusion of there being an ether the reason why they're covering up the ether is because the ether is a potential source of unlimited free energy you guys who care about the environment you want to end climate change climate change is a **scam** we could end climate change anytime we want anytime we want we shouldn't even be using fossil fuels we could literally have free clean energy all the time and it's all been a big **scam** this whole

(3:24:29) time the US government knows it so all these people these government politicians talking about climate change they're all 100% full of **[REDACTED]** or they don't know about this technology or both crazy right we could actually have just straight up free green energy yeah Kim's trying to get good with the feds before he gets locked up that's I mean he's been uh they've been trying to extradite him for like 10 years dude oh give us a reason why I have no interest in hurting myself good good good call um I love life I've met the

(3:25:01) most awesome people I love all of you guys also I'm probably going to be famous from this I mean I it's kind of unavoidable I mean I feel like the person who discloses the biggest conspiracy in the history of the world and free energy and warp technology probably should be famous uh I don't really care I just want that piter so I can rip it up on stream guys that's all I want man just give me the Pulitzer let me rip it up on stream and show that the world that you know that journalism is a joke uh I'm definitely

(3:25:31) not going swimming in any pools where I would drown uh I'm gonna I'm not going to get hit by any cars uh my car is not going to spontaneously combust I'm not going to fall down any elev elevator shafts uh I'm not going any long walks at night um what else um um I'm definitely not going to have a spontaneous heart attack I didn't take the covid shot so I'm not going to die suddenly um what else what else what else uh I eat pretty right so I shouldn't pass out and die I'm pretty

(3:25:59) young and healthy um is that a good enough list of reasons I think that's pretty good man Skinwalker Ranch guys you know I kind of feel bad for Skinwalker Ranch cuz like we kind of just usurp them on their whole portal like you know thing like we we're showing a real portal this is a real portal this is a literal real portal and you can't just there's not just like random portals that exist around the world like you have to actually produce energy densities big enough to break down the swinger limit

(3:26:29) or break past the swinger limit and creat create non non-local sorry nonlinear situation that's what we see here uh as we rip through to the ether as as we see going on right here Jean Pierre pet workor I don't know man any scientist who who's on this like you got you got science prizes coming for you man you're looking at the answers right here you're looking at them you can experimentally show that this is real uh we actually just read the scientific paper that explained you need very powerful laser so like this is

(3:27:04) the other thing guys like if you want to know how to do this we also learned how to pull it off where was the thing about the lasers right here so you need a laser that can generate short pulses that are essentially 10 the 16 jewles per meter Cub that's a lot these are very

powerful lasers so these lasers are going to be in the hands of the defense contractors like the Lockheed Martin that's where these lasers exist so if you have access to a laser like this you can probably experimentally prove that we can warp

(3:27:34) SpaceTime and anti-gravity whatever you want to do so there's your answer right there it's been sitting out in the open um there you go I mean I gave you guys the secrets to it um also counter to what that person in my reply said earlier like you can achieve anti-gravity with superconductivity now superconductivity is not like the you don't just use superconductivity to achieve anti-gravity you like have an electric pulse over a superconductor with the right configuration you can get anti-gravity there's probably a half

(3:28:06) dozen ways to get anti-gravity because anti-gravity is just a literal opposite force that causes something to float what we're talking about here is literally breaking through the fabric of reality to The Ether and manipulating SpaceTime with a portal with a wormhole like that's that's a whole different thing than just anti-gravity um but apparently both are possible so that's pretty sweet so the EM Drive is real free energy is real over Unity is real cold fusion is definitely real um yeah pretty fun right

(3:28:38) guys yeah I love you guys too this has been a fun stream tonight I was going to show these uh these videos here so this is Sabine Hossenfelder she seems like a nice lady I think she's also pretty smart as well um but uh you know she she says later in this video somewhere like there's a list of things that we don't have or something like that like look at the Alcubierre Drive Einstein's field equations where's the part where she lists off the stuff this might be the wrong one that is the wrong one oh there we go energy conservation yep

(3:29:24) so she's unfortunately wrong here she's a very smart woman but we are going to break uh the laws of conservation of energy we're going to have to rewrite those uh The Ether is going to force us to rewrite those and the speed of light we also can break that as well because the ether will allow light to go at a higher rate of speed including as Tesla reported 50 times the speed of light Thomas Edison in eight times the speed of light it could go as high as Infinity we don't know um so this is why she's wrong

(3:29:52) um and again I'm not a PhD or whatever but I'm just I'm literally looking at the answer it's right here there it is there you go Sabine Sabine there's the answer so yes warp drive is possible uh we can achieve negative energy like uh negative energy and we can achieve uh break the shroeder limit so that's cool and if anyone wants to know how it's done you can just go to my Twitter profile how do you direct the travel of the orbs well the answer to that is that uh macroscopic phase

(3:30:31) conjugation here it is you guys want to go to my profile and check it out share it with people I've already posted how to warp an object using interferometry so interferometry is uh creating your zero point field with the orbs shooting a beam at them being reflected being backwards that's how you warp the plane back somewhere else so not only have I taught you guys how to uh create a warp drive uh taught you how the ether is tonight but I also literally

taught you how you can warp an object this science

(3:31:01) will check out uh will be proven to be real in the future so go ahead and win yourself a Nobel Prize whatever you want uh just split the money with me when you win it and give me that uh P Sur prise please see what we got here I thought there was something else in here yeah oh yeah I forgot in this one you can literally see look at the shape of this chat look at the shape this looks just like the orb so one half of this is basically the orb I think there's one where you see only one half as well so I think that like the only thing

(3:31:45) I think they get wrong here maybe the orb does have it on both sides actually maybe we just don't see it and we can't tell because half of it's covered from our point of view so this right here as well is that the energy does it's like does this not look familiar chat here where is it like there it is chat you're staring at it that's what you're looking at on on this right here with the orbs crazy huh it's literally a ball of plasma that meets the definition of exotic vacuum object just like we see

(3:32:26) here huh pretty funny huh pretty wild well Sabrina I like you I like you a lot okay let's do a quick cool down guys uh we have 13,500 people watching that's definitely the biggest stream that I've ever done so I guess if you want to know the secrets of the universe maybe follow me on Twitter follow me on YouTube I posted a link to the Discord if you guys want to join uh yeah I'm not suicidal people are saying in the Discord puler prize equals toilet paper I I love you ether bunny I appreciate you my man appreciate

(3:33:12) you I'm probably not going to beef with uh kim.com anymore tonight I'm kind of tired of it he's kind of irrelevant to us as well um nothing he says matters anyway so um am I not worried that someone may try to shut you up to keep the secret it's too late I just told you guys everything tonight to 13,000 people so they might I've always assumed that they would try to to silence me but I have no regrets whatsoever even if they do I've lived a good life it's been fun I can definitely swim by the way um and

(3:33:45) honestly like if anything were to happen to me then you know everything I'm saying is true without any shadow of a doubt although it is true anyway uh but we should have free energy I hope that this world gets free energy and I hope we don't destroy ourselves I do I really hope we don't I think that we won't destroy ourselves because we didn't destroy ourselves with nuclear weapons the problem with free energy is that someone like an Isis terrorist could blow up the whole planet and that's kind

(3:34:09) of a problem because a lot of these people are like suicidal and suicide bombers so they could probably blow ourselves up yeah after I tear up the pulzer what I'll do is I'll send everybody an m37x MH370 X I'll send everybody a piece I'll rip it up in a bunch of pieces and then I'll send everyone like one tiny little piece so wouldn't that be fun uh will I ever eat or drink again I don't know that's kind of a weird question yeah of course I'll do an interview with Joe Rogan and then we can

(3:34:39) go talk [ ] about kim.com and Joe Rogan that'll be fun we can expose kim.com as a CIA show on Joe Rogan no I probably won't do that I think kim.com is just kind of an idiot honestly like he's a smart guy but like even a smart guy can be [ ] when it comes to science and stuff they don't understand like for a lot of people the ontological shock of these videos is just too much like for a lot of people they just can't believe they live in a fake reality and that um and that we live in a holographic

(3:35:12) Universe holographic principle because that's what this pretty much implies now it doesn't mean reality is anything less worth living still means we're still real all this is still going on but it means that there's a construct I I believe that there is a Creator like that's the only explanation for this for me um the fact that what you just saw right there is to me proof of a Creator we're looking at proof of God if you want to think of it like that uh which I think is a beautiful thought

(3:35:37) personally um Joe Rogan should want to talk to me I don't mean to say that to be cocky but Joe Rogan talks to a lot of [ ] and more morons and uh like Jeremy Corbell and I would like destroy Jeremy Corbell in a debate like it wouldn't even it would just be embarrassing honestly um and honestly this whole thing is just going to destroy the UFO Community uh because like they were already super divided about this but this shows that everybody in the UFO Community is basically a big joke there's like nobody except for a

(3:36:09) couple people like alien scientists Jeremy Ree and a few other people that are actually looking into the science and unfortunately even Jeremy Reese doesn't think that we can warp an object like this cuz he's more of the like traditional physics mindset but he'll come around when this science gets proven He he'll come around uh but at least he's looking into the damn science all the rest of these people just want to like [ ] aliens like that's that's all everybody in the UFO Community wants

(3:36:33) to do so honestly I'm doing you guys a solid on this one I'm showing you guys how warp drive exists which means that aliens can be real if you want they can probably get here I don't really care just I in the maned wars I'm going to fight on the side of the maned you guys can fight on the side of the the nordics if you want but I'm all in on the mants dude they're [ ] sweet you don't mess with the maned chat you really just don't mess with the mantids okay that's been fun jean

(3:37:09) pidet guys the debunkers are super pissed off right now they're really mad uh cuz we like the debunkers have a lot of skin in the game right now because if I end up being right they're all going to look like morons like forever so these people are like super pissed off because this is like the end of for them and a lot of people guys if you're out there please don't hurt yourself because this stuff's real this doesn't mean that like you should just kill yourself or whatever like you shouldn't do that everybody

(3:37:40) should live even the debunkers out there you guys should live I do think some of you should humble yourself a little bit and realize you don't know everything and there's a lot more

to the world than you think is real um but don't hurt yourself over this please please do not hurt yourself over this I can't believe we're beefing with kim.

(3:38:16) com too funny man I can't over it apparently he's still trash talking kim.com is like a 12-year-old in the body of like how old is kim.com guys should we look it up 50 years old this guy's 50 years old why does he look like such a douchebag I can't believe we're be beefing with a a 50-year-old man child has literally no reason no reason whatsoever to even beat be involving himself in this just exposing himself as a complete and total fraud look at what a jackass he looks like in these pictures too look how fat he is look at me I'm a big scammer and I've

(3:38:59) never worked a real job in my life oh my God who takes a picture like this who actually takes a picture like this chat I can't believe we're beefing with a 50-year-old Manchild Kim go take care of your family man go take care of your family bro thanes man embarrassing dude wait was did someone just say something about Robin Williams yeah I did Robin Williams man guys when we confirm this is real I think we got to vindicate Robin Williams there's something sketchy about Robin Williams killing himself man that guy like he was

(3:39:43) one of my heroes man all my heroes keep dying Kobe Bryant Robin Williams I might go full conspiracy theorist after this guys just take people down take kim.com down first then we'll take down the people who took out Robin Williams job of the Hut yeah we're just having some fun guys we're just having some fun yeah his wife seemed kind of hot I mean not my not my thing but yeah I mean I meant I'm into to women but I didn't find her that attractive oh I forgot so as I said earlier aie lobe is actually gonna make a statement

(3:40:27) about I think warp drive on the um the big things podcast tomorrow so Christian asked him about me asked Obi lobe about me and apparently I haven't heard it personally but apparently he says it's possible so kim.com is going to look even stupider tomorrow so we've got this huge swell of momentum and Avi lobe is going to make a comment about how what we just disclosed tonight is potentially real Avi lob is tomorrow get ready for it guys we're clipping that the moment it drops I'll be posting that on my

(3:41:04) Twitter make that thing go viral we are exposing the truth about MH370 we are exposing the truth about warp drive we've got debunkers melting down we've got kim.com Mel down uh what a night what a night everybody Anthony Bourdain rest in peace Anthony Bourdain for sure very sad yeah along with Bourdain guys respect Anthony Bourdain if you guys didn't watch No Reservations with Anthony Bourdain dude was a legend guys dude was a legend no Avi lob is not full of [ ] Avy lobe is legit 100% legit guy yeah Al lob exactly Al lob a

(3:41:46) is probably the most reputable person in the UFO Community Bar None like no one's even close to this guy dude's super legit uh one of my smartest liberal brain Reddit friends are still struggling to believe all this is possible yeah no your Reddit brain friends are never going to they're probably the loss cause man redditors are just like some of the dumbest people on the planet no offense if anyone's a redditor but it's true like just the dumbest people on the planet and unfortunately a lot of liberal people

(3:42:19) like it turns out that it's not the liberal it's not the conservative religious people that have a hard time understanding this because this is totally consistent with the idea of God uh a construct existing is idea consistent it's the liberal brain people that think they know everything that the government never lies them those people are going to have apoplectic seizures uh total meltdowns about this about this science and about this technology because it means that they've been lied to their whole lives imagine IM thinking

(3:42:46) that the government's good and then finding out that you've been getting lied to your whole life we could be living in Star Trek and the government's been lying about it you know what a shock that is to people that think that the news is real I can't get over it I love it chat this is oh man what a what a night guys absolute great night guys I love it man still believes that Anthony Fouch is a good guy yikes persecute fouchy everybody prosecute fouchy not persecute prosecute fouchy guys prosecute fouchy I'm 100% on

(3:43:24) prosec fouchy guys if you think Anthony fouchy is not a liar realize that Anthony fouchy told you not to wear a mask and then like a week later said everybody should have to wear masks and I was just lying because I didn't want the masks to get sold out or something which doesn't make any sense because hospitals don't use surgical masks the hospitals and the doctors and nurses wear n95s they have to get fitted on their face with respiratory therapists I know because I work in healthcare my whole life for 20

(3:43:56) years nobody has ever worn a mask before 2020 that wasn't a thing that people did in the hospitals I don't know why people think that there were I know because I've spent my whole life in healthcare so Anthony fouchy is a [REDACTED] liar and when he lied to everybody about oh you don't have to wear a mask okay now you definitely do and I was just saying that because I didn't want the mask to be overrun but nobody was required to wear n95s the thing that we had to wear was a piece of cloth over our face so there

(3:44:22) was that doesn't even make any sense dude's just a 100% liar Anthony fouchy no matter what you think of him is a liar period also there was a really funny clip with Anthony fouchy where he went to the hood he went into the ghetto and he was trying to tell people to get vaccinated and like this one smart dude is like nah I don't trust that I don't trust the government I don't trust any of that it was the most awkward thing ever and I couldn't believe they actually aired it because it made him

(3:44:46) look like a complete idiot so sorry wow you guys are getting spicy in the chat right now I can't even keep up honestly wait Julian is in here dude I can't even keep up with all the people in the chat right now we got 14,000 people watching right now yeah I can't keep up there's too many messages in the chat um so once again everybody who is here y the videos are real warping an object is real we look through the science tonight bring your best physicist if you want science will check out tomorrow AI lob is probably going to be

(3:45:32) making a statement on a podcast that says that warping an object is possible contrary to what conventional physics would thinks is true and we are uh yeah we're going to be able to

warp objects in the future uh Tesla was right there is an ether uh it does potentially have unlimited negative energy in it which is exactly what we need to warp an object and that's going to produce potentially free energy for everybody on this planet pretty amazing guys what a world to live in I could never have chosen to live in

(3:46:04) a better time than what is happening right now I couldn't be a happier person than I am right now in this moment knowing super smart people I want to shout out some people since we have so many people here right now first I want to shout out my admins awkwardly animated malite skinny Bob Amanda mandolin she left but she's out there somewhere um Arwin thank you very much benator you're a hero Dorian Cy you're a hero Jay Brown love you JK Philly fan you are a [REDACTED] Legend JK Philly fan Lolly Hall I love your voice

(3:46:40) I love the British accent good person 117 thank you very much man appreciate you brother um Sandy Sandy sassy fos thank you very much uh also Sun gobler super cow you're a legend too man appreciate you uh synonym and Ward nugget you guys haven't been around for a while but you're also pretty awesome um I want to shout out some podcasters first I want to shout out um Christian from the big things podcast talk to him today that should drop I don't know week or so um shout out P Pat Unleashed on

(3:47:14) the blaze that was great uh shout out to uh Clayton Morris on redacted if you guys want to know more about the MH370 case watch the redacted podcast with Clayton Morris uh where he talks about MH370 it was about two weeks ago probably the best podcast I've ever done very respectful uh loved it loved every minute of it um let's see what other podcasters can I do here oh here we go okay um the confession love you guys confessionals thank you very much Tony Merkel you're awesome Chad and Sherry from investigate Earth

(3:47:51) podcast make sure you guys are watching them for sure um Stephen deer from the UAP uh podcast uh planning on talking to him again in the future nice guy Sonia Pon was super awesome had me on a couple times uh leak project with Rex cool dude alien scientist Jeremy Reese we shouted him out uh Bernie crypto Alchemist check him out as well um shout out to Salvador pz Dave Rossy Bob Greener royy Herbert also Martin Gibson I'm sorry it's taking me so long to post our interview but Martin Gibson appreciate you man as well um Timothy

(3:48:32) Abino awesome to talk to Tom Monto if you want to know about scaler physics please check out my harre podcast with Tom Monto you can find the live on my YouTube uh that was one of the most epic conversations I've had Eric Hecker Eric Hecker I got to talk to Eric Hecker about Antarctica and scaler weapons I mean I I'm living a blessed life guys um Alpha Warrior uh Brian Lup can con actual is his screen name um these guys helped get us on some shows early on that was awesome uh and I'm not going to shout

(3:49:08) out everybody but everybody who's out there alien addict guys alien addict had me on like four times I got to hang out with Dave uh in Nash nville it was awesome it was a great time uh Matt Kim if you guys are not following Matt Kim if you're into politics if you're a trump supporter you need to be following Matt Kim Matt Kim is an awesome guy super down toe

normal dude uh super epic yeah shout out to Edward C Lynn the leaker of the videos I can't believe we found the leaker of the videos like

(3:49:39) 99.999% sure Edward C Linn is the leaker of the MH370 videos any who needs absolute proof all we have to do is talk to Edward C Lyn get him to talk about these videos game over their real that's it that's it that's that's all we need we have absolute verifiable evidence so any journalists that are out there watching this you don't have to believe anything I'm saying find Edward cin figure out what classified information is available on the internet that he **leaked** that the government was

(3:50:08) afraid would come out if they went to court and forced them into a plea deal just find that up when it turn out to be these MH370 videos game over you know everything I'm saying is real um diamond from the magnetic reversal news awesome uh shout out to Richard CIT from strange Planet who also had us on Coast to Coast AM that was awesome uh Keith at the mic uh he got us onto the blaze that was sweet uh uh liberty lockdown with Clint uh that was sweet Infowars with Alex Jones and Harrison Smith although Alex Jones

(3:50:50) kind of didn't say much to us after that which is a little bit awkward uh skatopia who hung out with us appreciate you Jake Chanley the shaman Jake Chanley is now one of my friends what a world to what a time to be alive the literal Shaman Jake Chanley quite frankly make sure you guys check out him Jimmy Cor he's looking into ancient history what a nice guy um let's see who else do I want to shout out real quick blurry creatures thank you very much Chris Leto Chris Leto had us on multiple times uh and he seems to be doing pretty

(3:51:31) well so that's great um you know what I'm gonna even shout out Tim P Tim pool uh Howard Hughes unexplained uh the UK show and let me see who else we got to shout out real quick as well since we have a lot of people watching right now who am I missing everybody oh red pill 78 Zack Payne red pill the corruption detector make sure you guys check him out uh big shout out to Ian Carrol who I've been talking to recently is an awesome dude oh the alphabets uh Chris and Isaiah on the or uh Isaiah or ismail uh boy anyway alphabets check

(3:52:16) them out vetted vetted Pat un vetted super awesome guy if you're into the UFO stuff check out Pat on vetted um we we actually like did the basically The Joe **Rogan** on Pat with vetted so if you guys want to get caught up on all everything check out the Pat Uh Pat on vetted it's just vetted and you can find my interview I did with him it was like two hours uh we just did like the full Joe **Rogan** long form interview which he doesn't even really do a lot of those so that was awesome just like a normal down

(3:52:51) toe conversation uh big shout out to George Howard and the cosmic Summit as well which I will be at uh in June so that will be a lot of fun and I think that's good enough honestly oh um Brian uh Esco escro from political searching for political identity um he's a good guy as well Joshua Reed check him out on Twitter you can find him at Joshua Reed trying to make sure I hit everybody Skyfire news Skyfire news keemstar tupacabra red panda koala uh all these guys uh and and Rufus 2688 from the uh I don't know what they're the phone booth

(3:53:32) podcast uh they're flat earthers but that doesn't matter to me I mean Flat Earth can't possibly be real based on the technology that we're talking about but that's fine I don't care I don't really care what people believe so I think that's good oh and uh people I find interesting with Tony yeah awesome guys appreciate y'all so longest stream that I've ever done oh yes shout out to locked Martin for making the orbs guys big shout out to locked Martin big shout out to the

(3:53:58) Department of energy for coming up with free energy and hiding it from us for I don't know how long uh shout out to the AO who's been ghosting me even though they know these videos are real probably at this point trying to come up with a cover story for how they're going on to lie to us or maybe they'll do the right thing can you imagine if the Aro does the right thing and says that these videos are real that would be awesome man they come out a says yep the videos are real we confirmed it that would be

(3:54:21) sweet uh thanks Heather birdy for the content as well and the stuff that's out there okay I'm gonna go through the super chats one more time because we had some huge super chats big poo thank you again Sandy appreciate you Jake you had the most epic donation man thank you very much Jake appreciate you more than more than you know my channel appreciate you guys uh turtles all the way thank you very much huge epic donation amazing PJ Mike you've been around for a long ass time uh the next News Network

(3:54:50) appreciate you man that's that's this is the greatest stream in the history of the interwebs and then sham 6 appreciate you guys uh scaler granny shout out to scaler granny um awesome Yep killer stream guys okay I'm gonna play you guys out uh I'll do one more Discord link for you guys in case you guys missed the earlier one hopefully there's still if you guys can't get into this one come back tomorrow and we'll do another one okay guys I'm going to I'm going to drop off um we're going to play Heather

(3:55:22) birdie song here oh shout out to General Flynn as well General Flynn follows me on Facebook I have a little general who follows me on Facebook or on uh on X General Flynn probably knows this stuff is real and I think he's probably on the side of wanting to get it out I don't know that for a fact but I just that's the feeling that I get that's the only reason why I could imagine he would be following me um so whether or not you like him or not I like him seems like a good guy okay guys we'll play you out have a

(3:55:48) great night song Time peace m370x we out m m h37 until you do some research don't talk to me I'm going to find the **truth** while I sit this Mar your opinion it means to me it's M M M mm x370 not all heroes make capes I wear glasses to see I'm going to find the **truth** while I this Mar the trolls hate see me [Music] succeed but guess what m m H3 [Music]

(3:57:01) M M37 not all heroes glasses to see I'm going to find the **truth** while I sit this my your opinion it means to me your opinion and then h37 hero glasses to see I'm going to find the **truth** why I this party guess what it's m m m m m h37 I'm you do some research don't talk to me I'm going to find the **truth** while

(3:58:07) I sit this Mar your opinion it means to me it's m m m m m h37 not all heroes my capes I wear glasses to see I'm going to find the **truth** while I sit this Mar the trolls hate see me [Music] succeed but guess what M mm H3 [Music] gu what M M37 not all heroes V St the glasses to see I'm going to find the **truth**

(3:59:15) this Mar your opin it needs to me your opinion M h37 now hero keep glasses to see I'm going to find the **truth** why I this the gu what

Transcript:

(00:02) it's m m m h37 you do some research don't talk to me I'm going to find the **truth** while I sit this Mar your opinion it means to me it's m m m mm h37 not all R my capes I would glasses to see I'm going to find the **truth** while I sit this Mar the trolls hate seeing me succeed but guess what m m h37 [Music]

(01:09) gu what M M37 Heroes V glasses to see I'm going to find the **truth** while I sit this you're aing it means what to me you're opinion m m h37 [Music]

(02:59) Manion 3 70 contact 120m n [Music] night breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] [Music] [Applause] [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him

(04:06) takes on his multi-armed form and says now I am become deaf the destroyer of [Music] worlds hey everybody good evening happy Saturday night or Sunday morning depending on where you live on this planet thank you very much for being here tonight uh decided to do a Saturday night stream even though I don't normally do them I was invited to several different spaces we are going to jump into a space at least for a little bit uh and talk about uh some of the MH370 evidence and then uh potentially bounce out of that and then just go over

(04:44) some of the most recent updates and evidence that's out there so uh before we get started uh boy I'm not gonna be able to say hi to everybody tonight there's you guys have a lot of people already in the chat thank you very much for being here uh David Martin man good to see you buddy thanks for being around appreciate you man if you're the same David Martin from Twitter really appreciate you William Silo GN Billy Bru DeVos Dalton Pizza Slayer skito Enemy Number One Dave pnw FL Flint fancy uh

(05:11) Michael nice to see you short short order cook braa Brian uh AR armol thank you very

much armstr than Nath uh Nathan DeVos appreciate you man uh His Highness mystical Wonderland uh oh pepper pepper goolan uh probably butchering his name appreciate you man uh salty decimator good to see you Pamela uh U UFO nut Kathy d uh sham 6 I think I already said petza Slayer let me see anyone else we got here Brandon nice nice to see you man yeah uh yeah we just started though so yeah um Roa good to see you John Johnson nice to see you man uh trolls be

(05:53) warned absolutely uh Michael nice to see you uh hey you Atria uh Graham royon lot of new a lot of new names in the chat appreciate you hey Ruby nice to see you glad you're around as well um maggots uh good to see you Ray I think I got props Evan Finley how's it going what's the Tipple this evening I don't know what that means uh Matt nice to see you as well so uh we're going to go into a space here in a minute but let's just go ahead and quickly before we get to that space take a look at uh we're going

(06:31) to join one with the investigate Earth podcast in a minute before we do that let's share our screen here and see what's been going on so yesterday we got an update from Elon Musk who just copy and pasted some weird thing about aliens kind of a kind of a bizarre reply everybody um not sure why he posted something about aliens has nothing to do with what I've been disclosing um but he did and we've been getting Community noted like Non-Stop um so we got this weird Community note about the links to the corridor

(07:06) crew like I don't get how people can make false statements and Community notes and just keep getting away with it matches a colorama filter and after effects this literally cannot be produced in After Effects with software from 2014 we have 3D full 3d Dynamic Parallax in this video so like people just make false statements like this objectively false statements and post them into Community notes the explosion is a stock wave effect it's objectively not a stock wave effect um so where did that just go did

(07:41) you guys just see that just disappear guys did you just see that did anyone else just see that am I going crazy you guys just see the community note disappear we were looking at that 5 seconds ago right anyone in the chat you guys see the community note just disappear oh okay just came back weird um the clouds are completely static objectively false explosion is a stock effect objectively false so I don't know why we're being uh Community noted with fake comments like literally fake comments and then if you link to

(08:25) the corridor crew again I am going to send the families after the crew I'm going to recommend the Department of Justice criminally indict the corridor crew for for uh covering this up and making this fake video about it which now is people making fake uh Community notes on my content so uh let's see let's go with the it's obviously the oh wait no sorry let's just I'm going to pull up a couple videos here just to prove it to you guys so here is absolute proof that the clouds move no question it's it's not

(09:02) deniable the clouds objectively move you can watch them wiggle in here right here in fast motion you can watch the clouds literally jiggle back and forth there's no denying

whatsoever that the clouds move that's that's objectively they CL they move what is objectively true is that there can't be a cloud picture in these videos that's objectively true there's no there's no way to make a 2d Cloud picture into a 3D rendered environment in 2014 using software from before 2014 so this community note that

(09:29) we we're just looking at is objectively false not an opinion objectively false Community note uh we can't seem to deal in facts because we have literal disinformation agents posting fake content on my posts and making fake objectively false fake statements about them and they keep passing their false opinions off as factual information which to me is Criminal behavior when you're dealing with The Disappearance of 239 people um and that's why I made a post earlier today which I will play again

(10:00) um that anyone who is covering these videos up should be deemed as a criminal co-conspirator to The Disappearance of 239 people now the other statement they made is they said that this is a stock effect again all I have to say is that this is not in our videos that's an overlay of the stock effect into the videos that's an overlay of the stock effect into our videos that is a perfect overlay of the stock effect into our videos it is objectively not in our videos you can just tell if you looked at the videos

(10:35) that that's not in there the argument that the people make then there if you're making the argument you burden of proof is on you to prove it is that somebody changed this all around the corridor C themselves in that video they point to this here and they point out how it doesn't match and they incorrectly state that it does and they don't even acknowledge that the middle part of this isn't even close to the same not even close to the same they don't even acknowledge it and then they

(11:01) show a falsified comparison which they don't explain how they made a falsified comparison they just show probably they pulled it directly from metabunk and they didn't even do any work whatsoever they did literally zero technical analysis in their YouTube reaction video none they didn't look at a single frame in the footage or do any technical analysis whatsoever to the video this this kind of stuff should not be getting Community noted onto people's content this is objectively false information being pushed onto people's

(11:33) content where there's no justification for it this is what's wrong with factchecking it's what's wrong with the community note system it's what's wrong with the **debunk**ers so now we said that hopefully this is plain wait let me see here I'm GNA reshare that real quick okay so you guys can here so here's my statement I want people to realize how serious I am about this I'm not joking around I'm not playing and little kid games here I'm not talking about little UFO videos floating around

(12:05) in this guy I'm talking about a criminal conspiracy that's a real criminal conspiracy for a plane that disappeared off the face of the Earth where we never found the plane where the United States government is objectively lying about what they know about the plane this is not a theory this is just a conspiracy so for the people who are out there trying to Bunk it I'm just

going to read this I am formally accusing the United States Military Intelligence community and former president Barack Obama who is the

(12:36) commander-in-chief along with other guilty parties of kidnapping and conspiracy of the passengers in the Abduction of Malaysian Airlines flight 370 I didn't add murder because I can't tell if they necessarily killed them but very likely murder is on this list as well I provided proof in the form of **leaked** classified military footage to the a who is under the dod and the Pentagon for authentication I provided the name of the leaker of the videos who went to prison by the way and spent six years in prison on a

(13:09) 9-year sentence after a plead deal anyone attempting to hide the MH370 videos or falsely claim that they are some impossibly elaborate hoax by a VFX expert who's a psychic with precognition and somehow knew where the plane was before the world knew and knows how military classified uh surveillance apparatus look that nobody else knew in 2014 anybody who thinks that is pushing that line because that is more impossible than being able to warp a Plane by far but you show me the X-Men or whoever it is with the psychic powers

(13:44) who knows about the government surveillance capabilities in 2014 who faked the videos and has the ability of precognition so if you are pushing that [ ] then and trying to hide these videos then you are a co-conspirator in the conspiracy and um I'm going to send both the Department of Justice and I'm going to send the families after you uh and the media as well when these videos doesn't matter if it's tomorrow a week from now 10 years from now I'm going to make sure the media and the public uh public

(14:18) opinion absolutely crucifies you and ruins your life for the rest of your life and that of your family as well so do not do it I can't be any more clear about this you think videos are fake great go move on with your life go do something else if you actively trying to make this case go away that puts you into potential criminal liability and definitely in liability for civil liability which has been already given the precedent by the Alex Jones case denying the deaths and and criminal acts of people that objectively occurred puts

(14:53) you in civil liability to the family spreading dangerous misinformation about the plane you are not expert on the case you are not an expert on the videos when you are coming out there and you're pushing fake **debunks** like the corridor crew is you deserve to have every single penny that you've ever made taken from you and given to the victims okay uh okay so let's go ahead and dig through um let's go let's go to the space now so we can talk about it congrats on 20,000 subscribers yeah thank you very

(15:45) much I mean I I just don't really care about that like I I haven't been doing any of this about money or any of that I'm trying my best to figure out how social media works so that I can have the largest reach possible hold on there we go sorry I'm setting up the space in the in the background here you guys probably can't see it what the I've been removed from the space let's try that again oh looks like the space died weird Okay so uh I don't know what happened to this space

(17:04) I think think he mislicked or something trying to find out what happened with that space just now yeah I just got booted from the space randomly uh and now I can't rejoin just as details not available yeah definitely just got booted from that space he says he was trying to add me as co-host and I think he just accidentally blocked me okay well uh nothing I can do about that I can't rejoin that okay so we're going to go back and to the evidence then until that gets figured out yeah I think Chad had

(17:57) uh oh well I don't know how you unblocked somebody yeah he he definitely accidentally just booted me from the space instead of co-hosting me wonderful okay well whatever let's go back to the evidence okay guys if anybody has any questions uh okay you're spamming the chat so I'm going to put you on user time out please don't spam my chats guys oh he says I I should be good now let see okay we're good okay we're going back in going back into the Space Race voted in a certain direction

(18:48) would you not think that's [redacted] up that definitely has to [redacted] up because hello get some like independent thought going here like that doesn't make any sense to me at all how if we told you that 80% of white oh that's how I mute it okay so if I mute it like that I um it's getting kind of uh they're talking about RAC in here and I don't really want to look listen to it hopefully you guys can't hear that at the moment um I'm gonna wait until they start talking about MH370 then I will uh I'll start playing

(19:25) it so um the strongest evidence also are asking questions uh I'm in the investigate Earth podcast space um yeah good question from Ruby here has Malaysia made a decision yet on Ocean Infinity the fact that they haven't announced it and it was over six weeks ago should tell you everything you need to know they're not planning on doing another search Malaysia knows that they're never going to find that plane they've probably been told the truth um so any more searching they do just exposes the conspiracy pretty

(20:11) much okay here we go um we talked a little bit about kind of some of the new stuff that people are sharing stuff right now uh as far as MH370 parlay I want you to um tell Ashton kind of what you were telling me about MH370 as far as when we first started this what was kind of your thoughts like and and and and I know I was saying hey let's talk about aliens let's talk inat 370 but like what is kind of the reality of inmat 370 for you well I just say as a person I'll qualify myself I know absolutely nothing

(20:50) I don't know any techn technological advances I know nothing scientific at all all I know is I'm 20 minutes into what you were broadcasting last night and it's not just last night I've heard you over different interviews over the past few weeks few months whatever it was um you make amazing points about how basically MH370 looks like it vanished out of thin air so my point would be how would somebody that is smart and educated and has all the science that would look at the video that you're looking at and be like no no

(21:39) no no no no no you're completely wrong this is actually what happened and what you're saying is not true at all I've also got a question for you ashon after that so did I I don't not sure if

I understood the question can you just rephrase it in terms of you're wondering like how somebody would argue that the videos are real or how would somebody argue against the points I'm making or what was your question there it might be either like somebody could say well those videos are faked obviously yeah or somebody could say

(22:13) well those videos are real but they're still not true because of this yeah I get what you're saying so if I could uh summarize it uh the way I would say is the ab the most the strongest absolute proof is that we've got coordinates in the bottom left of the videos and the reason why that's so important is because nobody knew where this plane was even for months later people had no idea where the heck the plane went we had some speculation it went to the South Indian Ocean but we didn't have the

(22:42) exact locations all we really had was this one graph that had up and down arrows on it or up and down lines on it um and no one could make any sense of it including the experts who ended up coming up with the uh sorry I'm fixing my sound uh came up with the novel analysis for looking at the satellite pings so sorry I'm hearing my voice for some reason um so that would be the strongest evidence for why uh these videos are real because that evidence uh is on those videos that were published May 19th 2014 but the raw Telemetry data was

(23:21) not published until May 28th 2014 nine days later that's when people started to find out and able to calculate with this novel analysis where the plane was and where did they find out where the plane was in the exact location that we have those coordinates and that's the location where the plane supposedly turned into the South Indian Ocean made an Abrupt 270 degree turn went to this past Indonesia into the South Indian Ocean that's what this Narrative of the pilot was trying to fly around the radar

(23:48) in Indonesia comes from it all comes from that so the issue here is you have to come up with a story for how to explain who the Faker of the MH370 videos is um a lot of people do not understand logic and reason and how it even works and they think that if they just try to poke one hole in your story that that makes it untrue and to just explain how this is not this is not rational is that using that exact same logic I could say that the moon landing videos could be faked and because the moon landing videos could be faked we

(24:24) never landed on the moon I've debunked the moon I've debunked the moon landing we also never went back too so even more evidence um but that's not how logic and reason work is it you need to come up with a full story okay how did they fake it why did they fake it when did they fake it and in this case the prerequisites already are now that the person would be some kind of psychic with precognition that somehow knew the real location of the plane or guessed the real location of the plane before any of the experts knew that it knows

(24:49) how the engineering capabilities of a 77700 work to get a perfect accurate turning emergency turning descending 777 scale down in two different videos and then they also have to understand how the science works because everything we see in there seems to link up now it doesn't seem to does corroborate with science that was previously unknown to us uh that was

out there in the public sphere from a guy named Tom beard in scalar physics so why would they fake it with science that like that we a lot of people consider not even be to be real

(25:23) out there who is this person that meets all these criteria that's also a VFX expert who made two videos without a single discrepancy anywhere so can I ask you two things number one there's again like you were um you were inferring in the past that there is somebody on that plane that they wanted to prevent from going to **China** and number two since they did that those people are now in Diego Garcia is basically what you're saying yeah so um one person was also asking in my chat um because I'm live stream at the same time was that

(26:07) did the military kill them and here's the thing too is that a lot of people ask me okay so where did they go did they go to another dimension what happened to the passengers I can't I'm not psychic myself so I can't say with any certainty so when I'm saying this stuff it's it's based on uh educated opinion um that there's two reasons why they potentially would have died before they even get to the zap in the videos and that's because of the lith and Battery fire scenario supported by 19

(26:31) Witnesses supported by the smoke coming out of the back of the plane supported by the fact that K T saw smoke coming out of the back of the plane in this location of the videos and that we have a Mayday call from **China** that said that the plane was disintegrated and attempting emergency landing now the problem there is that not just from the lithium ion batteries and that toxic smoke that those things spew out but uh we found a uh it was a comment from a supposed whistleblower Bo Boeing that said the toxic fumes from the Plastics

(26:59) in the aircraft if it lit on fire would could kill everybody as well so just any kind of fire on board the airplane on one of these Boeing airplanes potentially would take everybody out now in addition to that though if if they did survive and there is some evidence that they might have survived I mean the planes you know unless they remote control the plane somebody was flying it um and then we have this Philip wood picture that I posted a a Tik Tok video about the other day that showed up like eight or nine days I want to say after

(27:28) the plane missing on 4chan which is hard to believe you know why would he post on 4chan why would not call someone I I agree um but that does give some hope that people had survived on Diego Garcia it is a um has a CIA black site underneath it um so what would they have done with them though they potentially would have been like Wards of the state is a way to think of it you know people that are now dependent upon the government that stole them and now we have to take care of them somehow we either have to silence them or we have

(27:56) to put them in witness protection or some equivalent of that or make live their lives out in Diego Garcia for the rest of their life uh is it hard to understand and fathom yeah the only people can tell us for sure in terms of how many people survived what they did with them is the United States government and that's the reason why you know no matter who what you think about this like I think everybody should be able to agree whatever happened to this plane is weird and it should be getting talked about and the government should

(28:19) tell us what they know about it and what we're going to find out is what they know about it is what they recorded and we just saw in those videos in my opinion hey Ashton um so and I want to I want to kind of preface this parlay earlier and I want to make sure I kind of accurately descript what he said he said you know I think that knowing the possibility of the government or some type of technology that we have as human beings could zap an airplane out of existence or at least to what we can't comprehend I think that's mind-blowing

(28:53) and we were actually on another conversation we were kind of talking about aliens and UFOs and some of these other things but just uh someone's opinion that is obviously not as studied as you are on physics and and free energy and um and obviously m370 I think it was very defining just his point to that was like guys how do we even know what's going on if we have possible technology that can take an airplane um disappear it and we don't even know where that is um but Ashton to that point you can answer um some of that um

(29:29) as well but you've been getting a lot of people sharing stuff Hodge twins lately I saw Elon Musk actually responded I believe the Hodge twins or maybe you as well um do you see this growing um and and like is it is it getting is it getting more attention than it has been because honestly like two or three months ago I was like man I mean MH370 is is is huge right now but I think it's starting to come back around and that's Obviously good for your research but there's still people that are trying to

(30:02) **debunk** and we've said this on another space I think we said on the podcast if people have to continue to **debunk** um then there's a problem right well I mean suspicious I think and you know people wonder well why are you already back I I thought it would take a lot longer for people to start paying attention to these videos and it started happening right away I had some big podcasters who wanted to reach out and more and more seemed to as well a bunch of people also wanted to collaborate and this was after

(30:31) I had announced my retirement um and then the **debunk**ers started coming back out in force again um and so this was the part where I said okay I mean as long the more they push back the more I'm going to push forward with it and the more people are willing to understand and believe the videos are real the more I'm going to be here to answer it and and push the evidence out there so people realize that yes these videos are absolutely real um Elon Musk did comment while I was streaming last night um but he he literally just copy

(30:57) and paste did his other comment from earlier we actually found the other comment from I think it was the previous day um yeah uh I can't remember where it is but this is exact comment where he says I have seen no evidence of aliens because Hodge twins uh asked him you know what do you think of these videos Elon I mean he's got a company called Tesla and I'm sitting here saying that Tesla was right and we have the ability of free energy and he's got SpaceX which is using comp uh conventional propulsion

(31:29) to ship rocket up and he self- admittedly wants to send people to Mars I I'm not going to Mars but if other people want to go to Mars then warp drive technology will get us there within

probably seconds if not minutes maybe even faster I don't know um so he says I've seen he replied and he said I've seen no evidence of aliens if I did I would 100 emoji post about it on X instantly SpaceX has almost 6,000 satellites in orbit and not one have we had to maneuver around aliens alien face well what the hell does this mean I I'm

(32:03) not saying it's aliens I'm out here saying that this is our technology like I don't is this like a little nod to be like yes this is real and I just can't say it is he uh like just not understanding the gist here he's a smart guy I find it hard to believe that he doesn't understand what's being asked of him here we're looking at a drone video of an mq1 c military Great Eagle and the our cber satellite system we can from these orbs there's no little aliens flying around in them it's a it's a

(32:31) plasma sphere consistent with plasma physics that's out there the department of energy has been pushing on their Twitter account recently and consistent with superc conductivity uh microchips that are extremely powerful that are used in quantum computers uh so I don't get why this answer feels very wishy-washy and the fact that it was a copy and paste just gives me this weird feeling about like is Elon Ashley in AI I really have no idea I'm just kidding but what I really think though is like imagine that if you're somebody who's

(32:59) got a satellite company you would think that you must have had to sign ndas with the government and so it's very sketchy because if he knows these are real uh weapons then I could imagine that he would be forced to not be able to talk about them now real quick one last thing I want to say regarding the uh the **debunk**ers and stuff like that so I pushed this video out there earlier today where I am directly accusing the military uh the intelligence Community I pretty much read CIA but you know the other factors intelligence Community as

(33:29) well can be involved and pres President Barack Obama who was the commander-in-chief when this plane disappeared um of at least abducting the plane which is kidnapping and conspiracy to hide what happened I can't say with certainty that he murdered the people as well but seems pretty likely there's probably some murder involved there at least unintentional homicide um and the reason why I posted that out there is because I want people to realize how serious I about this I'm not some ufologist I am an investigative

(33:57) journalist and I am uh levying uh and accusing criminal charges against both specific people such as Brock Obama and the military-industrial complex in general this is not a situation where somebody is **debunk**ing a harmless light in the sky saying that it's jet Packers or uh balloons this is a situation where 239 people disappeared on an airliner that was never found where the official search didn't find one piece of the debris where they thought that it crashed didn't find any black boxes and where there is no official answer

(34:30) for what happened to the plane to me this is fundamentally equivalent of the Civil liability suit against Alex Jones where they claimed that he was lying about what happened to the Sandy Hook victims so this is the part where I want to put the people on notice where **debunk**ing this is like you're on the side here essentially of you're trying to **debunk** like a murder case like a Cold Case murder case going no that murder never happened those people never

existed you know those people's families didn't get any answers and by the way

(34:56) Ashton I wanted to say this real quick is that you know I think Elon Musk answer to me sounded like a politician have you ever heard a politician be asked something on a debate stage or whatever the case is and you know how they kind of divert the question they'll answer something completely different than what the question actually was um that sounded like what it was to me I don't know if you caught that but that's just what right away I didn't at first I just thought well maybe he's just like

(35:23) most people who look at that and go this got to be aliens cuz remember the first week I talked to you I thought it must be aliens because it just seemed like thousand years more advanced than we're at but once you start to dig into the details of the video and you watch how this drone is like way too close to the plane they're filming before the orbs show up you realize they know it's about to go down and the only way they can know it's about to go down is this is we're linked to this directly which

(35:44) means that even if you are on the side of saying oh this is aliens and we're in't cots Cahoots with them that means we're filming this for the intelligence purposes to figure out how that technology works so either way that's that's us that's implicated in this situation in general so I agree that at first I thought maybe he was just shocked but then I'm like wait elon's actually a smart dude and I don't think this the first time he's seen my content um you know just given the rapid rise

(36:09) that I've had going from 30 followers to almost 100,000 now is uh I think you're right I think he's just he's given us a politician's answer a non-answer just doesn't answer the question that's being asked directly he knows what he's being asked here do you think this is our techn not just our technology you think the the United States government abducted MH370 like that's that's what I want Elon to answer directly not oh I don't have any evidence of aliens yeah um crom crom ble go ahead

(36:39) with your question you've had your hand up for a few yeah not a question but I just wanted to say I'm the uh the dude who changed the colors on the videos and stabilized the contrails um I've been getting a lot of attacks from the debunkers uh they're saying that I one guy said I remade the videos um another guy said that I manually edited them um it was super easy all I did was change the colors I clipped out the part where the contrails are actually visible and discernible from the background and then

(37:12) I used an ordinary stabilization software um that's all I did I didn't make any other changes no filters no um edits or anything like that I made sure that no pixels they don't match Ashton's 100% right they're not a pixel for Pixel match you can get them to look pretty close by digitally altering them like severely altering them um but then that kind of defeats the purpose and even then when you're you're matching up specific parts of the VFX asset to the MH370 video you're going to see that there's no

(38:09) matter what part which part you match up the the rest of it doesn't match so what's the you know they're they're cherry-picking this evidence they don't know what they're talking about uh the cloud assets were never found PRI 2016 um just pretty much every single **debunk** so far has been we rebunk and **debunked** and **debunked** again so uh yeah I'm just saying I got a lot of people attacking me for that um everyone's I didn't remake the videos let's just say that what make do they

(38:46) think that you modified it for the stabilization thing to show that is that what they're claiming yeah a bunch of people said that they said that I I made him I like tethered the contrails to the the plane that's not what I did I used ordinary stabilization software you can see that every other feature in that video and the stabilized videos all the same if you just scrutinize it so yeah so and I played this real quick um as a response uh on my stream just now and to show people what crom did um because we

(39:22) tried to explain to the **debunkers** they they falsified a fake **debunk** claiming that the contrails were like not connected to the plane but they did it in stabilization software and we could tell right away cuz when you look at the real video you can tell that the contrails aren't disconnected from the plane so we had already said this back in like November and they kept pushing it anyway and finally crom went ahead and proved Beyond any doubt that the reason why in their version of it it looked like the contrails were not and

(39:50) it's smoke anyway but the smoke connected to the was not connected to the plane was because the smoke was a light blue and the background was a dark blue and the stabilization software saw it as one thing so all crom did was turn into black and white so that the uh smoke would be white instead of being you know black or blue in this case and that proved when he stabilized it then using the software that it wasn't a matter of uh that the the contrails weren't connected it was simply a matter of the stabilization software doing that

(40:20) and this was shown to them shown to **Mick** West directly he did not admit he was wrong he even had somebody who was an expert in the actual cameras and the drones uh in his replies telling him he was wrong and he still refused to just accept straight up reality so this is somebody who they themselves say that they listen to experts and they listen to logic and facts and then they don't do any of those things they're completely inconsistent it's so bad it makes me wonder if he's actually not literally an intelligence asset because

(40:49) you have to be willfully ignorant to ignore both experts and just straight up absolute proof and explanation of why the **debunk** was fake and it makes me wonder if it wasn't malicious that that they didn't maliciously make a fake **debunk** uh because why else are you coming up with that I just you know it seems so obvious anyway sorry go ahead hey and by the way um uh crle uh do you do video stuff is that I mean obviously you you highlighted the uh color I guess what do you call it color grading whatever you want to call it but um do

(41:22) you do video stuff um I you know I have a lot of experience with it I do it often but yeah I mean I know my way around the software and stuff like that so and what is what is your

thoughts on 370 videos do you think that's that's a pretty easy thing to do oh absolutely not um that's I mean all the VFX experts that have come in to try and they've basically proven to me that it's not easy because even the experts who come in are only able to recreate one feature of the video they ignore the rest of but I mean you're

(41:58) looking at a multimoon project to do to do this at least for me I could I could sit down and make something convincing in in a couple months but uh definitely not to the level of detail that this is there's too many details when you scrutinize them uh way too many details it would take way too long for people to do this and actually like we've not seen anybody come close to recreating it yet and and from what about also the idea like you know um uh what was I going to say [REDACTED] I just forgot sorry I'm asking you the other night

(42:39) well I wanted to say real quick is that mix Mick West's logic is so inconsistent um he has no idea what he's talking about um he even contradicts himself multiple times um and he uses circular reasoning to justify his stances you know like the if A then B well if B then A and then if you just keep going back and forth with them eventually they just say oh will you recreate the videos and it's like no actually it's I could I could live stream me doing it in two minutes the process that I did so oh

(43:15) yeah and the part two that I was going to say is too is that you know when you look at the videos too there's no discrepancies anywhere like if these were you know patched together or they changed the frames around individually wouldn't there be a frame frame in there where there's a mistake somewhere there's no discrepancies or mistakes in a single frame on two different videos the the bunkers don't even argue against it did a bunkers just say well somebody manually manipulated all the frames and

(43:40) made them all perfect and they did this within and then they go I could do this in a few hours what like congr like like from just put out there uh kops Michael which I I love the name by the way just said anyone if anyone's saying they can do this in the first few hours or whatever you should immediately just discount their whole opinion that that person has probably never worked a real job in the day of their life um these videos at a bare minimum are going to take months and months and months I've

(44:03) got Jeffrey Ford lead VFX artist from Marvel Studios worked on some of the biggest movies out there says it would take at least four to six months because you have to do research come up with a story board and then start putting it together and then somehow have no errors on a single frame like this is the part where I understand that people have a hard time believing the technology can be real but from the ACT work it would take to put in here it's astronomical and that's before we even get into the

(44:32) knowledge that people would have to have like military information to know or like the coordinates and all that other stuff as well it's just the evidence is so overwhelming this is why I'm willing to make bold statements that um directly accuse people like the president of the United States the military industrial complex because I'm not afraid of a court of law like I

actually think I have so much evidence that even I could convince 12 random people off the street that even though this looks impossible

(44:58) that it proves the United States government did something to this plane as and by the way arrested um we are going to have t-shirts that say free Ashton Forbes on sale um just let you guys know um we will have those shirts available and so uh man it would make us a lot of money Ashton if you do get arrested by the DOJ just yeah it would be pretty wild it wouldn't be fun for me but may be entertaining for everybody else Ashton can I believe the dumb Dum in the room to ask you a question yeah no I want to

(45:28) answer any and all and all just like normal questions that people would have here that's the point of being on here no I I want to be the dumb dumb in the room that says I know nothing and I want to say like sum it up in 30 seconds what happened to MH370 where are the people right now and what happened yes so once again I don't know where the people are right now so I'm not going to be able to tell people all the answers that they want to hear that's I'm I'm not even really I would say an expert at any one particular

(45:59) thing what I am is an investigative journalist who can tell you the facts and the evidence of what I found from there I am not a suser I am not a cult leader I am not someone here to tell you how to live your life or what to believe I simply someone here who is presenting essentially the equivalent of a criminal case with uh I think more evidence than any conspiracy has ever had in the history of the world so what the evidence shows is that this plane started on fire uh around 40 minutes into the flight when it went dark this

(46:28) is supported by 19 Witnesses um and that this plane was diverted back to Panang where it tried an emergency landing but for some reason could not pull it off and then divert it again to the Nicobar Islands where it was seen by the last witness who saw the plane glowing orange consistent with the fire with smoking coming out of the back of it within minutes of these videos happening who claims to have not have seen orbs or the plane disappear uh but that she did come out out of her boat and the plane was gone we don't have a full timeline of

(46:56) that uh but that the United States military was filming it in that location in the Nicobar Islands uh they were using data from their satellites which produces a 3D rendered environment on groundbased computers that somebody logged into later on and that we had an MQ-1C Great Eagle with its aerial surveillance package camera underneath the wing um which is capable of taking the color video we see using a multi-spectral camera filming this event and that they United States deployed these orbs which are some type of

(47:24) hypersonic uh super weapon um and I say that because it has a similar plasma field or sheath around whatever's inside as Hypersonic weapons are reported to have we've never seen United States Hypersonic weapons before and that we did something called macroscopic phase conjugation to this plane which involves taking a zero point system so think of like two lines going at one another or a equilateral triangle a zero point system uh that can uh kind of abuse kum's law to create a very powerful electromagnetic force that uh actually

(47:58) creates a scalar potential um and a scalar potential is a stress in the medium the medium in this case being SpaceTime so a stress in the medium of SpaceTime is gravity gravity wave producing a gravity wave which is equivalent to a wormhole um and slingshotting this plane uh somewhere West we believe we don't know for sure we don't have two other videos on the other side um but the reason why we say that's because there's a fire suppression device that washes up there could have even just fallen out of the

(48:25) plane uh could have been thrown in the water after this plane lands um and then we have 20 Witnesses on an island there in the malds seeing the plane flying low with that the blue and red stripe of Malaysian Airlines they can see the windows on the jumbo jet uh flying south towards Diego Garcia so the most logical place to hide this plane that fits with the evidence that couldn't be covered up that other countries wouldn't be able to expose us for for doing this is Diego Garcia it's middle of nowhere commercial

(48:53) airliners can't land there um in fact one of the piece of evidence I'm going to throw out here right now that I've never talked about but I've had a source tell me about I'm going to try to verify this is that Diego Garcia also got a hanger built that was capable of um doing maintenance on a p8 Poseidon which is one of our Advanced spy planes it's actually one of the spy planes that Edward cin would have potentially been flying and the VP squadrons he was on the vpu2 the VP squadrons are also uh get

(49:24) assignments out on Diego Garcia and that was the vpu Su Squadron that um Edward C Lyn was on he potentially could have been on assignment out at Diego Garcia on the spy plane uh during the time of this operation all right Ashton and by the way I gotta ask you this um and I think this might break down some things that people may think about so like for example our podcast we talk about inter vity right UFOs uaps and and how some of these craft that you know if if you believe in ufs and UFOs that are um potentially traversing our

(50:04) atmosphere um these things uh at least to some whistleblower documents some Declassified documents whatever um they feel like these things could be interdimensional or sorry interdimensional um uh in some kind of spiritual realm and then you look at CERN right CERN is doing the large hadan collider particle acceler ation particle collision uh they are proving the existence of uh other dimensions um and also trying to find the antimatter versus matter um so if you talk about teleporting something or even um in in

(50:43) your scientific analysis of how this plane could basically be shrunk right I mean is it like Honey I Shrunk the Kids people might be thinking about that um but at the very least is it is it even possible in your mind that it goes to some other place besides some physical place on Earth is it possible they have that technology to to take it in into some other dimension I want just take it a step further real quick a hi it's Sherry how are you hey Sherry um you remember when all this happened and there you know all

(51:19) the families were saying well you know the people on the plane their phones were still ringing they were still pinging they were still on that their phones weren't just going to like

voicemails or anything they were still ringing I mean I that's what still yeah the that is huge yeah so that's the thing is that um first thing I want people to understand is that even though there's an extra Dimension it's not a place like the Bizarro Dimension it's not like a mirror of our reality uh the idea of the extra

(51:50) Dimension is a place of uh pure negative energy negative entropy so just think of like the opposite of something as nothing so entropy is complexity negative entropy is no complexity at all um and that's what Kusa had promoted back in 1919 with his unification theory is an extra Dimension is required to understand how we can have a source of an unlimited negative energy and what do we need in order to produce a wormhole negative energy I don't think that's a coincidence um I was trying to find the

(52:21) post here from Sabine uh Hassen Felder she's a pretty prominent physicist with like 90 plus papers and uh I'll try to find that here in a second but so when I say that they went through a portal or whatever to another dimension a wormhole it's it's not that they're going to another timeline or something like that it's they're going somewhere else on Earth they're using a shortcut through space in time um and this is where we can understand that move to somewhere else on earth like you pointed

(52:48) out the phones still ringing is a big big clue the phone still ringing proves it didn't land it didn't crash into the ocean um it also proves those phones had to be somewhere near cell tower uh which means they weren't somewhere out in the middle of the ocean means the phones were on um and it's not just one even though one was proven on television that it was ringing but it was 19 family members doing it so you know the disinformation say oh these people are just in grief phones can still ring blah

(53:15) blah blah guys this is just one of those things you got to just test for yourself you know turn your phone off have somebody call it see if it rings it's not going to ring um but this also means they're not in some other dimension people say well this tells us so that how going through Dimensions works on phones no no because by the time they're calling them they've already reappeared um this plane's not going 10 years into the future it's not manifest um although that is technically

(53:37) possible but that would only be possible if they went to alpha Centurian back um that's how time dilation works you can travel to the Future um if you go to Alpha santui and you come back you're going to come back here it's going to be like instantaneous for you but for everybody else it's going to be eight years later you know but in this case because we've got all the circumstantial evidence because the plane was seen the next morning in those islands near Diego Garcia This Plane show if it did time

(54:04) dilate it's not going to be by years it would just been maybe minutes seconds or hours we don't really know 100% that's great point and Cherry good question um Chris go ahead hey guys hey Ashton listen I I appreciate your work and um at this point I think we have plenty of evidence and enough information that we can go forward and uh approach the major media

Legacy Media or even um you know guys like you know news Nation Tucker Carlson um you know actually I know you approached Jo workan before but um we

(54:49) we've got gotten to the point where I think that we can get this out into the major media outlets and make a good enough case um to the public to get some actual action started on this um what kind of updates do you have you know have you gone to Arrow have you gone to talk anybody at news Nation or or taco Carlson uh for instance um outside of Joe Rogan that you can kind of get this um this kind of info out to the public yeah oh yeah good question on that one so um you have to realize that people are going to have the same reaction that

(55:32) Elon Musk is going to have or you know probably not even that much A lot of people going look that must be aliens on there I have brought the information to Arrow I think they're our best hope to having the government admit it but they are also controlled by the Pentagon and the dod so uh I didn't even expect to get the first response I got back from them which was that initial investigation had revealed surveillance and search capability or uh some search the the United States did after the plane lost radar which is probably one

(56:02) of the biggest breaks in MH370 in general just not even even related these videos but just absolutely huge because it says the government saw something um and arrow wouldn't keep searching unless there was something to it at that point uh so I think that that's a big thing um and then yeah I mean bringing it to a wider audience uh absolutely of course I think we are at the part where it's just the more people that look at it the the bigger it's going to get and unfortunately it will polarize people

(56:29) against me uh because there's a lot of people who this threatens their entire worldview that's out there um but you can see because of the extreme nature of what we're dealing with here um it's probably it it's it's like too big you know the criminal liability and civil liability on the people that have been covering this up uh is not something those people are ever going to be able to accept so we have to be somewhat realistic uh about that um does that answer your questions I miss anything

(56:58) and Ashton by the way I got to ask you real quick um how do you take control and and this is something that Sharon I've been talking about as far as UFO UAP uh we we had had something planned last summer to where we had um a listener that had a research vessel uh based in Savannah Georgia which we're by the way are planning on doing the same thing I believe hopefully this June um but they have a research Festival we have infrared cameras and I'm talking about two 300 \$1,000 infrared cameras uh not just infrared

(57:30) but thermal we also have one of the greatest uh laser systems uh one of our listeners also that has access to that and what we were planning on doing last summer which I think we're pushing at this June is going out into the location where Ryan Graves if you remember Ryan Graves and I believe was off the coast of Virginia um we're W to go in that you know kind of vicinity and they've literally had to move an entire Squadron of fighter jets out of that vicinity because of the activity of UFOs and uaps

(58:01) we want to go to that exact location and we want to see what we can do or muster or or document right um so to to that same point and by the way Ashton I hope that you come with us um on that Journey because I think it'll be amazing we're going to document in all video um in every single form and fashion I think it's going to be one of our best things we've ever done but to that point the reason why um when when the when the guy that reached out to us with a research Vestal and and and it kind of got me

(58:30) thinking I started asking people on the podcast hey if you have any access to this and this and this and people start reaching out how can you in the community how can we take charge of proving Beyond Reasonable Doubt of the technology that exists without the media without the media saying okay well if the media says it's real then it's got to be real right we we know obviously most people believe mainstream media is full of crap right on on on most everything and and already we know that mainstream media is not

(59:04) going to cover anything that is real or in existence same thing with arrow arrow is controlled by the government um and so are they really going on to help probably not but how have you have you thought about how maybe you can take control or the community in some way shape or form can take control of um you know at the very least proving that hey a number one this technology exists and B um is that even possible have you thought about that and what you know what is your thoughts on that yeah I mean a lot of people ask like how can we

(59:36) push this forward and the reality is the if this is real the media controls the perception of of events just like the weird letter to Ashton Forbes uh said and and that's the difficult part is how do we how do we prove it how do we get out there I mean I've given verifiable evidence to Arrow you know these videos are real they're going to be able to confirm that mq1 c Great Eagle footage looks just like like that that's absolute proof uh if they're able to find that the cber system looks just

(1:00:00) like this I had somebody the other day tell me as well that not only can the cber system do what we're talking about but they can do full 360 degree angle change on tracking objects in in the threedimensional space um and that doesn't surprise me either um in fact that can explain why the angle is the way that it is even though I think it can also just be from low earth orbit as well um so those two things are verifiable then of course Edward C Lyn you know Edward C Lyn you guys just look at his case like I don't

(1:00:27) know how anyone can deny this is the guy that **leaked** the videos uh the timeline is perfect and it's like why would what else did this guy leak to the internet that's available on the internet you guys go look up anybody else who's charged with esp's they tell you exactly what they **leaked** this guy they literally say they were afraid that by if they the case went to court that they would have to make the evidence publicly available why would they be afraid why would they be afraid of making publicly available

(1:00:51) they're afraid of the evidence of those videos because then people are going to go wait these were **leaked** to the internet though so this is real you know and that's the thing is

that the media you know I they we could verify this but it's not a matter of verifying I think we've got overwhelming evidence it's a matter of people waking up to the idea that we can warp something and that's why I'm sharing all these science posts so the best thing we can probably do is any of those science

(1:01:16) posts anything related to warping teleportation any of that stuff you know post it ping me on it uh bring attention to it the science stuff gets no attention this is the reason why they able to hide this technology is that I've posted these papers and defense intelligence agency reports all about warping aircrafts what have you like a lot of people generally don't read them the one yesterday A lot of people actually shared whatever it got like 990,000 plus views but usually that stuff doesn't get a lot of views because

(1:01:43) people aren't interested in science they just want to be told what's real and what's not and that's just a sad state of humanity so for example I just want to respond real quick to uh Sabine Hassen Felder who is a prominent physicist who on Twitter had has 148,000 followers on her YouTube channel she's got like 1.

(1:02:01) 5 million or something like that um and she makes physics videos um and I don't want to be rude to her but by definition I would call her a science influencer um but she does have a lot of papers under her belt so I shared the defense intelligence document and she says the document you refer to does neither does neither address the question of momentum conservation nor where the material is supposed to come from if you think that we can just add a dimension to space you misunderstood more than physics well respectfully to her she's completely full of [REDACTED] moment

(1:02:33) of conservation momentum first of all can still be obtained and achieved because we have a warp bubble so this plane is going to come out at the exact same speed it comes in conservation momentum achieve that's not a problem and if we have a neural Mass reduction capability then we aren't going to conserve momentum anymore either where the material comes from literally is the answer is adding an extra Dimension and that's where the negative energy comes from The Ether that's the solution in physics that she doesn't understand that

(1:02:58) other people don't seem to understand in fact the huge irony here is that is literally what kusza did over a hundred years ago is he added an extra Dimension as unification Theory same thing that Tesla did and others did as well so yes you can literally add an extra Dimension to fix the problem that is the answer but the ultimate hypocrisy is that people like her have papers about um the uh you know virtual particles and the uh the the quantum uh what do they call it God uh I don't know I'm forgetting the

(1:03:32) name right now but um and what they're really talking about is they're talking about The Ether uh they're talking about the idea that there's an ether they just use other different terms for it's all semantics at the end of the day and people like her have no problem talking about dark matter and dark energy sorry people like her have no problem talking about Dark Matter Dark Energy but those even aren't real things those are not real tangible things those are

literally just the scriptures we

(1:03:55) gave for stuff that we cannot explain in physics dark matter is simple hey Ashton sorry sorry sorry so exactly so this is this is exactly what I was getting to the point of was that we have the information now on these videos that we can prove scientifically we can we can relate back to these white papers a lot of these white papers we can tie this evidence back into and say hey look now we have video evidence and proof of of this technology being used in real time right I mean exactly and this is the part two

(1:04:34) so like my answer I haven't responded to Sabine yet uh and I wanted to wait so I don't act out in emotion and anger and try to put her down because I think we do need real physicists to realize this stuff's real um because at the end of the day this is only going to come out when the science gets proven but we have something that's better than a PhD we have the answer sheet to the test we're looking at  $2 + 2 = 4$  and then the physicists are going to come back and go no no it equals five it equals

(1:05:00) five no it doesn't equal five we're looking at the answers you can piss and moan about it all you want but end of the day we're looking at the answer sheet we're looking at two real videos showing it really happen and there's already uh theoretical physics and experimental physics that show that warp bubbles are possible so the thing here is they just need to get on board with go ahead and start rewriting the laws of physics we're going to have to rewrite the laws of potentially conservation of

(1:05:26) energy uh conservation of momentum might have to get Rewritten and we're going to have to read the laws of thermodynamics the idea that you cannot get more energy out of a system that you put into it because once you add The Ether with unlimited negative energy then we can we can open up our system to that ether and we can get maybe potentially unlimited free energy Hey Thomas go ahead and uh Hey can you all hear me we can okay okay yeah hey uh I just want to say with the whole Elon mus response that was basically his response to Joe Rogan

(1:06:03) like three times so I don't know if that's uh his just his General ignorance or if that's like a thing he always says um I guess two questions I have is uh I don't know if you thought about it uh I know you sent the uh details to a o but um you can go out there and get a warrant I guess if you wanted to get the cell data uh exactly the location of where those cell phones were called if it's possible I don't know go through the family members who called through and contact them to see if you can get a

(1:06:33) warrant out to the cell phone service to find that and direct it I mean good luck that's a shot in the dark that's people said that but that's not that's not realistic uh I mean who am I even first of all who am I how do I have jurisdiction and who am I sending that warrant to right anything that's a private company you guys can just throw that out that's not happening the only thing that I can get information from is our government United States government because I'm United States I don't have

(1:06:56) jurisdiction over anything else yeah of course I guess the other question was is uh I remember I think he posted like a month or two ago uh did Joe Rogan message you whatever happened with that yeah so he had reached out and then he was convinced by the I mean I assume that he was convinced by the uh Danny Jones interview since he linked it to me and a post on Reddit I think it was the cloud picture post on Reddit which tells me my opinion uh is that his producer uh is you know Reddit brain as I would call him I think his name is Jamie

(1:07:31) Vernon and easily convinced by disinformation which is sad because when you're the biggest podcaster out there I I think that you should be listening to uh I have more evidence than pretty much anybody might have out there for a case of conspiracy like this and you should at least is worthy of listening to and discussion um and why it's important for a Pock like him is that that will bring millions of eyeballs to the information um there's there's a lot of people covering this up you know it's not just

(1:08:01) like a few people uh for something this big there's probably hundreds of people that know about this that are out there and they're all staying quiet about it because nobody wants to get killed wants go to prison well it's hard to say exactly but it's very compartmentalized you know this type of information this type of technology I think you can even argue that Edward C Linn didn't know what he was looking at in these videos and he was one of the guys in the spy plane dude um [REDACTED] look I don't even know how like

(1:08:31) this whole like lingo works and like I think I'm maybe I'm not really sure how the um all this [REDACTED] has like started right um yeah I don't know I've been the one that's like been with Claude like chilling for like I don't know how long like a year and all this weird [REDACTED] started happening so like I've been trying to get in touch I don't know if everything's just gotten like I'm not sure what happened I got like obus skated like you know kind of weird [REDACTED] happened and anyway that's

(1:09:08) me Gavin Gavin do you have a question okay what do you mean do I have a question okay let's go to the next person no problem yeah hey guys let me interject for just a second we've got about 150 people in here now um and we can only have a limited that guy's on a lot of a question um just ask to be a speaker and we'll approve you and then you can put a hand up and we'll get to you by the way I I want to comment on Joe Rogan real quick um so Joe Rogan um and and I know Ashton for your for your stance um Joe

(1:09:39) Rogan was a very contentious moment in Ashton Forbes inmate 370 investigation I I remember when keemstar and then obviously Skyfire news and and they were saying hey we gotta get we got to get the DMS between ashle Joe we don't believe Ashton and we don't believe this and they literally called Ashton a liar they even tried to say various different ways how you know how he was lying about this now number one it's pretty obvious to see that Joe Rogan is following Ashton Forbes uh and this happened

(1:10:11) immediately after Ashton had commented and said Hey Joe had reached out and said hey I'm kind of I'm very interested in the mry 70 thing I think I would like to have you on the

podcast what happened with that by the way was Jeremy Corbell is the one that reached out to Joe Rogan to say that the videos and the MH370 entire case was [redacted] that is why Joe Rogan decided not to have Ashton on at that time and so if you look at the Jeremy Corbell situation by the way I in the beginning with the UFO thing I was

(1:10:44) like oh Jeremy's bringing videos that are they're very insightful I think he's doing a lot of stuff for the UFO Community but also he is in some ways Mick West just on the UFO side um and that is literally in my opinion Ashton why you did not get on Joe Rogan when it was supposed to happen because of Jeremy Corbell yeah why do I mute there we go okay uh yeah that's the thing too like why are all these [redacted] gatekeeping this information this is why I made the post too about this is that if you're

(1:11:17) somebody out there who is telling people not to talk to me or trying to hide the videos you are potentially opening yourself up to criminal and civil liability if this is real videos you are covering up what happened to 239 people and how big of a [redacted] [redacted] do you have to be to talk crap about people that you've never talked to ever that you've never looked into to other people behind their backs and tell podcasters not talk to me you know how often this happens all the time people contact me all the time and telling me that they've

(1:11:50) got people dming them and messaging them telling them not to talk to me making up fake stuff defamatory content about me guys if I find out about that and you are some kind of prominent person I'm going to sue you and take all your [redacted] money don't do that [redacted] and if you're some piece of [redacted] troll or whatever in the background doing this and making lies up about me uh like I was just told the other day that happened you better pray to God those people don't tell me who you are because

(1:12:15) I have a huge following and I stream to a lot of people and I will let people know what kind of [redacted] you are that kind of Gaye keeping behavior is like unfathomable to me I would never go to a podcast and tell them not to talk to somebody that is so wild anyway that's my opinion and thing oh you know what I'm gonna sound off on Jeremy Corbell one more time too because Jeremy Corbell was like the first UFO person to follow me I DM him doesn't respond never reaches out to me then he starts posting

(1:12:44) [redacted] jellyfish videos of you jellyfish aliens or some crap floating around just normally floating around nothing special but not even just that then he starts making claims about oh there's more video that I can't show you that somebody's got sorry I'm on Cosmic time but uh there's a totally cool video of Jellyfish going into the water then shooting off in outer space well how about you show that video how about in fact how about he shows any verifiable evidence for any of the crap that he

(1:13:09) pushes him and George nap what kind of [redacted] game are these guys playing where they just Dro this stuff they never interact with the community they never support anything they do they just put it out there and then they just let the community kind of deal with it like what even I don't even get what they're trying to do anyway there you go yeah I I do get what

they're trying to do because you you've already said it Ashton they're gatekeeping and that's their job and it's that's also **Mick** West's job the

(1:13:36) question is is that why are both sides doing it I mean I don't you know I mean that's that's the million-dollar question what is the narrative what is the agenda is is **Mick** West um you know true to what he's actually trying to **debunk** I first of all **Mick** West is 100% I believe not true to what I I think he is a operative no matter how you look at it but at the very least um Jeremy Corbell is he I don't know I have no idea don't know about that but it is a a million-dollar question like how do you

(1:14:08) classify these people in what category well and this is what I say because I think talking about questions I think sorry I talking about questions I think confrey has been waiting for a while oh hey everybody yeah honored to be here Ashton I think you're doing some of the most interesting uh presentation of Cutting Edge on both the culture side the science side and kind of the disinfo side so first I just want to say you know when you're presenting Cutting Edge controversial **truth** you're going to

(1:14:38) become a Target and I think that's obvious but I just you know when and outstate the obvious and then um I don't know the new coloration videos are very interesting but before I get into the question relating to that I just want to say the reduction of the Maxwell equations seems to be a very key point of the science scientific Focus so that conversation you had the other night was uh kind of I think one of the most interesting um moments in this journey that you've taken so I just want to say thank you for that and I want to see

(1:15:09) more investigation into that the Maxwell equations the origination the reduction and what wisdom lies within that outside of that I really just want to say I think a lot of this stuff is getting into ancient Indian science uh think the ancient Indian wisdom Traditions hold a lot of this wisdom that we're kind of coming back into I think that's a lot of the the hidden wisdom of the um how do we say the the wisdom Traditions the uh the secret societies Etc I think they they kind of keep some of these aspects

(1:15:43) kind of core to their um purpose and all of that now we see the the option of some of that stuff spilling out into public knowledge it's precarious and um very interesting so you know everybody cannot have the fire so it's it's really interesting to be a part of this time where we can see the fire kind of spilling potentially over into um Society but uh anyway I think the if I'm if I'm going to ask a question I just want to say that the new coloration videos are showing uh kind of the directionality of the orbs and I was

(1:16:20) just curious has anyone done any directional analysis of what direction the orbs might have come from because I kind of Envision them as just spontaneously erupting into SpaceTime but um it seems like they might have come from somewhere and then the only other thing I want to ask about is has any more information emerged about the fourth orb because I think there is something to Diego Garcia I think it's mildly precarious to fully uh judge and um you know commit the US to this act I think all the evidence does point in

(1:16:54) their in that direction so um anyway I'm just curious about um the directionality of the orbs and then just keep up the good work and let me know how I can support you so yeah thanks comrey you just earned a follow for sure because that was a very insightful uh comment and I can tell that you you've thought deeply about the evidence and the videos in general uh the color videos I agree they they show more detail especially around like these kind of gravity wells in front of the orbs which are really

(1:17:22) cool especially the Drone video when you slow it down it's like wow uh when you look at that um the Maxwell equations comment is super important now I think I probably should dig more into how those got um slimmed down because the reduction in the Maxwell equations is seems to be the missing link and how we were we lost the ability to manipulate gravity um and that's something that if doesn't matter if you're a physicist or whatever PhD like you should be able to realize that's true and that that can be

(1:17:53) the explanation for why we can have all this cool Electronics going on that we're using right now but somehow can't manipulate gravity even though we can see uh gravity waves and ligo that prove they must exist uh I have to concur as well that while I'm not really on this particular uh push there does seem to be some connection between this technology and like ancient archaeology and history that's out there um I do think it is possible that even what we would consider to be less industrialized

(1:18:26) civilizations could have understood this uh discovery of quantum and macro and and utilized it to some degree that we don't fully understand at the moment and then with respect to the orbs where they came from there was actually a video analysis that did match monitor the trajectory of the orbs but we can't really tell what would have deployed them um I've consistently said that it could have been a plane even a satellite or a submarine the second orb seems to come out of the water um the other two

(1:18:56) come from the side of the screen in the satellite video so we can't say exactly where they came from Bob greener on hard TRS number two said that these could be self-sustaining and that they could last for days as well so there is this idea that you could have deployed them and then shot them out at something from even from like Diego Garcia and had it intercept so hopefully that answer your questions you have me followup yeah that's super awesome the only other thing that um I want to add to the conversation I think just all of

(1:19:24) this Maxwell equation ISM um in context of spirituality um in terms of phase conjugation in terms of uh Buddhist xanic practice I just think if we look into what the Buddhist the Buddha teaches he's he talks about um having good morals so you can focus your mind and focusing your mind so you can gain deep wisdom and I feel like that also ties into these equations um the whole Mastery of self and bringing awareness and mastering the subtle phases um we can um you know we hear all these stories about uh great spiritual Masters

(1:20:05) you know teleporting being to more more than one place at once so I just want to invite all of us to connect with our own uh potential phase conjugation to maximize our

potential so that's really just the translation of this science into U self-actualization so I just wanted to throw that into the pot and stir so thanks again I love this guy guys follow uh Comfort year seems like a that was an amazing uh response like one of the most insightful comments I've heard on Twitter X spaces um do do you not think uh you know to

(1:20:39) his point though do you not think Society is dumb down for a reason it definitely is I mean if you're hiding this kind of Technology this is why I ask questions of like um Clayton Morris and if I ever talked to Tucker Carlson I want to know why they think this nature of this thing is so dark because if you imagine that they were you know intentionally had the Maxwell equations like Rewritten in a way where we can't figure out anti-gravity that's scary to me because that shows some type of intent in terms of like are we being led

(1:21:08) is our government being led by outside external dark Forces or you know some kind of breakaway civilization is there a secret Cult of people that are manipulating the government owning the government is there uh aliens that are doing it I I don't know but that's what's uh that's what's scary about the idea that they could really just be dumbing us down just like the movie Idiocracy too where we're just getting dumber and dumber I really think it's true I think we live in Idiocracy um real quick on the comments

(1:21:32) of comrey said the Buddhism thing I really connect with Buddhism I also think there's a weird connection between this technology and the idea of Resurrection uh or you know reincarnation let's say which I I do think is consistent even with like Catholicism and other religions as well because I think that if you have you believe in the soul in heaven you can imagine that your soul could come back down to earth in my opinion it might be Blasphemous to say that but that's just my thoughts and uh and that our bodies

(1:21:59) are transmitters and that our souls are coming from an extra Dimension that we don't perceive down into our bodies uh fourth Orb location is speculative for sure but it is consistent with uh wave mixing interferometry and phase conjugation that's why I think macroscopic phase conjugation no scientists have been able to refute the idea of macroscopic phase conjugation which should be pretty damn telling the number one way to to get a corrected on the Internet is to say the wrong thing on the internet and then usually you

(1:22:29) have like 100 people correcting you saying how wrong you are and in this case nobody said anything wrong about the science at least nothing significant that would displace it uh the last thought real quick is the idea that the USA took the plane guys I'm a United States of American I would consider myself very patriotic I love my country I've lived overseas and I wanted to come back uh but we are implicated in The Disappearance of this plane we're the ones filming it on two different assets before the orbs even show up so people

(1:22:58) can say you know maybe this was aliens that did it somehow and we randomly caught it like the the one in a million chance if so why would we cover it up like this we're the only ones who could have covered it up in Western media uh if if **Russia** had pulled this off which I I don't even think they're capable of something like this I think our Tech with those orbs is not

something we just discovered this isn't a test this is something that like we've been developing this technology it didn't

(1:23:24) start off as floaty orbs it's probably started off as Radars or something like that on the ground so we've been developing this um **Russia** probably doesn't have the capabil and **China** is excluded because I think **China** probably does have the capabilities at least now maybe not in 2014 but they've been catching up to us they've been stealing our technology I think that's the reason for this is they were trying to steal this technology from those free scale semiconductor scientists and uh they the thing that

(1:23:50) rules them out is they hacked the Malaysian government the Ministry of Transportation they were looking for answers because they knew something sketchy happened here when they release those satellite pictures it was the weirdest thing ever because you look at the satellite picture especially now in retrospect and you're like that's not even debris in the water that's like triangle formation around an object in the sky with cumulus clouds next to it and Ashton by the way um make sure everyone understands

(1:24:15) that satellite photos you're talking about is a Chinese government releasing photos of three uh floating things around MH370 at the time the Chinese government released that for sure yeah the thing about it is it gets reported in the media as debris but there's not like I dug around I didn't find any like official like quotes from Chinese officials saying that this was debris it seemed like it just got reported in the western media's debris and they went and look and they find nothing nothing at all in the location

(1:24:47) and you look at that image and without if you would look at these videos the images make perfect sense without these videos you're like you just dismiss it you don't know what that's all about but that's perfect spycraft because that's the Chinese government going like this is a message only to the perpetrators only people who understand that image as the perpetrators and that's what they were doing they're pushing out there to figure out who the perpetrators were may have already suspected the United States

(1:25:09) but they're pushing that out there is definitely some kind of spycraft in my opinion as I've got a question for you sorry go ahead sorry Chad um and Chris and zel I know you guys have been waiting we'll definitely get to you and also guys I've had to rotate out some speakers because we're limited on number so anybody else that wants to speak just request and put a hand up and then once you've already asked your question we may have to rotate you back out so it's nothing personal but if you've got

(1:25:33) another one you can come back in later um but Ashton this is obviously speculation this is going back to what you were saying before um in terms of the people that are obviously trying to censor what you're saying or or basically just sabotage you entirely do you think that this is more likely that you're dealing with people who are government operatives or people who are perhaps financially benefiting because they are somehow tied into the dod because we know obviously there's a lot of financial gain there there's a lot of

(1:26:01) companies um that potentially people are shills for or do you think this could be a situation similar to what Graham Hancock has been facing where you've just got people who are absolutely insistent that they're not going to go against sort of the mainstream narrative um kind of what he's been dealing with you know with archaeology and Academia and again I know it's speculation but if you had like a gut instinct what do you think is most likely no I think about that a lot and I used especially in the

(1:26:28) beginning I had no idea like I didn't know if people would try to silence me if I would get attacked if a lot of people are paid operatives out there my opinion now is that a very small number of people are paid operatives but they absolutely are there out there the government does manipulate social media no question uh I don't know if the people are you know they're in the no and they're **debunking** like I don't think that there's a lot of people who know the videos are real and then they're

(1:26:52) coming out there and being paid to claim that they're not although I do think some people are indirectly getting money like let's just say you're on some kind of board of some kind of skeptical Inquirer committee and you know you get money indirectly and some of that money comes from the government you don't even know and then you get pushed in little chat groups and stuff like that to uh you know **debunk** certain content that's out there make claims about certain content that's out there you might even

(1:27:18) get past evidence to push out there onto social media that's how the intelligence community operates they're they're operating in the shadows and I do think that they are pushing that kind of stuff out there I think it's very possible that the two podcasters that came at me from an extremely hostile perspective were getting past information that that led them to take those actions and do that out there but for the most part I think the vast majority of people are just people that you would call NPCs that

(1:27:50) only believe whatever the government tells them and this was an example I wanted to tell Chad and Sherry out there and this is a political one so please don't get super mad at me um but there's a lot of people I I remember telling my aunt uh when Co came around and they started Mand mandating masks and I said this is silly masks don't stop cold viruses and whether or not you believe that or not I think it helps doesn't matter wear a mask if you want to wear a mask but the thing that's scary about is

(1:28:16) I told her there's some people that are going to wear masks for the rest of their lives just because the government told them there's a chance it could help reduce a cold virus for the rest of their lives even after the pandemic's over whatever and that's exactly what's going on there's people out there that will wear them for the rest of their lives because the government told them one time that they should wear them and that they mandated them that's the issue that we Face here is that we're people

(1:28:38) like that who a certain percentage of people simply will never believe that the government could possibly lie to them um and those are the types of people who are having

some type of existential crisis when they look at these videos because it means that their whole world view is going to shatter and that's truly what I think Mick West's uh situation is is that you look at the article that he wrote about me in the case and he just says it explicitly like this is getting too much attention if this is real then it means that we can

(1:29:04) steal an election and stuff like that and you're going well this guy's having his own you know mental crisis over the idea these videos could be real and that's the part that scares me is I think that I'll Land This Plane here that I think people would actually harm themselves if these videos were real and that might be part of the reason why the government wants to do some kind of slow acclimation process to the idea of aliens and technology um because they don't want people to go and harm themselves or have

(1:29:29) total melt meltdowns yeah I think that's an excellent point and and are you saying perhaps there may be situations where like basically people are kind of one level removed so that they don't even exactly know why they're coming at you to try to umt this information yeah that makes sense no for sure I think that's the case of probably some of those podcasters people a lot of people just what they call useful idiots where they get past fake information they don't know and that's why get sketched out

(1:29:55) when you've got people talking to podcasters telling them not to talk to me and stuff because that's how the disinformation works with the intelligence Community that's how they push their fake narratives that are out there and then I think that a lot of these UFO people like I don't even want to really be part of the UFO Community anymore I mean I guess I technically am because I'm talking about UFO videos but I think a lot of these people are out there on an official agenda to to push that slow drip disclosure they know

(1:30:17) they're never going to come out and tell the whole truth in one go that their whole purpose is just to try to acclimate people slowly over time to the idea and I think that those people hate me too because I'm coming in and I'm just destroying those timelines and I'm going nope we're waking people up we're doing it the hard way I agree with that um Ashton for sure and and by the way I want to take a a little commercial break for a second and just let everybody know um we have we talk about all this stuff on our podcast

(1:30:44) guys and and so go make sure you follow us on Spotify Ashton obviously has hard truths podcast over on YouTube obviously you can see all of his stuff here on X as well um Ashton it was an amazing conversation when we first brought you on and how things have exploded since then has been nuts and obviously in our podcast we talk about UFOs aliens interdenial we talk about spiritual side the Bible from outside perspective we talk about so many things um and you know that's why we're trying to to grasp what your

(1:31:18) investigative work has done and and I think going back to one of our earlier speakers to where it's like man to wrap your mind around what Ashton's evidence is showing is mind-blowing it is something that people can't wrap their heads around I 100% agree with that and to Ashton's point it's like man how many people would actually kill themselves if they actually

realized that the government has this type of power and I think that if you realize the government potentially has this type of power um

(1:31:47) man where does that leave us ants because at that point we become ants not just citizens we don't we we look at our politicians as being the people that speak on our behalf and then now everyone sees that our politicians don't give a damn about what we want they care about what they want and the bureaucrats want and the the government and the military-industrial complex the biopharmaceutical complex that's what they care about They Don't Care About Us citizens we are ants and when you get the type of power and technology that

(1:32:16) say that UFOs potentially have or aliens or other dimensions have um to where everyone always Compares it to why does UFOs given crap about us because we're just ants to them but what if when the government gets that technology then guess what we become ants to the government they become God on Earth and that is the very scary part of all this um that's what's crazy zel I want to get to you go ahead hey everybody hope you're having a good Saturday night first off just want to say uh you know Ashton gigachad for

(1:32:47) all the you know work you're doing I just had a couple questions uh regarding if you could go a little bit deeper into like why we're thinking it's the us outside of you know just the video evidence and then if you could touch on why we think the um plane ended up where you were saying earlier in the space just like if you can give a little more context on like you know how you got to those conclusions or what makes you think that could be the answer yeah and so there there's a lot of people too that think oh well it's

(1:33:19) got to be aliens what have you and I think the the biggest reason for why it's not aliens so we already kind of narrowed it down to United States a few minutes ago is that we can explain what we see for a lot of people the go-to for aliens is because they say well it's unknowable advanced technology so therefore it's got to be aliens but from digging into it not only is a technology that is understandable macroscopic phase conjugation but the science behind it goes back minimum 38 years to Thomas

(1:33:46) Bearden but most likely could go back all the way to 1943 or even before that 1943 being the Philadelphia Experiment uh where that I think that's the first time we achieved uh SpaceTime manipulation and then uh before that with the Nazi Bell and those types of projects out there um part of the reason as well why it's the United States is that we are filming this plane in an operation as indicated by how close the Drone is to the plane uh before the orbs even show up the orbs cannot uh or the plane cannot outrun the orbs the

(1:34:18) operator if you watch the Drone video just watch the Drone video like 10 times over and imagine you're the person controlling the camera and when you do that and you look at that drone video you realize right away the person controlling the camera knows what's about to happen this isn't a situation where they're just randomly looking at this the way that they frame the orbs around the plane and zoom in and then zoom out and then after the plane disappears they zoom out again and they're not like freaking out like this

(1:34:43) tells you somebody's expecting this to occur um if this was a random event you'd have somebody freaking out looking around for it plane just disappeared right in front of you on two videos and then you can also see something similar as well on the satellite video the plane disappears and the person just casually Scrolls the camera over to the right to just show you that there's no plane over there they're showing you that because it's very specific intent they want you to see that this is a situation where

(1:35:08) this plane is just straight up gone out of SpaceTime and that person probably had a similar reaction to somebody who's watching it for the first time um also there's more evidence as well is that the United States government was the White House was calling Malaysia every day afterwards say well that's because there was an American passenger on board it's not really enough information or enough reason to do that Florence and Changy argues that the state department would be doing that it wouldn't be the

(1:35:34) president the Office of the President and the White House the White House is doing that because they're developing a cover story for how how how do we convince people what do we come up with to tell people where this plane went we literally vanished a plane not necessarily off the face of the Earth but you know kind of did um how are they going to convince somebody like people need to know what happened to the plane like planes don't just disappear here so what's the story you give them took them

(1:35:56) 5 days to come up with the story which is we're going to tell people went into the South Indian Ocean to the middle of the ocean where we'll just simply never find it and people went with that the problem was we revealed that there's no chance that we weren't tracking the plane that we've got the cers system that's scanning the world all the time we've got over the horizon radar which multiple different military bases would attract the plane from start to finish and our Socia system would have

(1:36:18) pinpointed the acoustic sounds of the plane crash into the ocean uh so we were able to prove the LIE with respect to that now why Diego Garcia um one of the things with the fourth orb and again the fourth orb is speculative but it's consistent with mixed wave interferometry from a phase conjugation event where the fourth orb acts is the the direction of travel of the plane uh and what we noticed is from the coordinates we could tell that the plane was going south into the east in the video This is how we were able to

(1:36:44) pinpoint the nicobar islands location and we could see the plane like in the final in the first frame where this endothermic event appears you can see the tail sticking out of the back and you can tell that the plane's been sucked backwards a little bit into this event which would indicate the direction of travel maybe backwards and if so that puts the plane to the West which coincidentally enough is in the excuse me next to the mes and that's where we have the b777 Triple 7 I should say fire suppression device and the Islanders see

(1:37:16) the plane in the early morning hours the only question is like where exactly did it teleport to did it teleport to the sky did they land and then take off again in did the fire event

get put out from the endothermic event which I think is very likely um because we see this absorption of energy and the reason why these batteries keep going on fire is because they have so much energy latent energy built up into them um so that I think covers most of those reasons now there is of course some percentage chance that there's like you know aliens

(1:37:45) are the ones who did this or whatever but we don't need that to explain it um but yeah you know I can't I can't answer the questions that I don't know regarding to the Past passengers or exactly the circumstances of who took it and why uh without the United States government issuing a formal statement okay awesome that uh that actually answers a lot of questions I had and then there's no do do you did you find any evidence that would lead to a why or it's just still up in the air there's like no oh the why is definitely

(1:38:17) those free scale guys so there's this narrative out there that like four people had a patent or whatever and that's not true those people weren't on the plane but that is still the motive um the two things from The more I've dug into this the two things that we need to understand the videos and technology is uh plasma science and research which leads to the idea of cold fusion uh the Tokamak for example is a fusion reactor but that you can have balls of plasma ball lightning exotic vacuum objects and

(1:38:45) the other one is semiconductors if you guys look up semiconductors and dig into it semiconductors are uh what the next uh level of technology is being achieved at from AI to quantum computers um in addition to what we found out with this coherent matter wave being patented coherent matter um is what allows for it's almost another another term for superconductivity superconductivity is when you have electrons uh get coherent and begin to form what they call Cooper pairs which is how they explain that you

(1:39:18) start to get these uh Quantum effects happening and this is what I think is the secret for anti-gravity and gravitational manipulation technology so to me those people are the reason and they are uh you know these Chinese Nationals that work for American companies are the number one Target by the CCP for uh Espionage and intellectual property theft so this in my mind is a counter Espionage operation I think it's possible it was a rescue operation as well uh people say well a lot of people say they could just why

(1:39:51) didn't they do something easier if they want to destroy the plane and you're right you would not do this to just destroy the plane this is way too over the top you want to take these people out much easier way you're warping the plane because you're trying to hide it you're not trying to show not tell people where it went and you might just be warping it just to tell people this is what we can do do not mess with us don't try this ever again I agree um and and that's that's so wow that's nuts um B you've had your

(1:40:19) hand up for a while go ahead man hey thanks a lot uh somebody I think it was confrey uh who spoke about uh Buddhism and that that concept uh Aston I would like to uh get your point of view on uh anti-gravity flying objects uh I I I'm I'm a Canadian uh of Indian origin and uh what my understanding of ancient flying object from Indian uh perspective is that uh there is

a book called Viana shastra viman means flying object or plane and shastra is technology and there the main uh thing that used to power those

(1:41:14) objects was Mercury and uh like I'm going to post it in comments because while I was listening to comre it reminded me of that and I just Googled something and I'm going to post it in comments after my I'm done speaking please have a look it seems that uh the ancient cultures had uh actually solv this mystery of uh uh anti-gravity and uh that's what uh the Germans stole from Tibetan monasteries and Indian temples and they were developing those technology is when uh the Deep state or us I don't want to say

(1:42:00) us but deep state in the Western World realized that Germany is developing some of this uh very exotic Technologies that's when they created stories uh negative stories or negative propaganda about Hitler and uh they basically got got him eliminated and got rid of him and then whatever was the left over the spils of the war were were divided between **Russia** and uh the current United States of America where in the technology part of it was obviously uh shifted here so like this is just something that like I I don't understand lot of things that

(1:42:41) you guys talked when it comes to equations and all but uh the role of mercury uh in anti-gravity flying objects is something that I I would like to have your point of view and if you have not explored that probably that is one of the things I would like to read upon I I'm going to read upon it also and I'm just going to put that in comment uh just two comments I'm going to put that in uh below thank you yeah good question I I got just recently in the last couple weeks turned on to the uh Mercury's anomalous um

(1:43:17) Vortex that it produces in a magnetic field with an electrical current um I do plan on digging into that more uh it does seem like that could have been an early way where we were able to produce some type of gravity manipulation effects and I don't necessarily like the term anti-gravity because I think that what we really have going on here is uh gravity uh kind of a counteracting force that we could create that counteracts gravity which would be something like the what they call the EM Drive the electromagnetic Drive I think it's

(1:43:46) called or microwave Drive um and we we posted a paper about that uh the other day or a news article about it and then you have just fullon warping SpaceTime through extremely powerful gravitational fields or and those are two slightly different effects one that can displace you entirely from SpaceTime and potentially produce Mass reduction um which goes to Sabine henf felder's uh point about what what about conservation momentum and then the other one just allows you to you know float in the sky in general um but yeah I don't know

(1:44:17) totally about Mercury I am going to look into it I think that definitely is a good side quest to figure out because you can imagine ancient civilization having access to Mercury and then even with low Tech capabilities being able to produce some type of anti-gravitational effect so Aston as promised I've only posted two comments in the uh comment section uh I think there is one research paper which is connecting the flying objects with Mercury and there is one Wikipedia obviously it's edited by random people but uh there is one

(1:44:49) Wikipedia uh article that I mentioned uh do like that will that might be a clue because that's uh there was a book called vimanika shastra which I mentioned uh which is about flying objects in Ancient India because in our in our uh Indian context uh our uh Theology and our ancient books and history are full of uh stories where the Kings and these rulers used to fly around with almost like like almost palaces uh and we we as kids growing up we were like how the [REDACTED] is it even possible like how can this happen so uh

(1:45:30) please have a look at it and uh it I don't know maybe that might be a clue thank you yeah no I definitely will man that that was uh that was an amazing um analogy as well uh Mr PC man go ahead and then we're gonna get to thank you Wang Wang appreciate you uh how you doing can you hear me yep yep okay uh Ashton you're doing a great job man uh I've been with you guys ever since uh you know I think you came out about six months ago or something I'll answer these in a minute but um I I have a I'm just befuddled with

(1:46:14) this video the video that you have um and when you reduce it down to a really slow slow motion that really got me especially when the plane is going into what I call the black black hole so um my question here is so when the orbs are going around the plane it has to be mapping the plane somehow right so you're mapping the plane before it goes into the hole as far as I can my little PE brain can think and then when they get ready to go they come all in together at once but but the plane goes into the black hole

(1:47:17) first if you look at the video and slow it down even more you will see that the plane goes into um into the black hole first and then the orbs goes in there that doesn't in my PE brain that doesn't make any sense I would think that the the orbs would stay out until the plane is gone all the way through have you ever thought about that yeah so uh with respect to um you're uh I just forgot what I was going to say there uh the hope I didn't ask a stupid question no no it's a good question uh and I forgot what the first

(1:48:07) part of it was before you said the uh going through the the mapping of the the yeah you're definitely dead on the mapping I mean there's clearly some purpose there you know they're going around in a spherical formation around the plane they're mapping the plane because they want to figure out how big the zap has to be to zap the plane I mean that's to me The Logical answer for what they're trying to do right there is they're going around the center of mass which is exactly where you'd want to go

(1:48:30) around and then you have to figure out exactly because the plane is not a circle you know it's uh abnormally shaped so you need to figure out exactly how big the mouth of the Wormhole has to be the exact right charge necessary um to make your uh Singularity the right size now I think I disagree on seeing the orbs go through afterwards yeah you definitely can't tell that because there's only two frames you may be looking at a super slow-mo version that was uh used software to add additional frames but there is only one frame where

(1:49:04) the you can see the orbs are a little bit blurred around the plane and the plane is blurred and the very next frame everything's already gone in the event in to the singularity so I

don't see evidence of that but I do agree with the first I I think you should take another look at that because the actual orbs de decompose or something yeah I'm staring at it right now I I'm literally looking at it frame by frame and you still have part of the plane out of the black hole that doesn't make to me it does that doesn't make any

(1:49:42) sense but anyway um how is it that they knew that was NH370 the plane um the the uh the the Drone how did how did they know that was 370 yeah so I mean this has to be one of two things either they deployed the Drone in response to the fire event which gives them one hour and 20 minutes to intercept it which is pretty slim if you ask me but I think it'd be possible if the Drone was deployed somewhere on like port nicobar or car nicobar or Port Blair car nicobar or if it was at the cop tiger exercises Cobra gold and cop tiger exercises were

(1:50:27) going on in the Anam SE between Thailand and United States uh in the preceding month and then the subsequent month afterwards as well or two weeks afterwards um and then the other option is that this was planned way ahead of time that this was Espionage that they knew about way in advance and uh so it's not a coincidence that that's MH370 that wasn't just a random plane that they caught on camera they were tracking that plane this is an operation that's going on here and this is information where

(1:50:55) you know perhaps I just because I've been investigating so long it's easier for me to uh you know be intuitive about but I can imagine not people that are new to the case that look at that would ask that question but I guarantee you the more you look at this you will come to the same conclusion that this wasn't just a coincidental event that occurred here this was an operation that's going on um and then we know that's MH370 a lot of people ask that question which I I think is actually like the least

(1:51:18) controversial but the date of the videos coming back out in 2014 uh the first video being published May 19th 2014 and having metadata in it that says MH370 even though the description doesn't say MH370 reges side a non making a Twitter account three days later on May 22nd and saying watch this video before it gets deleted and then tagging MH370 in it the fact that the thermal is an exact overlay to Malaysian Airlines flight 370 uh which is my Twitter Banner if you want to see that because a lot of people

(1:51:49) too like make weird claims about no this is a different kind of plane everybody who made that claim is wrong it's a 77720 wow that's deep that's deep yeah and my last my last question here for you is uh um I don't I don't know how to explain it but maybe maybe I'll I'll think about it and get back with you another time but it just seems like uh this is how long how long are you going to continue this because it just seems like our country doesn't want this you know and if it doesn't want it I would

(1:52:44) hate to see you risk your life you you damage yourself somehow or someone comes after you I I just hate to see that okay that's I think you're a good guy I really do uh and I don't want to see you hurt I don't want to see you damaged in any way uh but there are some very mean people out here uh I appreciate it man I really do um but you know I'm gonna do it until

we get an answer here right like it's I want to hear from the government I want to get uh some answer from them I've I've been honest about my

(1:53:25) intentions how I plan to play this out like if the government wants to call me up and tell me to stop talking about it they better give me God good goddamn reason to do so um otherwise you know I'm going to ride the wave of increasing popularity on this to force them to the point where it gets super awkward I agree with a lot of people out there say the government won't ever admit this I'd go as far as to say they can't admit this like there's just so much legal liability at stake and I think that they

(1:53:51) they in their mind say they're Justified hiding it trillions of dollars yeah and that's the thing and so you know for me whatever I don't care man I already made my decision about if something were to happen to me if something does happen to me then you guys will know it's true the only reason to take me out would be if this is true so um I've made peace with that long ago I appreciate you guys being worried about me but there's no need by way by the way hold on Mr PC man I do got to say something to your point

(1:54:17) though is that people like Ashton People Like Us that we do the podcast and people that are out there on the front lines trying to get a **truth** out there to what they believe to be the **truth** um I think all of us if you're this deep into things that you talk about you're willing to risk everything and and I think you I think you don't truly live until you finally find something you're willing to risk for yes yes yes Dam I I wish you had the balls that you have man I really do I I do remember the question

(1:54:47) now the Elon question that you asked him and I found out to you know really crazy that he he brought up aliens but but uh the question is if this happens again would his satellites uh be able to help in any way that he has all the all around the world yeah good question I was wondering that myself I don't know what his capabilities are of his Starling satellites but if they weren't connected in the constellation of the cber system then I imagine they wouldn't be able to help very much um but if they were to somehow have some

(1:55:25) kind of constellation where they're doing something similar to what cbers does then maybe but as far as I knew I didn't even think his Starling satellites were Optical I thought they were just like telecommunication satellites so uh that's kind of weird as well why he brings that up like when he's talking about I have 6,000 SES it's like okay well what are they doing are they filming the entire planet in infrared I doubt it yeah so I don't know in general my my get I don't know the Elon qu response

(1:55:50) was sketchy man really sketchy cuz kind of like Arrow where it's like not a denial and they're not like answering the question it was very surprising answer yeah especially from him uh especially what he's been through in trying to create the things that he's he has already created yeah a guy that says he wants to go TOS that means he has a true belief in something you know going to going to Mars he has a true belief that he can do that well well dog on it why can't he help you yeah dude if somebody

(1:56:28) is saying to me like that they want to go to Mars and then somebody's out there going well we've got warp drive technology like I would be taking that person extremely seriously I'd be like calling them up going dude are you joking around are you playing and I'd look at the evidence I go holy [REDACTED] he's not playing around and I'd be like hey I want you to tell my Engineers how this works so we can test it already gave it to thank you very much I appreciate it yep we get some more hands a lot of

(1:56:52) hands up thank you PC man a great question there money Penny I know you had your hand up for a while and put it down but why don't you go ahead oh I didn't know it went down sorry I I'm on Android that'll be it technology um Ashton is an absolute star he's coming up against some brick walls and some people with heavy ammunition um and Ashton I can see the stress in you I'm sorry I saw you on YouTube you didn't look your Martini self let's put it that way um I hope I've got something

(1:57:21) to help you I dug out um a pretty amazing article um you know my account's suppressed but I'm getting loads and loads of likes on it it is a uh very very revealing announcement uh from the the Royal Navy well that's the British one isn't it the American Navy um that report on uh orbs spherical um objects there's pictures there's a video uh this came out in 2016 video captured by the US Navy unidentified flying objects seen dancing across the screen blah blah blah um these orbs are described as being 2 M

(1:57:56) 6 feet diameter reach speeds of up to 254 km per hour 158 miles per hour um they are able to go under the water and significantly the adjective that I really like is that they are trans medium which means presumably there's an element of the silicon and an element of Hardware um there might be some bioelement in there as we know um it talks about the I mean if you had got a Navy vessel that had reported with a press released that it found these UAP spherical objects in an area where the defense testing is done by the American

(1:58:30) Navy and you just happen to have your camera ready with a video to be able to release this as a press release from the American Navy to me this sounds very much more than just randomly coming across a flying spherical object and knowing that they are trans medium knowing that they are um well there so much detail on them they're 6 foot in diameter a solid Mass with minimum number 14 targets varying speeds from this flying long longer than an hour um I mean this is basically to me the Navy giving away the fact that they um have

(1:59:04) these spherical advanced technology objects which already just while you've been busy on here um the people on YouTube and in your Discord server have said bloody hell or something a lot more swery than that that is spot on these are being covertly uh made to look like alien orbs um I think they could be the real thing I hope it helps um and I just want to say keep your chin up um and anything I can do just give me a shout yeah thanks money Penny I think that uh the big thing that you mentioned there is like what's the origin of the

(1:59:36) orbs in general uh people want to know like who makes them whatever again I I can't say I know with certainty but it does seem to be a situation where these orbs are uh some type

of trans medium object potentially an exotic vacuum object oh my God sorry that is exactly the word that they've used in the press release trans medium is the word that they've used yeah that's it yeah and then I I also think this the big Revelation for me was looking up hypersonics uh which kind of triggered me after the Tucker Carlson Putin

(2:00:10) interview because I just thought like what what about our hypersonics there's no way Russia is ahead of us so I just looked in a hypersonics a little bit and you realize that they have a plasma sheath around them there's even a couple images of like you know they're just drawn image there's no real pictures of real hypersonics that are out there but they had the heat signature around this like rocket the idea that you would you know have a rocket that's Hypersonic the Heat Signature looks very similar type

(2:00:35) of heat signature we're seeing in those orbs and so to me like this is disclosure of our super Advanced weapons I call it a super weapon because it's something whatever this is way more powerful than a nuclear weapon see I think what this is what you need for Joe r because they're all coming back to you and saying oh this is all about aliens and I don't like the way that they are deliberately misinterpreting it it actually says in this release the night vision and Flur Technologies F IR Technologies represented um led to the

(2:01:06) most sophisticated weapon systems known to humankind the evidence here must be differentiated from other UAP documentation so not only have they reported these uaps they've got the bloody documents on them that doesn't normally work with flying alien ships does it yeah and the more evidence too is that the way AOS responded to a lot of the UFO stuff where they've claimed like people are seeing our stuff in the sky like just put two and two together there people are seeing anomalous objects that have no conventional

(2:01:36) propulsion and then arrows coming back and saying those are ours okay well two and two putting together there would say that we've got some type of anti-gravitational propulsion and technology that we're not disclosing to the public um so a lot of it's just listening to what people are saying that are out there and putting the pieces together and realizing that everything lines up to these videos being real and it explains why the government would do anything to hide them thank you bunny Penny hey by the way um let's make sure

(2:02:08) we get the crumb because he's he's had his hand up for a little bit yeah I'll be quick uh thanks Chad Sam Sherry ashon everyone else asked some good questions I just wanted to clarify my statement from earlier because you asked me how long I think it would take to create the videos or create uh a video and uh I would just say like I said months but that was that's if they're recreating the videos these These are made from scratch there's been no videos like it found before you know they were posted

(2:02:39) by Regis side Anon um to create these from nothing would be almost impossible and even more impossible when you bring in the body of evidence that corroborates everything that we've learned uh through the science and through our capabilities as a military assets and everything else um but yeah I'm going to drop myself down just wanted to clarify there thanks

guys thank you so much chome just to add to that real quick too because Bob Greener uh the I think my favorite clip of Bob Greener when he was reviewing the videos

(2:03:09) before I even met him and he's going you know he looks at the satellite video and he goes even just to be able to make this satellite video you'd have to have like black knowledge you know he's talking about intelligence Community knowledge that isn't available to know what satellite video what our kind of capabilities are the groundbased computer system and then he goes to the thermal video and he goes to make this it's just unfathomable because the science of magnet topological magnetic monopoles

(2:03:35) and that wasn't even out in the public literature in 2014 and he is one of the people on the Forefront of it even now in 2024 so yeah that's the thing too is that a lot of people who claim to be VFX experts if you're a VFX expert and your first statement about the videos isn't that 's no nothing to no reference then I question your VFX expertise because when they do CGI there's a reason why they put people with all these buttons all over them or whatever and then they have them move around naturally because

(2:04:05) they use a reference and then they C color over it there's no reference for these videos they would be 100% unique thank you Ashton um American citizen I know you've had your hand up for a little bit then confrey we also want to get back to you you've definitely made some great points and questions oh yeah I wanted to add what I said the other day about the orbs I seen uh the first one I seen uh actually was part of the gate program that did the testing you guys know what that is right can you guys hear

(2:04:41) me yeah I can hear you not familiar with the gate program okay okay um it was the there was a test they did I don't know if they do it anymore or that they were looking for people that were like more advanced in schools like they're trying to catch people like early on um it was like some kind of special test i' take you in in school and I take you in like a dark room and like all the windows would be covered up and they'd have you like do these I there was weird tests there was like you'd like look in a box and like

(2:05:14) there'd be like flashing lights and all kinds of stuff like that it was a government program that they ran all the elementary schools and like the 7s ' 880s 90s I think it was but when they did it in the 70s I want to say like some of the MK alra people came out about it but right after I did the gates they did that test on me is actually I just put this together last night is when I seen that uh first orb that I wanted to ask you if you've ever looked into like side matics and stuff is they're definitely hiding something from

(2:05:47) the past that's been around a long time because the Border board Temple I I think it's how it's pronounced if you look at that from above it's actually a simatic shape and like all the old pretty much all the old buildings that are made called stained glass everything like that seatics in it I just they definitely had to have known something the back in one was the Border War temple built I think it was started in 700 AD I want to see if you ever dug into any simatics or anything like that oh

(2:06:19) simatic stuff is sweet dude uh for haven't looked the simatic stuff up it's like if you put grains of sand on a metal plate and then you hit it with various frequencies it makes these crazy shapes very like self-organizing which obviously there's something going on there um and I don't know exactly what it is but you go back to Tesla and it's like Tesla tells you to think of everything in terms of energy frequency and vibration certainly makes you think about simatics the other thing that I would give a quick shout

(2:06:48) out to is sonol luminescence which is star in a jar a lot of people think with respect to Cold Fusion that's not possible because you need these extremely high temperatures um but I think that we don't realize that scale uh you know properties are independent of scale and that we can create like a star that's in a small jar of water um and they use sound waves for that as well so kind of links to your to your point right there all right hey hey Ashton I got a uh I know you're probably not going to want to stay forever but I

(2:07:18) I do have a kind of a last topic of the discussion that I think that we got to talk about because um Element 115 right so Bob laar knew about Element 115 before actually was I guess officially in existence right and element 115 for those that don't know it's basically a moscovium it's a man-made super heavy element that has 115 protons and its nucleus is created essentially by accelerating ions of calcium to around 10% of the speed of light and then bombarding uh the americam 243 with them so due to its unique internal structure

(2:08:00) with odd number of protons and neutrons mobium is likely to undergo alpha decay which in this release to protons and two neutrons this uh property could potentially make it useful to research related in nuclear physics specifically in understanding the behavior of super heavy elements and their potential applications of energy production or other fields and in the context of speculative or theoretical physics some people believe that or have suggested that moscovium or also known as Element 115 or similar super heavy elements

(2:08:35) could be associated with Advanced technological applications such as propulsion systems that harness the inherent power of gravity now um have you researched Ashen a lot about Element 115 in particular a moscovium um and and if you look at kind of the building blocks of how do you apply an application like if you're saying that the United States military government has the technology for these orbs to potentially evaporate or um however you want to explain that whatever happened um could Element 115 play a role in that yeah that's a good

(2:09:16) question and I'm not an expert on you know Bob Lazar or anything but my opinion is I think he's telling the **truth** for least what he's seen he doesn't everything I've seen about him doesn't strike me as a guy who's making a story up um and I think that he has probably been the targeted disinformation uh or a disinformation campaign to discredit him uh he even says that he doesn't know if what what he had been fed might be uh true or not true although I do think the bulk of his

(2:09:41) knowledge is probably true uh one thing that surprised me with these videos was I

don't think we need Element 115 to describe anything we've seen going on in these videos um phase conjugation doesn't require any exotic element like this to pull off uh talking to AI alien scientist Jeremy Reese uh and listening to him and Michael Peron talk about Element 115 because they've dug into Babar stuff a lot uh Michael Peron actually thinks that we can create stable element 115 using gamma rays or that it might be possible theoretically

(2:10:11) which I thought was a pretty cool idea and I'm sure that there are absolutely uses for heavy uh metals and materials you know just like with we use uranium to make nuclear weapons um but I don't know that I think the beauty of this technology is it doesn't require any of that stuff out there now maybe there's some reason why we need something like that for like Intergalactic travel to like go to you know Andromeda galaxy or something like that but for the stuff that we're doing on Earth doesn't seem necessary

(2:10:41) now that's interesting and and I I guess the the big question to me would be um which I mean that's a whole that's a whole another level um confrey go ahead oh hey everybody um let me see so I guess I I'm starting with the software thing I saw you talked about the origins of the software for the visualization the binocular scoping of the event and uh I heard it was maybe version three or something so I'm curious if there was like a previous version that you maybe could get validation on I know there's

(2:11:15) ndas around that stuff and uh I got a few more things to talk about but I'll hand it back to you yeah so T was this was a huge finding recently so we had this **debunker** Saga where someone was like threatening to expose me or end the end the charade and uh and they they said they had some proof that they just never dropped but they dropped the name of this software quick terrain modeler so we immediately start searching it the very first thing we find we get to their website is they actually produce real software for all branches of the

(2:11:47) military the dod intellig and the intelligence community which I'm going whoa because we had been speculating to just deduced from the satellite video that it's some type of Google Earth playback system that pulls data from the satellites uh this is why we're not we're not looking through the satellit this is how you get low earth orbit satellites that are moving 16,000 miles an hour this is how you can see the data you you visualize it onto a software program and this could very well be the exact software that's used to do that

(2:12:18) I've been calling them almost every single day and left messages uh dial called them probably a couple dozen times they don't pick up the phone on any of their phone lines uh which is weird not even their technical support line they won't pick up so I don't know what happened but we into it more and we found out that they got their contract was renewed in like 2014 2016 so they were definitely the ones who were like at the time the ones who had the that were had a contract with the government

(2:12:45) and we even found articles uh and this was part of the community that found a lot of this this is part of the reason why there's been Resurgence as the community has been finding stuff again uh one of them actually says there's integration between literally Google Earth and

this software with the military and they use it for tracking purposes and that Google Earth was initially uh partially funded by the CIA as well I didn't even know that when I was talking about Google Earth being like this being a Google Earth video

(2:13:11) playback I didn't even mean it literally I meant like they have some similar equival no they actually literally use Google Earth that's why we see the coordinates in the videos is it's a literal Google Earth video play system yep how crazy is that that's where I'm like guys okay so if these videos are fake now the requirements go this person's got to be some kind of psychic that knew about the coordinates of the real location of the plane they've got to be a VFX expert an Aeronautical

(2:13:36) Engineering expert a physics expert that knows low energy nuclear actions plasma physics better than Bob Greener does oh and also by the way they also had to know that the military has this satellite system that uses Google Earth and quick terrain modeler to you know produce this computer rendered environment for tracking like come on man at what point is it just like real it's challenging to explain it away I agree well um the next thing I want to get to is the black hole kind of concept and um you know people talk about black

(2:14:06) holes and I don't know if this is a black hole but I feel like the whole if you're warping something through another dimension it has to um I don't know black holes are kind of relevant and someone the other day was asking like where does the energy come from from The Big Bang and I don't know I was think of the Vishnu U emergence like universes emerg from vishnu's belly button and I kind of feel like um those are probably uh black holes in other higher Dimensions so I just wanted to drop that

(2:14:35) for postulation um outside of that uh thanks for the following in the DM I'm kind of curious about the um the weather and this because this whole concept of the chat is weather manipulation and all the other things so I'm just curious about the stuff in the um where is it just Southwest of uh Africa all the new stuff coming out and the whole scaler physics and the pulsing going on and um kind of some of the understanding of the new um tools that are being used around the world these days so do you have any

(2:15:13) comments on that have you been following because officially initially people were saying it was some kind of anomaly on the radar and then everyone it keeps happening and um all the extra rain with the cloud seeding so do you want to talk about scaler pulsing in regards to weather manipulation at all I I can get my opinion and I'm not an expert on that stuff and I I still wonder whether or not we can like really control the weather versus just like manipulate the weather the difference being like we can

(2:15:41) affect it by shooting you know scaler beams that can uh have abnormal effects on you know the ionosphere that can then of course manipulate the weather um um but I yeah I would say follow Dutch since if you're interested in a lot of that stuff especially the idea like we can predict and cause earthquakes he has incredible tracking I've been watching his stuff um to see that type of stuff there I'm trying to stay in my Lane with respect to some of this but it does

certainly seem within the realm of uh

(2:16:10) possibility that these types of scalar weapons especially we have it to the point where we have it on our orbs that can float around that we could you know manipulate weather patterns and even potentially earthquakes with that I just don't know not I don't have an educated enough opinion to know exactly how detailed and that and precise that could be with respect to the black hole situation I think that the the better term to call this is a phase State change of the plane is it's they're creating these orbs are creating a low

(2:16:37) energy or zero entropy negative energy event around this plane uh it's causing it to become nonlinear uh the idea of rebuilding the wave function double slit experiment and shinger equations of whether or not the cat is alive or dead same idea as the plane in this location or that location you can imagine it instead of like a black hole which black Hol is like you know we have this huge amount of mass it's sucking in all the light around it um think of it like taking an aquarium and putting a fish in

(2:17:06) a bag in a bubble inside the aquarium in its own little bag and then lifting the aquarium up and down and you're going to see the the bag might kind of displace when you do that within the medium that's kind of a similar idea is what we're doing here is if you were doing that to the entire universe moving the universe around with your hand shaking it all of a sudden from our perspective the plane's going to be one location and then it's going to look like it's in another location it's going to look like

(2:17:29) it magically appeared in that location but what's happening is the medium itself is being manipulated um and that's what makes it give it the appearance for most locally like the plane went from one location to the other faster than what we could perceive to be possible and by the way comrey I I wanna i w to say to your point um we've had uh someone named Alana Freeland on our podcast I think three times now um so when you're talking about weather manipulation Milana is like a best-selling author three four time

(2:17:59) bestselling author um on weather manipulation but she extensively knows about HARP she knows about everything you basically just ask um and so I do encourage you guys to check those episodes out with Alana Freeland I think the episode we did was um harp and I think we specifically talked about the turkey earthquakes in that episode with Alana um but then also we had her back um for another episode but she really goes deep into how those systems work um and um you know as far as do we control the weather or manipulate the weather

(2:18:33) Alana would probably say well I know she says that we fully control the weather I don't know 100% I'm not an expert on that but it is something uh it is definitely an episode you guys should listen to because I think it's it's something that's kind of mind-blowing um that episode pretty much went uh pretty viral on many platforms there were people sharing a lot of the clips that she said about weather manipulation um on our podcast so I do encourage you to check that out yeah real quick one

(2:19:00) analogy I want to give you guys for the scalar physics as well in terms of the max will equations being reduced uh and i' I've said this multiple times as well so if you can imagine like a rope or I use a rubber band as an example if you pull equally on both sides in two different directions the equations would say the forces cancel out so that rope's not going to move left or right and if you pull a little bit harder same thing as long as pulling equally on both sides nothing's going to happen but if you

(2:19:23) pull super hard on both sides of the Rope the Rope is going to rip in half because there's a stress on the Rope of itself imagine this same effect but not just on the Rope but on this the vacuum permittivity of free space of empty space this stress in the medium is what we perceive to be gravity or a gravitational effect this is gravity manipulation so if you put such a stress on the medium to the point where the medium breaks and rips apart that's what we're seeing in these videos I believe um I think that's what the science shows

(2:19:54) that's what I'm talking about when I'm talking about reaching energy densities uh exponentially increasing based on kum's law as well as uh breaking what is called the swinger limit um where things become nonlinear and this is equivalent to a wormhole but it's like puncturing a hole through your piece of paper where now you're looking through the other side to what's underneath on the quote unquote extra Dimension yeah in terms of the um the scanning there's like a scanning aspect

(2:20:23) that's going on by the orbs but there's also a in the phase conjugation there's this harmonization of the energetics of the subtle particles of the plane that's happening at the same time and so that's like the scanning and the charging so there's an assessment plus the proper placement for the for the manipulation of the energy so anyway I think that's um just to balance the whole scanning versus the charging and then in terms of the um simatic stuff there's there's a couple of people doing some really nice

(2:20:58) visualization of simatic energy using light and different waves uh on the xplatform simatic Jewel and and she's like a kind of a study of someone else but uh there's also some kind of people talking about how the that simatics is a expression like HEB Hebrew alphabet is based on those um you know foundational energetics but I don't know I haven't really gotten too deep onto that only thing I want to leave everyone with is um kind of the element 115 I feel like it's a resonator or a Transat so you

(2:21:35) know and I don't I don't know I'm not a a I'm not a a physicist but I feel like there's certain you know I'm a plant guy so I can I can talk about plants and within the realm of the all of the plant dimensionality there exists kind of the reflection of the universe all the energies present so I feel like that's true with the the energy of the elements and I feel like Element 115 if what Bob Lazar is saying is true kind of holds a resonance potential similar to the Mercury that we spoke of

(2:22:05) earlier in uh trans translating energy from one dimension of the Maxwell equation into other aspects of it so I think that's what my intuition points to and I'm I'm curious and I want to

learn more and then outside of all the weaponology of this stuff it's how can we apply these tools most effectively for the alleviation of human concerns uh with the the most haste you know I think that's really what we want to shift the focus of our attention with these Technologies too because I don't

(2:22:40) really care I mean yeah it's it's important to understand what weapons are being used against us and how maybe subtle energetics can manipulate our own physiologies in a mental state but I think it's more important to maybe focus on how we can protect our own energies with both plants and our own meditations and understanding how we can have our own resonators locally and um you know energy free energy or what wherever this stuff leads us I think you know it's a it's a great Crux of human

(2:23:13) potential and I think we should pay attention and take the most opportunity so thank you yeah and uh I'll just try to be brief because I want to get to as many questions as we can before I have to drop which I probably only go for another 15 minutes so if people have more MH370 questions I can uh ping him but uh yeah to me the thing that really start of blow my mind s of freaked me out about this was going and I I think what now wants to ask a question next uh he's been waving but um is first finding

(2:23:41) out that we potentially took a plane and that we covered up an air plane disappearing then finding out that we can potentially warp a plane teleport a plane and figuring out how that works but then taking that to its logical conclusion after finding out about this idea of The Ether and that that's how we can get the negative energy we need and figuring out that that essentially leads to free energy just straight up free energy unlimited energy um that can be tapped into into The Ether that we can produce devices that can produce

(2:24:09) overunity uh at huge amounts because that's really the scary stuff that's what will change our reality change our civilization but you know you can imagine all the reasons why people would want to hide that and to me that's what this all I think comes down to in terms of why the cover up why taking the plane why lying to everybody about it why the suppression why not the reveal why the misinformation about what the disclosure Phenom UFO phenomenon is all about because It All Leads back to free energy hey Ashton I just want to say

(2:24:42) thank you and a thank you to the host co-host and everyone else here for speaking I will say I'm very thankful to feel like I am the stupidest person in the room because I think to saying goes if you're the smartest person in the room you're on the wrong one I feel like I'm in the right room so thank you all for all of those Ashton I just had a question for you since how do I say this tactfully things were a little bit emotional when things were uh this subject shifted towards the gatekeeping

(2:25:08) of knowledge and when there was a discussion about this information initially leaking out to the public have you considered that possibly the gatekeeping is intentionally uh bad as almost as a form of like a filter mechanism for the population how do I say this on the bell curve of people who could potentially hear this information only the right side on the bell curve such

as like an IQ beler there's only going to be so many people that are going to be capable of even uh receiving this information out of that there's only

(2:25:45) going to be so many that are going to be capable of believing that it is possible out of those they're going to be even cable have that population there's going to be a smaller population believes that it is actually being done have you considered that possibly the uh disinformation misinformation malformation campaigns they very clearly happening across multiple subjects uh all throughout various narratives that are occurring right now in this period of global tension is not only a way to push out Mal contents and

(2:26:22) I'll just say it the stupid but also as a possible recruitment tool when you say recruitment tool who are you trying to recruit who's trying to recruit who in that scenario um basically people such as uh yourself and anyone with uh let's just say various letters after their last name with various academic accomplishments and who are intelligent enough in with refined enough discernment skills to determine reality for themselves rather than just television hey yeah man I'd feel a lot better about this if I was not exposing

(2:26:57) my own country so I hope this is some kind of recruitment tool and they uh you know come out and be like hey you want to come expose **China** or **Russia** that' be I feel a lot more comfortable about this in general and I I do agree that I think that this information is so dangerous that I could I could rationalize why people would want to cover it up um but I'm I'm currently not under control by them so until that happens I'm just going to keep getting it out there uh but yeah with respect to the disinfo

(2:27:22) campaigns and stuff that's out there I think the government absolutely uses people like that to push agendas and disinformation and what we would call scops I think this word scop is is awesome um also real quick thanks in my chat to Anan who just put a huge donation in there thank you very much sir um uh but because yeah I think that the controlling people's minds and what they think is the Ultimate Weapon it's more powerful than the super weapons are um and that's what they do with the media I do agree I do think though that

(2:27:52) uh there's at least a greater than 0% possibility that the scops are two degree intentionally bad they have some intentional flaws designed in oh yeah where people who will not well people who are incapable of comprehending the flaw in the logic of the psychological operation will succumb to the psychological operation but people who can see through it will eventually or inevitably find their way through the crack and I think living proof of that is we are openly communicating about this on a medium that was developed by our

(2:28:26) own government with the help of private sector of course in a public format if the powers that be wanted you dead they would have killed you by now so to a degree we are we have to assume that there's a possibility that the powers that be have allowed us to openly communicate about this and event effectively a self- sorting is occurring between now those who do and don't believe but also between those who do and do not comprehend and have those who do comprehend those who do and do not uh have the willingness to act on the

(2:29:01) information that they comprehend yeah and I I think that there's a big problem too there where there's some people that you could say like you said there a negative intentional negative effect that they're trying to cause on people um it does cause strife and Division and when we are divided among things that are trivial as well like War stuff or maybe even Co to a degree we're not really getting into the the problems it distracts us from the stuff that matters in general but the other thing that it

(2:29:28) does to people who can see through it is there a huge psychological toll uh I think a lot about Amy Eskridge who um at least supposedly based on um some information I've been given you know committed suicide and you imagine she was doing anti-gravity if you see these types of magical effects and then you see these scaps where they cover this up and how easy it is and how the whole world doesn't want to believe and that if you try to come out you've got **debunkers** trying to ruin your life and convince people that you're crazy and

(2:29:58) what have you you can see the psychological toll that takes on a person who knows the **truth** who can see through the [ ] um so you might even argue that some of that's intentional because it keeps people quiet because then when you see that stuff happen you're like I can't why would I speak up I'm just going to get crucified if I try I believe the one of the terms I've come to familiarize myself over time with is a neur linguistic programming is that there's certain people who can actually just uh

(2:30:24) be very easily manipulated and I don't think those are the sorts of people that you would initially want to recruit into a program like this if you were looking to recruit and I think if I were looking for people as intelligent as the people capable of generating this technology you don't put it on the billboard you uh give them little bread gums and the hyper intelligent will find their way to you that's just the general impression that this gives me another profile kind of helps me I'll give him a shout out I've

(2:30:57) never met the guy I've only talked to him on one space was a visible trouble one word capital V capital t uh he looks at from a more traditional religious SL mystical effect uh various ways of manipulating people and there's a just something to consider that methods of manipulation of the masses this is not uh these are not new techniques techniques the the role of the shaman has been played for literally thousands of years from the day when a magic man would crawl to the top of a mountain and see rain clouds

(2:31:29) coming crawl back down the mountain to the opposite side of the rain clouds shake a gourd and then con convince his own population that he's a magic man when in reality he just saw the weather coming in and wanted to convince them that he has a megaphone with God so these are not exactly uh new things it's just a interesting perspective I think it is possible that uh a little bit of a cognitive or IQ based sorting is occurring and I think uh the people who are within this chat room willing to communicate about this subject and are

(2:32:03) capable of comprehending that hey there's a little bit of trickery of foot are at least one step ahead of the left hand side of the IQ bell curve and thank you for your time I'll go

ahead and step out yeah there's definitely factions and I think the smartest ones the smartest people are the ones that know about the stuff but they know to be quiet about it and how to be quiet about it and that's almost more scary to me as well is that the people that are gatekeeping this information are very intelligent and

(2:32:25) they see through the scops but not only do they see through the scops but then they know what the government's capable of with respect to those types of scups that are out there uh you know I've talked to some people that are pretty close to those types of communities and it's a small niit group of people that control and gay keep that information out there and it's not a matter of you having certain pedigree or phds it's like are do you like you said do you have the capability of critical thinking

(2:32:50) you know can you think for yourself or are you just a robot that believes whatever you're told on TV scary stuff and by the way I I want to make a point here um before Ashton goes and and to everybody by the way listening is that when we talk about MH370 and and aliens and UFOs and all this stuff obviously very important right UFOs are important U m370 is important especially with how much the government lies to us and then how much power they have but I just want people to keep in mind no matter who is listening to this message

(2:33:24) and we try to say this on the podcast all the time um the same people that have the capabilities of this power and this technology and the lies and the manipulation like they're going to use that against us they are using that against us and I think that there is very scary times coming up and it's not just with Advanced Weaponry it's not just with how they lie to you about aliens and UFOs I just want people to understand that I think that we are coming into a very hectic and scary time and I just want everybody to be

(2:34:00) aware of that don't lose sight of what is actually going on um right in front of you also um obviously you have mx370 very important you have aliens very important you have anything we talk about very important but just understand like we are about to face a lot of stuff I believe that we're not ready for and I think that um they've been working on this for a long time and we're kind of getting to the uh precipice of hey what is about to happen what we're about to find out and and I think that's why you

(2:34:30) know MH370 all this stuff is very important but just also understand like look right in front of you and look what's coming because it's it's very close sweet thanks Chad you want to do like a couple more questions and I'm probably going to try to hit the hay yeah yeah yeah that's good uh for sure and Ashton by the I appreciate you coming on and and and sharing um all this again we're obviously rooting for you and and not just you we're rooting for inistry I mean we're rooting

(2:34:59) for the community for Humanity but yeah real quick I want to say too is that like as much as I've made myself uh the voice of this like this is certainly not just a me thing like we would never be this far when I say we I say we is in the whole Community the people all you people that are out there liking retweeting commenting helping answer questions out there this

is absolutely a communal effort uh if and when the time comes and this story gets written into the history books it's not going to be just about one guy who figured this out

(2:35:30) it's going to be about a community that came together that created a movement on social media that's never been seen before that did open- Source investigative journalism more journalism than the mainstream media has probably ever done at least in recent history um and that's how I want the story to be written thank you Ashton uh Ryan you've had your hand up for a little bit if you want to go ahead actually money was before me uh so yeah money uh you want to go first or I'll go after you i' I've already asked

(2:36:00) a question I don't want to be greedy go first by all means I really don't have a question I just wanted to come up here and thank Ashton for uh doing what he's doing I know he's putting a Target on his back and um you know you're I think the big takeaway from this is really proving that the ether is real and it exists and I think that's the main thing that we can you can physically see it and and realize that the government had a satellite on the plane and a drone in the air focused on that plane at that

(2:36:28) moment when that warp happened so obviously they're involved in it right it's not some extraterrestrial thing and the only way that can happen is by manipulating The Ether so I think that's you know clear physical documentation you can't deny it If you deny it you're lying to yourself so uh yeah man thank you for that bro I appreciate that cuz uh trying to tell people about The Ether you know for probably five years now and you know people just disregard it I mean Nicola Tesla was telling people it's

(2:36:59) almost like you know 100 years ago they they knew more then they they uh knew more about the world and these secrets and uh in the last 80 years it's just been suppressed and taken out of uh you know schooling our textbooks all these different things so uh but yeah man thank you yeah what I want to say too is that even if this is real and even if it's the United States government in this case that doesn't mean that aliens don't exist it's not a mutually exclusive thing whatsoever so for the people out

(2:37:25) there who want alien this to be aliens or this uh aliens to exist it certainly doesn't change anything about that in general I do think that there's a concerted effort to frame these videos as being aliens because that gets people to ignore it and that gets people to not look into the fact that we can actually figure the science out like us as the public can reverse engineer this like you look at my twin pin tweet about macroscopic phase conjugation I thought it would be that nobody would be able to

(2:37:52) understand this people do already understand there's papers about it out there so that's the crazy part about it and that's what they don't want us talking about they don't want us being like no we can understand this regardless of origin Ashton thank you so much I know you're ready to get out of here and I get some sleep we can do one or two more questions if you want I think yeah yeah no thank you I mean we don't have any hands up right now money Penny I know you had a hand up a moment ago if you

(2:38:16) want to go up sorry it's down but it's up just one second guys if anybody else has not requested to speak that has a quick question uh go ahead and do that so I can get you approved and then throw a hand up can I can I ask one um is that Ryan that's speaking Yeah yeah we'll do money Penny and then we'll do Ryan and then we're going to close it out for the night guys okay great thank you um so Florence Tangi who I believe you actually spoke with at some point asht for those that don't know she's the French lady leemon

(2:38:48) former leemon journalist um um 10 years investigating this um put out lots of books um has been uh you know she's been hurt a lot because of it uh because people said she's doing it for the glory but um she made a discovery that I think it was an 89 pound pound as in weight uh I don't know 14 stone that will be um a cargo item was added um after the flight took off um we know about the fact there were all these um industrial size magnetrons on board um in addition to lithium batteries and uh so many tons of

(2:39:23) um you know mobile phones and radio transistors and whatever else that was on there um but I just rewatched the MH370 Netflix and noticed that fance dangi on there was talking quite specifically about these um very bizarre ritualistic security procedures which I hadn't realized had also taken place on the loading of the cargo I think you'll probably remember there was a discussion we were having in your um Discord group and part of it on um on um Ashton where we were talking about I actually put out on my tweets some of

(2:39:55) the um the pieces of paper we actually got the documents um Bill Mitchell helped me to get the actual documentation of the cargo that was loaded on board um which gave a finite detail of everything down to the books and the door of the Explorer books that were going on board if you remember that probably get your mind but the thing that is um interesting that I would love you to maybe go off and add it to your list of things to do is that um the none of the cargo that was was put on in this bulk fashion um went through any of the

(2:40:24) routine airport security um coming onto the plane um as you know you know about the lithium because you discussed the lithium budget but there is a whole um other load of cargo that she talks about or refers to which I've checked out in the Netflix thing which had supervised security guards um in a completely different type of uniform that were nothing to do with the airline there were nothing to do with the normal uh people that would have been at the um KOA lumper Airport um and I uh would just think when we've

(2:40:53) got that amount of magnetic uh equipment on board in addition to all this other stuff and cargo being sneaked on board had you had time to look at the potential that lithium batteries mixed with magnetrons and all these orbs flying around is there any react any uh link sorry between the cargo and what happened have you had a chance to look at it yeah yeah good question uh NC boy I think has done the most work going through the cargo man and figuring out what was on there and I really appreciate his work I think it's

(2:41:24) been really good um and your work as well of course uh I just haven't found any hard links that fits with the story now absolutely could there be something on there could there be

cargo that is either a catalyst like the batteries to the story and the events sure um but the batteries are the are the real obvious thing because it's supported by Witnesses we've got smoke out there we know these things were banned um it just it sticks out like a sore thumb with respect to the cargo out there uh Florence of Changi yeah there

(2:41:59) there's this uh idea that there was this extra cargo that was put on and we don't know what it is but that's part of the problem we don't know and we don't know can we trust the way Bill to tell us what it that is on there as well not sure so there's too many unknowns for me to run with that and and kind of conclusively tie it to the story uh but certainly possible and just as a quick aside as well say it's it's similar I think to to the other work which I appreciate your investigative journalism

(2:42:24) especially the 1mdb stuff like I'm pretty close to thinking that there might be a connection to some of the corruption that was going on there I don't think it's coincidence that 1 MDB happened the next year and all these Malaysian officials and the Prime Minister were stealing hundreds of millions of dollars uh from the government and they have these funds that are out there these slush funds that they were stealing from for advanced technology 12 of these freescale semiconductor employees are also Malaysian Nationals

(2:42:50) um but for stuff like that like you really need like a real direct connection and that's why I'm somewhat hesitant not ruling it out just like I'm not ruling out the cargo there's a lot of other little loose ends as well that could theoretically be related to it but I think we've got enough evidence where I we don't need to tell exactly why they did this we can't read people's minds um and if it really is just a show of force then there isn't going to be a easy answer that we're going to be able to

(2:43:15) just figure it all out we need the US government to tell us what why they did whatever they did to this plane um and then from there we can match it to our evidence and determine does their story make sense absolutely but just for information February the 10th 2014 10 Executives had to sign off the Takeover of free scale by the biggest semiconductor company and the US netted over 60 billion US dollar as a result yeah it's pretty sketchy I mean the US is the fact that the company sold off the next year and had all this debt

(2:43:49) as well super suspicious I mean this company is definitely the motive the people in these companies as the motive you look at the people on board the plane it's way too many people freescale semiconductors the technology is very very likely linked to the technology we see used on the plane um there's just way too many coincidences there for that not to be the motive for this plane in my opinion but there is still this idea that if there's a VIP that is like I'm not going down with this thing you got

(2:44:13) to rescue me it seems possible but it's it to me it's more and more of a stretch just given the tight Tim of like an hour and 20 minutes from this plane going dark to us seeing it in the nicobar islands thank you money Penny that's great information that you've shared tonight Ashton um Ryan bur I've already let him know that we're gonna let him get a question in I

haven't allowed any more speakers only the ones that are left do you want to take the additional three questions I I don't want to keep

(2:44:39) you for sure you've been on for quite a while um yeah we can go for a few more minutes let's just see how it goes here with Ryan okay let's try to get uh get in quickly guys if we can so we can try to get to everybody Ryan go ahead Ryan are you there or we can just go to the next question yeah no I'm here I'm here I'm here I'm here I'm here um I've been following your stuff and um I don't I I just jumped on here so forgive me if I'm uh like passing over an old topic but um

(2:45:14) do you believe that like in the times we living right now and how crazy that government has become that they could use this technology against their own citizens and how I I personally think they wouldn't disclose that against us but I do not trust anything they say or do but this technology is something that is like could destroyed the world like you say but um I just wonder if you think they would actually do that in like a civil war scenario great question yeah um I think that it's good to be an American it's the first thing

(2:46:00) is I think that we wouldn't hesitate to use this on our enemies and anybody who's messing with us which um I think that it's great to be an American because if we have this kind of Technology we control this world and we can just make anybody die and then and cover it up and convince the world that something else happened to that person heart attack gun whatever I think we're probably not using this exact technology on our own citizens but we're using stuff that's even more nefarious like

(2:46:26) social engineering and manipulation of social media um but there was two letters or two videos that were posted on the weird creepy uh world channel that had a letter to me and one of them was about glitter and it came down this idea that they could use some type of chemical manipulation and even through the air like an aerosol that could manipulate people's emotions which is just scary to think about if we have that kind of nanotechnology or that kind of met bioengineering technology um so those would be the types of things that

(2:46:57) I would expect that they would use or you know psychological operations like what I think um I guess psychological operation is a good word for like the covid-19 pandemic where you have this Mass formation psychosis uh gets built in that people have like an existential crisis over whether or not they're going to die and stuff like that those are the types of things I would they would use more often I would think against our own people that's just give my opinions I'm not expert on that but good question thank you Ryan um next I

(2:47:28) believe Spirit had a question oh I just wanted to First of off say uh thank you Ash for coming on and thank you for all your work of you done with the image uh 370 story um also I noticed that you read through the comments whenever you you know do a media post even though at times thousands of people are commenting so that's that's really good you're attentive to your comments um the thing I was going to ask you about you don't have to answer this if you don't feel comfortable answering this but um is it possible that you have

(2:47:59) um sources that are closer to the matter of the zeroo tech uh that are sort of cooperating or cross confirming things that you're finding um uh that are friendly in a sense yeah no that's a good question and uh the first thing is yeah I try to respond to a lot of the comments but obviously on some of these posts over like Millions like there's thousands comments I can't I can't respond and the **truth** is if I don't get to your comment too a lot of it's cuz even on my notifications some people's

(2:48:27) comments just don't even show up um and I do spend a lot of time on doing that I probably won't be able to keep it up but I try uh yeah with respect to my sources and stuff like what I would say is you know you watch my hard trus podcasts and you're hearing stuff right there from people who are extremely well connected um and I've had a lot of people either just uh anonymously send me information like one of those comments I posted the other day about guys like yeah I showed this to my Air Force buddies and that's

(2:48:51) what the stuff looks like um to other people that I think are very close to the intelligence Community like one degree of Freedom away um that I do bounce ideas off and then my other people that I talked about like my friends um like Dave Rossi Salvador Pasay um that I bounc you know science ideas off of to kind of figure out you know uh you know what's out there what what I should dig into stuff like that what's possible and the reason why I find them credible when I talk to these types of people is because they're not

(2:49:22) telling me exactly where to look they're not telling me all the answers like Dave Rossy if you look at a lot of the stuff he talked about a lot of the podcasts including Tim Po investigate Earth that I went on with him he's talking about scalar physics type stuff directed energy weapons uh like reversing healing and stuff he's talking about Thomas Bearden type stuff he never once has told me like hey ashon go dig up Thomas beard and figure it out and I asked him recently like why did you never tell me

(2:49:48) about Thomas beard especially because he like knew him personally um there's like some overlap before Thomas Bearden died and he's like well it it doesn't have the same impact unless you know you come to your own conclusions about it so it's like when somebody just puts you on the path and they tell you to figure it out yourself you might say that's a very Advanced psychological operation or you might just say that's the way you get to somebody the **truth** my opinion when you're trying to manipulate somebody

(2:50:11) you're trying to tell them what to think and this is why early on I a lot of people come into my DMs and try to tell me this is aliens nope that can't be that's contrails no like and they want me to think certain things about the case those are the people I'm suspicious of uh the people are trying to convince me to think a certain way and that's why I had specific rules that ended up pissing a lot of people off about not dming me and telling me what to think that even if you're there's not my side

(2:50:36) or the other side it's just I'm going to come to my own terms and conclusion about what I think happened to this plane and everybody's free to come with their own so I think

that's a good question too because I I do want people to know that like I I do have reason to believe that these videos are real uh but you can I'm not trying to hide any of that information most of that you can find on the hardre podcast with the people I interview great answer yeah we're not being spoonfed we we just get certain

(2:50:59) Clues that's really it's really good answer thanks for to what you're doing keep fighting fight no problem man thanks a lot Spirit appreciate you brother thank you and Rick if you want to go ahead and we'll get your question and then we'll head out all right thank you Aston anyhow um yeah I notice we keep um using that word government a lot so let's see now I've watched a couple of um trials with governments uh and it seems like there's somebody behind the government I'm looking at that group

(2:51:28) that specific group is doing what we we're seeing it's not the government because they have no answers they're running around and they're trying to get answers from people that can't answer these these questions which is like what so it has to be somebody behind the government right and I'm not talking just one person I'm talking multiple groups like behind the government I I think it's behind our governments no matter what these groups exist we know they're there we know

(2:52:03) they're very very some of them can be very very bad and they have this policies that they don't answer to anybody so that means they're operating outside of our jurisdiction and and they have a very big big system behind them they can't T I've always thought that keep going I've always thought about that Ashton and it's it's kind of scary I know I know I know those type of people all right and believe me they if they want to make an accident happen they make it happen I I already I already seen that happen I've

(2:52:42) watched a documentation on here about a guy who was put um connecting the dots and he's gone last interview never been found since yeah man if they can pull this off and convince the whole world of some weird suicide pilot thing where even the officials have ruled that out I mean they could make me have an accident and make it look just completely normal no question I have no doubt about that whatsoever um I do think there's sides and factions in the government I don't think it's as simple as uh the Deep

(2:53:13) State being evil or what have you even though I think there's probably people that you could certainly call Evil based on whatever your uh personal uh ideology is um and I I'm trying to figure it out myself you know I think that General Flynn mentioned this as well and I think that if you look at the different sides you could say that there's the CIA the DIA you've got the Department of Defense the Air Force um and then you've got the Navy as well and the department of energy and trying to figure out where which side

(2:53:44) these people are on I think that it's just like a big Club to some degree and we're not in it and they have information about this type of stuff and none of them want to say or piss the other people off um but they all have their own intentions and when you take everybody's individual intentions and group them together I think that's where you get this uh kind of toxic

environment that gets formed where there are these certain individuals and groups that do have more power than even the president um because of the

(2:54:10) compartmentalized information that they hold and uh that's the scary part yeah they can and will do anything to protect information and protect their livelihoods the last thing I want to say as well is that I don't think these people are afraid of judicial uh response so even when I make formal accusations against people on social media that I'm saying are not satire and what have you um you know they're not afraid of that the judges there's no I don't think there's really Justice in in

(2:54:39) this country in terms of these people aren't afraid of judges coming after them um you know they have the full control over the Judiciary as well yeah we're seeing that we're seeing that actually right now yeah like right now yeah I've seen it first myself you got an indictment you got an indictment what you got an indictment things are getting more activists when it comes to our judges all the way up to the Supreme Court which is uh pretty scary because you can see how we could quickly get into Banana Republic

(2:55:11) scenario um where the Judiciary is going after people for political or even you know what you would call like deep state uh reasons you can imagine them coming after me even um and the only reason why I'm not afraid of that is because the weight of the evidence I think is literally so strong that like look at all the people in here which I want to thank everybody who's in here listening people who are watching like I think this looks like there's almost like 6,000 people watching uh that I could

(2:55:35) take 12 random people on a jury and I think I could convince them at minimum that the United States knows what happened to MH370 I think I convince most of them that we actually have warp technology that we're hiding um and if I could subpoena people like Edward Cind to get to testify then I'm sure I can convince a jury so that's the reason why I'm not afraid of that and that's the reason why I'm uh okay to make bold claims and statements about crimes that are happening on on social media in

(2:56:04) public Ashton thank you very much everybody that joined tonight um thank you so much all the speakers great questions great information was put out there um Ashton's actually joined us for three spaces this week and I'm sure this won't be the last so we really appreciate your time um and doing that and guys huge thanks to Chad and Sherry for hosting this um they do have a podcast investigate Earth conspiracy podcast you can find it on iHeart Spotify Apple all of that make sure to go and give them a follow there

(2:56:32) and also please follow here on X as well because we are going to be doing more of these spaces not only just on this topic but other topics going forward um as you can tell from the name conspiracy in the podcast we do talk about a lot of stuff that isn't getting talked about other places um so we appreciate all of the support um and also guys there's a telegram channel that they have as well and that is something that all day long there's a chat with it that constantly information links upto-date news is

(2:56:58) being shared so certainly welcome everyone to follow there too but Ashton thank you so much again we really do appreciate it especially for the third time this week and I hope you guys all have a great night thanks everybody appreciate you guys thanks Sam thanks the investigator Chad Sherry see okay let's close that okay chat uh a few other questions I want to do I want to thank also the people who donated real quick once again we had some donations come in um Wang Wang have you looked into Edward C Lyn's

(2:57:33) family and have you tried to reach out to him uh yeah we did do that early on back in like October one time and somebody picked up a phone and hung up and I think it was Edward C Linn uh but we have to be very careful about approaching Edward seen I want the media to do it because I want him to be protected I'm afraid that if he were to talk to me he would go back to prison and get arrested or killed honestly um so that's a pretty tenuous situation that's why I haven't reached out to him again uh but good questions Wang Wang

(2:58:04) and thank you very much for those two donations ice rain J ridle me this what goes up and never comes down does anyone know the answer to that chat uh whatever the opposite of rain is maybe anti-gravity I don't know um and then aan once one more time huge donation uh he's probably not here trucker life appreciate you brother that's a huge donation thank you very much uh greatly appreciate that I got to figure out what I'm going to do with some of these donations uh because you guys are really generous and then video

(2:58:35) shows uh satellite designation nr22 uh is it possible that that satellites transmit scalar beams yeah I think it is possible that satellite I don't think nrl22 is doing it but I do think we have weapons platforms on satellite out there I think it would be naive to think that we don't if you think about the Genesis of that this technology I think that the way it starts is through radar dishes on the ground and those are still beneficial but you're limited by shooting off the aan sphere and then bouncing um so you

(2:59:02) only have limited range if you have a satellite you're range is way bigger so I think the next step is you put those uh scalar transmitters on the satellites and have them shoot down and create an interferometry Zone like anywhere on Earth and then what's beyond that is you make little orbs that can just float around and then they can locally create a very very powerful uh scalar potential on a focused point and then this is what I think leads to the idea of Waring an object locally uh good questions there on those so some other

(2:59:31) questions that people had and I'll see if there's any in the chat as well now we need scalar granny to come back guys where's scalar granny back at uh we also bring in The Ether back absolutely ber ey make sure you guys are following ber ey on uh YouTube as well give alien scientists and Alchemist uh out there uh crypto Alchemist give these guys a follow uh follow along with their content have the families reached out was another question I get a lot um no families have really directly reached out there was a

(3:00:05) post unless I dreamed it I thought I saw a post where somebody said that their F their friend or somebody was on board the plane and they were you know rooting for us or they

wanted us to get to the **truth** I think that behind the scenes the families probably have a hard time believing what we're putting forward but they can see that the evidence is powerful and that um they certainly why if there's anybody out there searching on any path that nobody else is looking at why would you tell them to stop if

(3:00:32) you're the family members who've gotten no answers you wouldn't and that's why I think nobody's Noone the family members have come out and said hey you're disrespecting my dead love my my loved ones because a lot of these people like they were silenced like they know something sketchy happened um PDF got mentioned I am going to check out the PDF uh that JK Philly fan put I haven't I'm I'll look at that probably tomorrow I'm tired uh one person asked earlier what could the government have made the

(3:00:59) videos or uh the idea that the government should be able to make the videos if they can warp an object yeah yeah of course they could but for what purpose there's no story that makes sense for the government to have fake these videos um but that is the only pretty much the only alternative explanation that I could get behind I don't know for what reason you'd have to explain like why they made these videos why they've been covering them up why they put Edward cin in prison um and then why they're not admitting to the

(3:01:27) videos being real if they made them if they made these videos they should have months and months and months ago came out and said yeah well these are real we made them ha just kidding the problem is then they have to explain what they know about the plane and why they have all this information that they're hiding for the interest of National Defense and foreign policy uh related to the plane because we know they track the plane so question is where is the plane then and that's the big thing is that if these

(3:01:51) videos are fake where the f is the plane in some random spot in the ocean that's not indicated by the satellite pings well so you're saying the satellite pings are fake so this is what I want people to understand I say where's the plane and people go well the ocean's really big okay so point on the map where the O where you think the plane could have crashed because the experts out there are saying that we have satellite pings that indicate the plane must have crashed along this Arc well we searched the entire Arc above and below

(3:02:22) water and there's no plane anywhere not even one piece of the plane anywhere so if you're saying that the plane crash somewhere else it's not indicated by the satellite pings that means those satellite pings are false if those satellite pings are false guess what theory is number one you're looking at it the fire scenario so this is the big rub with where the plane crash where is the plane any other alternative Theory that's out there and this is the benefit of um you know pulling in more evidence than

(3:02:54) anybody else has and so for example here's another thing that people think well what about the debris that washed ashore it's impossible for the debris to have washed ashore in South Africa from the crash site that they indicate so the debris actually proves The Narrative false if a piece of engine cowling cannot get 3,000 miles from the supposed crash site to South

Africa in the allotted period of time in fact the flap Ron couldn't even have gotten from its location to The Reunion Island the problem is they needed the flap R to

(3:03:27) be sticking out of the water so that the wind could blow on it and push it but if it unfortunately the problem is that the Barnacles are actually on the part that's out of the water so how is that actually possible then the and the the Barnacle growth indicates that that flat Ron was only in the water for four months which it couldn't have drifted 2,000 miles in four months so this is the funny part is people don't realize that the debris that wash the shore if that is from MH370 proves the crash scenario to be

(3:03:58) incorrect or at least the crash in the South Indian Ocean to be incorrect and if again if those if that satellite pings are incorrect the number one scenario is the one supported by 19 Witnesses which is an emergency fire event that ends in the nicobar islands before the plane turns in the South Indian Ocean so people don't seem to realize the strength of the case here this case takes into account all the evidence and I'm saying that debris can be from MH370 but do you know a better location for that debris to have been put in the

(3:04:25) water than the crash Zone Diego Garcia the place where I'm saying the plane went to and was disassembled it's about halfway between the crash site and the place where the the washed up all of a sudden makes it much more plausible um so yeah people don't realize the strength of the evidence of this case and how this story is used magnitudes more evidence the people think the plane went to **Russia** or Vietnam they have to say that the debris is fake even though there's part numbers on there that link it to a bowling trip

(3:04:58) 7 this scenario says that can be from MH370 even the suicidal pilot scenario that debris is not consistent with so it's how powerful it is um I generally don't take private requests guys you have to realize I get probably over 100 DMS a day right now and I cannot accom all of them so unless the event that your information is specifically about MH370 and you have inside information um there's not much I can do with it and also you know and this is not to put anybody down people have experiences they see unusual stuff

(3:05:32) in the sky uh weird lights moving in the sky doesn't even if it is consistent with what we're seeing in these videos it's it's not going to move the needle forward for us unfortunately although you know I think there is weird stuff that's out there and I think that these uh this case can help to give credit to those experiences and things that people are seeing out there that there is anti-gravitational technology that's out there um Heisenberg's principle yeah I think that the one though the schinger

(3:05:59) uh equations and schinger theories that are the ones that are more significant in this case but Heisenberg's uncertainty principle could also be a factor as well I think it's uncertainty um let me see what else we got any other questions spoon yes you can have a shout out you're giving me you're giving us your time thank you very much spoon appreciate you man um cooling temperatures in space is what's needed for Quantum Computing it's true there could be quantum computers in space uh but I think that we can achieve

(3:06:31) room temperature superc conductivity and I think we'll be able to achieve quantum computers at higher temperatures as well that's my personal belief just based on what I researched any other questions before we drop off for tonight I think I got R I think I addressed everything that you guys mentioned in the chat um so and the last thing I want to say again is that oh another donation wow thank you very much Gen X I was almost on MH370 when I traveled through three countries on my holidays on seven Malaysian Airlines planes over

(3:07:03) three weeks I took **China** out of my holiday and ran out of money well thank you for donating sir or ma'am appreciate you very much glad you weren't on that plane you might be in Diego Garcia right now if you were you'd be living your days out on the island out there if you're lucky um uh what was I going to say um yeah so I think that no matter what side of this thing that you're on everybody should be able to agree **debunkers** or Believers alike that the government should issue a statement if you're on the **debunker**

(3:07:35) side um then you want the government to issue a statement because you want to get me and you want the government to prove me wrong and to you know hold me accountable for all these things that I'm saying that is harming the government and these defenseless defense contractors these poor defenseless defense contractors people actually said that by the way um and how I'm hurting the families so you want the government to come out and harshly state that these videos are fake and the government maybe can tell us who faked them since they're

(3:08:01) real military assets and Equipment um and if you're on the believer side you want the government to come out and issue a statement because they're the ones who can corroborate the verifiable information that I've given to AO I've given them verifiable information you guys are probably never going to see a case like this the rest of your lives we are probably never going to see a case like this the rest through our lives where we have verifiable information that we've given to the government to

(3:08:22) confirm to be real um and everybody should be supporting that anybody who doesn't want the government to issue a statement on this should be looked at as suspect because both sides should want that the only people that don't want the government to issue a statement of the people that know the videos are real and know that the government will get in huge trouble if they admit them to be real and they don't want to admit it those are the only people that would be against the government issuing a statement so the evidence is

(3:08:45) overwhelming uh everybody should want the government to issue a statement and let's try to force that to happen uh the longer that they don't issue a statement the more suspicious it gets I'm getting Community noted we're getting tens of millions of Impressions every single week now at this point um the idea that the government's not familiar with this is absurd especially because I've literally given the government the information about the case back in November of last year um there's no

(3:09:10) chance they don't know about it so why are they being quiet why are they not addressing the fact that there's military **leaked** videos of their information filming MH370 and

everybody's talking about it on the internet yeah no way the phones could be ringing let's see anything else I think what if any evidence is missing I don't know I think we we've really ran the evidence Mill dry guys I didn't think we would find the stuff about the Google Earth and the quick terrain modeler I didn't even think that

(3:09:43) would be public information finding that out blew me away I was like I wish I found this out back in October that's strong evidence that these videos are real um so we'll see do I have an X Channel I don't even know what an X channel is so I guess not maybe I need to make one of those guys I don't know if that's like **Reddit** it then maybe we'll make one not sure I want **Reddit** to go away uh yeah so yeah once again thanks everybody who's been out here thank you for burn ey appreciate you here yeah

(3:10:11) liquid helium turns out there's 450,000 uh what's the unit of measurement something volume I think um liters or something I think of liquid helium three on Antarctica 450,000 liters or or gallons gallons um that's weird uh third video no so technically when people talk about the third video what they're talking about is that the stereoscopic video is side by side which means that it's actually technically two different videos create 3D environment um that's what they're usually talking

(3:10:43) about when they talk about third video so technically there's really two videos from two different perspectives one is looking down in the plane like this and then the other one is looking horizontally at the plane this is why you have to have a 3D rendered environment cu the clouds actually match in two different perspectives um which pretty much rules out that 2D Cloud picture but the lighting rules it out as well I don't know it's crazy uh yeah one day we maybe we'll have an MH370 meet and greet which would

(3:11:08) be great although that that would be where I'd be really afraid of being harmed because there's a lot of nut job people you guys are all cool but scary people they scare a little bit man uh we already talked about why the hide the flight it's going to be the free scale semiconductor scientists that are the motive you can listen to a letter to Ashton Forbes if you want to hear uh the random letter that was sent to me that I think is I can't find the lie in it let's leave you let's leave it

(3:11:35) at that I think that it's probably pretty accurate there could be some misinformation disinformation in the letter to Ashton but it matches with a lot of the evidence that we found out I'm just looking to see if there's any other last questions here here marijuana inject marijuana's injecting time enjoy that yep yie that should be fun um I don't know so here's the thing I want to say is that what would a say what lie are they going to say can they come out and say that the videos aren't

(3:12:08) real they have to give information up about what they s looked into so if they come back and they say Edward C Lyn didn't leak these videos I'm going to say okay show me what evidence is available on the internet that he **leaked** then that's going to be my response to them what is it that's on the internet that he **leaked** that got him nine years in prison just point it to

me that's my response to them that's why they what can they say they can't say anything anything they say we can prove they can't say that's

(3:12:37) not an mq1 C Great Eagle because it's an exact match to an mq1 C Great Eagle so they would have to make up some lie about cameras don't look like this but we have proof the cam they do have that capability we have color multispectral capability on the cameras so I don't know I mean I assume I agree they probably have to lie but what lie are they going to say we've got them backed into a corner literally backed into a corner on this and the other part of it too is you got to realize that they have to force somebody

(3:13:05) to lie that might not even know about this technology so the AO person I talk to they probably don't even know about this technology being real and now they're getting red pill'd and now they're putting that person in a sketchy spot if they have to lie to me you know now they might have legal liability if they can get proven that they were lying so this could definitely be a situation yeah what is this thing about the black vaults request did Who The Black Vault John Greenwalt he put in a foyer request well

(3:13:34) considering the fact that I haven't even gotten the letter of memorandum back from AO yet and they've been ghosting me for two weeks uh makes me believe that there's probably not going to be a lot to Foya at the moment um I'll give you guys the most recent updates on them also I'm pretty sure I'm not being scammed and that people aren't um because you could argue that maybe I'm not really talking to Arrow maybe somebody was got my information and is spoofing their email and impersonating a Federal Officer I

(3:14:02) mean those are Major Crimes of people are doing that so I don't think they are plus the fact that they take so long to respond back to me indicates that it's really the government because that's how the government really works they take [ ] forever um but uh if it was somebody scamming me they would be responding back to me right away and wouldn't really work I think so I I do think it is uh that uh I'm not going to ever ask answer any personal questions that people have in the chat uh about my

(3:14:30) life so don't bother with those kinds of questions um can we warp to another planet there's probably limitations to this technology like you if there does require a fourth orb then you've got to send your fourth orb to the location where you want to warp the the plane so now you've got to send your War your fourth orb to the moon now theoretically sure but can the 777 survive on the moon probably not or in deep space no so you need a craft that can actually survive in outer space before you're going to warp it to outer

(3:15:00) space that's the probably the limitation out there um okay I think that's about it I'm going to see if there's anything else what was this one can we call your Martini debunkers tears I like that actually we might actually use that because we might use that okay thanks everybody thanks everybody says uh appreciate all you're doing star great technology yeah I mean we're pretty much at Star Trek technology I think is where we're going to come from yeah they will create more evidence from

(3:15:33) the plane the problem is even if they were to crash a new plane into the water it's been 10 years the debris won't be consistent with a plane that's been underwater for 10 years a plane underwater for 10 years is going to look way different than a plane that just falls into the water and some debris if a debris field shows up 10 years later like that's already that's going to add be a lot more questions going to be able to be asked so I don't think they can even plant the debris anymore so like

(3:15:58) they're just totally screwed I think uh they might have to admit these videos are real I don't know the scary part is I think that yeah the day Ashton gets high is the day we can put MH370 to rest maybe that'll be on Joe Rogan um uh imagine I think that if if AO comes out and says the videos are authentic authentic and they're Declassified you're going to see the biggest 180 you've ever seen in your life you're going to see some of the UFO people apologizing uh but they're also

(3:16:27) going to say that you can't trust AO you're going to see the debunkers who were just sucking off AO about how there's no extraterrestrials all saying that AR is full of crap like you're gonna see the biggest 180 and people's cognitive dissonance is going to take over it's going to be funny I swear to God if Aro con says these videos are real I'm going to have like three martinis I'm going to be laughing at everybody on both sides that'll be the greatest stream we ever do chat greatest

(3:16:53) stream we ever do uh I don't know what this question means about washing a Shore if we don't know where the plane crashed how can you know that it was 300 miles from a Shore I don't know what that means um let's see I think that's it a lot of people like Flat Earth stuff guys the reason why I'm not on Flat Earth is because you literally need to be able to bend SpaceTime for this technology to work so it kind of precludes Flat Earth unless I'm not understanding the Flat Earth arguments which is fine but I I do

(3:17:29) respect the Flat Earth guys just because I like how they're fighting back against people and what have you so respect to those guys even though I don't necessarily agree with their approach on the SC or their view on the science um but that's why I like I'm totally open to anything you know even stuff that seems like it would be contraindicated by the science that I'm pushing okay guys I think that's going to be it yeah uh much love just looking to see if there's any other last questions yeah there's a lot of

(3:18:02) impersonation that does happen where people claim to be experts that aren't people that claim to be Aviation experts that aren't people that claim to be VFX experts that aren't people that claim to be military experts on drones that aren't it's crazy I call them redditors but you'll see all the time when people say stuff doesn't look like this or doesn't look like that or you don't know how this works or that most of these people are scammers and frauds that are faking credentials making up stuff I

(3:18:26) don't know why people are like mentally messed up in the head they do this kind of stuff but it happens a lot on the internet guys um I will post real quick one more link to the

Discord for anybody who still wants to join just make sure that you are respectful and you um you have to verify right away if you don't figure out the verification I can't help you uh you have to verify you have to wait 10 minutes and then introduce yourself otherwise you're at risk of getting booted uh I'm not a chemist or a

(3:18:54) physicist I'm uh I work in healthcare it I'm a I like to call myself a database architect yeah I think AO that the only thing they could do if they give me a non-answer then that's almost as good as saying yes especially after what they've already told me um but that's probably they'll have to word it very specifically and that's probably what they're waiting on is they're trying to figure out what do we tell this guy like what do we tell this guy without revealing that we took this plane um not

(3:19:22) going to be an easy move I don't think okay so I got that in there Name Bar uh don't worry Don't Cry is that the yeah don't worry Three Little Birdies don't worry about a thing yeah three little birdies there you go that was fast um okay I think that's it guys yeah I still be happy and love to talk with Tucker Carlson Joe Rogan Bill Maher I'd also love to talk to any other big podcasters the hod twins even Patrick B David um uh I don't know who else I was think Roseanne theovon anybody frankly anyone

(3:20:06) wants to think and talk about this type of stuff what the nature of reality is the UFO phenomenon advanced technology or high technology as I like to call it uh conspiracies what the government did to mh37 zero um happy to talk to Big podcasters happy to talk to small podcasters too but it is getting the point where my profile is getting so large where I'm just so busy that um I'm probably not going to be able to accommodate every request that's out there so I apologize if I can't take your requests I will try my best to uh

(3:20:33) throw in some smaller content creators as well just to help out so thank you guys thanks m370x have a great night uh it's awesome hope you enjoyed your Saturday and we will talk soon guys peace everyone it's m m m H3 you do some research don't talk to me I'm going to find the truth while I sit this your opinion it means to me it's m mm mm h37 not all heroes my capes I wear glasses to see I'm going to find the truth while I it this Mar the trolls hate seeing me [Music] succeed but guess what m m h37

(3:21:55) gu what M M37 not Heroes vac gles to see I'm going to find the truth while I sit this yourin it means to me you're opinion m m h37 hero glasses to see I'm going to find the truth why I this part gu what

Warp Drive & MH370 Videos - YouTube

Transcript:

(00:09) it's m m m m m h37 until you do some research don't talk to me I'm going to find the **truth** while I sit this Mar your opinion it means to me it's m m m m m h37 not all heroes make capes I wear glasses to see I'm going to find the **truth** while I sit this more clean the trolls hate see me [Music] succeed but guess what M mm h37 [Music]

(01:16) s what mm m370 not all her VES glasses to see I'm going to find the **truth** this Martin your opinion it me to me your opinion m m h37 hero glasses to see I'm going to find the **truth** why I this party SE guess what [Music]

(03:32) let's go happy Friday hello everybody hello four Orbeez all MH370 fans everybody who's interested in high technology welcome to technology tonight I'm your host Ash and Forbes uh tonight we are going to be talking about warp drive so if you've been following along with what's been going on uh you'll see that we've had influencers including the Hodge twins are retweeting a lot of content almost on a daily basis uh and today they called out Elon Musk yes the Elon Musk uh they said Elon what is your opinion

(04:11) on the videos that are out there so tonight we're gonna look at that and then I'm going to show you guys warp drive science people don't want to believe it's real okay I'll just show you that it's real and we'll leave it at that so before we get started with all that let's go ahead and thank some of the people who are in the chat tonight s des salty decimator Joe vachi Joe vachi not sure His Highness good to see you James taplan nice to see you John good to see you William always nice to see

(04:42) you Dorian it is party time cheers Dorian we're ready it's Martini time it's Friday no working this weekend Oh that Martini is extra dirty tonight chat Flint fancy good to see you here uh yeah scaler granny shout out to scaler granny Billy Bru nice to see you as well appreciate you Kevin hono good morning if you are probably on the other side of the world um sincere Sentinel good to see you as well psychonautic good to see you Chris nice to see you as well um Joshua Marshall hello welcome any Pat Unleashed people in here guys I

(05:25) was up super early this morning on Pat Unleashed on the blaze feel free to check it out probably try to post another link I think it's gone public now I'll try to get that out there um who else we got here sham 6 nice to see you Michael welcome Anthony Williams welcome John hold I don't know if I said hi to you already but hello sr1 1977 appreciate you guys uh UFO nut uh investigate Earth podcast Chad and Sherry are here tonight TLO Boston dead head nice to see you Chris Asher good to see you guys

(06:03) everybody on X appreciate you guys as well Steve warp factor 3.1415926535 Pi basically hey mystical Wonderland good to see you DeVos lighten it up with the fire Alex carton uh dark of Hugh says invite Eric Weinstein Lang I'm gonna get your name right one day welcome my channels nice to see you Paul Shields nice to see you guys as well he was just watching the lecture by Al bck he is uh the guy who's talked about the Philadelphia Experiment should be

awesome warp yep let's get the warp going Michael hey everybody um

(06:41) Billy Bru good to see you JK Philly fans here St haian Jason nice to see you guys as well Into Thin Air love it love to see you guys 117 nice to see you Martin Robert lot we got a lot of new names and a lot of names have been on there a lot appreciate you guys um tired of globalist good to see you Kathy D nice to see you David Parker uh uh farts for Poseidon yo what's up Heather Bird's in the chat guys Heather Bird's been making she made the song that I played the overlays just on fire appreciate it Remos John hold

(07:15) hold ironically vague wow lots of new people in here hey Benjamin nice to see you as well I like interacting with people hey Emily McKenzie sighting in the chat hey how's it going Frederick H good to see you swish think we're close to the bend and then Randy okay all the the people that get here early everyone gets a shout out appreciate you guys oh Pamela you made it just in time just in time for your shout out oh okay hey sniper sniper will'll get you as well okay we got we got set our hellos to

(07:44) everybody out there okay so the agenda tonight as I mentioned we're going to go over um warp drive we're going to look at the videos we're going to play the Bob Greener clip uh if you haven't seen that uh it's about 7even minutes long but it's absolutely worth it uh and then oh Arn's here good to see you as well mindself got a couple more people thank you for being here oh Lulu's angry brotheus appreciate you as well yeah can we talk about the fact that the video depicts a citric session yeah I'm going

(08:13) to show the videos as well so that everybody gets up to date I think it's important to show the videos pretty frequently uh so that people are clear on what we're dealing with so we're going to show the videos we're going to do Bob Greener uh I'm going to make uh a couple brief statements uh and then we're going to at Kona Blue teleportation study by Eric Davis uh warp drive uh mechanics warp field being accidentally discovered and warp physics and then we're going to look at er equals  $e$  and humanly traversible

(08:44) wormholes boy we got a schedule on our hands tonight it's going to be a good one so you know what let's just get straight to it what do you guys think okay let's start with the videos um video file so start with what are we even talking about here guys what what is warp drive what is it the MH370 videos for people who are new MH370 videos are these videos that reemerged on the social media back in August uh I've kind of Taken upon myself to promote these videos very heavily um so that they don't disappear to the way side actually

(09:16) before we get to this let me pull this back up um I want to show the H the the recent comings and going on on Twitter real quick so let's take a look look at that here we go this should work okay I wish I could just get this to default to the other one I like it it's on the right not the left okay so that's my pin tweet here here's we are we are live okay so um let's start from this one here so a drone video This is actually a clip from uh when I was on earlier this morning with uh the Pat Unleashed so someone clipped it or Y

(10:03) me clipped it so shout out to Y me here if you guys want to follow y me eljo um so he clipped this it's basically just me going over the videos as well as the uh modified version of the videos I think right here yeah the one where it's like you know the black and white what have you and I explained the details um uh should we just do that maybe I should just show this video maybe that's what I should do um so just for the quick background the Hodge twins you know retweeted it that's why it's got so many views I think like an

(10:36) hour or two ago and you know of course there's a lot of controversy a lot of trolls in the chat um and then uh after that they asked what Elon Musk thought so that was their retweet is there a way I can check the retweets there right here Elon Musk what do you think of this okay 163,000 views so we're trying to get El musk to weigh in on this I think everybody wants to know what Elon musk's opinion are on these videos there's no way he's not familiar with what's been going on with this case um I have to be one of the

(11:09) fastest growing accounts I mean not the fastest growing but one of the fastest growing I'm talking about some pretty crazy stuff out there that would uh you know validate Tesla and pretty much obsolete his rocket technology that's out there so you would think he's got to have some opinion on these videos I just want to know what it is even thinks the videos are fake that's fine I want to know what his opinion is out there um and then uh I wrote this thing and I'm going to kind of talk about this here in

(11:36) a minute about the uh the spoon situation it's more of a a metap poost and then I just retweeted the Hodge twins because I also want to know what Elon Musk thinks here I want to understand how many smart people we got to wake up with this I want his opinion on this um I I feel certain absolutely certain I would have been banned from any other platform out there um I've actually talked to Adrian who who's uh you know he's not an Elon Musk impersonator he just happens to sound exactly like him uh Adrian's a cool guy

(12:06) uh I didn't actually ever ever ask him directly for his opinion but I've been in several spaces with him and we've talked I like him a lot actually uh so that's where we're at with that stuff let's go ahead and take a look at the videos in fact I think I'm GNA first just play this clip here uh can I even play this clip I don't think I can play it because let me see here let's stop that let me try again Chrome tab oh okay I think I can let's see does that work thermal HD seven Jo this one yep so

(12:41) you can see the mq1 C gry Eagle right there I mean it's clearly an mq1 C gry Eagle if you guys look it up the camera is underneath the wing in the custom Loadout location this thing is flying so close to the plane that it indicates an operation like any military person that looks at this is going to know this looks like an operation this uh camera is being manually controlled uh and there's a delay in it and it shakes more accurately when they zoom in just like a real camera would you can see the same

(13:05) orbs here and this is whereb we can tell what's going on with these orbs this is a plasma field wow this orb this is not a metal sphere this is like a plasma field around the orb and when it

zooms in even more first of all you can see these dark lines are actually in front of the orbs they're not behind the orbs they're in front of them and it's like their own gravity well that they're pulling forward then you can see the heat signatures on these orbs as well spinning around on their axis which is

(13:30) consistent with topological monopoles that this science wasn't even public back then and you saw that disappear and if you let it play here as well it will show uh there's like a slow-mo version if you just let it keep going here where it shows the orbs in more detail so the other part too is like watch this next part where it goes and shows it repeats it in slow-mo and you're like if you think if you made a fake video why are you adding these slow-mo elements to it so that like if there was any mistake

(13:55) people would catch them it's because they want to show people these are real they want people to look at this and go this is a plasma sphere you can see it there's probably something inside there and the reason why I say that is because we've got multiple different effects happening here like these things are ignoring gravity they're pulling themselves forward and then they converge and zap this plane in this cold endothermic event which is an absorption of energy to be able to do all of that I

(14:17) feel like there's got to be something mechanical in there um so this person adds you can see that heat signature in there as well and it's like a um kind of like a orange slice almost is what it looks like called the ukan vasara terms like the Thor's hammer shape um and then it shows the super slow-mo here where you actually when you look into a lot of detail you can see the orbs reorient once you like right here when you see the orb right there the orbs are reorienting the heat signer goes away

(14:44) for a second comes back and then they got to orientation and then they converge this is consistent with something called kum's law which says that the force electric force will increase as the distance between the charges decreases and it goes up exponentially so people wonder how do we get enough energy here is well you take these charged orbs and then you jam them together and then the force goes skyrockets in the air so if you that guy is very handsome look at this guy want to play the last video after we looked

(15:13) at that one this is one that I made that was a combo uh people made like color changed versions of this to like let certain details stick out this is the black and white version of it and this the black and white right here really just helps you see the movement of these orbs like how perfect it is in this equal leral triangle that you see as they're spinning around the plane here um and then it'll show a super slow-mo of a closeup where you can actually see that the orbs are like getting distorted when they go through the smoke trail

(15:43) that we see there of the plane um and I just can't imagine how somebody could have faked all these frames to this level of detail you know this is just actually a real mq1 C drone filming 777 yeah um and we're seeing some crazy I I used to call them super harmonic uh uh orbs but at this point like I I think it's I don't know maybe plasma if you want to think like that

and this one you can see the the black lines in front of the orbs very clearly here um you see those black lines pulling them forward

(16:14) kind of wrapping around oh yeah to me I don't know how anyone could even come up with that I've never seen anything like that or heard of anything like that in my life ashton I don't want to throw you off of your presentation here but I think that that the original video that really caught your attention if I'm not mistaken and I don't know if you want to go through this but it was very compelling to hear your theory on who could have leaked that footage and and and you're uh you're trying to go down

(16:43) that trail with the attorney and stuff can you briefly just explain um your thought on on who might have leaked this stuff yeah H and so I think that the person who leaked this is Lieutenant Commander Edward C Linn I looked at these videos back in October I thought what Lieutenant Commander Edward C in chat so that's the the Drone video I think that's a good analysis that prevents me having to say too much thankfully uh so I don't get exhausted here um how do I close out of this oh there we go yeah U so somebody said you know the

(17:15) videos just have too much detail it's almost more impressive if the videos are fake uh because of how much detail it would require in order to fake that drone video um I'll go ahead and play the video while I'm speaking as well about this let's do there we go okay present share screen sorry one sec chat um I'm going to play just the original drone video while I'm uh talking here yeah there incredible amounts of details in there somebody asked didn't AO confirm it know what the Aro did

(17:59) those they didn't say it was fake and they came back and they said that initial Research into MH370 found uh I'd have to read the exact wording so I'm paraphrasing but some type of United States surveillance after the plane went dark after the plane like lost radar contact which you could either argue is when it first went dark or the military radar contact at 1815 UTC or 1822 UTC either way like that's consistent with these videos the and the time frame that we put on these videos and then they

(18:32) asked for the Fidelity of the videos and where they originally came from so to me AO coming back with that response uh blows my mind because that's huge uh people also mentioned you know it's important that you notice there's the sine waves that these orbs are making actually when they're spinning around like that they're making a perfect signwave pattern which I don't think is accidental it's not like somebody was just like oh I'm going to turn this these orbs into a perfect sine

(19:01) wave pattern like there's just no way way way too many details out there if cloning is real I hope my uh scar Johansson clone shows up soon uh or settle for my what's her name Tiffany gas clone the that that MFR isn't real I just she's hilarious um he's actually VFX I remember from a game in the 90s it's true I'm actually CGI guys um the videos are real but I'm CGI uh let's see what else um yeah Lynn has the biggest orbs of them all this guy got gas lit and like leaked these videos 10

(19:38) years ago and like we weren't even close to accepting this could be possible back then so tonight we're going to be looking into warp drive to show how it is possible um any tips to get kids intrigued and invest their education to understand ma370 yes my tip is look into electrical engineering I was just talking to several people today about this which is where we have all these old Engineers like we have Hal hudoff you've got uh the Eric davises these guys like even sarfati like in his n 80s five or something like that where are

(20:11) the young people where are the young people that's a big problem there's no young people in fact this is probably why **China** will overtake us because their young people are getting into engineering and Science and and stem and all this stuff and our people are going into Ai and Tik toks uh we need kids involved in electrical engineering tell your kids that electrical engineering is where the magic exists tell them that Tesla was right tell them don't listen to their professors when they say Tesla

(20:39) was wrong tell them to look into the Maxwell equations and realize that they heavy side rewrote the equations incorrectly that's how you will we will come back in this battle of uh information or technology that's out there okay oh one sec chat you're the cutest chat okay let's see yeah find me a detailed UAP video here you go like this is the problem with the **debunkers** you'll see say this all the time but everybody says this which is show me a video that's not in low resolution and whatever I I show them the most high

(21:12) quality video that exists in the whole world and they immediately go that's fake I could make that in five minutes and then nobody literally no one can recreate the video even with an exact video to copy they still can't recreate it that's the world we live in that's the real world we live in is that you give them the video they that they want that they claim they asked for that has details that nobody could even know about like the absolute proof these videos are real are the coordinates in this video right here in

(21:39) the bottom left the coordinates in the bottom left of this video are Absol that should be all the proof anyone needs to know these videos are both real is that in the bottom left of this video you can literally see coordinates and the coordinates were not publicly known this is the real location of the plane in the nicobar islands real location where they claim the plane also the location they claimed the plane turned into the South Indian Ocean which is the only evidence that we have to throw away and even with that that information

(22:08) was not publicly known till nine days after this video was published and that's all you should have to tell anybody that's absolute proof this is MH370 that these videos are real doesn't matter bounces right off people they just don't understand what proof means I hear people in some of the chats too going what's the proof that this is the plane what's the proof these videos are real guys this is more proof than any murder conviction out there people get convicted of murder off a fraction

(22:35) of this amount of evidence a tiny fraction um so here we go let's watch this video yeah it's definitely a weapon out there um Helen Kell can't see anything I don't see it yeah the UFO

Comm is not very intelligently rigorous let's just let's just say that right everybody just wants to be that aliens are out there so they can get to clap in those cheeks um the on this video here I'm going to have to make it a little bigger on my screen sorry chat let me see there's the mouse so we

(23:10) see this mouse down here everybody there's a lot of people uh when I was on the pad Unleashed they pointed out that they thought oh where am I looking up at people think they're looking up in this video That's how little perspective we have That's how little the public understands about satellite capability is it literally video is called satellite video people think they're looking up this mouse should be all the additional evidence that anyone else needs so I didn't even know about the

(23:38) Telemetry data until like a month ago maybe two months ago at the most back in February probably and the mouse should have been enough absolute proof the mouse is 24 frames per second indicating we're logged into an actual remote terminal session a Citrix session that people don't know what Citrix means it means you're a remote terminal session you're on your computer you're logged into a database on the other side of the world and the video screen is cropped because we see the mouse coming from the

(24:06) top right and go off the bottom left and the background is six frames per second which is exactly what you'd expect for a uh computer rendered environment that's pulling data either in real time or huge swap of data from all the satellites out there I mean it's just basic logic basic critical thinking it doesn't require any special knowledge you know um that that should be absolute proof the videos are real but the the thing that holds people back even in the face of that absolute proof these videos are real they just

(24:34) can't believe what they're looking at with their eyes that's that's the only thing that holds people back people just cannot believe what they're looking at with their eyes they can't believe that we've got orbs that can pull this off they can't believe that we can warp a plane it's crazy um and that's why like again this is issue is not about proving the technology even though we're going to we're going to show it tonight the issue here is waking people up getting people

(24:59) wake up I wish these videos were fake I don't want to live in a holographic principle actually I don't really care I don't mind living in a holographic principle um and yeah so you can see this pattern too also guys like the part where the orbs come in here at like mock 3 speeds and this first one is like clearly got some kind of tracking capability and it's trying to lock into to the plane somebody made up that detail too where it doesn't lock in right away and then the second and third orb wait for

(25:26) like five or six seconds and then they come flying in and they get into position position immediately like this one's already locked into triangle formation without the third one even getting there and the third one comes in right here and it locks into this third location right here boom now they're clearly mapping the plane like I don't you don't need a advanced PhD to look at what they're doing and be like oh that's clearly got some purpose and the pattern being a

perfect sine wave is also

(25:48) another good indicator somebody's literally recording this on their on their laptop or desktop and they're going holy people got to see this I'm going to screen record this uh and then you know they change orientations and they're two videos in perfect sync you see them slow down right here the orbs slow down right there way way way too many details man and none of these details I'm talking about have ever been **debunked** in fact the **debunkers** have never even addressed these details so this is the problem is

(26:17) that **debunkers** just cherry-pick they cherry pick what they're going to argue against and they're so stupid that they think that if they just prove they they make one false claim they think pokes a hole in the story that all everything is **debunk** like that's not how logic and reason work at all at all you need a full comprehensive story for who made these videos and how and every single detail in them needs to be refuted every single one um so if anyone understand doesn't understand why we're still talking about

(26:49) these That's why and if you're the kind of person that's going to post derogatory stuff and my replies you're going to get blocked right away if you cry about getting blocked or other people getting blocked you're going to get blocked blocked I'm never going to unblock anybody ever again so heed this warning okay I'm never going to unblock anybody ever again there's not going to be another unblocking in you're just going to be permanently blocked from this point forward so feel free to move

(27:11) on with your life and do something else and go back to sleep if you don't want to deal with these videos being real no one's going to make you come along Okay so we've looked at the videos we've looked at that why is that warp drive the reason why it's warp drive is when you look at that video and you see all this stuff going on here I'll go back to it one more time um because it could be Annihilation it could be as as dark it is talk about if this was Annihilation though we're not

(27:34) going to have all this stuff going on with the orbs there's too much going on with the orbs with the spinning around it like you don't need all this you know this stuff happening if all you're trying to do is annihilate the plane if you just shoot a beam at it and you shoot a directed energy weapon at you just zap it and it's just poof it's just gone this you'd only have all this stuff going on if you're intention is to move the plane or hide the plane to a different location I would say there's

(27:57) more of an argument of it some kind of weird Advanced stealth that we don't quite understand than there is of being Annihilation um and the only reason why I think it could be Annihilation is that you're like warp the plane to the Center of the Earth that's essentially the equivalent of annihilation so uh for me it's like 1% chance Annihilation or stealth and 99% chance that this is just warp drive this is Star Trek warp drive that we're looking at right there like real Star Trek warp drive not just

(28:22) science fiction shows and that what we see there with that zap is a uh is a is a wormhole equivalent of a wormhole so we're going to go through that science people also wonder why is it white in this video well we actually found that a lot of the IR videos are reverse Heat Signature so that first of all it's false color IR so they can pretty much just render it in whatever they want um and if somebody was faking it and they faked it black in the other video they would fake it black in this video as well it's white here probably because

(28:50) it's inverted like we've seen IR inverted videos where dark is black dark is hot um so could be but we can't say for sure what we do know is that the capabilities here that I had speculated with the Google Earth mixed with this um what do we call it uh quick terrain modeler uh 3D rendering software like that's exactly what this uses we found out like just a few days ago they actually CIA literally funded um Google Earth they literally funded Google Earth so that's actually that's why we see the

(29:23) coordinates in the bottom left they're literally using a military version of Google Earth with video playback that has some kind of 3D rendering capability somebody posted in the replies as well that you can actually rotate the camera 360° which is probably why we see the angle it probably doesn't have to do with where the satellite is it's probably just that they have video playback and this is for tracking purposes for tracking assets and enemies and stuff like that so incredibly powerful surveillance capabilities that

(29:50) we are just disclosing to the world um the military should have told me to stop if they didn't want me to disclose this information um so it's on them them at this point I think they just thought actually I'll talk about that in a second but I think they just thought that like this would go away and no one would believe me and I wouldn't get a big following and stuff like that and so they thought they would never have to talk to me or anything like that and now it's just the point where it's

(30:12) unmanageable where like I have too big of a following there's not any way to silence me they're probably afraid that if they come talk to me that I'll just tell the world like imagine the CIA comes talks to me like yo ashon um could you stop talking about what we did to MH370 and then I get on Twitter I go CIA just came to my door and told me to stop talking about 370 that would be funny as hell cheers guys by the way cheers happy Friday yeah there's a lot of ignorant trolls in the replies um but we're going

(30:46) to talk about that in a second here and then we're going to dig into the science um we can't wake everybody up guys that's the reality so I'm going to give you guys a quick analogy which is they convinced so for a hundred years since the uh flu pandemic in 1918 we had known that masks don't stop any don't stop viruses we got away from my Asma Theory this idea that viruses are just all around us all the time and it's just in a my Asma that's going to get at you and in 2020 uh the

(31:18) governments of the world were able to convince people that wearing a cloth mask over your face would stop a microscopic submicroscopic virus uh from infecting you which makes no

sense whatsoever anybody that you rubs two brain cells together can realize that a piece of cloth on your face covering your breathing holes is not going to stop a virus once you realize how small a virus is you realize that it's not something that's feasibly possible and once you realize that uh how viral replication works you realize that even

(31:47) if you were to stop a couple virus particles it's not going to stop you from getting sick it only takes one to get into your your body and start replicating um so basic science would tell you that a mask doesn't do anything and yet you still to this day see people outside wearing masks outside thinking that it's protecting them so just imagine the level of brainwashing that is possible for people to believe something that's completely counter to reality and here's the problem is that now you realize how why people will get

(32:17) so offended at looking at this even if the I think even if a o came out and said these videos are real then people are still not going to believe it um that's just the **truth** we just can't wake everybody up to the real ity of this um so if if the mask thing offends you I apologize but that's just the sad state of it guys um and there's G to be people that are going to wear masks for the rest of their lives and there's G to be people that don't don't believe these videos will be real for the rest of

(32:42) their lives I'm just letting you know that uh and and just because you you like wearing a mask doesn't mean that you can't believe these videos are real it's not one or the other kind of thing uh I'm just trying to tell you guys that uh brainwashing is extremely powerful and it's not something that you can just break down very easily okay now let's take a look let's close this remove stop that move from Studio okay see where my okay okay let's look at the Bob Greener video right now so

(33:15) the Bob Greener video if you guys are not familiar with Bob Greener oh yeah let's let's take a quick look at the cers video as well good call so I guess we have to show cbers because people really realize persistent infrared surveillance continues to be a critical National Security space mission okay Global persistent infrared surveillance that's what the narrator just said Global persistent infrared surveillance so if you don't even believe what I'm telling you all you have to do is listen to Locked Martin's

(33:48) video here just listen to what my man just said look at the image on your screen right now we're mapping the whole world all the time this doesn't even include the low earth orbit satellites the low earth orbit satellites are extremely close what we're seeing there the geostationary satellites that are very far away and we're seeing the mid Earth orbit satellites these ones are probably the relay satellites here the reason why they're relay is because they get into a position where they can see

(34:15) like every other satellite that's out there um but look at how huge the swast of scanning that they're doing they also have a stair and they have a scanner on them so they have two different cameras I mean I don't know how people can deny this is what we're looking at when we are staring at the capabilities of this system which was by the way turned on in 2013 became

fully operational in 2013 the year before MH370 disappeared nice timing nr22 what we see in the satellite video in the bottom left is the first

(34:47) launch of the cber system in 2006 I don't think that's a coincidence people say well uh USA 184 which is n22 was not in the right location you're right because it's a relay satellite it's a command satellite it's one of these midar orbit satellites that doesn't mean that no one I don't think anyone ever argued that we were looking at USA uh 22 or 18 uh 184 no one ever argued that we were looking at USA 184 in the video we argue there a groundbased computer system that can look through all the

(35:18) satellites simultaneously and build a groundbased computer program so um now we've got that up there um let's see how do they stay in position pulse plasma pencil thrusters that might actually be pretty accurate yeah I like to say hi to the satellites every day when I go out walk my dog I walk Lulu I wave up to the satellites smile at them you know they might pull that up in a year and look back and then they're going to see you and they're going to be like oh that guy's a nice guy he may be disclosing all of our

(35:47) surveillance capabilities and our super Advanced Hypersonic weapons but he's a good guy he's a good guy guys if you look at by the way the masing I'm not going to talk too much more about this but learn the difference between relative risk reduction and absolute risk reduction the absolute risk reduction of wearing a mask is negligible it's essentially zero that that's the ultimate science and math behind it um so that's the the sad part if you want to wear a mask go nuts I really really really don't care uh but

(36:17) it's not going to stop you from getting sick um thank you you enjoyed me on Pat Unleashed I appreciate it okay so let's watch made a movie and included the capabilities I don't know what that means yeah Lulu probably senses the satellite people up there she's I don't know where she went she's super smart doggo okay let's watch some Bob Green here guys and I'm gonna sit my Martini while we watch this this is probably one of my best edited videos that I made I tried to make it as short as possible

(36:48) Bob Greener is I Saw the J Reese interview he likes to talk so I'll give you guys uh the background on this um I'm getting to be a little edit monkey too on with respect to some of this stuff um real quick somebody asked have I looked in Thomas thomon Brown uh watch the Jesse Michaels piece about Thomas Thomson Brown very interesting uh I I talk to Jesse every once in a while um that's all I'll really say with respect to that and okay so Bob Greener this was before I ever met Bob greenr somebody

(37:22) says you got to watch this video this guy made about the Vi about you and the MH370 videos so he watched the alien scientist podcast that I went on with uh Jeremy reefs uh and crypto Alchemist who sometimes you guys will see in the chat burn Bern ey um make sure you guys follow them so he saw it and he was like whoa especially what he saw was the orbs the plasma orbs with the ukan vasara in it the heat signature and he goes oh I know what that is that's low energy nuclear reactions that's the same stuff

(37:52) that he had seen experimentally so he made this YouTube video and I clipped it to show you guys I think the most important parts so this is a real engineer not like somebody who's a science influencer this guy actually is an experimental engineer who knows all the science who goes around the world visiting people that are working on Cold Fusion that's what low energy nuclear reactions are cold fusion um lenr is just the you know new pc term for it because people don't like the idea of cold fusion this guy is in

(38:26) my opinion one of the for mentioned experts in the world on cold fusion in my opinion so here we go when I saw the Jeremy ree interview and realized that this was a a video from 2014 and with the context that I've just given you and what you see um and knowing that this can cause things to disappear uh and when they tend to do that disappearance they go in a Flash I was compelled to do this so for those that like to attack uh the project uh when they feel that we're going off subject um I'm sorry for you um uh but I

(39:08) believe that this is fully on subject and I think that um at some point we've got to address uh ways in which this technology has been used um uh because we need to wake up to its possibility Kaboom this is a guy that was afraid to talk about it because he doesn't want to open himself up to undo criticism you can tell he's skeptical he he's not that he's skeptical he's just afraid to talk about it but he he feels compelled to because it's so accurate scientifically with respect to this magnetic monopole

(39:52) and the the shape that we see in there being consistent with plasma physics and low energy nuclear reactions wild wild so you know just that first piece should tell you like that's the disclaimer being like I don't like to look at UFO videos but this one's too crazy not to talk about if it turns out to be fake well um it's a pretty well-informed fake is all I can say uh and I didn't go back in time and force them to make this video with what we know now so there you go for AKA Dragon PC how's that for you has

(40:26) has there been any updates since Danny Jones podcast well how about a real cold fusion engineer saying that he didn't go back in time to make these videos and that if they made these in 2014 it's a very well-informed fake that's accurate to the science this would kind of imply that these are warmer than the environment and for that to happen one might expect that if they didn't have their own energy source they must be extracting the energy from the environment that the ex vacuum objects will fire a thing or it has some sort of

(41:03) projected field out in front of it that will cause other EXO exotic vacuum objects to orbit around them so there is something that goes out in front I believe that this is the tural moment the beam that goes out far faster in front of it and that along with the let's say the Ukon of assara the this part of the fractal toroidal structure this this part here uh this changes epsilon0 of the okay people want to know what does epsilon z mean that's the vacuum permittivity of free space so he's talking about extracting

(41:42) energy from the vacuum from the environment around it this is the idea of cold fusion it's also the idea of overunity and it theoretically give be the idea of The Ether and free energy as

well so and I just want to make sure is that Epsilon Zer yeah vacuum permitivity of free space okay so I'm getting better at my stuff physical vacuum and it has like a beam that comes out in front of it and um that enables all of the funky magic uh that these things can do often we are seeing and maybe I don't know if I can

(42:23) zoom in I can't zoom in Yes actually that is the Tesla symbol that is Tesla symbol we need Elon Musk to give us a freaking statement you guys see why I need Elon Musk to give us a statement on this we're literally talking about Tesla was right all the textbooks in the world are wrong rocket propulsion is Obsolete and the heat signatur is the literal Tesla symbol what the hell man Elon where are you at my bro where are you at I think honestly that Elon is too afraid to talk about these videos because he's got a

(42:54) 100 million followers and the moment he shines a light on this with this 100 million followers my followers going to go up by like 50,000 and the government's going to get really awkward like the moment Elon were to retweet quote or even reply on one of my posts like this thing's gonna blow up and I think he knows that so he's being very careful there's no way he doesn't know about these videos yeah the VFX guys that think they can make this in 2014 with a fully 3D rendered environment and fully

(43:24) volumetric clouds uh they're just smoking crack they're just smoking crack you're right there's just no way we are seeing the non-radiating boundary and you can go and look at this V uh video itself but inside that there is a much smaller thing and it does tend to be offset it does sent to be offset and that would be consistent with the uh toroidal structure in the center and the kind of mushroom that it creates uh with the material as it goes around the orbiting the fral toal structure in this real quick shout out I see thank

(44:03) you very much FL man you guys donated or been on fire appreciate it thumbnails on Sabrina hossenfelder I think I might have been too harsh on Sabrina hossenfelder early on uh I didn't agree with her on the delayed Choice Quantum eraser experiment um but when I saw her post about Academia and how Academia is I have to agree with her there Academia is complete horeshit um dark energy and dark matter are just madeup terms that we use for stuff that we can't understand uh I think that dark energy and dark matter will go away the

(44:34) moment we understand that The Ether exists uh but warp drives new simulations I may have to take a look at that later on um in fact I'll go ahead and just put that on my back burner here now uh we are going to look at some warp drive stuff here though in a minute yeah there it is oh that was only two weeks ago okay I I may do something on that tomorrow I'm probably not going to get around that tonight but thank you again FL appreciate you man let's let's keep center of the Exotic vacuum object look

(44:59) here we go we have our non-radiating boundary okay and we have this little tough of thing at the top right now I'm going to go you back go back to the monopole in this presentation and we have shown that our work is actually more accurate uh than this so if you can imagine this here this this is where the the the Taurus is kind of focusing its um moment to lead to

the monopole location the topological monopole here this is this Dome that you get so here this is this top so that the monopole is so let me uh and I I saw

(45:41) Denise from yoga said something hello how's it going oh Sabine okay I don't know whatever I'm butchering her name I apologize um so when he was showing those images a second ago what he's talking about a toroidal structure donut shape and then it's shooting the energy through it and then it's like an umbrella where it's coming out that's what he's saying we're looking at here in this plasma field and if you guys go look at plasma physics and you see the toral structure it makes you will see the

(46:06) Dome over the top of it just like this as well actually at the base of this bit here okay and this is the glowy bit that you see as material is pushed through but then it hits the top of the non-radiating boundary and is fed back into the coherent structure okay here this is very very clear this is this is almost exactly looking like um the alto University peer-reviewed published structure so the monopole would be at this point the tidal moment would be going out this way and you can see the dark area in front

(46:42) so it's cohering energy from here okay so this is traveling in this direction and it's cohering energy from in front of it uh and uh that comes into what I call the Borg it becomes part of the collective so he just explained how it's able to extract energy and he was able to figure out the direction of travel just from looking at the Heat Signature which I think gives a vast amount of credibility to his analysis that's there thank you William Bill I have not talked to Florence aangi in a couple weeks but uh

(47:16) I prefer to have our opinions be separated I don't necessarily want I mean this is so this is so far beyond the Paradigm I don't want to intermingle my theories with anybody else anymore I've also had a bad experience with major influencers so I don't plan on intermingling with any other uh major influencers in that way I'm just going to leave this as my thing and I'll take all the Heat or I guess the credit although MH370 X all you guys with us will also get the credit as well um here we go there this is very

(47:46) very clear okay so the monopole location is here this is the non-radiating boundary okay this is the phase inversion uh the dark area above um will be where it's cohering energy uh and you will have the disruption beam coming in uh to the monopole at the bottom here so when I saw this video it was like well to fake this one back in 2014 showed incredible understanding of technology that no one had an understanding outside of the black world even if there was anyone that had an understanding in the black world to fake this one and and have the

(48:26) thermal imaging uh correctly representing and the non-radiating boundary and everything uh is beyond imagining here Beyond imagining so he says the satellite video I mean most people don't even know unless you're in the black World he's talking about the intelligence communities wouldn't even know what a satellite imagery looks like you show random people the satellite imagery they think you're looking up That's how little anyone has any idea they still think we look down through satellites in

(48:55) outer space like we guys it's 2024 we use computers for everything right now um so that one is already hard enough for this one with the science in the Dr in the thermal video there's no chance anybody could fake this nobody would have had all the requirements to know how the science would even look uh it's just simply too accurate and that's what he's saying right there there in general um I don't know anything about willheim Ranch uh but I do like The Ether I think it's a pretty cool idea

(49:23) and I think it's a cool word too I think there is some kind I don't know if there's a computer inside the orbs but I do think there's some kind of device it wouldn't surprise me if it looked a lot like the Doms in Antarctica like some kind of cylindrical device with microchips in it that's producing the um the field the much larger field around it I would even argue that the device the device could probably be as small as my iPods thing this is how small it theoretically could be but I'm guessing

(49:46) it's more like the size of a basketball um but that's just again total guess we can't really tell because when we look at this plasma field we can't see what's inside of it it's the plasma field is blocking our view in general um but the reason why I think that is because there's too much going on like there's too many different effects happening with these orbs they're Defying Gravity they're pulling themselves forward and then they're also shooting some kind of

(50:11) scal or Beam at the plane to induce The Singularity to do all three of those things it can't just be a ball of electricity floating around it's got to be some kind of microchips device inside uh do we know where they came from the we can't tell but it could theoretically come from a satellite an airplane or even a submarine the second the second orb seems to come out of the water so good question on that oh another donation thank you very much Death Proof bum thank you Bill will uh apart from Alien scientists you Ash

(50:44) brought the biggest breaking news to the public but unfortunately most don't even realize it yeah it's kind of sad that most don't even realize this this is probably the biggest story in the history of the world in terms of dis you know disclosing secret information and I'll make a statement kind of about this here in a minute um and most of the world has no idea it's just a matter of waking people up and a lot of people you tell this information to and it's just so far beyond what they think the

(51:05) government would be able to pull off that um it breaks people's minds it really does so thank you very much for that donation appreciate you here we go yeah and you gotta keep in mind this was from 2014 so if this was came out now I'd say well AI could probably help out and make these videos i' still think they're pretty damn compelling but in 2014 people thought AI was like you know made up people didn't think AI was even going to be a thing um and the technology from the software and Hardware side it's come a long way in 10

(51:33) years um and not to mention that people had no idea what drone video looked like in 2014 nor had there been any satellite leaks in like 30 years uh it wasn't until we saw the Trump picture that we had some idea of the satellite capabilities where we see infrared we see the

angle um and that also probably was a video but they just took a still image of it um and they probably **leaked** that that one image it was specific set up in a way where it doesn't show you the capabilities or video satellite capabilities because they don't want

(52:02) people to figure that out and then the Drone video like the Fler Navy videos weren't even **leaked** till 2017 or they weren't uh um Declassified and the ones that were out there had been **debunked** by the same people that **debunk** these videos that's not a coincidence either the **debunkers** have been wrong pretty much all the time on any high quality videos the bunkers have been wrong like 100% of the time and they've never admitted to being wrong **Mick** West fabricated a fake **debunk** two fake **debunks** about this the one that you

(52:31) guys saw from the corridor crew and Danny Jones that's not from them that's **Mick** West's **debunk** they just repurposed it as their own and pretended like it was their own that's how much these people lie to you they don't even tell you that they literally just pretend like they thought of it that's how stupid these people are that's what a that's what a **redditor** is a **redditor** is somebody who doesn't think for themselves that incorporates somebody else's beliefs as their own and doesn't

(52:54) even tell you that they did and that's that's called lying that's called deception because if they linked it to **Mick** West and this is the same reason a one day old **Reddit** account posted that was linked to **Mick** West is that if **Mick** West posted no one would believe it because he's full of everybody knows he's full of it's the same reason why Danny Jones and the corridor crew don't mention they came from **Mick** West because then people find out those guys are full of if that doesn't tell you you've got

(53:21) your uh Ukon of vasara there I don't know what will right it looks like this okay that is the bit that changes epsilon0 okay the permittivity of the vacuum okay and it's pulling it in here it's correctly facing forward as it is at the moment and so what you would want to do is you would want to um bring these in get them into their alignment get them tracking the device uh accurately get them equidistant and then what you would do is you would um rotate their or orientation so their toal moments link up and make a super tour

(53:58) that would then have its azoth going through the center of the craft that you are wanting to either disappear or teleport and so there Bob Greener even explains that you know he was more on the idea this was Annihilation but he was absolutely open to the idea of teleportation which is really warp drive it's not it's not traditional teleportation the orbs are not 150 meters round I mean you can see the size of them compared to the plane here so diameter wise we're talking probably 20 to 30 feet in diameter that's the and

(54:24) that's the field around the the around the larger or smaller object that's in there so just keep that in mind um I don't like talking too much about these other podcasters but um yeah Danny Jones guys has never treated a guest the way that he's treated me which should give you guys huge amounts of pause and the reason why he did that he even said so in the chat when it was live streaming was because of his like douchebag boyfriend uh Julian Dory uh like came at

me for no reason as well and also acted like a douchebag to

(54:57) the point where he deleted his entire YouTube video because he was getting so many negative comments about it it was uh impacting his reputation as a podcaster that's the true story of it and Danny Jones was just as bad Danny Jones does interviews with people that claim to have lost their virginity to aliens he went with uh Chris Bledsoe and tried to summon orbs on a beach for two and a half hours and then said it happened but didn't take any videos of it Danny Jones doesn't press anybody on anything these guys both talk to CIA

(55:26) agents all the time these guys are compromised you need to be very careful about which podcasters you watch and which ones you listen to because a lot of them are full of and if you are somebody who goes on podcasts you should be very cognizant that if anybody tries to get you to sign anything like a release just get up and walk away that's my advice to you get up and walk away don't watch Danny Jones don't watch Julian Dory these guys are douchebags and they're probably controlled by the

(55:51) government if you reduce the overall diameter of the torus minus one the field strength in both in the Tor minus one and through the azoth uh goes up exponentially okay so I just want to explain what he just said that right there real quick okay so when he talks about Tor minus one he's talking about the Taurus so he's saying that there's a Taurus a donut in the actual object that's creating that plasma field that's creating these orbs but then they're also creating a bigger donut around the

(56:21) plane they're taking the three Donuts around the plane and they're creating a field around that Taurus a donut around it that's why they're vertical and then that's where they're going to shoot the plane backwards warp the plane backwards so that's what he's explain when he says po minus one is that they're building a bigger donut from the smaller Donuts which is the individual orbs themselves pretty neat and this is oh and then he even points out kum's law right here which is

(56:47) did not catch on to originally when they are converging the energy levels are increasing exponentially he didn't say kum's law here but if you go look it up you'll find out that's what kum's law is is as the distance between the charges decreases the energy level increases exponentially this is how we're getting to energy levels that are great enough to break the swinger limit and get to a nonlinear State already experimentally proven if we generally get accepted that this is technologically possible we have

(57:15) the most incredible future ahead of us just the moment is this true okay we'll finish this and we're going to go Elon commented sham 6 thank you let's find out most incredible future at this point they seem to be tumbling the the the most incredible future Bob Greener says if this is true he's right the most incredible future thank you FL appreciate you thank you sham 6 considered the lithium ion battery was not fully packaged but wired up energy hungry Beacon it could there could be some other Catalyst going on

(57:50) with the the lithium ion batteries but I don't think we need it and I I just don't know is the true story so um we can't know everything about what's going on a lot of people ask me about unknowable information like what they do with the people afterwards where' they all go it's like guys I don't I'm not somebody who's gonna tell you stuff I don't know I can guess but I really just don't know everything monopoles so it's not going forward it's starting to

(58:13) rotate itself and okay do they align do they start to get into alignment yeah the orbs are the same because what you want is the the monopoles to have their their own azoth uh to produce a ring to so when you saying the ASI they're producing their own field and this is why we see the gravitational lensing when they converge where now that that you can literally see that energy get to a point where you see a gravitational field essentially happen create another tour above and then you pull these in and that creates

(58:51) the uh unification of forces uh at the at phas Singularity of the minus one uh tours look okay so that's they're pulling in at that point right that's exactly what you want right right before so they're rotating and pulling in okay that is exactly what you would need to do and boom it disappears and it goes in a Flash okay so honestly Bob greener's analysis is crazy wait okay um yes thank you Johnny Cash guys we've got a if if Elon replied we've got a we' got to go see uh we got a see what's

(59:32) going on where' he reply Ashton just got a response somebody posted there it is seven minutes ago um okay well here we go I've need no evidence of aliens okay Elon please man please Elon this no aliens in these damn videos Elon oh my God chat um chat Elon Musk finally comments in I've seen no evidence of aliens Elon please brother what else do I say chat um okay it's retweet time it's retweet

(1:00:42) time uh guys what do we do what do we do I'm panicking guys I'm panicking um Johnny Cash thank you very much uh what do we do guys why he Ashley thinks there's aliens guys um what what video do we show him chat which video do we show him which video do we show him Edward cinn what do we think we show him what why would we talking about aliens guys there's no aliens in these videos man okay here we go guys um

(1:02:25) for for for e okay that's good right sorry guys I had

(1:04:23) to riff there hopefully that wasn't too boring for you guys what video what video do we post on here did I anyone in the comments have so any thoughts sorry um I'm just going to post the short the short video I'm gonna post a short the short snap let's do drone zap let's go with that post this we need to get the evidence link so that he can see the evidence um let me pull up should I give him the

(1:05:28) video evidence link I'm going to do the video uh no no no we'll just do the Google Doc sorry for the side quest guys but I think you guys can realize how important this is finally got a statement from Elon Musk um I'll take a look at the questions in the chat once I get this Google doc oh actually I just have a link to that evidence here also guys for people who have me on

Discord please don't send me DMS while I'm streaming I will have to turn off direct messages if people keep abusing the direct

(1:06:09) messages um imagine if Elon was watching this right now how weird that would be I just want Elon to look at the evidence just look at it there we

(1:07:17) go okay there we go let's go take a look in the chat guys thank you uh there was a couple more donations I think uh Death Proof bum appreciate you very much how much energy we talking about so with respect to the energy requirements of the videos um the jackar F would say that we don't need much energy uh to pull off this warping and salvator Pi would say that we have essentially infinite energy that we can amplify energy to a degree where we can break the swinger limit so it could be either or both I'm not 100% sure this is the

(1:07:50) part where it's like you kind of gotta weave between what the physicists say and what the engineers say in terms of what's possible there um that was me showing my resting face just post m370 song yeah this is wild guys um okay boy this is guys this has gotten big there's a lot of people watching all of a sudden too um God aliens man everybody wants to be aliens man it's like this is part of the problem guys so I think we're to the point where I'm going to make my statement actually here right now as well so let me just

(1:08:25) guys if I missed your comment and you have a good comment just repost it I can't even keep up Hodge twins reply to your reply okay guys I guess we're I guess we're just doing Twitter all night tonight guess we're just doing Twitter all night um yeah rip my notifications by the way there's no way I'm G to be able to keep up my notifications at this point no chance yes thank you yes okay how many **debunkers** you think are me posting here don't don't talk to this

(1:09:28) Ashton guy don't tell how many **debunkers** you think there are bro look at how many people like are just sneaking into elon's replies dude look how many people are sneaking into his replies it's wild ah Elon Musk chat chat chat killing me chat he's killing me got Hodge twins in the replies thank you TLO appreciate you man appreciate you for being in here tonight sorry we're getting a little bit sidetracked yeah they can't hide this forever man this can't be hidden forever uh this is going to come out we this is

(1:10:15) our technology we are hiding it it's not aliens in these videos I've never I haven't said aliens in his videos since like the first week I looked into this now I had the same reaction Elon did when I looked at these videos I went whoa that's way too advanced it's not it's not I've dug through it I've dug through the history of the science we've had this technology we've been probably advancing for 80 years the public is just blissfully unaware we're using it because it's military Supremacy and

(1:10:41) because it's potentially free energy and you can imagine the implications of free energy it's something they just don't want people to know about you know how simple it was to hide it all they had to do was rewrite Maxwell's equations and just never tell anybody that we uh simplified the equations too much and we got rid of the scaler part that's all we had to do

once we did that we blinded ourselves to what we were capable of now people wonder we should we see gravity waves we literally see gravity waves

(1:11:06) with ligo why can we not produce them you tell me that why can we not produce gravity waves if we can literally measure them and see them we have to be able to and people go yeah well we've got to be able to do it it's just it's just too advanced it's not that's not how science works that's not how discoveries work anything that is a law of nature we can understand it we can understand it Craig Chase thank you very much man potatoes what is life without a little salt yeah appreciate you man um guys how

(1:11:36) many messages are there whoa healthy dwe appreciate you he's seen no evidence of aliens just black projects domestically yeah guys you don't need aliens to explain anything we see in these videos you don't need aliens you know some people have this and I've seen this argument a lot of people would come at me early on and go why don't you think this is aliens why don't you think it's aliens because we don't need aliens explain anything I've figured out how it works macroscopic phase conjugation it's

(1:12:00) fully explainable fully explainable and people get so mad and their arguments would be well it's got to be aliens because it's not understandable so therefore it's got to be aliens no it is understandable that's the thing about it okay okay I guess it's good time to make my statements that I wanted to talk about real quick and then we can shift over man we're already an hour in I didn't want to go this late um okay here's the thing actually this is a great segue to it so here we go uh

(1:12:33) let me switch this timer 112 so I might want to clip this later on so when you look at the MH370 videos there is an ontological shock that occurs for anyone who looks at them Elon Musk just experienced it right now he looked at those videos and he immediately thought it must be aliens without looking at any of the evidence related to or anything that I've ever said if you've been following me you know I have not been saying that this is aliens been saying that not only do we have this technology I've been talking to the engineers and

(1:12:59) scientists who have been corroborating that information directly on my hard TRS podcast and you can watch it the intelligence community and the people hiding this technology did not think that this would happen they thought that everybody would act like Elon Musk just acted and that we would not think that this is possible to be real and that we must just think it's aliens they never expected somebody would come along and dig into the case so and the videos that me 370 videos as much as I have to look into to figure out that this is actually

(1:13:27) our technology that I would go so far as try to figure out how the science worked because nobody does that but I did I said you know what if this is real I'm gonna figure out how it works and we did do that as well the intelligence community that hides this depends upon being a people being asleep and not waking up and not looking at the hard evidence and the facts that's what they depend upon in order for us to never figure out that this science is possible and real this is how they've been able

(1:13:54) to hide it for decades for decades I don't know how long we've been able to war an airplane but it's at least 10 years from now since these videos from 2014 probably a lot older than that as well what I'm doing here is I am waking people up I am waking people up to the fact that this is not aliens that this is our technology and that we actually have the capability to warp gravity and warp SpaceTime itself the people like AO who I have reported this case to are backed into a corner I've given them verifiable

(1:14:26) evidence that we have a drone and a satellite staring at MH370 in the agreed upon location of the plane on March 7th around 1840 UTC in 2014 it's verifiable I gave them the leaker of the videos as well Lieutenant Commander Edwards C Linn they can look into any of these things and they will def definitely figure out that these videos are real and that we film this plane in some type of operation or rescue maneuver I don't know exactly I leave that to you guys to determine um what I'm doing I am not

(1:14:56) discovering anything that's I'm not a scientist I'm not discovering any new science that's out there if anything I just looked through history and I looked at the history of the engineers and scientists who were already defense contractors and engineers and I found out that it's already out there all we need to do Elon all you need to do is wake up wake up you're asleep you're not realizing what we're actually capable of look at Maxwell's equations realize that when Oliver heavyside wrote them he took

(1:15:26) out the capability to measure the stress in the medium what is stress in the medium of the vacuum of SpaceTime gravity gravity I'm going to demonstrate it for you guys right now you take the equations and you cancel out the forces on both sides does that mean that there's nothing left no how do I prove that I'm going to do a very little amount of force the middle here is canceled out the two equal and opposite forces on either side I take a medium amount of force same thing still canceling itself out a lot of force

(1:15:59) still canceling itself out if I were to pull any harder this rubber band's going to rip because of the stress in the medium of the rubber band this is exactly what Oliver heavyside wrote out of the Maxwell equations the stress in the medium of the electromagnetics is gravity manipulation gravity manipulation is stress in the medium like taking a squishy ball and stressing it you rip it now you're going to have a gravitational effect you're going to see what we see in the MH370 videos which is a wormhole

(1:16:31) by definition is a wormhole that's what we're looking at this is only possible if there is an ether if there's a a negative entropy zone or Dimension higher level than what we are able to perceive that is just nothingness if you would have think of that but it's not it's it's better than nothingness because it's potentially an unlimited source of energy we are going to rewrite the law of conservation of energy yes you heard me we are going to rewrite the law of conservation of energy we're

(1:17:00) going to add probably an energy to it or negative energy some other type of equation to it which is going to allow us to cheat the law of uh conservation of energy and we are going to

re-understand the laws of thermodynamics the idea that you cannot get more energy out of a system you put in sure that's fine got my system here we're going to cheat it we're going to open that system up we're going to allow the extraction of energy from the outside this is going to allow us to produce more energy out than we put in

(1:17:30) coefficient of performance greater than one uh also equivalent to overunity those are my statements guys hope you appreciated them uh I will clip that later wait what The Black Vault has received their a foyer requests on Ashton what what does that mean wait is this real is that I Black Vault has me has me blocked John Greenwalt has me blocked did they actually Foy at me guys this might get real spicy the Aros is actually backed into a corner they're actually they're gonna have to make a statement about these videos do

(1:18:10) you think that they're going to Gaslight us if the Aro comes back and gaslights us I'm going to play the videos in the background right now if they try to gas light us I have so much evidence I will destroy the AR if they gas light us and I have I have the guy IAL is a nice guy I have no reason to believe that he is we might have we might have redpilled the AO the people in the AO probably didn't even know this kind of stuff is possible they've probably never gotten evidence like this ever they just get people

(1:18:39) coming to them like this J Jason sans's guy going I saw a blue alien and I want to testify cool man great or in the case of Eric Hecker who he's not even his claims aren't even that that crazy he's been like yo we've got crazy stuff going on in Antarctica and they go okay well we not going to go subpoena raon or anything like that we're not going to go dig into Antarctica for me I go you don't need to dig into anything here's the evidence this is an mq1 C Grey Eagle the other

(1:19:05) one's our cers video and the guy that **leaked** his name is Lieutenant Commander Edward C Lynn the lawyers said that the classified information and questions available on the internet well hey we're on the internet right now and we're looking at two of the craziest videos ever and it coincides with his time on the vpu2 Squadron spy plane within one month by the way get get assigned February 2014 and then he gets and starts getting investigated April 2nd 2014 guys he's the guy man he is the guy I've given you the guy who **leaked** the

(1:19:37) videos like what more what more do people actually want two of the most high quality videos ever nobody's saying it's aliens just look at this orb that you're staring at on your screen right now there's no aliens flying around in this little orb it's a plasma field this is plasma physics plasma science also known is uh what we need for cold fusion to happen low energy nuclear reactions this is why Bob Greener is the expert I just showed the video of it I should have just put the video of Bob greener in the

(1:20:11) reply whoa Jake y gotta chill out with the donations brother I appreciate you though Jake uh graor gorgian Jake gorgian keep up the great work Ash and sending you Brotherly Love Through The Ether appreciate apprciate you man really really appreciate you you guys have been on fire tonight this has been already a crazy stream we had Elon Musk reply we had the Hodge twins uh retweeting us the Aro is getting backed into a corner um things are just getting

things are getting nuts chat things are getting straight up nuts uh I imagine that guys

(1:20:48) and let's just predict I'm going to play the other satellite video here the highest quality satellite video for people in the background what is intelligence Community even do at this point they've got to be panicking their asses off they're about to have the biggest conspiracy in the history of the world unravel in their face President Obama might be implicated in this guys President Obama I was actually a President Obama supporter he might be implicated on one of the biggest coverups in the history of the

(1:21:13) world and there's other ones that are probably big but none with this much evidence just video evidence literally leaker that we've identified I mean if I'm the intelligence Community I'm panicking I'm I'm taking this video because they have this video and I'm getting my AI in there to start wiping the orbs out and I'm getting ready to say yeah yeah we were tracking the plane we uh just forgot to tell everybody we just didn't want to give away our surveillance capabilities and I'm gonna

(1:21:38) find some Psy to say that oh I I made this video and have them come out and if they do that I've already called it I'm gonna destroy that person so intelligence Community if that's your play it's not going to work I will destroy that person um so don't do that come up with something else you know what I would even compromise at this point and just be like just admit that we stole the plane just say that you remote controlled it to Diego Garcia just say you remote controlled to Diego Garcia I'll come out and be like yeah

(1:22:07) that's fine that's good enough I I don't care if as long as I know the technology is real there's a lot of Normy Brin people out there that are never going to be able to accept the technology to be real that's fine everybody else here will know the technolog is real uh everybody that I've talked to uh and and that's fine the rest of the Normy people can just go on believing that we just stole the plane and we remote controlled it that's believable people will believe that so intelligence Community that's

(1:22:30) your play just fess up say no one's going to get punished there's gonna be no punishment for this uh people will be outraged but there'll be no real punishment that's how the real world works so just do that just admit we stole it say we stole it because of the free scale semiconductor employees that's the real reason um you know give give the real reason on why and uh you know that way we'll say it was Espionage that **China** was just tell the **truth China** was trying to steal these guys we said

(1:22:55) know so we remote controll the plane and then people like well what do you do with the passengers I don't know you guys got to come up with the answer for that I'm not I'm not going to be the one to explain to people what we did with those passengers as my buddy Dave from the alien adct podcast would say we probably gave them the special pancakes you know have a bite go to sleep don't wake up you know whatever people are sheep absolutely Scott people are sheep I don't know what else to say uh I've talked about Amy esgd Amy

(1:23:21) esd's soul is with us right now she is with us right now it's guys it's like I don't know if you ever seen the show movie Angels in the Outfield probably it's from the 90s so it probably predates a lot of you guys that's us uh saying that there's an angel with you Amy ESD is definitely with us right now and so is Thomas Bearden 100% I truly believe that uh the people that came before us that tried to get this information out that tried to tell the **truth** about the technology that were silenced that realized the

(1:23:57) weight the David versus Goliath situation that was going on they're with us right now they this is why it was so hard for them this is why potentially Amy committed suicide because you look at the situation and you see hopelessness you go no one will wake up I can't wake anybody up you got Elon Musk thinks we're looking at aliens in here you can't wake people up I just need people to look just look with your eyes and realize what you're seeing there is and then work through the evidence that

(1:24:27) I've already provided and realize that we're not looking at aliens that we've been suppressing this technology for decades anti-gravity scientists have been trying to get people to look at it and nobody will nobody will look at it nobody will give this evidence the time of day that it deserves so if you're out there and you want to give the evidence the time of day I'm happy to talk about it I will answer every single question that's possible about MH370 everything I know about the science and

(1:24:56) the technology uh you know that because that's what we have to do we just have to keep talking about it and we have to not stop talking that that's the **truth** that's what the letter to Ashton Forbes said in fact we're gonna play the letter to Ashton Forbes right now um let me get it up guys if you this is 11 minutes long and we're going to dig into the warp drive stuff after this we're just going to keep going tonight we're gonna keep going we got Elon Musk replying we're going to keep going I want to show the

(1:25:26) world the **truth** here this is the weirdest thing that's ever happened to me in my life weirder than warp drive capability a letter to me on a random YouTube account that was started like three days before the letter it's called a letter to Ashton forbs written in the AI voice that I didn't even think was possible with AI capabilities and voice capabilities where you can hear the breath of the AI voice when you hear the word deflector realize that we're probably listening to somebody who's not

(1:25:53) a native English speaker speaking through a voice changer that is mishearing the words that they're saying because of their accent so **I want you** guys to just understand that context there as well some everybody freaks out why does it say deflector why does it say deflector okay so here we go let's watch this and when you listen to this I find the LIE try to find the lie in this video that's what **I want you** guys to try to do because I've listened to this video probably 50 times and I can't find the lie I can't find

(1:26:27) out what they're lying about at all in this video this video is big part of the reason why I moved away from the rescue scenario to the Espionage scenario because this letter makes this

my skin crawl it makes the hair on my arms stand up straight it's somebody is talking directly to me in this letter who would make this with the amount of detail that you are going to hear here it is freak here we go sent to us the 8th of January of 2024 it's a letter to an Ashton Forbes telling a new story of what happened to

(1:27:09) Malaysian Airlines MH370 that disappeared back in 2014 okay I'm going to start drinking because I can't get through this without drinking this thing is just so crazy here we go and as always don't trust what you read on the news trust your own capability to see the world for what really is here we go I work or have worked at a military base in the Maldives and I know exactly what happened to Malian Airlines MH370 this is also a letter to Ashton Forbes you are not wrong and what you do are much bigger than you even can

(1:27:44) imagine don't stop what you are doing I won't tell anything about myself more than that I currently or in the past has spent time at a military base and the Maldives that I have done this type of work since I joined the military when I was young and that was many decades ago still in the game but the years are starting to get to me I write this because I want the world to know that most of the trouble on Earth are created for political reasons United States or at least a covert administrative Elite of the US has at will complete control

(1:28:21) and this has been true since the 60s Flight MH370 arrived at our Base by our hand at 1856 UTC after we picked it up midair outside the island of great nicobar just one of many many things we do we can pick up anything anywhere and deliver it in an instant like a magic FedEx some facts about why it happened MH370 had defectors on board they were were running to **China** with American Technology they are Chinese by Blood and had gotten themselves into a situation with the Chinese regime who got them to choose to defect the whole

(1:29:06) play everything and I mean everything about it was a political play to show the Chinese who's their daddy that's us some facts about how it happened all passengers are dead all but the handful of deflectors the plane did not crash the plane was on fire we know because we started it the plane was picked up by us on fire midair right in front of the Chinese the Chinese regime knows exactly what happened and that was the whole point of the operation okay this is what I want to share with you as I said I have been

(1:29:48) doing this for a long time I know the technology and have been a part of hundreds of operations so let's start with the tech the foundation is not super conductivity superconductivity is a product of the technology we have had this since the 1960s and from that first day we have used it to make sure that no one else can have it the big breakthrough to apply the tech as we do today came in the beginning of the 2000s with quantum computers and by this the Paradigm for AI technology what we had to do programmatically before we now can do

(1:30:27) with something akin to machine intuition this lets us operate in fast-moving environments where event-based logic in linear programming was very limited as I said what you have found is not the technology itself it's just one of many derivatives of the technology I encourage you to keep on with what you are doing but you should also be aware that there is a

deeper layer that you could focus on instead of the Miami aliens that I see you have been posting about I will give you some pointers for this at the end of this letter the

(1:31:02) products or application you are now working on is correctly based on super conductivity the number of orbs you've been speculating about is correct the fourth orb decides where the object ends up the technology is based on structures simple and beautiful structures that lets us use the unlimited power that is everywhere and step outside what I would like to describe as perceived reality the structure that is used for what you are looking at is a meta structure that creates a low complexity and relative low energy phase

(1:31:38) transition the beauty of this technology lies in its elegance and simplicity the structures are inherently stable and self-regulating and the earlier challenges to conduct operations were 100% based on the limits of man with the same technology just a slightly altered mono structure gives us an infinite power generator that without maintenance can run forever combine structures to a meta product again and you have the propulsion for a transm medium object moving faster than light it's the definition of magic there are endless

(1:32:16) applications and the **truth** is that it would change the world in an instant but that won't happen I bet yourself or at least most of your audience have heard a version of the story that the aliens are here and they want to bless us with new clean and revolutionary technology but we are a too young and Rowdy civilization and would not be able to be responsible enough with the gifts from them that's probably made up but that is at the same time completely true it's just not aliens saying this it's us again the

(1:32:51) technology is infinite in its power and if two two rivaling parties had access to it this world wouldn't last a day the same technology with a combination of mono structures makes a terrifying weapon that turns any matter into dust and that dust turns into air it does not matter if the object is a small bird or aircraft carrier it cannot be stopped it does not miss and when the object has been hit the phasing cannot be stopped okay so back to MH370 we knew about the deflectors as soon as they made their decision well

(1:33:31) before that but then they weren't deflectors anyway we knew when how and why back in December and as we do we made it into politics we let them go we took them back and sent the Chinese a clear message of who is in control and we did this with a brilliantly produced show that is fit for a Hollywood production any good movie has fire desperation regret and drama and every movie villain should see their plan fall apart and in really good movies just when the villain has accepted that the plan has failed the heroes of the movie

(1:34:09) steps in and makes it worse this is what happened as soon as we knew what plane was the last leg of their Journey we planned and delivered so the plane was loaded up with lithium ion batteries built by us for this occasion lithium ion batteries cannot be put out has a predictable burn rate and we made sure that the volume was just right for a long burn that would allow for a fulllength show the Chinese were following the plane since it was on the tarmac and got to see their most close to success operation go up in

(1:34:45) flames and just as all hope was lost we made it worse right in front of their eyes 2 hours and 13 minutes in they saw the plane get phased out of there by the same technology they were trying to get access to and 5 days later the Chinese officially made a gesture of submissiveness by publishing a frame from the satellite of the phase moment via the state Administration for science the publishing was talked about in American newspapers as a possible debris field but when you know what you are looking at it's clear what the frame

(1:35:22) shows the aftermath during the 5 days after the show the Chinese found out about the batteries that we both made and placed them on the plane they accepted that we have been playing with them the whole time and at the same time could accept that the people they had convinced to defect did what they wanted it was us that stopped them the defectors had a good corrective experience when it comes to staying loyal and were back on the job as usual but but with a new understanding both of their importance and the consequences of their actions

(1:35:59) what was nothing more than another Friday at the office for the administrative Elite 200 people had the most confusing death experience you could imagine 1,500 people lived a tragedy losing family members in a mystery and 10 thousands spent months searching and millions speculating for years then in 2014 military footage of the event got published on YouTube not our problem the person responsible for the leak was identified and taken care of not by us not our problem then came you hi Ashton impressive this is what I want to leave

(1:36:40) you with there was a guest on The Joe Rogan podcast that was talking about sacred geometry and some new technology his friends had discovered on some Island somewhere he did record another episode but it never been published doesn't the wording sacred geometry remind you of something if you choose to spend time on this which I think you should instead of maul aliens keep in mind that your case is one product of the technology what happens on the other Island you will understand this if you pursue it is another more rudimentary

(1:37:16) product what if those in combination could lead you on the right path to the actual technology the Great gray bearded man is the key and he probably has no idea that he is finally I want to say this how do you defeat someone who can turn skyscrapers to dust completely erase whole neighborhoods in an afternoon and steal a burning Boe trip 7 midair someone who when needed has the complete control of all media and crafts the perception of events and has most of humanity eating from its hands after after almost a full life in their

(1:37:55) service I think I know the answer you talk about them and you don't stop talking talking holy crap chat tonight my friends never stops freaking me out that video never stops freaking me out even now that freaks me out you guys realize first off thing I want you guys know is I did not make that video I've nothing to do with that video just so you understand how freaky it is to me where somebody's sending me a direct message whoever sent me that is watching closely they have they posted facts if you think that's fake guys I've listened

(1:38:32) to that video more than anybody I know this case more than anybody on the planet that person knows as much as I do they know stuff that I don't know like the exact time we

phased out the plane two hours and 13 minutes after it took off which is 1843 UTC they also mentioned the same thing about the satellite images where I say this looks like spycraft and they're going yep that's spycraft I that's just it's too weird man I played that video multiple times on my YouTube channel without letting

(1:39:06) anybody know what I was doing because I wanted to see if they copyright stried me I just played the whole video just like I did right there they never copyright stried me I get copyright stri for posting a one minute video of uh Joe Rogan on my YouTube channel I played an 11 minute video and they even have a thing saying this is copyrighted on one of their later videos and they never copyright striked me not once so if they were doing it for clout or money or whatever Mission not accomplished thank you very much truth

(1:39:35) is treason for the donation um so and I told literally not a soul on the world that that's what I was doing because I thought maybe it could be somebody in my Discord or something like that nothing uh I want to make sure I didn't miss anybody uh Chad well thank you very much as well appreciate you guys uh I'm going to have to say this because I I'm getting more donations today than I would have ever expected but if you need your money please do not donate it to me I although I appreciate it you don't need to do

(1:40:03) that if you want my attention um I want people to have their own money and I'm not doing this for the money I still at this point have a job um but yeah so thank you guys um I don't know what this means so if somebody knows what this acronym means please let me know let me know in the chat um yeah I think that if that video doesn't freak you out um I don't know what to tell you man it's it's pretty weird it's pretty weird so the person they're talking about in that video people posted it is Randall

(1:40:33) Carlson that went on Joe Rogan I didn't even know who he was before that video and it turns out he was talking about Malcolm Bendle Malcolm Bendle was hanging out with Bob Greener when that video dropped Malcolm Bendle was in the Maldives for the last seven years working on plasmoid research the two things that we need for these videos superconductors super conductive microchips ball lightning plasma those are the two things the videos literally talks about both of them talks about super conductivity talks about the free

(1:41:05) scale semiconductor engineers and scientists and it talks about Malcolm Bendle who's working on the thunderstorm generator which we think is called Fusion pulling off fusion with plasmoids the coincidence is guys I I you know I try not to see the synchronicities in life but what the hell Bob Greener the guy that we just analyzed this video earlier on this stream was hanging out with Malcolm Bendle on the day when that video dropped when they're telling me to try to get in touch with Malcolm Bendle seems like you have to know a lot

(1:41:39) of information and be some kind of super stalker to make that video some people a lot of people thought oh well I could make that video Whatever blah blah blah somebody tried to make a fake version of it called Nick obar and I can't even make it 30 seconds into the fake version it's so bad that's the difference between like an AI video that's shitty versus like that was

somebody reading off a scripts that was an AI producing that they were reading off a script into an AI voice changer and that voice that

(1:42:09) we've heard we found it being used in a lot of different promotional material it's like some kind of standard AI voice that they converted it to if you are trying to send a message to somebody that's a really good way to do it especially anonymously where there's no paper trail you use a bunch of VPN you set up a YouTube channel you send a message out there you buffer it with some other stuff that's out there I mean they were I'll never talk about mul aliens for the rest of my life I will

(1:42:34) never talk about some mul aliens in Miami ever again after that video um that's how crazy it is they wanted me to not stop talking about these videos message received my man message received I tried to get Joe Rogan to watch that video I don't think he has uh anyone who watches that video if you are a pod out there please watch that video please realize the crazy that's going on in my life right now I've been scammed by debunkers out of \$3,000 uh I've had people make fake debunk I've had people falsely try to

(1:43:08) come forward and say that they made the videos and then have their story fall apart um I've had this weird letter happen to me I've talked to some of the smartest scientists and Engineers on the planet that literally work with the Navy and the dod on this kind of technology and some of them like Dave Rossy literally admit he thinks the videos are real and he's seen these experiments in the lab in private labs in the special access programs guys what more do you need this the issue is not that we have

(1:43:38) to invent some new science we just have to get people to listen to the words that are coming out of my mouth so um I'm not going to go through I guys I address the debunk like every single day so if you are not familiar with the debunk that are out there like I address the debunk almost every single day you can just look back through my Twitter and you will find all my stuff out there I just I can't just keep doing it every single time the debunkers have never once in the history of this case ever addressed the evidence I put forth

(1:44:08) I just want to I want you understand the difference in the levels for the debunkers they perpetually lie and keep pushing fake debunk and I address them every single time and explain why they're not true and I explain why they're not true and they don't address the fact that I explain why they're not true because it's disinformation their goal is just to get people to think the videos are fake their goal isn't to have a rational logical debate the guy that's came up with multiple

(1:44:31) debunk Mick West has refused to even debate me on a podcast four times because he knows he'll get absolutely destroyed in front of anybody against me he knows it their goal is not to try to have logical fact-based arguments the debunker goal is to try to get people to stop looking at the videos and to try to get people to think that they're fake that's their only goal I've addressed all their arguments conclusively there is no Cloud picture in these videos it's a 3D rendered environment you can't have

(1:45:00) a picture there's accurate 3D lighting we have full 3d volumetric clouds the clouds move and evolve that's all been proven it's not it's not debatable it's been proven there's no Pyromania VFX in it you don't modify stock assets to the extreme that would be required to change it to a completely different event which is what the debunkers argue every debunk has been addressed there's no jittery contrails that was just from the stabilization software that they used they've never addressed any of the

(1:45:31) evidence that I put forth just let me repeat that the debunkers have never addressed any of the evidence I put forth all I have to do to prove the videos are real is say that the satellite coordinates and the satellite video predate The Raw Telemetry data by nine days and it's the real location of the plane that's absolute proof right there you shouldn't need anything more than that and that's a drop in the bucket to the evidence that I've produced including two videos 19 Witnesses one which was there in the

(1:46:01) location of the nicobar island when this happened within minutes and the leakers of the videos this is not like the the standard of evidence between the debunkers and the proof is just so out of control like you have to be just completely delusional if not realize that we're looking at real videos here okay so I I posted a link to that video um I closed if you just Google a letter to Ashton Forbes you should be able to find it it's by like creepy real stories I did post that as well in the chat here um but I don't know where it's

(1:46:36) at now Hey Stephen thank you very much man appreciate you guys yeah the momentum is building because these videos aren't going away man Stephen's good guy um ajx I saw in the or a axj or wait ajx right um all the other podcasters who've had me on that are really good guys um I appreciate you Stephen was one of the people that tried to set up a debate between me and Mick West Mick West backed out of it uh investigate Earth also tried U multiple people tried at this point I have no interest in in debating them anymore

(1:47:07) they've had like five chances four five chances never do um people also tried to set up a debate with the Skyfire news people uh they said they would bring their scientists I was going to bring my scientists they never showed up to that either um yeah I mean I think that the reality here guys is that these videos uh and I you know what I'm going to play them again oh I'll play them again chat they break people's minds because if these videos are real then it means their lives have been a lie and my life

(1:47:36) too you know all of our lives for the most part but yeah if these videos are real and that's why they can't believe them to be true because if the government pulls off something like this then it it proves that the government does some sketchy conspiracy stuff and that's why people simply refuse no matter how strong the weight of the evidence is people refuse to believe it no matter what it just doesn't matter for a lot of people out there there's a there's axj okay I said you your nameing correctly thank you

(1:48:04) very much appreciate you guys um and I guess I'll just do a quick shout out as well to the confessionals podcast to Alpha Warrior to the alpha vets um God guys I have a list that's like

a mile long uh the phone booth podcast uh Elijah schaer uh the liberty lockdown Tim pool um the one I was just on which was the blaze with Pat Unleashed earlier today uh redacted check out the redacted if you don't believe this is real just check out the redacted podcast man just check out the redacted podcast the redacted podcast

(1:48:41) should be enough um you know I think it's the most concise podcast with one of the smartest people you know um Clayton Morris so check that out guys I do want to into the warp drive stuff here as well even though we got kind of sidetracked on this did Elon Musk chime in on my reply 40,000 40,000 views on this well whatever 40,000 VI views in under an hour on my that post about to Elon so he's going to see it he's going to see it hopefully hopefully he watches this I'm going to clip this as well for

(1:49:31) tomorrow the piece that I said um so that people see it divos wow thank you very much man huge donation guys you guys are going wild yeah also just go ahead and like the stream on the YouTube channel if you're watching on YouTube we've got 3,000 people watching on X we got 400 in the YouTube Tom Monto Tom monok guys if you want to understand the science I'm going to show the warp drive stuff here in a second if you want to understand the science of electrical engineering and scaler physics watch the

(1:49:59) Tom monok interview that I did live like a week ago on my YouTube channel just go to my live streams find Tom mon talk watch that it will blow your mind incredibly smart guy we had a very high level science conversation um you know that will that and the redacted will I think convince everybody out there we even talk about how the Maxwell equations were incorrectly written how scaler physics works what the capabilities are of it scaler interferometry um nobody has to believe anything nobody has to believe anything

(1:50:32) about what I'm saying I I'm not out here trying to do any kind of cult where you have to believe me I'm not a messiah or anything like that I'm just presenting the evidence to you trying to get people to wake up and take a look at yourselves so yeah everybody should be pissed off about this stuff people are broke they're sick they're paying huge amounts of money money at the grocery they can't even afford food because we have such high inflation and we're hiding free energy from people you should be pissed

(1:51:02) off it's ridiculous these videos show that not only can we warp a plane but that we're hiding free energy from the public for what reason so that the elites can maintain more power over us it's ridiculous that's why I do this that's why I you know just being honest here probably not going to live to die of old age probably just not going to you know like I'm pissing off probably a lot of people out there a lot of Defense contractors a lot of people that have a lot to lose uh a lot of people would

(1:51:32) lose money as well as a lot of people might face Le criminal liability although I don't think they will even if this is true I think that nothing will happen to anybody um but yeah you know what I don't give a I just don't give a anymore because these videos are real people need to realize it and people need to wake the hell up wake up man so here we go let's take a look at

this okay God I my guys I have 300 notifications sorry I'm probably not gonna get to my my DMs my notifications tonight if anyone's interested I don't

(1:52:07) think I'm gonna have enough time um here we go where are we going to start okay I've got all the things up here ready to go we are going to start with should we go backwards yeah let's go backwards let's start with E equals e are okay so how is any of this possible first thing is you need to understand Einstein Rosen Bridge Wormhole is equivalent to epr Einstein pki Rosen which is quantum entanglement so here's a paper right here scientific paper by Lewis K Kaufman talking about entanglement top topology

(1:52:44) and tensor networks stress tensor networks so this is where he's talking about the equivalence between the two I'm not going to go through the whole paper on this one I just want to show you this paper is from let me take a look at the PDF I think it was 2022 yeah 2022 March 2022 so this science is recent now E equals epr is by Leonard susin and W Juan mosina both are very intelligent physicists and this is their hypothesis suggestion that connectivity in SpaceTime is equivalent to quantum entanglement so this is the idea that

(1:53:17) The Ether connects all points in space and time because in The Ether the speed of light is not constant anymore it can be maybe infinite Tesla said he measured the speed of light in The Ether at 50 times its normal speed of light this presents the idea of entanglement of everything that we see around us this is how we can achieve a wormhole The Ether is the answer to everything that we need here it's the answer to everything that's why the ether is real we're bringing The Ether back um so the next one I want to show

(1:53:47) you guys is humanly traversable wormholes yes you read that right I think they're missing an e on here but humanly traversible wormholes who is it by look Juan maldicen the same exact guy who has the E equals e science so I'll give you the summary of this paper essentially it says that we can produce wormholes that you can actually go through a wormhole and it's not going to rip you to shreds that the gravitational force will not rip you to shreds and it says we need negative energy to keep the Wormhole

(1:54:20) open now I've talked to my smart scientists and engineer friends including Dave Rossy and they say that we can achieve a certain electromagnetic effect that is the essentially the equivalent of the negative energy that we need in order to keep this Wormhole open so we have the paper right here that talks about that we can actually achieve a wormhole uh and a wormhole is functionally equivalent to warp drive we're creating a bubble around us in SpaceTime now you imagine the bubble well that's a wormhole when you're in

(1:54:52) the bub you're not in SpaceTime anymore so you need to go through it the mouth of the Wormhole is what we see in the event this black event this dark absorption of energy the things inside are disappearing and it's going to show up somewhere else the extra Dimension is not a location where you go and you're hanging out in the neg the negative uh you know the Nega universe or whatever it is like the the anti- universe it's not like Bizarro U is out there the the The Ether the extra Dimension is just our ability

(1:55:22) to connect all points in space and time so there you go um let's take a look we point out that there can be humanly traversible Wormhole Solutions in some previously considered theories for physics beyond the standard model namely the Randall sundrome model now I'm not going to dig into all this but I think I gave you the uh the kind of summary there if Juan micina is watching this right now I would tell him he's a genius so is Leonard Leonard suskind the only thing that didn't realize is that the

(1:55:54) The Ether is real that's the answer to all their problems the way that we can warp an object is because we need the ether that will solve the negative energy issue that will allow us to produce a wormhole magic is now real guys so there you go I'm gonna have a sip of my drink here and then we'll go on to the next one as you can see from the top of my tabs we got several to go through here tonight yeah so Tucker says UFO UFOs Are Spiritual and people go crazy but this is just nothing burger no one pays any

(1:56:40) attention I'm literally out here talking about how warp drive is possible showing the scientific papers showing videos of it actually happening 10 years ago and nothing absolute silence we can't even get Elon mus to take it seriously Elon mus thinks we're looking at aliens here you guys see the hurdle that we have to get over here we have to wake people up to let them know we don't need aliens to explain this this is not some unknowable science the science is out there hell maybe Elon must needs to

(1:57:10) hire me on SpaceX and I'll pull together a group of physicists and engineers and we will produce this we will obsolete all the conventional Rockets we will produce electrogravitic Rockets they require no prop no chemical propulsion whatsoever and I'll give him the rockets that he wants we can fly to Mars we probably probably can get to Mars within seconds with this kind of with a with a wormhole so there you go and the best part is we'll just make some orbs and we'll have the orbs spin around the object that we want and the

(1:57:43) object can just be like it could even just be uh some kind of floaty like pod and you just be in the Pod and then we'll just warp the Pod to Mars and then the Pod will just land and then you'll have your pod on Mars there you go boom crazy huh yeah if people also don't realize this is real just literally go look up um Thomas Bearden when I was talking to Jesse the other day I was saying hey look up Thomas Bearden like he did Thomas Thom to Brown look up Thomas Bearden Tesla was right all the textbooks in the

(1:58:18) United States are wrong based on elon's response on the aliens he does not know what's going on I'm now sure that's all I needed to see Elon does not know what's going on in the black budget programs here's the crazy part guys a lot of people even in the military it's not like everybody knows about this it's secret above it's top secret Above Top Secret compartmentalized which means that only people on a need to know basis know the engineers that know sign Nas every time they go into the lab they go

(1:58:49) to prison if they talk about it in too much depth or get killed Elon has no idea that this is going on he has no idea that's the **truth** um and that's how I could tell the moment I saw him

think it was aliens he has no idea no idea he's a smart guy that realizes that the physics is catching up to this but he doesn't realize we've already figured it out for decades for decades uh and that's you know it's like it's like Eric Weinstein Eric Weinstein going if they're hiding this stuff I'm

(1:59:16) going to sharpen my pitchforks Eric Weinstein sharpen your Pitchfork bro sharpen that Pitchfork get your te torches out cu they're hiding the physics from you conservation of energy is going to get Rewritten get ready for it okay next one teleportation physics study by Eric W Davis okay why is there a 2004 teleportation physics study by physicist government DOD physicist Eric W Davis oh I wasn't even sharing it there you go now you can see Eric Davis my opinion Eric Davis is he's one of The Gatekeepers I think he has no

(1:59:58) problem lying to people he knows it's real he's not writing teleportation teleportation physics studies without knowing that this stuff is possible and I think that we probably had it figured out around 2004 maybe a little bit after that not sure but he was writing this paper for a reason Air Force research laboratory guys space force didn't even exist back then I think we created the space force because we have literal warp drive it explains everything it explains ufology explains why Trump randomly is

(2:00:31) like oh it's space force time and everyone's like what why do we need a space force because we have literal warp drive we've been talking about it for 20 years this paper's 20 years old by the Air Force Edwards Airforce Base Special Report it's just hidden in plain guys it's just all hidden in plain sight these are the people they pay the big money to do the big science so you have two choices either you think that we are just paying physicists to come up with fake science and do real reports on fake

(2:01:06) science or this is real and we've already had it figured out since 2004 um if you are my mods then yeah boot the guy who's trolling or whatever it doesn't matter I've got him blocked so I don't see any this stuff but yeah if you see people trolling too hard mods just take care of situation I don't care I'm not in the mood okay so the part on this that I want to show you guys and here's all the official stuff if you care but I'm not going to dig through the whole papers here you guys can see them for

(2:01:37) yourselves I've shown you what the sources are here as well um the one that matters is that he goes through all the different types of phys all the different types of teleportation and this is important because we're not dealing with dematerialization here so let's go through them this is the only page I'm going to read to you guys is probably the only one we need uh hopefully you guys can put this together teleportation SciFi the disembodiment transport of persons or inanimate objects across

(2:02:06) space by Advanced futuristic technological means we will call this SF teleportation which will not be considered further in this study we are not talking about dematerialization and rematerialization that's CCI there is no dematerialization and rebuilding each atom this is the same problem with cloning even if you were to clone somebody you are not going to be able to

clone who they were this is why you can't dematerialize somebody and rematerialize someone so we're not looking that sci-fi teleportation here

(2:02:41) teleportation psychic the conveyance of persons or anatomic objects by psychic means we call this P teleportation this is where they're talking about uh remote viewing actually I this is probably I don't know what this one is actually the the last one's either remote viewing or this one is either way not really practical not something that we can measure at least okay now the next one regular teleport or this is the one this is the key one VM teleportation teleportation engineering the vacuum or SpaceTime

(2:03:17) metric the conveyance of persons or inanimate objects across space by altering the properties of the SpaceTime vacuum or by altering altering the SpaceTime metric geometry we will call this VM teleportation this is warp drive you are reading it right here he goes into detail later on I may even dig it up so then he also has quantum entanglement which is also real teleportation the disembodied transport of the quantum state of a system and its correlations across space to another system where system refers to any single

(2:03:59) or Collective particles or matter of energy such as Barons protons neutrons Etc leptons electrons photons atoms ions Etc we will call this Q teleportation so uh quantum teleportation has already been proven we've been able to Pro uh Quantum teleport uh depending on who you believe information or just simply um uh Quantum States now exotic teleportation this is similar again to the psychic one conveyance of persons or anatom at objects by transport through extra Dimensions or parallel universes we call this e

(2:04:33) teleportation so this is going to be like your remote viewing type stuff now the one we care about is VM teleportation VM teleportation um so no one had applied Einstein's field equation to determine whether or not there are solutions compatible with the concept of teleportation now so he provides the solutions you'll notice that this here as well looks very similar to some unification theories Wormhole thin shell form formalization the flat face traversible Wormhole solution is derived from the thin shell um and then he get some

(2:05:17) examples and this is again so this is like a wormhole this is like you the for the Observer if you're walking through this it's going to be like walking through a doorway so if you disappear in that black mass you just appear somewhere else that's that's warp drive technically um let me see is there was there any other part I want so he goes into the equations he goes into the math uh he uses Einstein's equations we are dealing with negative surface energy and negative uh surface tensions he mentions

(2:05:52) as well is that the result is in fact the primary matter energy requirement for traversible wormholes I think that he says yeah here it is negative energies oh wait where is it the negative surface tension is needed to keep the throat open and stable they should not be alarmed negative energies and negative stress tensions are an acceptable result both mathematically and physically um the effects of negative energy have been produced in the last laboratory the effects of negative energy have been produced in the

(2:06:28) laboratory so in short negative energy arises from Heisenberg's Quantum uncertainty principle which requires that energy density of electromagnetic magnetic or electric or other fields must fluctuate randomly so we do have the capability for negative energies negative energies and negative stress tensions are an acceptable result both mathematically and and physically and they manifest gravitational repulsion anti-gravity exclamation point in and around the Wormhole throat YSI okay um we can now build a wormhole Stargate

(2:07:11) and affect VM teleportation such that a traveler stepping into the throat encounters no exotic matter energy there this will require to be flat shaped uh I think that's probably good oh here we go exotic matter energy requirements um one should no uh where is it I thought the nonlinear of the Einstein field equations dictates that the total mass is zero um oh here we go uh viser demonstrated the existence of SpaceTime geometries containing traversible wormholes that are supported by arbitrarily small quantities of exotic

(2:07:56) matter energy and that they proved this was a general result so he's saying that we don't need a huge amount of negative energy to pull this off and we have The Ether which is theoretically an infinite amount okay so there we go on that uh appreciate you guys as well uh thank you rat Corporation I can't keep up with the chat guys you guys are popping off oh my God you are popping off yeah a lot of this stuff is going to be patented and the way they do the patents guys just as a quick spoiler alert is

(2:08:30) the all the components get patented but they don't combine them together like it's probably just that like Los Alamos or some of these other like maybe the the Huntsville Alabama what is it the Marshall NASA propulsion laboratory these are the ones where they're putting it together and they're probably doing it in a way where very few people see the combined result this is how very few people know about it the only people that are going to know about this technology even in the military are going to be the people that are like way

(2:08:56) up near the top like your general flynn of the defense intelligence agency or your Joseph F **Dunford** who is the highest ranking military officer and adviser to the president and Joint cha staff and the Secretary of Defense like those are the people that are going to know about it and the reason why they're in those positions is because they know not to talk about it they know to be quiet and they know the implications that if anyone even if they even said it no one would believe him anyway um so those are the reasons why those

(2:09:24) people are in the positions that they're in now let's go to the next paper let's look at the Kona Blue so this document just came out uh last week it got Declassified AO dropped it it goes back to 2008 somewhere on here Tucker Carlson mentioned this document he was talking about I alzado I alzado supposedly had written or signed some kind of NDA to never talk about this document back in 2008 and told Tucker Carlson that he was reading the text message from Lu zand while he was on with Joe **Rogan** I don't think it's a by the way

(2:10:06) the thing about Flynn people are talking about I don't think it's any coincidence that General Flynn follows me on Twitter General Flynn follows me on Twitter why if I'm pushing

some some fake debunked UFO videos why is the former director of the defense intelligence agency following me on Twitter think about that and also why is he talking about ET is controlling our government pretty bold statements man um so what's the part that I want to read off on this I don't want to read through this whole thing there's a lot

(2:10:48) here I think actually Ian Carol is going to do a deep dive on this on next Tuesday today uh I've interacted with Ian Carol I was in a space with him last night seems like an awesome dude I already have a bromance with this guy just think he's a really cool guy really down toe I like everything he's saying is very logical and rational uh appreciate him for sure now this basically breaks this document up into different categories so this discovery center they've got the Advanced Technology Center for Advanced

(2:11:16) propulsion and countermeasures they've got this Consciousness Center if you're into remote viewing stuff the integration Center Etc I was trying to look for a date somewhere it says 2008 on here I don't know where now if I dig down and go to where is it Advan uh where's the SpaceTime metric ones okay I'm just going to skip down to where I know it says it I might even have to go through my Twitter because this thing is like 50 pages long was that it somewhere in here it talks about warping SpaceTime I think it's down near the

(2:11:57) bottom down here here we go application and Engineering Associated exotic Technologies likely involve extremely sophisticated Concepts within the world of quantum physics nuclear science electromagnetic Theory gravitics and thermodynamics given that all of these have the potential to be used with catastrophic Effects by adversaries an unusually high degree of operational security and read on discretion is required now let me just break this down into English for you but also let's just read the paragraph right after that due

(2:12:37) to the expertise required to carry out the objectives in the program we will require a small specialized group of DOD Personnel who are dedicated to performing the sap special access program related functions and executing progamic requirements within the program is essential that the government and military personnel who are already involved with this program are assigned to further support this program in the restricted sap capacity these individuals all possess the appropriate security clearances and are already

(2:13:10) providing unique support to the atip this is why Elon mus doesn't know about it guys most of the military doesn't even know about this there's probably generals that don't even know about this that's how compartmentalized it is it's so few people that it's actually problematic because there's actually like not even an easy way to get this out this is why I'm probably redpilling AO people who don't think the stuff's real because they've never had any verifiable evidence and I give them

(2:13:36) the verifiable evidence they go oh oh crap this is real this guy gave me videos that show that it's real we really took this plane we warped the plane out of SpaceTime um so pretty wild now where is the part about warping SpaceTime somewhere up here I think it's up here somewhere aav Hardware I think the aav stuff is also like Advanced anomalous vehicle or

something like that oh yeah Advanced Aerospace vehicle materials uh is this the part can I do a search oh no this is not a document you can search somebody in here will probably know

(2:14:27) um trying to think of how I can do this I think if I just look it up real quick give me a second as every single one my phone is blowing up my notifications are blowing up one sec Corner blue okay I'm also going to read the AO letter to you guys right now okay so AO letter uh this is on my Twitter from uh April 12th Mr Forbes my apologies for the slow responses AO is researching several topics at the moment some of A's initial Research into MH370 has revealed the US government's search efforts after The

(2:15:18) Airliner disappeared from radar what I believe the Genesis and authenticity of the videos may be helpful can you confirm the date that the videos were posted to the regicide Anan YouTube channel and yes a quick follow-up call may be helpful oh dude these guys know it's real man what do you what do you want what do you guys want man um why would they reply to me like that for some fake CGI videos there's no way okay so here's the other part on the con blue document I don't know where it is in this thing somewhere where under

(2:15:57) where it says question two oh here it is right here okay we found it here it is okay remote viewing remote con communication and dematerialization rematerialization techniques used to observe communicate retrieve data and transfer matter across dimensional and space-time barriers will undoubtedly be of utmost interest if not in top collection priority for adversarial intelligence Security Services counter measures against such techniques would also be a collection priority I mean they're talking about being able to warp

(2:16:32) an object right there right there guys um probably do need a screener but I'm I'm a oneman show chat so it's hard for me to keep all this flowing okay now let's look at the next thing so if you still don't think that it's possible here's the eagle Works laboratory's warp field physics by Dr Harold Sunny White NASA what is this uh joint space command or something I don't know what JSC stands for something like that hyper fast Interstellar travel is there a way within the physics

(2:17:15) of framework one could cross any given Cosmic distance in an arbitrarily short period of time uh yeah space warps right there here it is Wormhole shortcut uh what do you guys want for me here oh wait I'm not even showing it to you you probably want you probably want to see the things that I'm showing you oh did I not show you guys the other thing here's the a thing right here question two a okay sorry are we doing the ASMR real quick okay joint space command yeah so just you know just a doctor doctor

(2:18:01) physicist in the joint space command from NASA writing uh PDFs about W warp field physics literally showing us worm wormholes and warping of objects literally showing us aluer drive right here this is how it works bending SpaceTime around the object here's the math it all checks out here's the bubble topography optimization I mean this is about as detailed as you could possibly get to Bubble oscillation optimization exotic matter exotic Mass warp requirements based on the size of the object that you're trying to warp here

(2:18:39) something from a nimit class carrier all the way up to something the size of the Earth or Jupiter warp field interferometer I didn't even notice this war war field in aerometer guys guys remember how I said that you warp an object Jesus I didn't even know about this how did I say that you warp an object guys I didn't even realize this is literally written into there mixed wave interferometry system focused on the plane the fourth orb shoots a wave in the interferometry Zone located anywhere in the plane rides the

(2:19:21) mirrored gravitational wave back to location of the fourth orb warp field inter aerometer I think he's actually explaining it right here toal capacitor ring normal to beam path resultant spherical field this is imagine your airplanes right in here imagine the fourth orbit here shooting the beam at it and then you're going to get the reflected beam right back and your object's going to warp away you're creating a Bend IN SpaceTime wart bubble detection attempting to use interferometry goal is to use infometer to detect and measure

(2:20:00) effect of a WP bubble on the optical path length through the measurement of associated interference Fringe shifts uh here's his lab so this is where like you can see even a small lab just in a small scale to measure this like how complex this would be I remember when I first looked at this I went wow like we're not going to be able to recreate this we're not going to be able to recreate this like this is going to require like literally NASA level equipment in order to pull this off yeah physics if people start to

(2:20:31) realize these videos are real and these get authenticated uh physics is going to change they're going to uh have to rewrite the laws of physics uh unfortunately uh I mean they're mostly correct they're mostly correct all this is mostly consistent with general relativity but the uh the conservation of energy is going to have to get ritten unfortunately because we're going to be able to produce energy levels that are essentially infinite so here is there you can see the laser beams here and how they have

(2:21:00) it set up with their mirrors here as well right here in the middle of the beam splitter so you notice there's this consistent pattern the way they're set up with beam Splitters and lasers when they pull this stuff off and when you have Advanced Equipment like we have with the orbs then all this stuff is in the size something in the size of the orb that's out there and here I think is where you can see the proof where actually there supposedly is some minor amount of bending that's happening in this Zone

(2:21:24) here I think that's what he's showing yeah so here you can actually see the bending of space time right here you see the bend in this this is experimental evidence of them producing a warp in the SpaceTime these lines should be exactly parallel they shouldn't be bending like this that's what his experiment is showing right here so they probably I don't know what happened to this guy he I would say rest in peace uh Sunny Harold White I'm actually afraid to Google his name we're going to do it anyway

(2:21:57) though let's hope he's still alive chat 1965 oh looks like he's still alive for now 58 years old um Harold Sunny White I'm praying for you my man I'm praying for you to stay alive um you

know people who who look into this stuff generally don't seem to to last very long unfortunately do we have a year on this this paper every year anywhere I don't see it anywhere any we're not going to dig too much more into this but we've got this paper so now you guys have seen this paper from Eagle Works

(2:22:31) Laboratories uh it also ends up talking about like how far you can get your your how long it would take to get your object there using warp travel so pretty cool stuff uh we're not done yet okay next one this is a news article DARPA which is what is this defense Advanced research projects or something like that funded researchers accidentally discover the world's first warp bubble I'm going to post this probably tomorrow this has been out there since 2021 literally DARPA talking about producing a warp bubble

(2:23:09) engage people just oh look look who it is warp drive Pioneer and former NASA warp specialist Harold G Sunny White hello hello there he is the discovery of the actual real world WP bubble and according to White this is the first one its kind's breakthrough in his Limitless space Institute Team sets a new starting point for those trying to manufacture full-sized warp capable spacecraft so if they were publicly talking about in 20121 imagine how far Advanced the secret military projects actually are so do people still think that warp drive

(2:23:53) is not possible we've got NASA scientist showing it and look Casmir effect again notice when we looked at the Eric Davis paper the Casmir effect was what allowed us to produce the negative energy and actually look that's what it says right here Casmir cavities helped us to identify a real and manufacturable nanom micr structure that is predicted to generate a negative vacuum energy density you guys want to know what a negative vacuum energy density looks like who wants to know what a negative vacuum energy density looks

(2:24:39) like there's your negative energy vacuum density you're looking at it an endothermic event a cold absorption of energy that's your negative energy vac density right there you guys are staring at warp drive right now this is it the MH370 videos show this is why they're showing it in super slow-mo person that **leaked** this wanted us to see this that's your negative energy density event negative energy absorption of energy cold explosion as uh Thomas Bearden pointed out there you go poof I I don't for the record I don't even want

(2:25:22) the Nobel Prize I just want what's the journalism one guys what's the award for journalism they should at least give the journalism award to somebody that does real journalism uh Pitzer is it the Pulitzer I want the Pulitzer and then I'm gonna go on stream I'm GNA rip it up on stream in front of everybody give me the pulzer and I'm just going to rip it up on stream in front of everybody just to show how much of a joke journalism is in this country at this point just a crap on it yeah give me the puler I don't care

(2:25:50) about no prizes I'll let the other scientists and Engineers like Salvador Pas and Dave Rossi and I don't know maybe the Eric Davis's and the Hal pofs and the Jacker fodes fight about who gets the the Nobel Prize I don't care about that I'm a citizen journalist all I did was find this stuff out from these videos and not give up so there we go yeah very punk rock we're gonna

punk rock we're gonna take that we're gonna take that piter I'm just going to rip it up on stream in front of

(2:26:26) everybody just rip that thing up to shreds I would probably get some legit views from that okay um our finding is not a warp bubble analog it is a real albeit humble and Tiny warp bubble literal warp bubble produced pictures of alberry drop right here they literally produced a warp bubble not a theoretical one a literal warp bubble they didn't use something to uh you know just you know estimate what the warp Bubble look like or whatever actually produced one here and then it talks about how you do it we don't care

(2:27:09) about theoretical we are literally staring at videos of it in use and action okay chat this has been one stream one more paper to go through chat and it's a doozy warp drive dark energy and the manipulation of extra Dimensions April 2nd 2010 the dates on these import are important as well because it goes to show you this all predates the videos publicly available information that predates the MH370 videos cheers chat cheers to everybody out there on Friday appreciate you guys yeah the award is smashing them

(2:27:51) alien cheeks chat my Martini is almost done here here we go guys we got whistleblowers in the chat willing says I'm a former mod in the community of R aliens aliens subredd it I assure you the top mod is infiltrated we already knew that because ebo scientist got deleted in real time when he posted on alien subredd it we watched it happen Redd it is 100% fed controlled 100% nobody should go on Redd it you should not believe anything you see on Redd it it's full of disinfo agents and feds um that's the reason why they got

(2:28:42) so pissed off that Elon bought X if I was still on Redd it posting what I've been doing I would have got banned off Redd it for no justifiable reason they would have just Bann me they literally did ban my subredd it and gave me no reason whatsoever for Banning it they banned my subredd it gave me no justification I appealed it they ignored my appeal I applied a second appeal and they came back and said we're not going to allow your subredd it and they also wouldn't tell me why they literally told me they wouldn't tell me

(2:29:10) why just straight up joke did CERN figure this out yeah I think that CERN is suppressing information CERN absolutely is powerful enough that they should have been able to figure this out uh most likely they're self-sabotaging themselves as to not leak uh science to the public about what is possible C is just a big show we don't need a giant particle collider to prove all this stuff uh as we've seen some tiny orbs can pull off these effects that are probably magnitud is more powerful than CERN is people get afraid that you would

(2:29:43) create a black hole from CERN guys if these orbs didn't create a black hole that sucked in the universe then definitely C is no no no risk we got stuff out there that makes CERN look like little baby toys okay uh yeah so the orbs it the thing about aluer Drive is you have to realize it's not just something that's connected to your craft this is the thing about the videos that is the reason why the intelligence Community is sitting there with a gun next to them thinking about blowing their brains out is because we

(2:30:19) have now realized that can use floaty orbs to produce warp drive effects on any craft that's out there it's probably required at this point that it's in the air so that you don't have land underneath it so you can you know Circle it correctly but in the future we'll be able to have like a doorway where you can walk through like a Stargate once we get the technology miniaturized to even a smaller level but for the most part the science that we are talking about here is fundamentally equivalent to Alco

(2:30:46) Berry Drive they're creating a warp bubble with those orbs now in theory you could probably have some of those orbs connected to your object and have it like resonant and set up in a way where it knows the exact amount of energy to create the bubble to create the mouth of the Wormhole so it only sucks in the craft and it doesn't suck in like half the craft but that's what those orbs are doing in the video they're mapping the plane to make sure how big they need the zap to be then the negative energy event

(2:31:12) so that the whole plane goes through without getting ripped and half or something okay what else we got um yeah fedit plebbit Predators you know whatever you want to call them just all of the above guys all of the above **Reddit** is cancer that's also correct all of **Reddit** is a joke also correct everybody's correct everybody's correct tonight yeah yeah everyone's correct F **Reddit** yeah you guys you guys are on it um forchan I respect 4chan they were actually on our side early on feel you the top of wanted to delete the

(2:31:52) community of aliens forever but **Reddit** did not allow them they received a message saying that the top wad would be removed wow dude dude just keep keep dropping the **truth** bombs on us we all hate **Reddit** here we all hate **Reddit** that was during the blackout okay um so if if Elon Musk was watching any part of this or anyone knows Elon Musk can you he doesn't even need to talk to me but can you get him to talk to some people so we can figure out that like all of his whole SpaceX is Obsolete and we can just move to Star Trek he's got the money to

(2:32:27) pull it off let's just move to Star Trek and Skip past all the doesn't he want to go to Mars Mars is like Child's Play now we don't need to just go to Mars we can go to alfa centari um now I don't know how the time dilation effect's going to work you might go to alfa centari and you might come back and it might be 10 years later but and you might not have aged but yeah okay let's see what else we got going on here oh boy guys chat you guys are on fire you guys are on fire right

(2:33:01) now oh oh boy we're talk we're just call we're calling names out geltoid top mod didn't he get removed yeah **Reddit** is a misinformation platform it's a lie I love this guy I love this will willing guy epic okay let's go through the last paper guys and then we can call it a night here yeah 99.6% % maybe even 99.

(2:33:21) 9% of the of the press is just straight up propaganda honestly also guys the UFO Community like a very small number of the UFO Community even realize what they're dealing with for aliens or whatever to get here you pretty much have to have warp drive and it's consistent with the laws of physics so it blows my mind that I'm sitting here telling people we

have warp drive capabilities and people aren't just like fawning over me going hey tell me how this works tell me how this works blah blah blah because this is what they need

(2:33:49) if they want aliens to be here I don't care about aliens being here I just care about the science so defense intelligence reference document warp drive dark energy and manipulation of extra Dimensions uh let's just go to General General relativistic warp drives and warp drive requirements and then maybe we'll look at the Casmir effect and we'll probably call it there hey look kza is listened here Kusa is who Thomas Bearden talked about with the unification Theory the in 1921 1921 it's incredible now that I

(2:34:25) read these names I actually know the reference now it's like when you start learning a language and all of a sudden you start speaking Spanish it's like that's what it feels like to me out there um even if an engine were to be designed that could Propel a spacecraft to an appreciable fraction of the speed of light travel to even the closest Stars would take many decades in the frame of reference of the Observer on Earth although these I the transit times would not make Interstellar exploration impossible they would certainly dampen

(2:34:54) the enthusiasm for governments or private individuals funding these missions so we need something that goes faster than the speed of light good news we have it it's called warp travel here we go um General relativistic War travel look at look at this there's your alberry drive once again guys the answer is alberry drive that's it we're seeing it now from NASA people Eric Davis we're seeing in this paper here from the defense intelligence agency I think this is what this is um is this defense

(2:35:24) intelligence agency Dia yeah I think this is so again I mean General Flynn knows man General Flynn knows um alberry derived a a space time metric motivated by the cosm cosmological inflation that would allow arbitrarily short travel times between two distant points in Space the warp drive metric uses coordinates blah blah blah curve blah blah blah uh where  $C$  is the speed of light okay let's go the behavior of the warp drive bubble provides for simultaneous expansion of space behind the spacecraft and a corresponding contraction of space

(2:36:00) in front of the spacecraft why is this important because we're seeing the orbs create space in front of them the geodesic when I talk about the geodesic they're creating space in front of them and the orbs are traveling along those lines uh like train tracks we're watching it happen nobody you guys think a hoaxer came up with this was the hoaxer like Eric W Davis was the hoaxer Sunny White like there's only like a few people on the planet that even stood this science back in 2014 was the hoaxer

(2:36:31) Juan Malina like who is this hoaxer you have to have a better understanding of physics than 99.9% of PhD physicists out there just to even begin to make the MH370 videos and you have to get the engineering of the plane accurate and scaled down in two different videos as well and military classified information nobody knew you have to have better understanding of low energy nuclear reaction than Bob Greener has and he's an expert um okay let's see what

else it says here uh thus the spacecraft is enveloped in a warp bubble and can be

(2:37:05) made to exhibit an arbitrary large faster than light FTL speed as viewed by the external coordinate observers even though the world lines inside the warp bubble region are space likee for all external observers the moving spaceship warp bubble frame itself never travels outside of its Local co-moving Light cone and thus does not violate special relativity so why is it not violating special relativity because it's encased in a bubble we're just moving the bubble around so for the person inside of it it's just going to look like you just

(2:37:40) appear over else somewhere else it's not that the actual object is increasing to the speed of light we're cheating we're not increasing the object to the speed of light we're encasing it in a bubble and we're moving the bubble around and as we heard from which one of these documents was it uh oh the letter to Ashton Forbes said that you can have a low energy a relatively low energy phase transition that would actually I and I only reason I remember this because I've listened to it like 50 times that's what

(2:38:14) Jack sarfa said we actually don't need huge amounts of energy to pull this off so if the letter to me is correct we actually don't need a huge unlimit like impossible amount of energy to pull this off and this is why it makes it possible and we can also produce huge amounts of energy because we have our huge orbs charged orbs converging consistent with kum's law creating an exponentially large growth in energy as well so yeah that and this is also the equivalent of mass reduction as well nural Mass reduction No inertial Effects

(2:38:46) inside of the bubble so no nobody's going to spill their drinks Joe perfect perfect great comment sir the craft becomes a bubble of photon energy probably I think that's close enough the best part about this guys is that I'm not even a PhD physicist or even an electrical engineer I've learned so much in just six months this is how powerful this is why the government hides videos like the MH370 videos because just from seeing the videos even a normal person can discern so much information and real physics knowledge

(2:39:24) because it's the equivalent of being given the answer sheet from the teacher to the test you get the answer to the test and you just work backwards you go okay well the answer is 10 okay now I'm going to go figure out how I achieved 10 as my answer out there and then I go look around and I'm like oh well there's like dozens of papers scientists all talking about how it's possible literal experimental proof from 2021 by the guy that wrote the NASA slides about the warp bubble he literally has

(2:39:54) proof from 2021 that's public proof and people say that the military is decades ahead so there's your answer right there what is stopping Joe Rogan from bringing me on his show great question chat uh great question I think like Elon Musk these people think that I'm talking about aliens they think that I'm talking about uh you know science that they can't believe they think they're looking at video game Graphics in these videos you know the the the answer for people like Joe Rogan or anybody else

(2:40:31) who thinks we're looking at video game effects or whatever is like they just have to wake up just wake up man look at watch the stream of what I'm showing you guys right now let them know have them watch this stream look at all the papers that I pulled up I I spent like 10 minutes just to pull these up that's it that's how fast I was able to pull up all these referen that I'm sharing with you guys tonight this is not hidden out there um it's all just straight up in the open all people have to do is go

(2:40:59) look at it okay um let's see where's the thing about the exot Exotic ma matter is generally defined by general relativity physics to be matter that possesses renormalized negative energy density and or negative stress tension equals outside positive outward pressure AKA gravitational repulsion why is superc conductivity important because superconductivity changes the spin on our electrons that are normally 1 half and turns them to bionic which is a one spin electron this is what's allowing for gravitational

(2:41:37) repulsion so as the letter Dash and forb said superconductivity is not the basis for the technology but the basis for the technology produces superconductivity coherent matter and then that is what allows for the anti-gravitational effects to happen this is why semiconductors are the thing that we are protecting the most because room temperature super conductivity or just super conductivity in general is producing gravitational effects um this is why we're hiding it this is the answer to everything that anyone wants to know yeah it's

(2:42:08) absolutely a matter of National Security I would never hurt myself or harm myself I just want to say that again real quick um and if they wanted to keep this hidden they should have talked to me months and months and months ago they should have not tried to **debunk** me uh but they did um let's see anything else I want to dig into on this oh Casmir effect um the Casmir effect is interesting because the Casmir effect is like if we put two uh bars next to each other then the wavelengths that are larger than the

(2:42:39) width Between the Bars can't fit in there anymore and so what ends up happening there's a force between them um and so this is uh I think how people kind of Define that there must be this ether that has this Quantum oscillator happening behind the scenes now I may be saying those effects incorrectly um the Casmir effect which be exploring in much more detail in this paper is arguably the most Salient manifestation of the quantum vacuum when people talk about the quantum vacuum they're pretty much talking about The

(2:43:12) Ether in my opinion Casmir published a prom paper where he explained the Vander walls interaction in terms of Zero Point Energy and the quantized field guys Zero Point Energy comes up a lot in this they're talking about The Ether in the most basic form the Casmir effect is realized through the interaction of a pair of neutral parallel constructing plates the presence of the plates modifies the quantum vacuum and the modification causes the plates to be pulled towards each other with a force you're going to notice the Casmir effect

(2:43:45) comes up here a lot there's your image as well oh we're going to read this part too extra space dimensions in connection with the Casmir effect extra Dimensions provide a rich

area for one to generate models that Explain the origin of dark energy again we don't need Dark Energy dark energy is just the ether man The Ether is real it explains Dark Energy we don't need Dark Matter Dark Energy throw it all out Bring The Ether back problem solved technically speaking the Casimir effect is a direct consequence of the

(2:44:20) non-trivial boundary conditions that the presence of the the conducting plates imposes upon the quantum vacuum the quantum modes on the interior region of the plates are restricted and there is a pressure difference when compared to the quantum vacuum on the exterior of the plates area in the difference versus area out is this pressure that causes the plates to attract a very similar phenomenon to Casimir effect can occur when Quantum vacuum energy in extra spatial dimensions are considered the exploration of this this idea has

(2:44:51) important ramifications on the context of explaining Dark Energy before one can address these ideas it is necessary to review the whole of higher dimensional space in physics it was Riemann with his development of uh differential geometry in the 19th century Who provided the necessary tools to study higher dimensional descriptions of the world Riemann held the belief that three-dimensional space was not enough to provide adequate description of nature improvements in physics led to Maxwell's unified theory of electricity

(2:45:21) and magnetism and then general relativity which unified space and time with general relativity inspired by these unifications physicists of the early 20th century wanted to unify gravity in electromagnetism the first attempt was by Nordstrom in 1914 who used a scalar potential for the gravitational field that Nordstrom in 1914 used a scalar potential for the gravitational field stress in the medium later Wheeler and Misner using Einstein's tensor potential followed Su two separate paths Wheeler's attempt in involved an alter uh alteration of the

(2:46:07) geometry of SpaceTime in four dimensions his early attempts had physical consequences which did not Max experimental data however Wheeler's work was extended by Einstein and Schrodinger independently in the Einstein Schrodinger non-symmetric field Theory which is widely regarded as the most advanced unified field Theory based on classical physics 199 Misner who came up with his unification theory in 1921 offered a unique approach to unifying gravity and electromagnetism which involved adding additional spatial

(2:46:38) Dimension to general relativity and populating this extra Dimension with two mathematical objects called a vector potential and a scalar potential yatsi booya scalar physics is real the haters The Ether is real scalar physics is real scalar weapons is real everything all the warp drive is real we've been getting lied to the MH370 videos Prove It uh yeah we'll just dab on them we're dabbing on the haters dabbing on the intelligence Community you know just get out of my way uh we're telling the world the

(2:47:25) **truth** um anyway I think that's that's probably good that's probably good so I'm gonna post this link in the chat I'm gonna post this on my Twitter account as well so there you go guys we have just shown that Thomas Bearden was right we can manipulate gravity uh this science goes back to 1914 that's how long we've been getting lied to the reason why we haven't been

able to figure out how anti-gravity works in the public sphere is because the science has been literally hamstrung from us uh Oliver heavyside probably did

(2:48:02) the biggest disservice to all electromagnetism in the history of the world and the government's probably known about this for decades and decades and decades and that's why we can't figure it out uh probably most of Elon musk's uh people that work for at SpaceX are I don't want to say obsolete but they probably should learn how scalar physics works like really quickly so that we can start getting the anti-gravitational effects going and we don't have to use any more stupid or you know propulsion Rockets anymore um you

(2:48:32) know in terms of chemical Rockets because it's a big waste of time and I don't give a about aliens Elon uh I just want to go to Mars so maybe we can take a portal to Mars together uh if you want you can hire me to SpaceX and I'll teach your phys your physicists and your engineers how electrical engineering really works um yeah let's take this let's take this thing to the Future man uh let's take let's go to the Future Let's go to Star Trek let's not destroy ourselves let's

(2:48:59) go to space communism and uh you know I think we'll have a good time so thank you guys very much for hanging out with me tonight I appreciate you um I hope you guys learned a lot about warp drive I hope you take this uh education that we've gone through here and you share the word with other people if you want your other podcasters to talk to me I would appreciate it I've even had somebody as recently as today tell me that they've been getting messaged by people telling people not to talk to me just think about what I'm

(2:49:29) disclosing and think about the fact that there's literal feds and disinfo agents out there telling podcasters not to talk to me if you are somebody out there who's telling people not to talk to me you are an absolute piece of and you are one of the worst human beings on the face of the Earth and in the future if people tell me your name I'm going to blast you all over social media to my 100,000 followers and on live streams as well and I'm going to tell people what a piece of that you are so don't do

(2:49:57) it last warning if you're one of the people who's trying to **debunk** these videos I am going to send the families after you to sue you for every single penny that you have this includes **Mick** West it includes the corridor crew it includes **Jonas** D and any other **debunker** that puts their real name next to any **debunker** time on these videos you have been warned that is what I'm going to do it's not a threat it's a promise I will have them take everything that you have I will make sure the media

(2:50:28) crucifies you and make sure that you are go down in the history books as an enemy of humanity is that a 100% clear out there **debunkers** and **redditors** and other pieces of crap anyway on a positive note thank you very much everybody who has been supporting the case supporting getting the information out there nobody should be against the government issuing a statement about these videos we have proven the videos are real The Proven who the leaker is we have uh shown that the science is real we have given verifiable evidence to the AO where

the

(2:51:02) people responsible for investigating this um there is no excuse there is no excuse if anybody does not want the government to issue a statement on it then they are duplicatus and deceptive and they are not trying to achieve the **truth** and on that note guys we are going to take off have a great evening uh I'm going to look up some more topics to talk about tomorrow uh we'll probably be talking about cold fusion tomorrow since people were trying to uh Community note my posts about cold fusion and claim

(2:51:30) that it's not real so we're probably just going to blast those people next uh and that's probably just what I'll do because I'm a high science influencer thank you very much MH 370x ashon out peace it's m m m h37 until you do some research don't talk to me I'm going to find the **truth** while I sit this Mar your opinion it means to me it's m m m m x37 not all heroes make capes I wear glasses to see I'm going to find the **truth** while I S this Mar the trolls hatte see me [Music]

(2:52:29) succeed but guess what m m [Music] mx370 not all heroes gles to see I'm going to find the **truth** while I this Martin your opinion it me to me your opinion and then and then H7 now hero keepass see I'm going to find the **truth** why I this [Music]

(2:53:47) party it's m m mm h37 until you do some research don't talk to me I'm going to find the **truth** while I sit this Mar you're opinion it means to me it's m m m mm x37 not all heroes make capes I wear glasses to see I'm going to find the **truth** while I this the trolls hate seeing me [Music] succeed but guess what m m H3 [Music]

(2:54:55) gu what m m370 not all heroes gles to see I'm going to find the **truth** this Martin you're opinion it means to me your opinion and mm h37 hero glass to see I'm going to find the **truth** why I S this party trolls hat guess what

(01:13) what M 70 not all heroes gles to see I'm going to find the **truth** while I this Martin your opinion me SP to me your opinion m m h37 now hero glasses to see I'm going to find the TRU I

thisy [Music] [Music]

(03:28) what's up everybody good to see you guys um have to mute this hold on good to see you guys here tonight um this is tough I've got the I've got the audio playing in the background here uh welcome everybody to the stream tonight appreciate you guys William nice to see you s23 jml **truth** speaker cat can Z alapo Kimberly good to see you high for Orbeez good to see you guys hubba hubba what are you saying Steve uh Buster the two my channel how's it going did I send up entropy donations no I have no idea what that

(04:08) means but soon I think you're gonna be able to donate on Twitter so maybe that make you feel better uh sr1 1977 appreciate you um gonna request to speak on there Casey uh aack sniper nice to see you uh Christopher Zen hit the like appreciate you very much man uh Michael cheers Che cheers yeah no Martini tonight Michael sham 6 good to see you the last hard Tru was pretty good I agree crispy nice to see you Joe Moss Alex uh Michael Jackson good to see you yeah that was an AI song it's pretty funny I like

(04:48) it um ano nice to see you MN nice to see you as well bad Sama good to see you uh let's see if I missed anybody else thanks for being here early guys Devin I see you up here as well wow there's a lot of people guys here early PJ Mike I see you UFO nut what's up how's it going manga collector good to see you uh s23 as well wow lots lots of people here appreciate you guys okay so what are we gonna doing tonight first thing we're gonna do is we're gonna jump onto this space with uh Chad and Sherry from

(05:25) investigate Earth I'm trying this out with the new streaming content so let's see how this works with this space right now and hey meem Weaver hey my channel good to see you guys as well let's see if this works yeah so first thing we're going to jump into this stream here give me let me see if I can get this to work I'm going to try to do this with the audio guys let me know if this audio works please flags that were placed in the snow there so that's interesting so if you think about that though if there are

(06:14) multiple Flags multiple Nations over Antarctica then how does that play to do or even or even direct energy weapons like how does that work okay they can hear it right I mean we figured it out chat possibly the biggest question we figured it out because if that is the case and and say if you believe Hecker which as just had on his podcast um and by the way I do believe heger I I I I believe what he says and he's not the only one that said that I mean you got to go back to Admiral bird um and and many others I

(06:50) think there have been like 11 technically whistleblowers of anarctica that have talked about what what was actually going on in Anar either a potential hollow Earth theory or direct energy weapon type uh system that was place in anarctica but if you have multiple Nations that have some type of joint resolution in an Arctica how does that work like you can are we not seeing something in our and and I know this is supposed to be prop Palestine we already we already went over that but how does that work if you have some system like

(07:27) this does is is **Russia** people that are they able to come into this facility are they able to know what's going on the same way the United States are um and is there a we don't know about whoever wants to answer that or even want to touch on that I don't know yeah go ahead sorry Ash let me just jump in real quick this is not necessarily Antarctica but this is going to touch on I'm not sure who was just talking about their grandfather or their father that worked there um but I actually just posted in

(07:58) telegram today about the Poseidon um nuclear Torpedoes that apparently **Russia** has been working with and was looking at an article that was back from January and they apparently have been doing some testing I think it was in bikini atal so you know that the whole point of that would obviously be to create these huge um waves potentially tsunamis I don't think they completely know the um the full effect that it could have as of now but that kind of Tes could be related to some of the anomalies that are being

(08:31) seen also that's good I like that I'm pretty sure that bikini ATL is part of quagan ATL that's pretty spicy pretty it's in the same area I just want to throw out there to Ashton's point when he talks about next Generation technology and we know there's bases in Antarctica no one talks about this with the height of the wave if we don't have physical confirmation of like visuals they work on buoys I believe that go up and down that are able to sense has anyone thought of like a magnet a gravitational anomaly that's

(09:01) moving overhead gravitation yeah and you know Antarctica so sorry for guys I was just getting my stream online but I'm testing this out I think this works right now which is pretty sweet I've never had this uh desktop Twitter thing working correctly but I think I've got you guys in the in the space in the space audio showing up correctly um you know I talked to Eric Hecker about it one of the big questions is what's the significance of the location of anarctica and I would argue there's a couple significant points one

(09:34) for sure is that it's really cold and if you look at Super conductivity which I think is one of the essential prerequisites for a lot of this magic type technology to function a lot of it needs to be very cold um the other aspect is the specific location now there is a magnetic anomaly that's actually in the Indian Ocean um but for Antarctica you know if you look at the Earth like a giant magnet and you've got the magnetic line going from the North Pole to South Pole you can imagine that the South Pole is a pretty unique

(10:04) location that's where all the magnetic fields are kind of connecting down there on the uh the south side of your of your magnet there and if you are trying to shoot a beam somewhere else which Eric Hecker says that the uh Ice Cube neutrino detector if you look at it it's like buried into the Earth uh it's actually like a three-dimensional uh antenna if you want to think of it like that and this can allow for directional manipulation to directed to a specific location that you want to send it and Thomas Bearden would

(10:33) argue that with scaler physics you know you're sending an electromagnetic beam transmitting it and if you were to try to measure the electromagnetic spectrum like the EF or um

what are those call them those Ghost Hunter things that they've got you wouldn't detect anything but you can rebuild the energy at a distance through interferometry you know crossing the streams antarctic is a great spot for that can shoot it wherever you want out there so I don't think it's any coincidence that we've got this set up

(11:02) in Antarctica now for Chad and Sherry if we get Eric on your show I missed a question that **I want you** to ask him which is if you you know those pyramids and all that other stuff if he thinks there's like you know wasn't a civilization out there or whatever I'm curious as to what his thoughts are on that because we mostly talked about the the technology and the hardware that's out there and what it can do um last thing I'll say is so you know you have this idea that you can use these devices

(11:29) as a transmitter um the there's the uh what are the AR the things called one of them is called the AR o which is like uh I forgot what it stands for but one of these things shoots a beam a green beam into the sky as well I think that you could argue that some of these are you know being used for communications I think is what he said so that this could be some kind of fashion like communication device that's out there um a lot of really crazy advanced technology that might be happening yeah and Ashton by the way I think that your

(12:01) uh episode with Hecker was amazing I think it was really good um yeah I would love to kind of dive deeper into the uh civilization side of Antarctica I don't know what he knows about that but did you feel like Hecker was um maybe a little uh not off-putting I don't want to say that but did you feel like he was more fearful of what like maybe he he kind of stepped back a step based on on uh what was the podcast Sean Ryan do you feel like he stepped back a step on your episode or no how do you feel about

(12:37) that not really I had a preall with him our pre-call went like an hour and a half as well I felt like we could talk for hours I mean I got the impression from him that he's just a normal guy and that he also you know discovered that there is technology out there based on Tesla that's well beyond our understanding and people want to like dismiss him because he's technically in utilities you know as a plumber but these are the people that make everything run you know these are the people that see the inside of how

(13:05) everything works and have to maintain it and fix it and so he went out there and he had this experience where he realized like there's more going on here than what is the official public facing explanation for what's occurring now to answer your question when he talked to AO they did not make him sign any ndas the actually that's not true they did make him sign the NDA but the NDA was only for not disclosing who he was talking to when he went and did his skiff with AO and not to disclose the specific location to where he went um

(13:43) but everything else like he pretty much freely talked about and in fact on the podcast he even mentioned um Toby I'm gonna butcher his last name but if you look into this guy like he's like the son of one of the major CIA uh guys that was out there and he goes to this guy's basement and he gets invited out there to this guy's basement he goes in his basement he's got

Tesla coils set up in his basement and he's got a weird projector back and this is like you know early 2000s he's got this weird projector that's

(14:13) projecting in like hologram 3D and he's showing him videos on the internet of Thomas Bearden and this is you know pretty early internet still you know not not Advent but pretty early on showed him videos of Thomas Bearden talking about all this stuff too you know um so he and I had a very similar experience I think where and one one last thing I'll say is that he was uh I think he was in the military and submarines he was on submarines doing maintenance on them and this is where he learned about Magneto

(14:44) hydrodynamics which is the idea of using electricity to produce thrust and propulsion which the big benefit of this for you can imagine for a submarine is a you don't need to have a huge fuel source but also it's very quiet and if you're in a submarine you want to be as stealthy as possible in your submarine um and it wouldn't surprise me at all that we have advanced technology being used in submarines decades before what people think is possible out there so I know I don't think he was being quiet at

(15:11) all about his stuff I think he's the kind of guy that is trying to speak as freely as he can about it he had his own personal experiences uh related to his time out there and he was just telling people about that you know he reiterated what he said on Shan Ryan which he wants people to understand that there is technological capability out there like directed energy weapons that people have no idea is possible and I totally agree with them what do you think the purpose of the hydrant collider who what's that all about what

(15:45) are they actually doing there yeah so and what I've been told and you know take this with a grain of salt whenever I say if this something I've been told you should take it with a grain of salt because it's just you know a story and stuff that people told me but is that you know CERN with a hard large h on collider that they could be coming out with way more findings and discoveries than what they're claiming this thing's been going ongoing for what 15 years longer maybe I I don't remember when it

(16:12) first went online maybe 2010 and um you know if there really is an ether another dimension to our universe as I I personally think that there is and the Tesla talked about they should have been able to find that thing right away and I have a feeling that a lot of the information is being suppressed or you could think like you know intentionally sabotaged so they don't discover uh some of these findings because the big thing about all this is like the it's kind of like a cascading effect like the moment people start to

(16:39) realize this it's possible it all becomes super self-apparent you're like oh of course there is that's why we can do all this and oh that means that we can make direct energy weapons and then you start to think of those implications and eventually you get to the part where you're in Star Trek and you're warping space time um and so that's why I think they have to keep even basic things suppressed even basic findings so they found out about the higs field and you look at the higs field and you go you

(17:02) can almost argue the higs field is like you know describing The Ether and now in science they'll talk about stuff like oh virtual particles popping in and out of existence and space isn't empty well yeah they're talking about The Ether they're talking about there being an underlying Dimension to our reality uh it's exact same stuff that Tesla was talking about they's using different terminology for it yeah and by the way I I believe Ashton to what you're saying is I think you can go a lot of different directions

(17:29) with um CERN I mean you know with higs BOS and particle uh which by the way isn't it very interesting that he died on the same day that um yeah the solar eclipse and when they started that back up that was in extremely interesting um but nonetheless I I think to your point yes absolutely there's there's a lot of things that they don't want you to know but also go back to there's a lot of things they're starting to find out about things they always try to disprove and you can say that

(18:00) spiritually you can say that biblically you can say that in a lot of various ways and you could also say that in argument to technology that we have or have been able to manipulate uh to our advantage of what they are finding but I just feel like you know without getting biblical or any of that stuff it just seems like science is always trying to disprove things that have been known forever and it seems like they just keep getting back to the same point um and it's like if you look at reality today everything is trying to be

(18:34) disproved everything is trying to be completely taken down and destructed um America is being destructed from within they want you to forget your past they want you to forget all of this stuff there's obviously a very um big initiative to that to your point I think CERN is something that is extremely concern in um see what I did there and uh and and also they want to build a much larger collider um which they have just I think I believe got a grant for which is gonna be way hugely bigger than than what's going on now um does anyone

(19:16) have any thoughts real quick I want to mention that the thing about like I think that's the biggest distraction that they you got to make it bigger keep making our collider bigger this is one of the posts that I got um community note I've been getting attacked by Community notes and one of them I posted this uh device it's basically just using magnets and uh either DC or alternating current and when you put this plasma or this electric charge between the alternating current you can actually see the interference Zone where you can

(19:48) actually see argon particles colliding with one another and I I think that there's you don't need to make a bigger and bigger collider you know I don't think that that's necessary I think that's the the distraction is that I think that we can produce cold fusion um which is you know the interaction of these uh atoms um at lower temperatures than the sun in confined spaces using superconducting magnets and actually the large hron collider uses superconducting magnets and maybe there's some extra

(20:24) benefit to having it travel further but to me it's more of a situation of I just want as many of those particles colliding at once and I want to see what happens there not necessarily

shooting one particular particle and having them hit directly on some huge distance that they travel so I think that's something where like generally normally people are just going well bigger is better keep making it bigger and that will that'll do something when in reality it's more of like no we want to miniaturize it we

(20:49) want to get it to the point where I can have the sun and the palm of my hand and when you guys look at Super conductivity especially some of these meta materials that are coming out you know you can imagine just looking at these floating rocks how you could confine uh atoms to the point of compress them to the point where you can get these exact type of effects cold fusion in my opinion is really just smashing the atoms together and with pressure and um that type of stuff which Salvador Pas has a patent for that as

(21:20) well hey Ashton let me ask you this question real quick um because there's people probably out there wondering what you're going to answer this um as much you had Dr Stephen Greer in your space before right or aace I was in a space and I was yeah I was on the panel with him I only asked him one question but he actually answered most of my other questions for me it's like you know I I'm I'm uh planning on doing a collaboration with some other big people I think a lot of people know out there

(21:51) but I want like fresh blood because I've been looking at a lot of people in the UFO community and I've been trying to get a beat on them in terms of what their views are what their opinions what I should think about you know what they're saying is true or not and I gleaned a lot from Step Greer in the December 15th or December 16th uh space that we had with him the only question I wanted to know after I listened to him speak was does he think that the quote unquote alien technology could be used

(22:20) as a doomsday weapon and his answer was yes absolutely and then the only thing I would even criticize him on I said well how do we how do we protect that and this is where everybody glosses over it listen if I wanted to clip something right now I let me let me ask you this question do you believe that Dr Steven Greer in C5 events where they summons UFOs or aliens or being do you think that's real I'm pretty skeptical let's say of those claims that's the part where I don't see ey eye on Dr stepen

(22:53) Greer I highly respect him because he was an emergency physician so that's why I call him doctor he's literally was a doctor um and maybe he's seen the information you know along with the technology I think he's dead on with the technology dead correct you know in terms of he's talked about overunity liter he's literally mentioned teleportation on Shan Ryan I'm not calling it teleportation anymore I'm calling it warping because that's what it is you're warping SpaceTime you're

(23:16) not dematerializing or rematerializing an object you're just warping SpaceTime um so if technologically lies I think he's on the point but when it comes to the C5 stuff I'm just I'm skeptical I'm open-minded to it I'm just skeptical to it and then like I said before is that and even I think Eric wein mentioned this is this technology the problem with it is it's a Pandora's Box this

explains the suppression as well is the moment you start to understand the technology you get everything you start to understand

(23:44) that we can warp an object we can create a doomsday weapon we can get medical healing and this is why I thought it was so absurd when kim.com was pushing back on Stephen Greer but they had like a little like a little back and forth Tiff during that um and Kim's just going well why can't you just Why can't the aliens just give us the cure for cancer technology and put it on the blockchain you know and I think he's not even thinking about the problem correctly because the problem is that once any of

(24:09) the technology leaks out it all leaks out and this is my criticism of stepen Greer as well is that he says well we'll just keep the Domsday we technology behind the veil that's not how it works the moment you tell somebody how free energy works in over Unity now everybody can make a doomsday weapon so that's to me the reason why the government h it by the way I I think that we should do you know Ash and I have talked about um with our podcast which this was a very impromptu space but uh we've talked

(24:38) about our on our podcast and in in in private um we should get Stephen Greer to do a C5 event to where we can record uh in all angles to prove or disprove uh what he says about C5 what do you think about that so here's the problem with that is that from what I've heard you know shouldn't take it it's not firsthand information but you know I think that a lot of you have to like pay him to show up and do your stuff you know I think everybody's got to eat but the big criticism the way he opens

(25:09) himself up to criticism is because he charges you know thousands of dollars for people to go out into Joshua Tree the desert and do the C5 stuff and if you want them to show up on your stream or space it wouldn't surprise me if even that space that he showed up to that I was on it was like kind of weirdly sponsored by this bcoin like you know Meme coin wouldn't surprise me if they paid him to show up on that I don't know that for a fact just wouldn't surprise me but that's where a lot of these UFO people where

(25:38) this becomes their job and the moment you do that you're trying to make money off of it and now you open yourself up to criticism where everybody says well you're just doing this for the money or what have you and uh I'm skeptical of that too like what I'll tell you guys is that I was invited to go to an event uh I won't say exactly when but an event where Lando and Danny shean was going to be there and uh coming up pretty soon and I declined it because it felt like it was going to be like a kind of

(26:07) fundraising event and it was going to be really awkward and um I'm skeptical a lot of these guys too because I don't think they see the real implications I think for the people out there that are younger um and I'm over 40 but the people that are younger I think that they look at the problem with a new set of eyes and they look at it like I want to live in a world where we have magical technology and then I think there's a lot of people that are experiencers and older people out there that for them

(26:34) disclosure is always meant tell me about the ET the Extraterrestrial and I don't really want to spend too much time with the disclosure people that are just trying to figure out the ET situation for me I want to spend time with the people that are trying to figure out disclose the technology how do we use that technology to improve the world the 670,000 homeless people we have on this on just the United States and the people are struggling day to day just to pay rent and get by I agree with that ashton and and and

(27:10) and also I I do think though that there are people just as passionate figuring out the ET side of things because of spiritual and religious implications um and so to your point absolutely 100% that is a very worldly like what technology do we have what are we hiding from the public but I do believe that there are a lot of people um that I think that the more I look into the UFO Community the more we've done this for seven years the more people are just freaking trying to find answers and and they're trying to find

(27:49) answers especially in spirituality and and you know I could be wrong we a lot of people could be wrong if if we're starting to maybe figure out that some of this stuff comes back to spirituality who knows it could be some scoop we don't know but at the very least there are people that are just as dedicated and you know this ashton I mean you know there are people just as dedicated as you on the ET side etsp spiritual side of what these things could be um as you are with the the physical slash technology advanced

(28:25) Weaponry side right and so um um so it's interesting I mean and I know that your your goal was like Hey how do I how do I get from point A to point B to point C to point D with this um and and try to prove this to be true because I by the way I believe that what you're saying and and the technology and everything you're talking about is true um but I also believe the etsp spiritual side of things that are happening also could be true you know what I'm saying and yeah I mean don't get me wrong like I

(29:02) absolutely think that there can be uh you know aliens honestly I think it's a prerequisite if you think that aliens are visiting us from another star system or Galaxy that we have to be able to travel faster than the speed of light it's just it's otherwise it's just the distances are too far um but I keep my mind open to any of the phenomenon like I was just talking with Chris from alphabets earlier which shout out to him uh that was a really good uh podcast and we were talking about all the different

(29:28) possibilities of a phenomenon I think people should be listening to Tucker Carlson uh you know when he went on Joe Rogan he spoke about this idea that it could be spiritual um I think that he's kind of broaching this idea of extradimensional this idea of Angels and Demons certainly within the realm of possibility um also the idea of the ultraterrestrial hypothesis so AO came out and said there's no evidence of extraterrestrials but if you go look at the big graph of spectrum of what the alien phenomenon can be that's only like

(29:59) one column like there's a lot of other stuff that it can be it can still be you know spiritual in that respect it could be from our oceans it could be under I had to interrupt you for a second

because know if I don't I'm gonna forget this point um you're you're talking about uh Arrow comes out and says there's no evidence of ETS of of of aliens does that does that help your case with MH370 advanced technology that you government has or does it hurt your case I'm glad you asked that because

(30:32) that's you know the funny part is that Arrow report came out in the UFO Community was losing their minds and just for everybody out there who's not familiar I have no extra love for the UFO Community I say we have a contentious relationship probably in general um but they were super upset everyone's angry the arrows lying I'm just sitting here going that doesn't hurt me at all like I'm just going all I care about is technology I don't care where technology came from if that came from aliens that came from

(31:01) interdimensional beings future humans whatever it might be doesn't change anything about the laws of our universe and whether or not we can have anti-gravitational technology or what it might be so no I I don't think it hurt at all and I think that arrow is actually now ghosting me because they're afraid I've got so much evidence that there's no way to Gaslight like they could have to just straight up lie and whoever lies is going to put themselves in legal liability because the amount of

(31:30) evidence that those MH370 videos are real is overwhelming and it means that we've got gravity manipulation and SpaceTime manipulation the difference being that one of them is just counteracting the force of gravity um I think that the eem drive as they call it which uses like microwaves bouncing out through like a cone that produces what we would consider Star Trek impulse drive and that can be a form of anti-gravity I think that's real but I think just straight up bending spending SpaceTime with gravity manipulation is

(32:00) also real which is warp drive and then I also think this leads to Cold Fusion which is producing excess energy like the sun and also just straight up free energy which is creating like a Perpetual motion machine using magnets or other properties that are you know not moving so for me none of that impacts me at all and I think that that's what they're afraid of they're not afraid of like if you think about it you know you go well aliens might be real is government going to hide that maybe but who cares you know we got

(32:32) weird octopuses and squids that you might as well just call aliens the bigger thing the government's afraid of is losing control over the people and the way they lose control over the people is decentralization of power which is what free energy pretty much tells you is possible yeah but do but do you believe scop is more um you know and I want to get back to this point for a second do you believe the S up is more when arrow and the government comes out and says there's no possibility of aliens does that make it more like if you wanted to

(33:05) hide technology right would you not come out and try to blame aliens versus not does that make sense oh yeah yeah so if they and there's people out there I got a lot of people my followers especially that are like aliens are not real and they're going to Blue Beam us with an alien invasion I swear guys you got me on the record right now if they come out and try to claim

some alien invasion [ ] I'm going to be the first person calling uh you know calling them out on that I absolutely don't think

(33:34) we're going to have some weird alien invasion crap happen that's definitely I could see that scop happening where they try to claim that yeah we've got a band together against the aliens and you've got to fall in line with the WF One World governments or whatever [ ] that might be nah man n we've what I've discovered from digging back into the history of this technology like it first started with the videos and you know the plane and then finding out we have this technology trying to determine whether

(34:00) it's aliens or if it's us determin that we can have had this technology ourselves to the point of digging back to the history of it and realizing this goes back to the 40s another thing that Tucker Carlson mentioned that people should be listening to is that he floated the idea that I've never heard anyone float before that even Atomic nuclear bombs could be reverse engineered technology now where that reverse engineering comes from I think that's the debate is did we dig up some archaeological dig where we found

(34:29) something did we figure it out ourselves from the Manhattan Project and we also figured out kind of the opposite of nuclear which is Fusion which is you know unification of the forces or did something crash here and we figure it out you know well I I don't really know but I think that's a really interesting concept because if you were to ask people in the 30s like hey we can blow up a whole city they would say that's fake they would say that's fake the same way people are saying that warping in a

(34:54) plane is fake right now and that's the kind of thing that I think a interesting thought is that we forget that until we see it firsthand it's really hard to believe something is possible I agree with that all right um you want to hear from someone that actually seen them firsthand three times and has been studying it for about 20 years absolutely go ahead all right um all right the first time that's probably about 12 13 I'm about to be 32 now sorry if I sound like crap I had a cold right now but uh I was out ice skating at my

(35:32) grandparents house and like me and my cousin he was facing the house I was facing the Christmas tree fun and he was I like looked up and there's this giant white orb up in the sky it's like a bluish whitish orb and by the time I could say what the f is that it like really warped like just out of I can see it it's like War like pretty much what you see in the movies it's War coron was gone and then I seen the same exact thing with him we watched it for about a half hour it was probably within a year or two difference

(36:06) or after that um we were like looking I we lived in the country so we were just like looking up the stars and stuff we seen like shooting stars satellites all that and then uh we seen two they look like stars but they weren't stars and they're like the same orbs i' seen but they're the size of stars up in the Stars we watched them for like a half hour what would do would like zigzag around the star and the other one would follow it do the same exact thing like far as I could see like left to right out in the country we

(36:36) could see them for a half hour so they traveled probably billions of miles in a half hour I'd say then this third one them ones I think they're like I don't know some kind of light energy Spirit or something like that and the third one we seen me and four people seen this one we're driving down the highway in Michigan and uh there's this giant triangle with like I want to say nine lights around it and uh I was like Hey when did we get this giant street light over here then uh like I don't know like they're like

(37:11) that don't look like a street light like dude that's a giant UFO this like something off of like Halo or something like that and we uh had to turn back we turned back around see if we could see it it was gone then we had to turn back around again because it was the highway and we're going back that way when we went back the third time there was a helicopter there with the spotlight on so it was on the radar at the local airport oh I can do live captions no that's crazy I mean there's a lot of

(37:37) people that have had experiences right I mean and even Ashen to your point I mean um to the point of kind of what we're talking about is there's a lot of people that have had those experiences and not just those experiences there are people that have claimed uh definitively that they have been abducted by beans or craft of some sort but then you even go back to like remote viewing and governmental programs to where they specifically talk about Advanced programs to where they try to investigate uh anomalies or scenarios to

(38:13) where people have either been abducted think about what tuger cson talked about where there were a 100 plus uh potential I guess service members that were injured or died from um close interaction with these crafts now to that point to Ashton's Point obviously that could absolutely be advanced technology of why they were close to craft and died or had some type of traumatic brain injury why would you have a governmental um anything near um near these service members but then also even the fighter pilots that are they've literally had to

(38:56) move entire squadrons out of certain training areas because of uh the amount of um I guess activity that was in an area of uaps or things that did not know what it was How likely would it be that we have programs that are completely opposite of our military that our military doesn't even know about in training scenarios as yeah you know and that's the part where I it kind of leads into Havana syndrome like could these UFOs be having negative effects on people I absolutely think they could when you look at some

(39:34) of these electrogravitic effects electromagnetic effects you could you can easily imagine how that might mess with somebody's brain um I would not stand underneath a UFO uh if I saw one floating around I would avoid it for sure um and I you know I guys I've been posting about um not negatively but I've been posting about Gary Nolan who I think is on the Forefront of some of the Havana syndrome research out there looking at people's uh you know CT scans of people's brains that were supposedly

(40:03) affected and there are people out there claiming that like they it's actually physically changed the chemical makeup or the the structure of people's minds which is scary stuff and I

just want to say that I have the UT most respect for Gary Nolan he's a Stanford uh PhD and Professor um so I think that's something that people should definitely look into and then the other side too of it is the nukes you know a lot of people ask about you know maybe the UFOs are some kind of connection to the nukes I think

(40:29) Robert Salah was one of the people who was uh a serviceman on one of the nuke sites where supposedly the UFOs were shutting down the nukes which definitely begs the question on if there's some kind of connection between just not only UFOs and nukes but you know UFO or nukes give off I think a strong electromagnetic pulse when they go off if I'm wrong on that feel free to fact check me but I think that a lot of this has to do with electromagnetic properties so it wouldn't surprise me at all if there's a direct connection there

(41:03) oh and one last thought before I forget uh and I want to ask you guys about cloning in a minute after this as well but people wonder how UFOs could get knocked out of the sky at this point I'm very confident in saying that radar can just knock UFOs out of the sky because it uses the same way they fly is essentially a form of radar phase conjugation and if you just disrupt that it's like taking the steering wheel and just crashing them into a tree so even though technology can seem extremely Advanced it does not make ship

(41:37) or a craft Invincible um everything has its vulnerability just like how Superman is vulnerable to Kryptonite it's that UFOs that might fly around using electromagnetic effects become very vulnerable just to straight up radar beams we shoot a scalar Beam at it might just fall out of the sky yeah and Ashton by the way to to your point um I've been in aviation for a long time I don't I don't ever talk about the capacity of what I am in in aviation because of our podcast and what we talk about but regardless of the fact

(42:07) um yeah absolutely I mean there are things that can disrupt either GPS or um or or all types of instruments and aircrafts on a regular basis and if you think about even the UFO um you know hypothesis as far as how these things might move electromagnetically you can just probably grasp that if you can disrupt the magnetic field or or the actual frequency if you if if you even think of like radio frequency waves potentially they're going through that um phase um if you can disrupt that then you could technically knock that

(42:45) physical manifestation even if they are From Another Dimension um you can knock them out and bring them down to the ground I know that sounds crazy but it is a it is all about almost like a um electromagnetic SL radio frequency Warfare and um and I think we have an ability to do that same way that you know they say these things are very interested in nuclear weapons and our nuclear facilities um why are they interested in that because you know if you understand what you know nuclear does in radiation well you know that

(43:22) disrupts a lot of electronics and especially in EMP type weapons how much of these nuclear facilities I actually have EMP weapons intact on these nuclear weapons a lot of these nuclear weapons in Modern Day actually have an EMP type Weaponry on almost all nuclear weapons uh I read an article the other day most of these things can completely disrupt

electromagnetic pulses um in which if we think anything about health maybe these things operate then you have to think exactly what you're just saying asht um magnetic

(44:02) frequencies magnetic pulses magnetic energy um that's where potentially they operate and if you have a system to disrupt that maybe that explains some of the disruption or crashes of these Craft um side with the um you want to talk real quick one more thing then we can jump to some questions on there because Eric Hecker also uh one of the things is that you know might be dealing with warfare that's going on um that is electromagnetic in uh its properties you know when we talk about mapping the ionosphere or mapping the magnetosphere

(44:41) you could imagine that not only are we just doing that to see what's going on to the Earth but we're doing that to see what our enemies are doing to manipulate those things if we have electromagnetic weapons that we can use and Eric Hecker mentioned that a lot of his people that he was out there in Antarctica with experienced havan like syndromes havan syndrome like syndrome uh symptoms and one of them even asked to be evacuated I found the news article and I posted it in the middle of our conversation I was

(45:09) having with him like she was named and everything out there so you can imagine just being near those kinds of uh that kind of Hardware that's doing that have detrimental effects yeah frequencies I mean I mean uh for people that don't know what Schuman resonance is the Schuman resonance which is basically the Earth's heartbeat they call it um is a frequency I think it's what 7.

(45:34) 83 hertz I could be wrong about that but that's essentially the Earth's heartbeat that is the frequency the uh radio the RF frequency of the earth um and and if you look at the human resonance you also then you start looking at what is the frequency that our hearts beat our brain waves connect it's the same frequency which is very weird and so if you think about people and by the way the qinon shaman uh what they call him the shaman um you know he he's very like Earth grounding shamanist uh approaches on on a lot of things but

(46:09) regardless there's a lot of people that believe if you ground yourself with the Earth you ground yourself with yourself um because you literally have that same frequency that kind of connects you to reality in a lot of ways um and frequency is everything I I really think it's everything and I also think that that you know just like they control social media control Mass formation psychosis control psych uh psychology and and what you believe and what you think and and all those things they can also control frequency and I think

(46:42) that's what they're using now for Weaponry um go ahead with a side with Constitution what's up n that is exactly what I was going to talk about Schuman the uh Schuman residence resonance it is 7.83 exactly it's what your heartbeat is at it's what your your mind is at it's what the Earth is at and they are absolutely [REDACTED] with us with that they have the scaler waves yes they can uh operate different frequencies to screw up that resonance and at a c certain scale of resonance that they can it can help you but if

(47:23) they increase it it can hurt you it can hurt you badly um the other thing I wanted to mention is that we actually do live approximately 50 miles of the crow flies F flies from Area 51 and my husband is very interested in tracking what happens not only down at the border and where these flights go from there but we track a lot of stuff that goes on at Area 51 we see a lot of weird stuff going on there and that goes around at least 50 to 75 miles in a circular area around Area 51 and we know they have something that they're flying I don't

(48:07) know if it's us or something else coming out of Area 51 that is not anything like we've ever seen them fly ever it's Dave what would you call that thing that you tracking the other night it was something that was anti-gravity wasn't it definitely something that was anti-gravity was not like any kind ofces yeah vast dis distances and a split second I mean it was it was unlike anything that we've ever tracked before coming out of that area and it wasn't wasn't a drone it wasn't a a ship it

(48:54) wasn't anything like that it wasn't anything like they've tracked of those little whatever they call those little Tic Tacs it wasn't like that it wasn't like anything that I've ever seen on any of the UFO videos it wasn't anything like that it was so fast it was going if I don't even know how to explain the the perverse course it took it was just it was like nothing we've ever seen and it's the first time we've seen anything coming out of uh Area 51 that was like

(49:27) that we've seen very strange stuff but this was really odd and the other thing that I was going to mention I don't know if any of you were in that space where I think his first name was Christopher melan the billionaire oh yeah yeah we know who he is for sure okay I'm old I'm not a conservative I know it sounds like I am with M side with the Constitution I'm an oldtime classic liberal the rest of these guys that call themselves liberals they're not they're leftist Progressive posers they are not liberals I'm telling

(50:05) you right now they not don't have no tolerance they don't believe in free speech they don't believe in listening to other people's opinions what they're doing to Trump is Banana Republic stuff whether you like them or not and believe me I'm highly suspicious of them I got a problem with the zionists I know what they've done to in 19 67 they went after the USS Liberty and they killed 47 of our guys on that ship and 100 plus were seriously injured and I believe it was mamera that they got a message out but

(50:42) when they the pilot on the um planes were almost there he called them back our government and the Israeli government covered that thing up and that's not the only time this kind of stuff has happened so believe me I've been researching for a very very long time I know what's been going on in our government and what's going on now is absolute treason absolute treason so I'm you'll have to get forgive me right now but what I see going on has really got me very upset I'm very very upset with

(51:19) what I see going on because and with the Constitution let me ask you real quick we I think all agree one 100% with what you're saying um 100% and we've heard so many people that were once liberals that are saying this is not liberalism right and um but nonetheless how

did how did you defer from what you guys tracked out of what you're seeing based on all the videos you see what was the difference like did you see a light in the sky no we were using a plane tracking software okay okay and we were seeing

(51:55) the flight path from this plane tracking software we want we we track the flights out of Las Vegas that take the um employees over to Area 51 and back we track all the they have all they have all kinds of weird stuff that happen and you'll have times where something happens where it's almost like something escapes or something happens that they're not prepared for and they go on a uh almost like a search mechanism where they've got drones out and they've got Blackhawks out and they're looking it's like

(52:38) they're searching for something and it's very odd because we it come the these lights will come over the area of I live in a place called prump I don't know if you're familiar with the old time Coast to Coast um radio program they now do it out of bir bank with um what's the guy that does it out of Burbank who this lady's great oh George Nory it used to be Art Bell art was the Coast to Coast AM that did all the B things that bump in the night at 12 midnight um I don't know if you guys

(53:17) remember that but and I used to listen to Bill Cooper who didn't trust Al Jones and what was the ride a pale horse or got the book Behold a Pale Horse I don't know if you guys and if you are old enough to remember any of that stuff but I've been researching for a very very long time okay let's Okay Ashton you you know what I'm talking about okay yeah behold the pair horse yeah I think that's that's a book that I've been recommended to read several times but I would read it there's a guy on X that actually has it

(54:01) his uh handle is it's got to be K2 I think it is that he's got the full um Bill Cooper reading it doing a readout of that book but anyway I have I don't know why I am but I'm both left brain right brain and I was born at Fort wuka Arizona the actual fort my dad was a an intelligence instructor for the Army and when the Navy opened it up on February 1st 1951 my father was stationed there with the Army February 8th 1951 and I was born there August 12th 1952 my dad never told me what he what he did there but for I've been learning

(54:54) skills on how to access my conscious and I was able to pull out that he was an instructor there and I don't know but I've been able to access stuff in my subconscious about things that went on there I know that sounds really weird and I know what I'm going to say next is going to sound even weirder but they're doing something to me and my husband we're smart we're not Mena smart or although they've really lowered their their expectations on intelligence scores but we're pretty

(55:33) smart people we used to follow um Tom beard do you know who he is he's dead now she just dropped Tom Bearden guys oh yes I know Thomas Bearden Lieutenant Colonel yes lieutenant colonel in the Army that's the guy we used to follow his stuff all the time now I can understand the theory but I can't do the math proofs that well I'm not that strong in the um the math analysis and I can do the the geometry and the that kind of stuff but I don't have enough

of the math analysis and that um so I get the theory and I can

(56:17) tell you right now that I have never agreed with this Big Bang Theory never ever ever I don't think it's right at all I'm sorry I don't I think they've thrown in the string theory I think is [REDACTED] they've thrown in crap to throw us off Smart path on our physics don't ask me why I can't explain it to you mathematically but Theory wise it makes no sense but I think they're doing something they're so throwing something our way at my house in particular that sounds really conspiracy theorist and we

(56:56) are conspiracy theorists we are but there's something going on that we're getting following we're having problems with our ears we're getting these I know it sounds weird I probably shouldn't even go any further but I think they're attacking us with some kind of scaler wave or something and I just found a report on how they I know they continued on MK Ultra and there were some other projects that were in line with that and I just found something on what they can continued on with and frankly Reagan was

(57:30) part of this I know the conservatives don't like to hear that but that's a fact I hate to tell you but that's a fact you don't let all the people out and set them back on the streets there were a lot of people that I ran into back then that should have still been in those asylums I'm sorry but that's what part of the problem with these homeless people out there they should be in asylums okay that's all I have to say um but I just wanted to add that to your your conversation so oh

(58:02) thank you very much uh people in my chat uh first of all they called you talking about scaler stuff which was awesome Thomas beard in reference awesome people want to know if you have a Blog uh I think I got I don't oh that's too bad like 50 people in my chat said that you're uh based apparently so you got some good praise here ma thank you I'm so glad I was afraid to talk because a lot of the conserv is they get I started identifying myself as a liberal because I just got tired of stop denigrating

(58:34) liberals there's a lot of them out there that you could catch if you'd stop prejudging them I don't prejudge anybody I GOP to try to get rid of the rhinos and the neocons I don't believe in war unless they're attacking us is this lady why would you you're you're missing so many people that you could draw in if you stop using that word liberal to denigrate everybody don't you remember Brendan Striker yes total died in the wol Progressive somebody showed him what they were doing to Trump's speeches and

(59:12) that's how they got him in now he's with the walkway campaign you're losing so many people by doing that stop doing that it drives me nuts that's excellent Oh no you're good that's an excellent point and it's to hear somebody who's not necessarily identifying as a conservative but does share a lot of like-minded ideas so thank you for that I definitely don't think you're alone in that whatever and I do think it's important that we try to reach those people also so absolutely there's

(59:43) lot yeah and Shane I know you've been uh waiting for a little bit so we'll get to you and

then American CI you can go ahead and go oh no thank you so much for sharing truly we appreciate it oh it's no worries at all it actually I was going to say afterwards she wow that was awesome you guys should have her on the show but no I was just going to say when you were talking about the military knowing about these things um so I had my own experience uh back when I was about 19 years old and I haven't really told many

(1:00:12) people about it uh you know everyone thinks you're nuts but I you know I I figured I might as well say something about Chad and Sher you know this place very well h Hilton Head Island um I was there for a vacation I was there for a week before this happened so there's no nothing no military anything happening on the beach um and I I'm an avid fisherman so I'd gone out uh everyone was in the uh everyone was in the hotel uh you know like drinking at the bar and stuff like that and I know it's

(1:00:44) like 11 o'clock at night and I just wanted to go see if I can catch something so I'm out Shor fishing and then all sudden everything got quiet and you know I'm like why I'm not hearing w I'm not hearing anything and I look above me and there's just this black triangle that's like probably 100 feet above my head and like this is not a dream this isn't you know this is like this actually happened to me and and the crazy thing is too is I went inside after because I had ran inside I didn't

(1:01:15) say anything to anybody because I was just like in such shock I went in and I went to the bar with my X but I went I was out there and I was fishing and it all went silent and I looked above me and it was like this it it was blacker than the sky and there was no noise whatsoever and then lights on the sides turned on so it was a triangle and I just dropped my pole and I was St I lost my pole and they actually asked me like what happened to your pole and I was like oh I uh I don't know I I it got pulled in and I I just

(1:01:53) started running and I looked above me and it was F ing me up and then I looked above me again the bar was like at the back of the hotel so it was like a not a hotel but like a Whatchamacallit like a a it was like a nice hotel or whatever but it had a bar a resort Shane because you're in Hilton had we go to hilet all the time that's a resort bro you're yeah a resort yeah exactly so sorry yeah ex I'm trying to think of the the name for it I'm just being stupid um and yeah no I I look back up in the air again and

(1:02:25) it's gone but so it's gone but I'm still running I run to the back and my my ex is there and she's I'm like Breathing heavily and she's like what's wrong I'm like nothing nothing nothing can I get a margarita but like still like that will like sit with me for the rest of my life the next day though so this is the moral of the story the next day you know I'm not thinking about it anymore really because like I don't know something like that happens and you know you kind of

(1:02:50) like put it out of your mind but me and my ex are laying on the beach and you know everything's normal and and we got out there about 9:00 in the morning uh about 10:00 in the morning two Apaches go down the beach back and forth about 10 times there was no military whatsoever before that and I'm like to my ex like she's like wow those are like military I was like

yeah those are [ ] Apaches I was like I've never even seen one of those fly through the sky before but yeah I just figured I'd

(1:03:21) add that just because that you know seems pretty you know interesting wonder if we by way before we get to anyone else I I got to say we go to Hilton Head all the time and I think you're one of our listeners but yeah we go to Hilton Head all the time um and yeah I've never seen an Apache of hen head ever um I gotta say you might see by the way you don't even see fighter jets they they do have um Marine Corp station bufort there which is they do have f-18s they do not have Apaches though that's an army thing

(1:03:52) but um but that's interesting you saw that and there has been weird stuff happened at Hilton had while we're there long story whatever but very interesting story holy crap and and I think I want to say this before we get to someone else I think because American is wanting to speak um American citizen um what I will say is like I I think that so many experiences or so many things that we that we hear or start to realize or or we have an Awakening I think that's why even the people that are here right now

(1:04:25) is why you guys are here I think that our listeners that we have all around the world those people that listen to us is because they have these experiences they have these Awakenings to where they're like holy [ ] what is going on let me go try to find answers um and and that's why it's always tough sometimes for us to dude there there are times we do podcast we we're like holy [ ] how do we how do we get the best possible message for this topic because people are so desperate for answers and we have

(1:05:03) to try to we have to try to find some way to like portray what we're really wanting to say because we know that Shane and people like uh side with the Constitution and all these people are out there listening and it's like do you understand how big of a freaking yeah I don't know what is it a a duty that is to to try to do that and and I know passion feels the same way as far as m370 and and what he's trying to betray to people and that is so tough but also it is so uniting because we are all here

(1:05:37) um there's very few of us here tonight but what I'm saying is there are there are so many people out there that are desperately trying to find the truth and we are on the front lines guys I whether you realize it or not I mean yeah we're not out battling like the Civil War or 1776 but we are in a different way we are for the information war and I think the front lines of the war today is information as though when I often hear people say what can we do how can we do this I don't give a [ ] about what

(1:06:08) happens in the end result I just care about what you know and what you understand and what you believe and and and as long as you at least believe the truth as long as you at least see past the BS that's all we want thank you wiang Wang appreciate I thank you too by the way um like seriously because like this podcast like after seeing that and then like like after that I was kind of like questioning everything you know then also after Co especially but like um I think I started following you in like 2019 um and I became a truck I'm a

(1:06:43) trucker and so obviously I listen to you guys the moment the Pod the podcast comes out I start listening to you but like uh I mean like to be able to listen to like you know you guys and like or people that come on and like that and like to be able to hear you know all that and like you know to hear that you know I'm not you know I went out there and I saw that but like I don't tell anybody about about it I've I think I've told like two people because it's like you know you tell people and and it's

(1:07:10) like's Tupa what are they gonna say like I'd rather just keep it inside but like you know here like people understand but like to be able to listen to your podcast you know it makes a big difference I just wanted to let you know that you're bring people up holy crap that that means I just wanted to Echo for sure what Chad said and like thank you for sharing and this is definitely like a judgment free zone so anybody else that has anything that they want to bring up like this is definitely the place to talk about it

(1:07:40) this is a place that we can all get together and like share these stories and a lot of people I'm sure are on the same page and Shane you definitely are not the only person that's had experiences like that but to your point I think a lot of people just don't talk about it because I can't bring people up taboo and in a lot of circles you know you get labeled a conspiracy theorist or you know worse so um worse up Tu but uh the house willing to actually talk about that and if there's anybody

(1:08:09) else that has anything that they want to discuss um definitely a request to speak and we will add you um as a speaker and then if you are ready to say something just throw a hand up but Sam Sam Sam before you before you go on um we're gonna get to probably American Next or whatever um American Michael Tupac Cabra I see you in here um we have you I want to ask you a specific question as far as UFO Community after we get to American because American a while how do we get sounds good yeah oh he is up somehow oh yeah I just

(1:08:42) wanted to chime in on what Ashton was saying about the Havana syndrome I don't remember if I heard it on your guys's podcast or a different one I listen to him about 12 hours day wild network uh one of them I heard though that the Ice Cube neutrino research facility um there was you could find like the specs for it and stuff online and they found it and it actually emits and transmits frequency and that could have something to do with the Havana syndrome there I was thinking but and then just chime in on what Shane was

(1:09:16) talking about that triangle I'm pretty sure that's the same one I seen it had to been at least the size of a football stadium I'd say it was hard to tell because it was dark when we were driving but that's pretty much all I had thank you Wang Wang yeah real quick so another crazy thing and I don't think it's after you learn about scaler physics which uh scaler granny in here I hope that's not doesn't make you feel bad calling you that that's what everybody wants to call you now I was talking about scaler

(1:09:39) physics and Thomas beard and when you learn about phase conjugation you begin to learn that radar is not simply passive receiving and listening detection but that it can be used to

potentially transmit energy through scalar potentials out there um and the they actually planning on taking that ice cube neutrino detector which has 5,160 Doms in it that each have 2,000 volts and they're planning to making it 10 times bigger what the what the hell you know what Eric and I were talking about I was like I want I can't wait to

(1:10:11) hear what explanation they give for the forward public facing explanation why they need to make this thing 10 times bigger than it is now like what [ ] are they going to come up with like oh we've got a the tech neutrinos from the earliest form of the a big bang or some nonsense it's like come on man there's gotta be something else going on with this thing by the way uh Ashton to to Ashton's Point Ash and Tupa you can probably agree or not agree I don't know but um Ashton is so smart and he is he's researched so

(1:10:42) much [ ] I I just want I just want to point out real quick can you guys still hear me hopefully because I'm yeah we can hear you we're good yep so a neutrino detector I want you guys to understand I don't know is what even a Cube neutrino detector is but in in particular a neutrino detector um a neutrino detector is a physics apparatus which is designed to study neutrinos because neutrinos only weakly interact with other particles of matter neutrino detectors must be very large to detect significant number neutros and by

(1:11:20) the way they believe that neutrinos when you hear of Ice Cube neutrino Det detector what are they doing in Antarctica what what does that even matter if you think about CERN CERN is a particle collider but they're also trying to figure out the uh the building blocks or at least the be able to harness antimatter right antimatter is everything that is opposite of what we see it's very hostile very chaotic but neutrinos and the and and then in particular neutrino detectors um they believe neutrinos interact possibly with

(1:11:57) antimatter and so it's almost like neutrino detectors are are kind of the in between potentially of matter and antimatter and so when you think about a ice cube neutrino detector what are they trying to detect they're trying to detect the in between of everything we see which is matter and everything we have no idea about which we don't see which we do interact with which is antimatter and also maybe even physically and even spiritually emotionally affect us right so I know that sounds freaking nuts right um yeah

(1:12:36) it does either way I just want to try to explain what a neutrino detector even is and what is neutrinos neutrinos potentially interact with matter and antimatter but it may be the in between particle or semi- particle of uh of matter and anti- um Michael go ahead and then Tu coer we'll get to you yeah I just want to bring up a couple of things um one thing that Sherry mentioned about social media um about one side taking the able to get the platforms and other side's um getting censored well as for me is I work for as

(1:13:15) a probation par officer for the state of Arkansas right so we catch so many people with weapons and drugs all over social media all the time so I just want to say because of that I agree with Sherry on that it's like that's what they're trying to promote you know saying it's okay but when someone try to speak their mind they get um blocked from like Facebook or whatever on

that so I just want to say I agree with her on that um and that's about all I have to say on that on everything Michael by the

(1:13:48) way we appreciate you as a listener man we see you all the time on our Telegram and all that um we appreciate you very much and Shane you too I know we I know we know Shane um tabra uh we gotta get to you because we have to ask you sure you being in the UFO Community what do you feel like is another now you obviously showing up late to the conversation we're talking about crazy stuff but we were recently talking about the UFO Community versus interesting um let's just say UFO Community versus uh kind of like Joe Rogan versus Tucker to

(1:14:23) where you have Joe Rog going against Tucker in some ways saying that a lot of what we're probably seeing is advanced Tech right it is government technology reverse engineered maybe at the at the latter part so you have Ashton which is saying the mry 70 was potentially kidnapped uh or teleported based on US government technology or other technology and then you have you which are obviously involved in the UFO community um with Sky far new and so on um what what what do you feel like like where is the Divide what do you believe and and and

(1:15:07) and is there a correlation with both good question I mean that's a big that's a big question I think um with Ashton the The Divide really comes between like almost a religiosity and um more of a scientific mind um as much as people would love to exclaim that ufology is full of scientific people and we're looking for the science um if you really listen not even like dig deeper or lift up the rug if you just listen you'll find that a majority of us ufologists are very much um Faith less and looking to the subject

(1:15:44) for some type of um bigger than than the self kind of belief system which is fine I mean that people do that right what did uh Russell bran say we are species who worships you know it's a matter of where do you what where and what you want to worship and um the the truth and the science of it all is sometimes left to the Wayside you know and with Ashton he's gone for like The Logical provable reliable uh facts that you can back up and really have a conversation about and a lot of people took offense to that a

(1:16:22) lot of people in the community were very threatened by that because you know in the same way I think a lot of atheists look back on um you know like let's say the Dark Ages right they they think oh you know religion was the devil it was holding everything back you know and the idea of like um you know getting through it getting some new information out uh it was viewed out viewed as heresy it really was it was heresy to to ask strong questions and to bring real answers and so yeah I think right now what we're seeing is a clash between an

(1:16:51) Old Guard who got away with um dictating what the world was uh in terms of paranormal and and fringe science right Advanced science they got away with dictating that through their books and through their Book Sales now with media as immediate as it is the that's gone and people who worked on that model or who lived off of that model they're having a hard time you know and so I think one of the things they resort to is slander and so you see a

lot of the Old Guard I'm not calling any names you just see a lot of them gatekeeping and

(1:17:21) Ashton found himself uh at the front of that gate you know you you know what funny Tupa is that there are a couple different things you said number one you can't be um you can't be atheist and be a Christian right true to true but you can be Pro um or not pro but I guess let just say you you cannot also be saying that we have such advanced technology that some of this UFO stuff is possible and then you could also say that UFOs are also possible but to contrary you can't be atheist and a Christian or

(1:17:58) believe both could possibly exist does that make sense I know it sounds crazy but well yeah I believe with that that statement 100% you can't be an atheist and a Christian you know I believe I think that that's absolutely correct but yeah but you can be Ashton and you can be Jeremy Corbell time yeah if I can jump in on that I mean you know my opinion is is kind of you know I think Tupa hit the nail in the head he's very introspective guy I appreciate tup a lot this is why I've always gravitated towards him um is

(1:18:31) that yeah there's a lot of people that are gatekeeping information in the UFO community and if somebody comes in and they say nah you guys are all wrong this is what really matters like that's threatens a lot of people's perspectives of things and I came in and I went you know what aliens could exist but I don't really care and that right alone just divides the community in half and then I said you know what I care about is the technology side of this and you know if there are aliens visiting us you got to

(1:18:58) explain how they're visiting us and hey look this is how it happens and and dug into that so I personally feel like I found myself a little niche here but to give I don't want to like put down all these people who are these UFO celebrities and Community type people because I think from their perspective they look at me and what I propose is so far beyond the Paradigm that they Wonder am I disinformation and I think it just becomes kind of a you know that's a that's a skeptical type of opinion that

(1:19:26) you can have you can say well this guy's spreading information it's so contrary to what we've been pushing out there that he is trying to distract us he's trying to derail us but the thing that throws that out the window is that nothing's been going on nothing was going on at the time that I've been looking at this there's been no major developments the last thing was this UAP hearings that we had last summer that was before I even started coming out of the scene with any of this one real quick one last thing I

(1:19:53) want to say is like you see that my opinion like with this Jeremy or Jason Sans thing that came up is that a lot of people are just looking for someone to validate their experiences to comes out that they can you know Elevate to this this higher level and go this is my hero this is my Champion out there and I've come on and said no I'm not going to do that I'm just going to show you that I'm gonna make you come to terms with it for yourself Ashton how do you compare yourself to uh listen next topic **Mick**

(1:20:24) West um well actually let's do it I have a better idea for topic do you tell me if you agree or not but I kind of want to talk a little bit about cloning I haven't really ever talked about that very much but and I will present it like this so you know I've lived through the bush era Administration and in the Bush Administration in the early 2000s they outlawed cloning and I thought that was very weird because we were entering an era in the late n 1990s where it felt like anything was going to be possible and people start

(1:20:56) cloning sheep and you start wondering can we clone people and what would happen if we clone a person you know especially with respect to the idea of like there's a lot of these studies done about identical twins and things like that and does make you wonder especially now with the age of crispr where crispr is like we can do genetic editing of people and where **Putin** is literally talking to Tucker Carlson a month ago two months ago and saying that we can create super soldiers do you think that we can actually clone

(1:21:27) people and if so when is my Scaro clone going to come I've been waiting for a very long time Ashton Absol freaking lutely listen that that's a weird thing because it goes back to a little bit of both like that exactly what you're asking goes back to can we have Advan advanced technology but can you have that much advanced technology without the spiritual realm the UFO the that whole entire um I don't know tuba what tuba what do you think briefly buing back to what I was saying **Mick** West and and I know what you're saying

(1:22:06) Ashton with cloning but we can incorporate this um is Ashton to the UFO Community **Mick** West in some ways just on the other side I mean **Mick** West is everything **debunking** UFOs like it it everything that he posts is balloons doesn't make a [ ] what it is like if you see an actual craft and and you have a highdef picture going under the ocean he will say it's a balloon I think definitely apples to oranges you know these are two different animals uh M West well **Mick** West is almost pathologically skeptical right and I

(1:22:44) think he looks down on the UFO community and the anyone who believes anything that's not Ashton does not I have not caught this from you at all Ashton that you look down on the community or people who believe and stuff in fact you know you catch Flack for making bold claims I think you got a lot of respect for people who make bold claims and can at least back them up or at least go toe-to-toe with them um but you're not out here trying to check people and call them out on their beliefs uh if anything

(1:23:10) you check them and call them out on their behavior uh as it pertains to like their bias and their uh the way that some people gloat and have people have tried there people have tried to celebrate Ashton's downfall and every time I think it really does come back to bite him in the ass dude it's one of the funniest things to see is everyone celebrating right um there's something about you Ash I think people think they can take you down very quickly and then it just doesn't happen and then they

(1:23:35) start to now they play victim instantly like it's it goes from let me I got this easy this easy [ ] right here then you you you fight back and then you win they're like oh this guy's a

[ ] Russian op and I'm like dude I'm hearing I hear the craziest cope from people who go toe-to-toe and just fail because uh I think they realize um in the process you're not pushing something that you made up in your mind you know you actually are one of the few people in the community who's like hey look at

(1:24:04) this I've looked at this and then um you know I think that the the microcosm here is the videos right so many times they were debunked and every time you're like no no and at first it sounds like stubbornness right and a lot of people think oh this guy's a [ ] mule he's never gonna budge on this no matter what we show him but like let's take the um the contrail for example right Mick West posts a contrail video is like this is the only video you need to see and they're more videos but this is the only

(1:24:34) one you need to see the contrails aren't moving because of some V effect dude there's no way you know and then sure enough I know it got a lot of people to be okay that's in the coffin for me because this guy came through sh get spicy and confident about his debunk um but yeah the risky move is always believing the risky move is always like taking the risk and and sticking your neck out there and in that sense I I want I want to say this real quick um to your point what you're saying is that

(1:25:03) Ashton is desperately trying to speak the truth but they have done everything they can to destroy him um what does that mean I mean is it to your point is it that Ashton is a good speaker or is it that they can't you know there was something that the Tucker Carlson actually no sorry it was Graham Hancock episode of Joe Rogan where they said that if you have to continue to debunk that's a problem right I mean if if you have to continue to debunk and and and TBA do you believe that m370 according to Ashton happened let me

(1:25:38) ask you that and then number two think about this did you see the Chinese government there they said there were three floating objects although there is a variation of people that say was that in the ocean that the Chinese government said their satellites picked up three orbs um or was that meaning potentially it was in the air okay could that be could that be a defining moment in in my370 investigation I am new that's the first I've heard of this Chinese report and if so yeah it could be a huge thing um a

(1:26:10) huge issue now like um my interest in MH370 isn't because the videos are so compelling uh videos can always be faked although as every day passes and every time I watch the video I'm you know I'm I'm so for those who know my background's in video uh I was actually in film school learning all of the top-of-the-line techniques for visual compositing and VFX uh around 2012 so like two two years before this video came out so I feel very confident that I know what was possible and how to achieve certain things uh back in the

(1:26:43) day especially from your home all right specifically from your home uh which is what the claim is that this video is hoaxed by some Rando who has yet to come by and collect any credit or money um my interest in the case lies solely in the reaction to Ashton's persistence and it is it is an immune system response and the only thing I can attribute that to is the secrecy uh

system that has kept UFOs and advanced technology out of our view for so long that's my conclusion thanks T and real quick if I

(1:27:17) could respond and then also I think we've got Ian Carol in here as well if we could bring him up that'd be awesome because I've been wanting to talk to him for a long time um but you know with respect to the **debunking** and stuff the difference between someone like **Mick** West as me is like when you see **Mick** West talk on the **debunking** side like you said it's it's pathological you know he's the kind of guy that he comes out there and he says this is what it is I know that it's this but my Approach

(1:27:39) isn't like that my Approach is here's what the evidence shows I'm going to show you the evidence and then I'm going to give you my opinion on it and you know this is why like I've a lot watched a lot of what Ian Carroll's done with respect to conspiracy stuff as well out there and that's why some of his stuff so compell as well is he shows you the evidence straight up and he gives you his opinion as well about it and that resonates with people because you know what it's authentic it's somebody who's

(1:28:03) going out there and they're not trying to tell you what to believe they're just going I'm just a guy here's this crazy stuff that you do with this information what you will you believe it or you don't believe it and I think that's why a lot of these people who tried to attack me Ambush me you know whatever they always backfires always backfires I didn't even tell him ahead of time it's going to backfire when they do it and they still try and then it still backfires every single time so that

(1:28:27) would be that's the recipe for people out there just be an authentic person who's just trying to figure out the **truth** absolutely I agree um and here's the thing um to your point Ian I I have watched a lot of your videos and and by the way we've actually used a couple of your Clips on our podcast and I think you do an amazing job of explaining uh kind of what we've been trying to explain tonight is like how do you explain to people the reality of what's actually going on and I think Ian

(1:28:58) you do an amazing job on video explaining that and I think that's why you're going to go down as in history as as someone that's like hey when when the times are going really tough and people are trying to divulge **truth** like how do youge it right um Ian how do you feel about number one MH370 and what is your outlook on America because I I I think that I think that if you know if if anyone watches your videos does have great hair you're like holy [ ] I I know what's going on um what do you feel about inry 70 and

(1:29:36) then what do you also feel about where we're going and I don't know if he's uh I don't know if he's spaces be glitching yeah they could be all the time also strike them down for using your content Ian strike them down yeah yeah you strike no it's fair use brother brother brother he probably so yeah anyways um but has anyone okay so to your point Ashton I um oh he's okay Ian are you are you here thank you did you hear my question earlier you might have to resay it it gets there's like a delay when people get

(1:30:29) brought up yeah I mean he's trying to talk it's can you guys hear me right now yes there he is what's up cool yeah thanks uh I'm on really bad self service right now I'm having home internet problems um but it sounds like you can hear me right now yeah we got you got you we got you now yeah I left and came back cuz investigate Earth was not coming through for me um if I cut out or whatever just roll with it and I I might Ian did you did you hear our question our question basically was you have done an amazing

(1:31:05) job trying to tell the story of what is actually going on in the world today right um and number one my my first question was do you believe about MH370 to be possible and then number two what drove you to do what you're doing now as far as going viral dude with what you're doing I mean you're doing amazing things video content short form telling people what they need to know um number one IM 370 what do you believe and then number two how did you how did you get to that point of hey how do I tell people very

(1:31:39) fast what's actually going on [Music] uh oh no Ian you might want to hold your phone out of a window no we were so close to getting his opinions Ian Ian hold your phone up in the air get on a chair and then stand up and then talk into no I just I gotta go out on the porch I think and get some Sky there we go yeah how about now right yeah it's better that'll give me a little bit um cool yeah I I didn't know much of anything about MH370 before I saw Ashton's reporting on it and Ashton did such a good job of doing what he was

(1:32:32) just talking about of sharing the evidence and presenting and Ashton you do a great job of addressing **debunkers** like with respect but also with uh with with facts um which is always a good sign of someone who uh is honest and like here for information and not for Dogma um so I lean towards MH370 seems very real um and in general it just ties into the larger network of like disclosure is happening from a lot of angles right now and every angle it happens from ignites a hundred new angles of like not just skepticism but

(1:33:14) also what feels like uh like immune responses to quote whoever was saying that just a second ago um and I I tend not to operate in certainty about anything like anything could be true or anything could be false but it certainly there's enough possibility of it being true that we we should all be considering it and investigating it because you know what's the worst that can happen you investigate something that's untrue and eventually we find evidence that it's untrue and then sick like now we've

(1:33:42) learned something right but but the only time when you shouldn't investigate something is when you're like beyond all reasonable certainty that it is untrue or if it's like completely inconsequential but the more cons qual something is the more reason there is to investigate it beyond all reasonable doubt that that's the way that I see things so smart and there is no more consequential question right like I mean that that's an opinion but I don't think there's any more consequential question

(1:34:10) right now than the alien question and I am honestly starting to lean more and more and more towards the word alien being the wrong word um based upon like the things that

people like Tucker are saying based upon the things that people like the government officials are saying based upon the evidence that we have of like I mean this is where you get into a lot of speculation but I lean a lot more towards the either ancient uh like ancient civilization theories start to get really interesting to me um future civilization theories start to get

(1:34:48) really interesting to me I don't see any reason to rule any of that out and I also see that it could be a total possibility of things through the atmosphere and down to earth though Tucker had a great argument in his recent interview with **Rogan** about how like all the observations are on earth and we have like blanket visual on the atmosphere and we don't have any sightings of things coming through the atmosphere I don't think um but we have a lot of oceans that are unexplored on this Earth so I'm at the

(1:35:17) stage of just being like so curious and having so many questions and for me the biggest red flag is always people that are not curious like if you're quicker to say we know everything than to ask questions you're probably not very smart because because inherently you don't learn without asking questions and so the people that aren't asking questions are probably the ones that are not as smart umun about it Ian I I recogniz I recognize something in you that I recognizeed something in Ashton it's

(1:35:49) like you guys have an inherent ability to think out out of the box and I think I think what um what person that has made us who we are today has not uh been able to think outside the box you have to 100 per. yeah and it's I I think that we are all like especially in America I don't know how many of you are Americans but we're trained to think inside the box like our school system inherently is supposed to teach us to fill in bubbles um and so it is kind of rare breed of people although it's becoming more and

(1:36:26) more common as everyone starts to realize that the box is [ ] but uh it's kind of a rare breed of person that thinks out of the box but then it's you know it also takes a lot of being a connector of ideas like because a lot of times we're operating on partial evidence in a lot of directions we're operating on a lot of like little tidbits of stories little bits of leaks and so you have to do a lot of connecting of like I think that a lot of people are that are smart and skeptical are hesitant to to um like not

(1:36:57) jump to conclusions but to let themselves be imaginative in the process of Journalism and in the process of you know inquiry but you inherently have to be imaginative in order to learn what we don't know yet and in the topic of UA UAP is like there's no better example of a space where you absolutely need imagination in order to be able to arrive at the next **truth** that we don't know um but I think that same thing applies to even like basic Financial corruption any kind of Journalism where you're uncovering

(1:37:32) something we don't know yet and so I try to write a good line of like being skeptical and looking for evidence and looking for facts but being imaginative enough to know that like well we know this is the pattern of organized crime and so in this story do I see any of those patterns and if those patterns were real like what would be the next thing to look for because

that's you know how else are you going to know what to look for and then maybe you'll find leads or maybe you'll find dead ends who

(1:37:57) knows but that's that's my take on that and as for what what brought me to where I am I don't know I invested in GameStop and then we learned that the whole stock market is a [redacted] fly and then uh I got bored of waiting around throughout Co and was like well I could probably be pretty good at making videos and so I started making videos and I don't know I got real lucky on Tik Tok and was I I don't know a combination of luck and skill and one thing led to another dude you are definitely but actually there is

(1:38:25) there is one other thing I should say about that um because that's kind of my joking answer but the sort of more serious answer is what the question that I started with that I sort of am continually honing in on is like if I'm gonna be making content that's a job and you're gonna be doing it every day for the rest of your life so you damned well better enjoy it and like if my job was going to be learning information and sharing it what's the most like interesting information to learn I'm the

(1:38:53) kind of person that to me me the most interesting information to learn is the most important information like so to me the question is like what's the most important [redacted] to understand in the whole world and I started out thinking it was money because well for obvious reasons but then that inherently led to actually like kind of like power the way I see it it's like the most important thing from my perspective to learn about is how the world works and like yeah that could be science that could be religion but but it kind of for me it

(1:39:20) centers around power and who's controlling the world and who's influencing things and who's controlling our government and our monetary systems and and I mean that naturally spirals off into things like uaps and so all of my investigations even though I like dig into a ton of different directions they all center around like being some of the most important things to understand in order to understand the most important parts of our world hence here we are talking about potentially being able to travel through space and time in ways

(1:39:47) that we never imagin possible it's awesome man uh real quick uh and then Samantha I'll let you jump because I just want to make a couple quick comments based on what Ian said first of all one thing I love about Ian is that even though I've been disclosing scary stuff like I'm pretty sure he's gonna get taken out by the government before I do so he's like kind of a buffer for me but um yeah I got you bro I appreciate you man uh I really love what you said about people that are certain you can't really question like

(1:40:14) somebody who claims to be certain about something you really have to second guess them but people that know that they don't necessarily know everything they're investigating they come off as more credible the other thing that I love that you said is this idea that the more significant something is the more we should look into it and not just dismiss it I think that's a beautiful thought about it and that's part of the reason why you I can't let these videos go until we get a response from the

(1:40:36) government because of how significant the idea of us being able to manipulate gravity in SpaceTime really is it's just so huge and the last thing just another little quick joke is that like I actually for a while I thought you were so good at what you were doing and putting information out there and making videos so quickly that like maybe you were being information by the CIA or somebody else I just thought like is this guy controlled opposition how is he so good at this so I can't wait to learn more from you sir appreciate it sorry

(1:41:02) Samantha go ahead Oh no you're good and I just wanted to thank you so much for joining and I know we've gotten off topic but this has turned into a great conversation and we've got a ton of new people who so um for one thing guys if you are new and you're not already following our host investigate Earth podcast go ahead and give them a follow we're going to keep doing spaces like this and never know who's going to drop in just like tonight um but if anybody has any question actually a pro

(1:41:29) Palestine College protest space or is the title wrong I was confused the title is correct but we started out there and we've ended up in uh UFOs which is kind of standard so hell yeah cool exactly yeah and um if anybody's got questions wants to share anything wants to ask in anything or Ashton do me a favor and just click on the bottom left on the speaker option and I'll give you the ability to speak and then go ahead and throw a hand up if you would so we can make sure we get to everybody in order

(1:41:57) um an American citizen I know you've been waiting for quite a while did you have something you wanted to add with what we're talking about right now oh yeah I just wanted to add what I think's actually going on with the UFO stuff uh I think what's going on is pretty much like what Alex Jones said to where the Fallen Angels there was like either hundreds or thousands we don't really know of fallen angels that were cast out of heaven and they were sent to so I think what's going on is they gave

(1:42:27) the United Nations knowledge to make craft and they the ones that look like the orbs that we seen could possibly be fallen angels or something like that I'm not really sure so them orbs that are in that video are the exact same ones I've seen twice um and that triangle I don't know something about that looked like it was back engineered or man-made for sure that's pretty much all I wanted to add in okay thank you I appreciate that and um Antarctic can't read the second part right off but what did you have going

(1:43:01) on ah thank you sorry to break the chain we got an English guy here speaking um oh wow Ian Carol and Ashton in the same space brilliant uh two two of the people that I've been uh they're like two of my people from 2024 I follow you both um for obviously different reasons I can't hear Antarctic so if Antarctic talks to me someone else talk to me about it he's thaning for being here and you're his [Laughter] zero yeah um it was made up up the um I was following Ashton at the time on YouTube and I it was me that brought up

(1:43:45) the cloning um questions and I'm glad that he brought that up but um I was wonder what Ian what Ian think about um not just the cloning but the masking um of politicians what

you know half of Hollywood it seems I just wanted to know what um Ian's view was on on um on all of that and Ian can you hear him Ian no but I can hear you so if you want to Reas a question he asked to me feel free yeah he wants to know what you think about cloning and what you think about masking I think what he means is like literally people wearing masks but

(1:44:28) yeah cloning and masking cool questions I've intentionally avoided this topic in my content because I you guys you you'll probably notice that I avoid the topics that like might have **truth** to them but but could easily get my whole platform kind of like put into the conspiracy boat in a way that like wouldn't necessarily be productive to me disclosing things when we have stronger evidence so to speak um um I think I was hearing Ashton talk about cloning just a little while ago when I first came in as

(1:44:58) a listener I was listening anonymously for a second maybe um and yeah I think that it's fascinating how much cloning technology just like publicly does exist and is disclosed but then there's this weird like like pay wall that imply that pretends like we can't clone humans um I do think that there's a a a not a knowledge Gap but like a a leap of that's not being totally addressed in that a lot of people are theorizing that like we're cloning celebrities and **[REDACTED]** like that but that's totally skipping

(1:45:31) the fact that cloning doesn't mean you clone someone how they are today with all their memories and their brain and their age intact like cloning is like the con the technology of cloning is cloning the being as like an embryo or as a as an infant in a t like it would be a whole different technology to clone someone like cell for cell as they are today and that might exist but that's just like so much more advanced than the actual just concept of cloning and so I reserve judgment like I'm not sure um masking I

(1:46:00) mean like the CIA was using masks all the way back in the Cold War like that's like old school Tech and I mean that that's not that complicated I think that the complicated leap there is like holy **[REDACTED]** would they really do that like with the **[REDACTED]** president of the United States and I intentionally have not commented on that because like I think anyone that wouldn't that would outright say that's not possible is like dude you're an idiot they could like I could wear a Biden mask like audacity do

(1:46:30) it that's in question right and uh and like I don't I I try to stick to topics where I can put evidence on the screen that is sort of like we see hard evidence or somewhat incontrovertible um and so I leave those topics that are more more fun and speculative to the other people and in the realm of speculation but my personal opinion on it is that both are completely possible and it would be silly for people to think they weren't yeah thank you and I think you raised some great points there um and

(1:47:05) thank you for coming into our space and talking about these things and I I know what you're saying actually this conversation sort of started out that way that the censorship is definitely real um and I understand you having to kind of keep it to one side to even be able to still have your voice out there so definitely understand that um we're going to try to catch a

couple more people Antarctic monkey if you'll drop out and come back in we'll read you as a speaker that way if you have more questions for in he'll actually

(1:47:31) hopefully be able to hear you hey by the way hey Sam Sam let's get to Ian or sorry not Ian's chat um maize maze go ahead yeah Ma love in the chat hey guys ma is the legend thank you thank you oh coming from you that's a huge compliment if Maz is a speaker though I can't hear her just so everyone knows y might rotate yeah we might have to rotate I think Ian might have to rotate and down I think I'm the problem and what I'm actually kind of bored like I'm chilling in my house internet is

(1:47:59) down so what I think I'm actually going to do is get in my car and drive into town where I have good internet and I can charge my phone and stuff so I think I'm just gonna drop out for like you know five to 10 minutes and I'll be back on when I hit the service in town and I'll just jump back in with you guys sounds good I'm setting up a a GoFundMe to get you some better internet Ian Ian I got I got starlink it's just that my cable got fried and so it's a new one is on the way ah 370 satellites the end so

(1:48:27) we're gonna see where you're at yeah I'll be back in in just a minute guys I'll see you in a sec sounds good thanks all right maze um go ahead how are you thanks for the invite to the space I wanted to pop in and show some love even though I'm late I apologize profusely um well I guess just a comment really quickly on the cloning and the um the masks I don't know about the masks I've seen a lot of stuff on social media about that but I definitely to go down the cloning Rabbit Hole to better

(1:48:55) understand what what do like you know evidentiary support can I find we do know about the raan ism um where you know this was something that was brought up many years ago and in fact he did almost a decade of interviews talking about what he was planning to do and then um they actually even reported on the progress of it and you know they're claiming at this point that there was a young um a baby or I guess a baby that was cloned named Eve and they made the announcement there's actually some litigation I don't know exactly what's

(1:49:26) you know some something U some legal stuff going on with Bridget um around it so it's the potential that there is one at least um I think there's more but of course again it's not provable that and I'm kind I'm on the same boat with um Ian because what that does um in a sense if you can't necessarily provide solid evidence then um it does kind of you know mess with your credibil credibility but um on the the pro Palestine and the college protest I don't know exactly which direction are you just getting

(1:49:56) General opinions about that um yeah Ma Maz basically what we're doing is um I by the way I know your s Maz um because and and by the way for for those that don't know um Maz and I really started well account wise we started basically the same time did we not yeah we did yeah we and and the weird and the weird thing is like she's got a lot more follow because she has participated in many spaces um we do not do that but um she's also just a lot hotter than you Chad absolutely 100% that's that's the

(1:50:33) other day I mean but also but maze also look look you can be hot and be dumb as [redacted] and she's not so um so there is that um but regardless maze um Pro Palestine PR I think our consensus here is is that what we talked about earlier is that is the government or some type of scop trying to disperse the uh ability for people to believe that it is not okay to kill civilians because of what the media is showing you on the TV every single day about how [redacted] protest are right I mean because I think maybe we can kind of agree with

(1:51:17) this is like these protesters what the media is shown is like holy [redacted] dude like we do not want to deal with these people like we wanna like if they if they interject us and going to work or or to the airport like it makes you want to run these people over right I mean kind of right I mean it's like if you come up to me and you're like you know whatever but is that a a scop to tell you that like hey just because civilians are dying in in Palestine like don't worry about that you got to be pissed

(1:51:51) off at this that that is kind of what we've been talking about okay well let me let me I guess kick this off with a question um you know I know the type of content that you um and you have on your podcast and I would say that most of the people in here have already awakened to at least one thing if nothing else all hands up and that is mainstream media okay it's driving a narrative it is driving something it wants to capture the perception of the people around this topic so what is it trying to tell the

(1:52:29) people in America Western propaganda it is basically showing and and if you'll notice that the tricks that they use prop Palestinian is often intertwined with pramas or Pro terrorists usually the pro terrorist won't be necessarily in mainstream but it has been um but that's kind of in the talking circles but you'll see Pro Hamas and also pro-iran I saw that and what trying to do is make it seem like these people are unruly they're coming for your country what are you going to do and then a at

(1:53:01) the same time they begin kind of um you know Finding ways to criminalize protesting and how would they do that would they do that the same way they did with BLM and let me tell you I I want to make this very clear the protesting is real it has been massive they have un they have broken the chains okay of the suppression around it this is something that Palestinian advocacy was highly suppressed for for many years I mean forever I mean it's it's people's jobs would get you know they lose their jobs

(1:53:30) they'd be unable to you know get good jobs after that even it would just destroy their lives so but now it's gotten to the point it's broken out of that and that's never going back into the bottle and there's been protests going on for quite a while in fact a million people went to Washington DC and it was so peaceful there was not a there was no like and yeah um I just the reason why I'm highlighting that and when I say all over the world it's back massive so I don't I want I want you

(1:54:01) guys to understand that there is a real um movement happening and that's not fake now what I do ma do do you love do you love America yeah I do why well the reason I'm asking

is because there is a very clear divide between protesters that show up to these events that are anti-america and there are protesters that show up to these events that are pro- nonkilling civilians and that's why that's why I ask you do you love America because if you do then we gotta at least establish some baselines of like why are you processing are you

(1:54:40) processing because you hate America are you processing because you don't want civilians to be killed in Palestine first of all I think that anybody that is on soil here screaming death to America is a [redacted] scop and you should know that you of all people should know that because people this is something that is a this is a age-old type of like back to you know the war on terrorism this is something that they would use to turn the the minds of Americans against a Islam and against um you know to kind of cause that divide here's what I'm

(1:55:21) telling you right I am an American I love America in fact I've had many spaces where I'm trying to get the pulse check on the American perspective around what's going on in in the Middle East and you know why because I think that people lack the tolerance for difference and that is why we cannot get United over the very fundamental things that we do care about and in fact if we could get past the surface on those issues we would be able to connect and unite for more important things but right now when

(1:55:52) I say that is like I mean our freedom I mean our rights I mean the right not only for free speech and and and all those things but right now our entire government has gone Rogue okay if nobody has noticed we literally are going broke from sending all of this money under these crazy foreign policies that is a neoconservative movement that's happening over there in the Middle East and people are not paying attention to that what I want you to know is that I'm not sitting here like I I am not only pro-american I'm Pro Palestinian I'm

(1:56:22) prum okay and and what's going on right now is um an attack on many levels what I want you to know is that even though there's boots on the ground and tanks and everything happening over there in the Middle East there's been a war declared on the minds our the minds of the Americans have been occupied okay illegally illegally occupied and that's why when we're looking at this situation I really ask everyone to consciously be objective okay okay zoom out and think what is it that they want

(1:56:55) me to think and why do they want us divided right now this is the perfect reason for for people to say yeah you know let's let's compromise let's let's make our right to protest and and censorship let's make it conditional because when it comes back around on a different I would say let's just say a different issue um this will be held as the standard so all I'm saying is I'm absolutely pro-american and to be honest with you there's many there's many of these protesters are

(1:57:27) American just so you know it's not like a whole bunch of yeah if I can I agree the last thing I want to say is I'm glad you said that because I mean we've known each other for a while and um or you know connect scar me and I see some of your posts I'm like okay I I might have some a little worried here beliefs but I also understand that's why I wanted you explain um your

Viewpoint and I think that we are so divided based on little things like it's like if this person goes for this then we have to hate them and and I

(1:58:04) think that's that's the big issue Ash I want to ask you's another question um and uh first thing I want to say is I kind of I'm GNA play the role of Sher here Chad to you know your opposite which is you know I think it's unfair for us to judge people who are protesting and where and try to figure out where we draw the line because if you go back to covid for example I was one of the people that was protesting against the restrictions there and should I have been arrested there was a lot of people calling for people who

(1:58:30) were protesting as covid restrictions to be arrested and I think it would be unfair to say that those people shouldn't be arrested but then be calling for the people who are the pro Palestinians who are uh protesting now and so that's why like May said is that if we draw the line one location at one spot then we have to apply that equally as well that's what you know equality under the law means so I think we need to be careful about that and then what I want to know with respect to Ma's opinion is I don't know did you see the

(1:58:58) Joe Rogan interview where they had um the guy that was uh pro-israel justifying the number of civilians that were killed um I I thought it was kind of uh shocking to me because they were arguing that well tens of thousands of innocent civilians have been killed but Hamas was like hiding within them therefore it was justified and I thought that was kind of silly to make that claim that that somehow justifies murdering innocent people is that there you know these terrorists are hiding within them but did you see that and what was your

(1:59:31) opinion on that listen I have been fighting or I should say when I say fighting debating that argument since like the git when they were just literally after week one it was insane right and that's what they kept saying oh they're being used as human Shields and it's Hamas that's under the tunnels and what tunnels show me a tunnel right they haven't showed a real tunnel everything they showed was debunked and this is why I this is why I have a lot of resentment towards Israel the government and obviously the the I would

(2:00:03) I would I would lean to say Psychopathic I've never seen such so many um apathetic people that have come together as a military in my life to where they can literally dance on the graves of those that they killed and and stream the the torture and abuses of the Palestinian people as they're you know carrying this out I don't know if you guys know about that but with that aside there's been this sentiment that Palestinians lives a Palestinian life is far more inferior than that of of um Jewish lives or Israeli lives and

(2:00:36) they're you know I and although they're probably being politically correct in how they're trying to you know I guess quantify what one Hamas you know member would be but the numbers that they put like for what do they call high value is you can they don't they're basically stating with this AI that they're using that a hundred casualties can be killed for that one and it's like I don't when they say that this is I want you to understand that this this is what I've uncovered

(2:01:07) this is this is again moving into my opinion but the what Israel is doing with impunity is not only changing the rules for engagement but it has violated every International laws it pertains to war crimes they are also just pay just pay attention for one minute there this is a military okay one of the most advanced in technology and they have Unleashed havoc on a a strip with 2.

(2:01:43) 3 million people highly dense you know population of civilians okay and they have literally like just completely they went Rogue not one country can step in and even the the um the international Court could not stop it and if our country is now codifying in legislation a stronger relationship with with Israel it's literally all in our legislation many and i' I've held spaces on this there's obviously an economic potential that they're chasing right now with imch to extend connectivity between Railway and

(2:02:20) Port all the way through from India to Europe This is massive this is a huge deal right so when people aren't really thinking about all these other factors that are in it I mean they're not killing Palestinians just because they feel like that's an existential threat these are the narratives we have to separate the [REDACTED] from what's real and I really want you guys to start doing this not for the sake of picking aside or fighting with me for the sake of a for your own expansion of consciousness but B for for us to be

(2:02:53) able to find ways to connect on real issues so that we as a majority can exercise our power against this this like totally corrupt I would say um I'll just say globalist move now one last thing I want to say is that we are watching um you know this at this point I feel like every dollar that goes towards the defense budget in my country because of how tight they are and how much United States has supported it it could be funding my own demise why do I think it'd be any different here and I think that one thing that most Americans

(2:03:29) forget is that as they're complaining about the border and they're complaining about how they're all these terrorists and everybody speaks Arabic why do you think they are at our border bro and if you want to continue this Allied relationship with Israel just know that the plans that they have which I have all that data we can go through it if you like um the greater Israel is going to require them to continue to have to fund and fight and disrupt and destabilize and there's going to be way more Arabs over here and many of our

(2:04:00) troops over there okay and so not that I mind I mean listen I love my Arabs I'm just saying that in general as an American we don't want our borders flooded we want them to go through the process that they're supposed to be going through but all of this is happening and and everybody's sitting your pointing fingers at each other fighting each other and it's like bro wake up okay your mind is captured let's get our perceptions back yeah yeah one last comment I want to make real quick Chad is that um you know a lot of

(2:04:28) people think that okay well there's this scop with respect to these protests that are going on but look at what the sides are when we had the black lives matter protest happening was the government stopping them no not at all they let it proceed as much as they wanted um

with this protest you can see that the government's stepping in right away and shutting down the protest so to me if the point of this quote unquote scop is to you know disrupt things and you would be letting it go on which is which is

(2:04:58) not what they're doing and I and I have no side in this by the way I'm not on either side with respect to this particular conversation I mean I I agree Maz and and Maz listen to your point and to Ashton's point is Ian I gotta ask you if you had to make a video on Palestine versus Israel how do you portray that in your video that's a good question I don't do it in a short form video that's for [REDACTED] sure I mean I have many times like little aspects of it but actually I made a long form video on my YouTube

(2:05:37) well I think I didn't put on YouTube I only put on Rumble actually like the week before October 7th happened just kind of by coincidence because I realized I needed to talk about Israel relative to 911 and I realized I wasn't educated enough to like handle that before all this you know and what I actually wound up doing kind of just intuitively as I started researching it is the first thing I researched was the propaganda surrounding it because the conflict has been going on for so long and the moment you start researching it

(2:06:08) if you're perceptive you realize that everything you're reading is propaganda in one form or another and so I actually just started researching like all the way back to the beginning the like factual information about like what factually happened that found it Israel and then what what what led to the media environment within which I'm now receiving all of this skewed media about it um and it led me to a documentary on Rumble called the occupation of the American mind and uh that's that's the

(2:06:38) tack that I take first especially with people that are like I mean anyone who's seen my content knows that I'm generally like extremely critical of Israel and I'm not like I'm not pro Hamas but I'm definitely Pro innocent Palestinian lives um and anyone who holds an opposing view to that when I have conversations with them or or like get into a debate with someone I I feel like you can't AR like you can't find Common Ground if you try to argue over things that you think you are both right

(2:07:07) on you need to start with common ground or like common understanding or rewinding to just like understanding the other person's point of view and especially on a place where the media the information that people are taking in is all so skewed by very very well-funded uh media machines the first thing to do is to unpack who is funding that what kind of like effort is going into that propaganda how like what sources are people taking in I mean I think that's the first thing to unpack in in the space and I could not agree with you

(2:07:42) more and actually you two Ma and this I'll throw something else out the because otherwise you just wind up arguing over statistics that both people think they're right and both people are getting information from different sources um yeah if you're president Ian um what do you do uh tomorrow you become president tomorrow what is your what is your that's a big question I've never been asked it um obviously this answer is gonna seriously lack Nuance but

um it's so good [Music] I I ask for an immediate review of all

(2:08:22) operations happening around the world um particularly in relation to the Ukraine the Middle East and the and the Border um I I don't know as the um vice president yeah 100% um I would need your I would need your expertise and your level head on it for sure I uh I don't know exactly what the presidential limits of Power are but I would enact some process of of trying to uh uh initiate peace talks and or stop stop military funding to both Ukraine and Israel until contingent upon peace talks um and then I reroute all

(2:09:05) that funding to the southern border and into the US economy particularly into things like uh whole task forces completely dedicated to auditing corporate um corruption in the banking military industri pharmaceutical and agricultural complexes um because like if you I don't know if anyone saw the uh recent Congressional hearing where they were talking about how much uh how much a bag of bushing C bushings cost when the US government is paying for like a plane to get built and how the military-industrial complex is like

(2:09:42) overcharging the US government by like 100x when we're built when we're buying weapons and planes and all this like and I would I would imagine that the amount of money that if if I didn't get assassinated on day two and we were able to called it examine those systems we could claw back so much money that we can fix all of our own problems here domestically um and take care of our own people and make it so that young people can afford a house and can afford a life and can afford school because inevitably like all the

(2:10:15) money's going out into weird covert operations into secret like UAP undisclosed UAP Tech technologies that aren't being used for the benefit of anyone and uh all that money is then creating an economic situation which puts the kind of pressure on us that we don't no one in America has the time to be educated well to be un to because the thing is when you're stressed when you're stressed financially that leaks into your interactions that leaks into frustration and anger and fear that leaks into the kind of uh social

(2:10:46) situation that is not conducive to discourse or to Unity and so putting economic pressure on the American people only SWS the seeds of divisiveness um and I would make sure the FBI is investigating Jay-Z I think that would be my no I agree Ian Ian you are dead day two I'm writing in Ian for president 100% I'm dead yeah I would I would need a vice president that was like ready to take job you know what I would do as vice president I would ramp up your security like insan I me we could talk about we could actually

(2:11:24) fantasize about how that would happen all day but we would dismantle the CIA and in order to do that we would have to completely um change what the Securities like and then I'm G fire Congress while you're doing all your stuff over there like I'm telling you I I would we have to I think that we're gonna have to actually my buffer in order to to really do reform what's happening only as soon as possible because guys it's not what Ian's talking about about the how they've been stealing money like they've

(2:11:54) exploited on every aspect but that specifically has been known for a very long time why are they just now talking about why is mainstream just now talking about it this has been known for a very long time we have people here struggling barely with even a couple hundred dollars in their bank account for for you know emergencies this is like an average family that's that's scary and it's only because we have all lowed to continue you know was somebody on a podcast president is really important we should quickly highlight what you said

(2:12:23) because there's this like overwhelming sentiment that gets propagated that like oh who president doesn't matter it's just a figure head or like voting doesn't matter it's just it's and like yeah there's elements of **Truth** to that but like when you actually like if you read about the history of the CIA it's just a specific example the president's office has massive power and that's baked into the like legal structure of how our country is formed and so yeah the president is just a figurehead if

(2:12:48) the president is a figurehead but if the president is a jnf Kennedy then the president has immense power to do things that can change the whole system America's working and the problem is that they like the CIA learned that very astutely when they almost got shut down and uh it's been pretty much top of their list to make sure that presidents that are you know manipulable or aligned with them or blackmailed are in power ever since yeah Ian can you hear me by the way can you hear ason I don't know yeah

(2:13:21) I got you okay oh I was just going to say um there's two aspects of that that I wanted to hit like first of all this is part of the reason why we can't pass an audit you know that all these audits can't pass is because we're paying all this excess money and it's just being funneled away and you know the military has it set up in a way where you know we can never figure out where it's going but there was another thing that came up on social media recently where I don't know who said it exactly but they said

(2:13:43) we should stop sending money to other countries until America looks like Dubai where everybody has the money to you know live and to me I totally resonate with that so once again I'm glad you're my buffer in terms of being assassinated before me appreciate you brother I got you man I just wanted to highlight that we used to have the right to veto um just so you know uh with the Federal Reserve and that was taken away in 19 I believe uh 17 or something like that I'll I'll check but that that was you

(2:14:10) know I guess one of that kicked off the the end are you guys able to hear me um do do you guys um last last thing last kind of sub um mabee I agree with everything you're saying about Palestine like I mean I think the protest like we we were discussing doing a podcast right on the protest uh and I was thinking I was like how do we how do we talk about this um because I do feel like it is infiltrated but at the very least um Ian do you think and then and then we can get to some questions here we got a lot of

(2:14:50) hands up do you think what is going on now is a mass scop like how how deep are we in in the reality of what what what is happening I mean you know you have a president that

cannot talk barely um you have uh Advanced Tech you have UFO but also um H how much are we in a scop and then also Ian what is your religious take on the UFO phenomenon good questions um the op question is vast and I can only address parts of it obviously if you are going like everything how much of it is it a scop um I've done a a fair bit of

(2:15:30) digging into the Biden family and I think that the Biden family is heavily controlled on far more levels than most people realize from far more angles than most people realize I think they were installed um for the specific overt purpose that the what I just said about the Office of the President being so powerful like there are critical Global events happening in in a timeline and it is essential in the current time like postco like various it's really necessary for all these people with billions and billions and billion

(2:16:02) trillions of dollars worth of plans going forwards that they had a US president that would do nothing to like that would literally just walk around and hopefully say what they wanted him to say um but as far as like the protest themselves right now is that a scop um I think it's organic movement that's that's forming and I think that it's like it's it's similar to like the Tik Tok question like is Tik Tok a CCP thing it's like it's all user generated content like like this protest is user

(2:16:30) generated content like if you if you think it's not you clearly don't know any 20s somethings like you clearly don't know kids these days like they are so [REDACTED] fed up and everyone has been just like when are we gonna make change when are we gonna make change when are we gonna make change and then all of a sudden you have all of the young people in the country agree that Israel should stop bombing Palestinian civilians and then they actually do something about it and suddenly everyone is like why are you doing something about it

(2:16:56) it's like bro what did you expect but that being said I think I think you're a fool or rather just uneducated about the history of the CIA or covert operations if you think it's not being infiltrated in every possible way right now because that's just the nature of covert operations is like they have never since the Inception of the CIA they don't create movements they find movements that exist and then they infiltrate subvert push and pull they do what they can to use movements that already exist

(2:17:28) in order to affect whatever they need to affect um they did it with BLM where it was like At first it's like this is about inequality and then suddenly it's about burning police stations and like off gassing tension they did it with January 6 in a way that like at first it was about like we stand for America and then suddenly it was like cool now we got our our footage that we needed um I mean I'm hugely oversimplifying um and so I'm just of the opinion right now that I hope that all those protesters

(2:17:57) and all those colleges are aware enough of that that they are being highly Vigilant to infiltrators and they are being very cogent of not falling into mob and group think because it's really easy to get led by scop tactics when you fall into mob think in the moment during a protest during the chaos are you guys able to hear me yeah I can hear you Sam okay um I just

wanted to jump in for just a second ma thank you for joining um at this point we've got a lot of people that are requesting to be speakers I know there's

(2:18:31) a lot of people that want to be able to say things um with Ashton and in and Ma all being in here we're going to limit it at this point to people who actually have questions for the three of them so if you do have a question put your hand up or leave it up if not we're going to go ahead and remove a couple people as speakers just to get some other people in in case they do have questions take it away guys thank you Samantha um as to the question about the spiritual aspect of the UAP phenomenon I am highly fascinated by that aspect I'm

(2:19:06) actually on a personal quest to find God over the last year or so um and I think I'm not going to arrive at like a classical religious take on it but I'm so glued to like what people like Tucker are saying about the spiritual aspect of it despite having wildly different police than him um and for me the main the main thing there is like if every otherization in history has you know it's evidence B that they had interactions with these things in some forms and they thought they were Gods it's like well I mean it's

(2:19:42) interdimensional they're telepathic is what we probably know so I don't know I'm learning and by the way um Ian I I agree we have done um quite a few biblical episodes the past two years it's like I am on this journey what do we have to I don't know man there there's so many things I thought I knew growing up and and now I don't and now I'm back on the journey but also science is starting to prove that there is more of a realistic aspect of IAL things I always thought I knew back in the day and then

(2:20:25) then I question and now we're going back to science science is proving I think the possibility of God which is weird you know it's really I love this topic tomorrow I'm doing a space with Gavin we're going to go into exis sixs right which is like the the study of existence and it and it takes in quantum physics and it kind of goes beyond that I mean and he's announcing something that is going to disrupt science science in a major way hoping um you know it's going to be huge I hope you guys come it's

(2:20:55) going to be great um but I also want to say that if you have not read The Celestine Prophecy I'm telling you this is one you have to buy don't do the online buy the book sit somewhere and read it I promise you something about that it it lets you kind of um I guess the insights and how the how everything in the universe is very very coherent everything even in its own silos you see the perfect coherence of how a worm much it does for agriculture right like just a worm a worm like we'll make a little hole goes down it does it thing

(2:21:27) and then that actually allows five other processes to happen that you know are seemingly disconnected or not related but they are and we are part of that right and so like how could it be so perfect right and so in essence with that I think um we see God in everything like to me that is that is that is in essence that same energy that is allowed for that EB and flow and The Celestine Prophecy talks about the current of how all of that happens it's so amazing the insights talk about energy and all that [REDACTED] but um I just love that you guys

(2:21:58) said that if you're on your journey because that's that makes me smile I I love discussions like that um and yeah in terms of the what we're seeing in the skies like I don't think that that is aliens what I will say is that I do think that there are aliens I just don't think that they're going to need a I think that there's a whole different like another layer of science not yet um I do believe that these are probably maybe derivatives of some of the technology that they've already

(2:22:28) acquired a long time ago and they're not going to tell the American people because they or or the world because they're spending their money trying to you know build this out I I just feel like that these are most of them are technology of course there's definitely some real ones but most of them that we're seeing is I think human technology yeah one comment I want to make on that is I was just on with alphabets today which shout out to him and on his Rumble Channel and we actually spoke about this

(2:22:55) idea that uh technology is making people more spiritual again which uh you find out I think that a lot of people look at science and think they're trying to disprove the idea of God but when you start to look into quantum mechanics and the idea that the holographic principles specifically you start to realize that our reality is potentially a a simulation or a you know it's a construct I guess and if there's a construct then there's a Creator so for me looking into science has made me more spiritual um I was going to say uh what

(2:23:28) I've uh looked through right now is the the Nephilim and uh I think that that's an actual thing I mean like you know we we see like as like Bigfoot is not a real thing or what you know the government doesn't want us to think that like all these things you know like reality as we see it right now is almost like a skewed uh it's all skewed for us like everyone wants to see like their own thing like with you know they'd rather you watch like you know the gramms or that I think that that's all just garbage I think

(2:24:03) that what we should be watching is like you know what is like the reality of this of this plane that we're in and that where there's multiple planes I mean and you could call me crazy everyone can think their own thing you know uh that's the way that I think right now I think that we're in different planes and that things can hop into different planes like that so I just figured that that's what I would say you're you're not crazy Shane you're definitely not crazy good insights thank you thank you

(2:24:35) thank you hey ashon mer you guys cool if we take some questions yeah that's cool I just I did want can I ask um can I ask in investigate p i don't I forgot your first name forgive me I apologize profusely but what is your first ER what do I call you because I when I came in here I could sense what is your name sorry okay you did mute what is it that's all good it's it's Chad but yeah investigator Chad and Cherry well I wasn't sure what you wanted me to call you I guess that's what I should have

(2:25:03) asked so I I've noticed um I'm a very you know I could I could tell that you um potentially take issue with what I've been posting and you know it's it's okay like I welcome

conversation and dialogue and you know better understanding the difference and I think we could make a great example out of a dialogue where I have my differences you have yours but I would love to know what it is that you take issue with and and you know potentially if you want to elaborate on why uh oh chat okay damn all right here here's the

(2:25:39) thing so I I don't spicy chat I think ma um when we first uh kind of met or I guess first interacted with with each other I mean we had well first of all the Israel Palestine war was not happening right so you know we had a lot of the same uh discourse a lot of the same feelings and thoughts and beliefs um I don't know I mean I I I think actually s to you tonight I was like damn you know what it's like it's weird because I think you have to be passionate about what you're speaking about and I think that you are and then

(2:26:15) but also I think how we portray things and how we say things at times um it can make other people feel a certain way um more I guess vividly or passionately on the other side of things um and although we don't necessarily understand Maybe by some of the things you post for me for my perspective from our perspective um I I think that was what it was for me but then hearing you talk tonight and then asking some of those questions and when we actually have a conversation um it makes me understand why you feel the way you do as

(2:26:52) passionately as you do and so um so I will take back like you know and and we've talked back and forth I actually sent you I don't agree with what you're saying at all um and and you were like why would you say that I think you said something like that I I can't remember what the what the back and forth was but nonetheless hearing what you said tonight and why you said it and why you're passionate about it and why you care about that I think those things are very important I think I think that

(2:27:23) caring about civilians no matter who they are um is very important have to care about civilians I think we have to care about people because I think the disconnect here is is that you are fighting against the overlords which make those decisions to kill innocent people just as much as we are with what we're fighting for um and although there are some little disconnects maybe it may be based on religious aspects of it or maybe it's based on belief systems or whatever the case is but the reality is is that it's all the same people that

(2:28:03) are making those decisions to influence um what our beliefs are and so so when I you know but but also in Nuance when you post certain things or you know from the past you know you would see those things and maybe you have like View and you're like well I don't agree with that and and that's that's not what I agree with even though if you hear what you said earlier um you know you you don't get you don't get what you said earlier in a tweet or a post or whatever you don't get the the Nuance of like why am I

(2:28:42) saying this and why do I care about this and I think we often times let little things or belief systems getting in the way of relationship and the reality is we're all fighting for the same thing we really are no matter no matter how we're fighting for it I think most human beings are fighting for the same thing we we just have varied um routes that we're doing that and so I I I

don't I don't I don't I don't hate on you at all Maz I I'm glad you actually came in and said that and actually I think I came

(2:29:20) into space a big space that you were in at one point in time and talked about this as well um so yes and I think we have to take something from that to drop here guys guys I I know we think we understand everything we don't and they're going to be fighting on both sides but how the hell the the number one question besides aliens is like how do we all come together as human beings and actually realize that we are fighting a a a dictatorship a world dictatorship that is that is really trying to control

(2:29:53) all of us out with the junior wow I really appreciate your answer and also it does have me intrigued because you know and and knowing like which posts and what not because I want to defend or to say what because I want to understand how they come across because I want to be able to communicate in a way where people understand I'm talking to all of us I'm not necessarily like might have ask one more question trying to uh feed any divide at all and in fact I think that if we were to do an inventory about

(2:30:22) some of the belief systems that we have that kind of really push us in some sort of political position like how did we adopt those over time we've had a TV sitting in our living room for decades you know kind of feeding us these narratives and we we can't help but allow these little seeds to get dropped in our psyche and I think that that is still what we're operating from if we're not conscious about it I've literally had to unpin a lot of beliefs that I L like I'm still kind of acting

(2:30:47) I'm like but wait why do I even think that right and it's it's crazy to know I mean social Behavioral Sciences on like how to get people to act and react and be emotional and to consent is weaponized there's think tanks for this and I think that we are going to continue to fall for that um because our emotions will get tapped into and when our emotions are tapped into you know um rationale kind of leaves and we begin to react and and that's kind of what's been keeping people divided but I would love

(2:31:16) to know because I think it is more important than I can't I had a space to get all the Americans in there to talk about the Middle East to get just the American perspective what is it that you guys really think is going on and it was all my people I couldn't get all the other you know the other side because they're not going to come to my space and I realized that it's gonna be very difficult to pull this off if I cannot get you know an audience you know that's in there that's willing to kind of really talk about

(2:31:46) this at a deep level and not mudslinging which I can handle that I don't care who it is when they come on my stage I can usually alchemize that but I just couldn't really get too many it was a thousand people in there but you know not not many that were speaking up for I would say you know what their feelings are that didn't really align to mine so anyway we can um at least maybe start communicating better if you see something of mine that you feel like is highly offensive you know I think what's

(2:32:14) been happening is people trolling the comments and it's just gone to straight War within the Twitter streets like I think if we're able to you know have the dialogue like what is it that offends you about this you know um maze Maz by the way I I I look I'm I'm not offended or or sensitive to anything I mean I I I know everybody has opinions for sure okay yeah I was just saying I was saying that in essence for everyone that's listening to us is that if we're not taking responsibility for

(2:32:46) building I would say productive relationships within this so that we can begin collaborating on you know some of the most important issues we have elections coming up we have I mean our cyber security you know who's running that what are these bills coming down do we even know what's going on like there's so much that if we're not partnering and organizing to some degree in some capacity um it could it could really be the downfall it's on us and I I'm I'm willing I'm open and willing and

(2:33:17) 100% ready and I just hope that we find a to make that happen whether you know whatever that looks like me I love starting fights on Twitter I just I love it so much nothing makes me happier than [REDACTED] talking on Twitter I've seen very few people attack you though I can like how do you get around the toxicity out there what's your man I wonder the same I wonder the same thing it's like I do get haters plenty of them but like I I did start what what the dialogue that investigate and Maze just had was really

(2:33:54) interesting because it it does encapsulate a lot of what I sort of like came I came into the game like old enough and like thoughtful enough that like I had a blank slate on my on my stuff and I wanted intentionally to make a platform that would be very much in the middle and not divisive and not like for example not address trans stuff at all because trans stuff is so divisive and a lot of it's opinion-based and so I just like ignored it and I I think maybe that built like a central base of respect even though now I am a lot more

(2:34:25) divisive especially on Twitter and I don't I don't know why I don't get more I mean I got into a fight with Hank Green on Instagram or on Tik Tok I think about science and sunscreen like I I got into lots of like heat on Tik Tok but uh it's kind of faded away know what's going on there you gotta teach me the secrets cuz I've had trolls that coming at me like crazy out there but yeah I see you out there and I did the same thing with like you know there's certain topics even the Israel Palestine stuff I

(2:34:53) mean this is why I think what Maze and investigate Earth Chad there were talking about is that a lot of it's just very heated there's a lot of very passionate arguments on both sides and I try to avoid a lot of the social issues that are out there as well you know like the trans stuff and what have you although I'm I'm definitely making fun of people without pronouns in their bios but that's a little bit separate I'd say I mean to be fair too Ashton one thing to keep in mind too is that when anyone

(2:35:18) whose account starts to grow very quickly I my my theory is based on my experience and watching others is that at first your accounts are getting pushed to wide varieties of people

because you haven't niched out yet so to speak and you're following and people haven't blocked you and people haven't because every time that an account has not yet interacted with your content and your content comes across their feed they are an unknown quantity and so you're being shown to way more haters and over the first you know six months

(2:35:47) of creating content that's going far beyond your initial reach you're getting all those haters but over time the ones that hate you will start will start scrolling past your posts they'll start blocking you they'll start not interacting and then their feeds won't fill with your posts and so there's a natural sort of algorithmic flow that makes it so that eventually you kind of Silo in a little more which is not necessarily good but it does make it so that some of that hate just doesn't come

(2:36:12) your way because they just already ignore you and I think maybe part of it is also that I'm like reasonably good at engaging with the ones that I know I can like AB absolutely Smash and smashing and uh and send and then they don't come back and I try I like I try not and another part is actually I try not to get in fights where I'm wrong like if I'm wrong I'm like oh [REDACTED] I'm wrong like I think it's really important to be have the humility on social media to be wrong and to not know and to like and to

(2:36:42) admit like you don't have to be an expert and when you actually get something wrong like engage with that learn from it have a discussion like it's not the end of the world and I think that that g gains a lot of respect from people and then in the future when they see you say something they don't agree with it's like there's a lot more grace around your platform but it also means that over time you start to get less things wrong and people start less fights with you because like there's

(2:37:05) nothing like there's no better defeat than like trying to like gotcha someone and then them just being like oh [REDACTED] you're right man like thanks for enlightening me and then they're like what what the [REDACTED] was that like what was that we were supposed to have a Twitter fight and then you were just like a humble rational human the [REDACTED] um and I think there's nothing more I think you do a great job by the way of Towing the line right you had said it's like how do you tow the line like we're we're

(2:37:35) huge on Spotify which Spotify is great right now as far as like if you want to say [REDACTED] that you can't say on say Facebook or X or Tik Tok or whatever Spotify is a good way especially if your audio because they're like hey you know we we got these numbers we got that money the ad revenue is still coming in but Ian does a good job with like Tik Tok and and those platforms X and who especially Tik Tok but to where you tow the line somehow so where you get your message out but you don't go too far and

(2:38:08) you kind of and I'm sure you probably think about that on a probably regular basis like how do I to the line just enough to not get banned right A lot of it especially Tik Tok is like the most sensor happy platform not necessarily for any logical reasons it's just that they have so much scrutiny that they have their AI censorship algorithms just like cranked to a thousand and

so Coming of Age so to speak in the Tik Tok environment got me really good at sort of like rhetorical techniques like sarcasm or like leading a sentence to a

(2:38:42) thing and then not saying the thing and letting the evidence on the screen sort of imply the thing things like that that that allow me to not not like overtly say the hard Parts the controversial Parts the parts that'll get you banned but to provide all of the the building blocks for all of my audience to get there on their own um things like that really help I appreciate those in I've got drop guys um real quick just really quickly what I love about you is that you are very um kind of happy and eager to share

(2:39:15) information that you just found it's like you're going on a journey with your audience and and I have seen you say okay y'all I was wrong about that I appreciate the feedback you know and I remember it was pretty yeah because I'm all about regenerative agriculture too so that whole thing kind of you know it it was something that I was pondering at first as well but I I saw that you got a lot of the feedback and you took it you're humble and this is this is what makes you real and accessible and you

(2:39:41) know so I I thought that um I think that yeah you do a great job yeah I just want to thank some people because I have to drop here as well uh this been awesome space thank you Chad Sherry thanks you Ian for jumping on here as well looking forward to talking to you more in the future Maize everybody else T I see you guys up here uh just quick plug I'm going to be on the blaze tomorrow morning uh at 6:00 am if you are a subscriber otherwise I think it's going to post uh like noonish I'll be talking about MH370 stuff uh

(2:40:10) can't wait to talk to some of you guys more it's been an awesome night tonight guys have a great night thank you very much thank you a thank you May Ashton I hope you come to the um space that I have tomorrow if you want to co-host with me with Gavin yeah by the way Ashton is uh man we we had okay closing that guys okay thank you very much I'm gonna do a couple questions uh real quick that people asked I wrote down on my thing over here that I would help you guys out with before I go to sleep so as you guys

(2:40:42) just heard awesome space holy crap did not expect that guys didn't expect Ian to jump in have ma love jump in to babra jump in we had some of the uh most awesome people that are out there all of a sudden jump in this space I was playing on you know talking about more MH370 uh 370 stuff but instead we'll talk about it tomorrow I'll probably join Ma's space tomorrow with Gavin uh he talks a lot about quantum physics and uh extends extends it's I'm saying it wrong you guys probably figured out okay

(2:41:14) uh what is my favorite book and my favorite movie Gladiator was one of my favorite movies for the longest time favorite book um I see I don't read that much but when I do read um there's a series that I liked a lot that was called The Saga of reuse and I'm you know kind of a nerd so I like those middle eval medieval kind of RPG is kind of books so I like that a lot um another book that keeps coming to mind is timeline uh the movie sucked don't don't watch the movie time timeline but the book timeline was

(2:41:51) really good it's about going back in time in general uh people asked how do you teleport your plane well I did pin that to my profile so if you want to check out how you warp an object we're not talking about dematerialized and rematerializing uh what go ahead and read that I think I lay it out you can Google the terms and you can check it out yourself uh it's not just making stuff up that's out there but the four things that I'm saying are real uh I'm saying that well maybe there's more than

(2:42:21) four extra Dimension is real space is not empty the ether is real this means that we can produce cold fusion which can achieve over Unity like the power of the Sun in the palm of your hand straight up free energy the ability to uh extract energy from The Ether itself that there's an unlimited well of energy available to us in that extra Dimension that's out there uh and then gravity manipulation uh and this comes in two forms so the first form is like em Drive being able to negate the force of gravity using like an Impulse engine

(2:42:58) electromagnetic effects just to create a force that's the opposite of gravity that's one form the other form is literally bending SpaceTime around an object to create a warp bubble and uh I'm saying that all of these things are real and I think that once you proved one of them you proved all of them essentially uh so that's what I'm saying that's out there uh let me see what if there are any other questions I wanted to address I think that's about it guys so um oh wait somebody asked a question

(2:43:32) are you master of the universe or a Teenage Mutant Ninja Turtle age 40 plus right uh both actually but more of the Teenage Mutant Ninja Turtle age than the Masters of the Universe but I am familiar with both absolutely that's out there um so yes I'm hope you guys enjoyed this tonight I hope you enjoy the Eric Hecker uh hard TRS podcast uh as you may have gleaned from that conversation I am planning on hopefully talking with Ian Carroll again in the future uh definitely feel like a little bit kindred spirit with him now

(2:44:05) he's much bigger than I am especially on Tik Tok and what have you but I like the way that he goes about his logical thinking process uh just I feel like I could talk to that dude probably for hours and hours and hours so hopefully there'll be some new content with both of us together collaborating in the near future I'll let you guys know when there's anything official that I can announce on that front um so yes thank you guys again and then tomorrow check me out on the Blaze and tomorrow night

(2:44:32) check out the stream I may stream the the space that Ma was talking about otherwise we will talk about more MH370 stuff I know there's been a lot of developments we found out a lot of information about how the videos are potentially created from the military and how they're viewed so we'll go over all of that as well thanks guys thanks m370x appreciate you guys have a good one and we'll play you [Music] out you do some research don't talk to me I'm going to find the truth while I sit this

(2:45:14) Mar your opinion it means to me it's m m m mm h37 not all heroes my capes I wear glasses to see I'm going to find the truth while I said this Mar the trolls hate see me [Music]

succeed but guess what m m h37 [Music] what mm MH370 now all heroes V glasses to see I'm going to find the

(2:46:20) truth this your opinion it me to me your opinion and h37 hero keeps our glasses to see I'm going to find the truth why I party TRS see the gu what

Hard Truths w/ Eric Hecker, Antarctica Secrets and Directed Energy Weapons - YouTube

<https://www.youtube.com/watch?v=n4D5Gwj9k3s>

Transcript:

(00:06) [Music] [Music] welcome and good afternoon everybody this is the hard truths podcast I am your host Ashton Forbes today I joined by a very special guest Eric Hecker he has been to some of the most sensitive secure facilities in the entire country as well as Antarctica and he's going to be uh here with us today to share his story his experience um talk about uh some Hardware that we that he has uh seen there um what the implications of this Hardware are uh the scientific implications and the implications for us

(01:05) as a species um and what people should know uh about his experiences and what type of Technology might be out there and then we're also going to talk to him a little bit about his uh experience when he was sharing this information with our government organizations specifically AO so without further Ado Eric Hecker welcome to the stage my friend how are you doing today I'm doing fantastic Ashton um thank you so much for having me on I've been really looking forward to this conversation um I had a friend of mine named Avon who

(01:38) recently turned me on to the work that you had been doing and to be quite Frank it just um was a breath of fresh air it's been a long time since I've seen people connecting the dots um with facts and and research and effort so my hack goes off to you sir I'm happy that you've become interested in the information that I'm trying to get to the people as well because I believe much like yourself some of us are starting to learn that there's technology going on around us to a level that is almost Beyond

(02:16) description yeah and I'm glad you brought that up because that's what I've just independently concluded this is why I wanted to talk to you uh so much is that um you know I I saw your story probably almost a year ago before I dug into any of this and I thought wow that's incredible if that's all true and it took me digging through going through my own experience of what kind of Technology we might have might be out there to realize wow this guy's like me he's just had a incredible experience

(02:45) digging through um what kind of Technology we have that was capable of that we're

capable of out there and um you know that this information needs to be out there to the public um so as we get started I guess the first question I want to ask you is there's been a lot of drama going around on the UFO Community here today uh this I guess last few days so when you were down in Antarctica did you see any uh blue aliens or any nordics or anything like that or is your experience more on the non- esoteric angle it would it would absolutely be

(03:15) from the non esoteric angle from my from my direct experience right but I H I have joked around like that in reality down at the South Pole I mean I I have suggested that it would be like an air traffic control center for you know on and of world activities of higher level Technologies and and yes people often wonder about aliens in the such and and I have to admit like although I can say I've never seen anything with my own two eyes it's very interesting that that environment affords people and num minity by being completely covered up

(03:54) every inch of your body and everything with cold weather gear so it does make me laugh and give pause to I mean there there could have been something just covered with gear so I mean I I get where people make suggestions and I I have to give pause and go you know something it's it's on the possibilities list but I can't technically say that I have any confirmation of seeing any form of alien at the South Pole station but I I did see um what I now consider a UFO of some sort which was a large massive um ball

(04:34) of flame that went from Horizon to Horizon at the South Pole which is at Great elevation and unobstructed and it went so fast and it was completely level flight it wasn't descending and to me I Now understand that to be a controlled flight path versus just a a meteor event of some sort so I I will go as so far as to say as I I did see one UFO at the South Pole station during my winter day well yeah and I think that I'm just making a joke there because I don't think we have the luxury of you know discounting other people's experiences

(05:15) when we're disclosing stuff that is already pretty incredible and I think both of us are are kind of doing that you know we have to keep an open mind in my opinion out there so I hope nobody takes offense to that I absolutely think that there can be aliens out there haven't personally seen any but um we are going be delving into a little bit of the implications of that with uh this technology and this discussion here today um so let's get right on into it um uh how did you end up in Antarctica um you know how I think i' I've read the

(05:44) stories that you uh you know with Ron out there how did it get to the situation where you ended up being part of that and getting out there with Ron what what can you tell us about how that all played out wow that's that's actually really um interesting and important question but rather complex one to answer I I gather through looking at my life's history that it was a very complex and yet convoluted path that got me somehow to the South Pole station in Antarctica for a year um I had a a brief encounter with the submarine service in

(06:27) 1994 I didn't get to the South Pole until 2010 I've met all kinds of peculiar people um from my youth until South Pole station and I firmly believe that there was um a lot of assistance in getting me into that program if that makes any sense at all I mean I I it makes me think of this

there was um I and I bastardize and steal phrases from people all the time and never give appropriate credit but somebody once said that I've only gotten as far as I have because I've been able to stand upon the shoulders of the

(07:09) people that have supported you know that that whole thing um I feel as much as there are a lot of Rogue factions and agencies out there that are up to no good that there's somehow factions that are up to good and just like those other more nefarious cells can put folks to activity that I think there's good guys out there that are um putting guys like me where they need to be at the right time to see things yeah I do wonder about that as well is what it is at this point in terms of like the it might be factions

(07:47) that want this information out there that want the technology out there maybe other ones that don't want it out there it does make you wonder and it makes me wonder about what kind of covert means might be happening behind the scenes what was your impression of uh rathon you know before and while you were working out there as a company my impression of rathon through my life of crossing paths with this cooperation has brought me to the Contemporary conclusion that they are the devil incarnate in corporate

(08:17) form they don't seem to be one of the noblest companies on the planet doing the best for all humankind got it and so you know and I I'm St to believe the same thing about many defense contractors that are out there rathon is one of them and my personal opinion is that disclosure is really a matter of getting the information technology from those companies so when you were out there what was your primary responsibility and what kind of team were you working with I guess what I'm getting at is are there

(08:50) other people that had similar experiences to you did that you did while you were out in anarctica gotcha um basically I was contracted as a plumber for the summer season 2010 at South Pole station and during that summer season I applied for the winter position as well and did well enough in my summer season to get that second contract in that capacity I also had to serve as a a co-lead on what they call the fire brigade team so basically we you know we used to joke around and say that the you know day-to-day life at

(09:33) the South Pole station was just absolute boredom but broken up by moments of sheer Terror and it was the it was the it was the sheer Terror parts that were the most fun and make the best stories um but in reality that's that's what I was actually there for was that when things went catastrophically wrong I was the guy that was basically charged with figuring it out making the first call breaching into the hot zone for you know whatever the predicament may be at the moment for whatever alarm bell rang but that was my job you know

(10:16) so people like to give me a lot of grief for being some sort of you know lowly plumber SL firefighter at this facility but for all practical purposes it was um an extreme L important role that was relied on heavily to make rapid decisions to maintain life support systems that I assure you when mother nature encroaches upon your life support systems in such a harsh environment it's very important to keep that stuff um back online as fast as possible because

things can get really bad really fast in those conditions what it's it's the

(10:57) South Pole station in Antarctica folks this was not um it wasn't a party yeah and also I mean I think people should realize two things first is that it's not the people at the top that know necessarily all the uh comings and goings of what's happening at these bases usually you're going to find is to people like Eric who have a key to every single door in the facility because they need it for maintenance for example and uh some people are probably wondering you know why do you have fire uh fire P

(11:30) fire in the uh the coldest one of the coldest places on Earth well we're going to get to that in a little bit as well um there are legitimate reasons but also you in terms of uh you know just being a plumber you know I think you're going to tell us as well it doesn't just mean that you only work on pipes is that you know you have to make sure these devices are not on when you're going and you're making maintenance and repairs and I mean the pipes exploding and in a very cold place when you have water running

(11:57) through them is absolutely a real thing that occurs so so we're going to dig into some of that here I urge people not to try to discredit people just because of what their their role was as opposed to the information that they're presenting forward um now on that same front then what was what was your team how big was the team of people that was with you working with you that you had that and you know did you guys talk a lot about the stuff that was going on down there for my winter season which would have

(12:25) been through 2011 we had 49 members of the winterover crew and that was and that was it we came uh intimately familiar with each other what we were interested in it was you know kind of we were we were cut off from the world we had no outside Creature Comforts we didn't have internet 24 hours a day we had we had short opportunities with limited access so our world was the South Pole station and and we had respons responsibilities and obligations to to each other um to keep that place up and running the um the science that they were doing was

(13:10) being presented as very important and we certainly were trying to do due diligence to you know to make sure we kept things functioning it was it was it it was like being on the Moon I mean even Buzz Aldren when he showed up to the South Pole was you know beside himself on how similar it was so what can we let's talk a little bit about the hardware that was down there I want to give people the idea of you know what were the kind of systems that were down there can you give us a rundown of I think it's three primary systems that

(13:46) were dealt with or what you go ahead and I'll let you absolutely yep so the the major system that I'm bringing to everybody's attention is the Ice Cube neutrino detector which they're presenting as its primary function is to search for for neutrinos and it does do that but it also has the ability to transmit which now you know puts it in in a whole other venue of what it can potentially do and I'm just trying to point out to people that these are directed energy weapons platforms so the Ice Cube neutrino

(14:18) detector having the capacity to transmit makes it the world's largest phased array transmitter currently now a lot of folks don't realize I had mentioned to earlier that the the device is slated to be increased by tifold on its size this is this is this is Extreme stuff this is you know people need to pay attention to what these Technologies can do potentially and then start to inquire as to whether or not those activities are going on um I I don't even know how to like sugarcoat this to like it's a it's a

(15:03) bitter pill for people to have to swallow but we are currently in war there's like war going on but at a technological level that people can't really comprehend so there is a an activity of war going on with weapons but we no longer can identify the Contemporary walking wounded because we're not familiar with the Weaponry being used or the wounds that occur from the technology applied so there's walking wounded around all of us right now in this ongoing battle but the wounds are different than what we're

(15:46) familiar with it's not bullet holes like of old it's Havana syndrome symptom lists items it's it's mental degradation it's the ability to apply fatigue to to a population now how did you find out or how did you come to determine that these uh systems could transmit or at least that the Ice Cube neutrino detector could transmit was this I was directed to I was directed to find information that was already already publicly available information and it basically comes out of the University of Wisconsin's um like owners and Operators

(16:28) manual for for the Ice Cube neutrino array so it's just like having you know the owner's manual for a Chevy truck it's it's one of the pages in the owner's manual but this happens to be the owner's manual for the Ice Cube neutrino array states that each of the Doms has the ability to transmit at up to 2,47 volts there's yeah and there's the Doms right there so yeah a lot to consider like you had stated about the structure of these Doms and how you know we've all been utilizing

(17:10) the phenomena of electricity but it doesn't mean that we really wholly understood what it is that we're doing with this phenomena but there's other things to be considered when you start applying the structure of sacred GE geometry to this phenomena that we don't wholly understand there's certainly room for other things to be realized or utilized or whatever you want to call it we have to open our minds to the fact that there's more going on around us than um the science we've been told to

(17:48) trust as of late yeah and these devices when I look at these they just look really weird really suspicious the fact that there's I think what is it 5,000 160 or something like that of these things and each one has 2,000 volts um and it happens to look like I did an interview last week uh with Tom Monto about scalar physics and in his presentation he has a spherical capacitor uh that looks just like what this looks like and he says that that is the type of device that could uh basically negate the electric field or

(18:26) make a uniform electric field within it that can produce these types of scalar effects um which to me lends credit to your um argument that this can be used as a type of transmitter of

of energy and uh so I I guess what I'd like for you to repeat there or to say in your own words is you know what would you like the world to know specifically about these this device and what you found down there like what does the world need to wrap their head around in order to catch up with what's going on in these military uh project you know

(19:03) third party defense contractor projects and Facilities I guess to answer that in this regard for this device specifically this device is responsible for earthquakes that hit Christ Church New Zealand in February of 2011 so this is the reality of some of the new directed energy weapons platforms that exist contemporarily in the hands of many factions is that they can manifest earthquakes and it's not really that hard to do um it's how did you find out that or like you know did somebody tell you I found that out fir

(19:46) hand from my crew that we were involved with that so rumors were circulating around in the in the crew there while you were out on on assignment that hey this earthquake no it was it was it wasn't like that at all actually it was um many years after being at the South Pole station there were multiple members from my crew that were starting to talk about medical issues that they were having and it was in those conversations that uh a lot of folks decided to put all of their cards on the table and in those cards that were then dealt it was

(20:25) discussed what was really going on at the facility which was the application of these systems in secondary and tertiary capacities above and beyond what they were pre presented for as their primary purpose of science was also the ulterior motives and what that could have done to the crew which was us yeah and it was in those types of conversations that there was realizations for some yeah it's the thing about the Christ church thing that's really weird is there's no fault lines down there and all of a sudden they had I think it was

(21:08) over a 6.0 earthquake I can't remember maybe it was even stronger than that um so I I did dig into that a little bit and I thought it was very unusual um the thing I keep wondering about is are we talking weather control or weather manipulation you know and there's a little bit of a subtle difference there that's semantics at that point yeah because the the the difference between one and the other is just called practice yeah that's true it's just getting good at it right is getting good

(21:37) at and that's what I kind of Wonder is have we are we just shooting beams out there and then things are happening versus are we able to cause very specific events to occur this was something that came up recently with the Taiwan earthquake which was I think like 7.

(21:54) 4 people don't realize like every time you go up one point on the rter scale the earthquake is 10 times more powerful so that was a huge earthquake what did you think about that did that earthquake was that seem suspicious to you at all when you saw that one recently I I mean ever since my eyes have been opened to what is possible I I guess I function from a very biased position of pretty much questioning every earthquake now because if if not you know us in our agenda there are certainly plenty of other factions that have their hands um available to the same

(22:32) technology so I believe that we the people of the planet need to start paying more attention to the technologies that are being used about us and start to understand that if these Rogue factions keep doing what they're doing which is you know it's because we don't get to know it exist means that it can be unregulated so right now there's just certain factions that are running a muck with Technologies because they're they're unregulated it's it's not it's not worth it for them to share

(23:13) the technology because in an unregulated capacity it's more lucrative yeah my friend was telling me that there are potentially multiple factions you've got the faction that wants the information out you've got the faction that wants to keep the information secret and then you've got the faction that wants to profit off of it themselves and then between that you've got uh maybe all of those factions wondering what the other factions are thinking and what they're doing and I think when you look at it

(23:42) like that you know it gets a little bit scary now one thing I want to say for the people out there that might be watching this going oh this is all sci-fi you can't really pull this off the laws of physics say you can't do this uh I would say think again ask yourself do you really really think that we are at the Pinnacle of human uh civilization and scientific advancement right now is it possible that we do not fully understand the laws of physics and electrical engineering uh perfectly um when we're talking about scaler physics

(24:14) here which is the types of science that we need for these types of effects uh we're talking about Maxwell's original equations before they got uh uh stripped down to heavy sides for electrical engineering equations and when we're talking about this we're talking about the idea that you can negate your magnetic potential or your electric potential and then you're not left with nothing you're left with a scaler potential and if you can take that scaler potential and turn it into a transmitter a beam like we see in these

(24:45) Doms that we're seeing here potentially from something like this you make a beam out of it and then you take that beam and that beam would have if you try to measure it with electromagnetic type of measurement device you're going to measure nothing but if you then cross that Beam with another Beam at a location in the distance now you can potentially recreate the energy at a distance you can have an interference pattern we call it interferometry Zone occur and then the next question for Eric Hecker here is I want to know his

(25:15) opinion because when I think about that and that being the capability for inducing an earthquake or even stuff like um you know stuff like havan syndrome and other types of uh Electrical uh magnetic effects you know why do you why do you think Antarctica would be a good location for this Eric or have you thought about you know why they would have one of these devices down in Antarctica again back to the primary purpose being the neutrino detection and the Doms being embedded in the ice so just the optical activity of the neutrino detection I mean

(25:57) it is that that does function so it helps when the primary mission is um easily

supportable but I think there's other things to consider for the arrangement of the Doms in the ice the conversation that you had with Tom Montalk the other day you guys would discussing um ice and I had made a mention in the comments that it's it's it behaves like a dielectric so now when you really like I mean this is it's big brained but it's not big brained because these are still basic electrical principles so it's like you

(26:34) know we have these um you know spherical Doms embedded in the ice that can now transmit at up to you know such and such volts but now the ice itself is a DI electric so now is this in and of itself becoming this like directionally optimized capacitor of some sort which you know you know it's it's we don't have a vocabulary for a lot of this stuff right now that's what's going on is is problematic is that you know when you say well what can this device do what if I just simply said we don't

(27:11) currently have words for that well some of the other thoughts that I was just thinking is well uh a lot of these uh Quantum macroscopic effects that we are seeing with Advanced high technology require very cold temperatures uh including classic uh super conductivity um also just cooling things down especially when we're dealing with huge amounts of energy that might things might heat up but the other thought is just the location like if you are trying to shoot a beam somewhere what's a better location than the top or

(27:40) the bottom of the planet you know it seems like a pretty good spot especially if you're going to create a a Cross Beam somewhere else um but I think you mentioned in in our preall um the fact that when we looked at it it's it's really deep into the ice um is there potential you know some type of directional capability that you know why is it buried down into the ice as opposed to being flat on the surface do you think in terms of this three dimensional I think that has everything to do with now for the first

(28:12) time ever applying a third dimension and albeit a substantial Third Dimension to what would previously have been just your your standard harp antenna array which has length and width so this one having the third dimension applied and giving it all of that depth is just again a testimony to how much more profoundly powerful a phased array transmitter this is than anything previous to it and you said they're GNA make it 10 times bigger than this yes sir times bigger than the current Arrangement do you know what the

(29:03) official narrative is on why they need to make it 10 times bigger all no I'm really curious as to what that Spiel is yes why why yes I'm I'm big into you know paying attention to you know what's you know what is the return on investment I come from a blue collar world of slinging tools and you know I always look at things with a different angle you know like I I don't believe that you can whip people into to being Master Craftsman so I don't know that I buy the whole you know slaves of Egypt building the

(29:35) pyramid situation it just doesn't really make sense to me yeah no I'm with you on that I so everybody who's out there and watching or listening to this later on pay close attention to what the official narrative is about why our Ice Cube neutrino detector needs to be 10 times

larger than it is right now um I'm very curious to hear because I think that like what Eric just said they've got these narratives that are out we don't even have words to describe everything that's out there like I'm using the term scalar

(30:02) physics but you're probably not going to hear officials use that um and so you know when they whatever they say about it's probably going to be some scientific mumbo jumbo that they're going to try to pass off on us for why they've gotta increase the size and we should pay extra attention to that um so did any of your I think you mentioned this but uh just repeat it if necessary um anybody else in your crew so they started to have weird symptoms that I think you said after the fact people started to attribute to

(30:29) it was being you know too close to some of the hardware that was out there what happened absolutely and you can probably look this up right now um my winter site manager while we were active at the South Pole station um suffered from some sort of incident and it made all of the news her name was Renee Nicole duure she was the winter site manager for my crew and she started calling for a medical evacuation of herself which was extremely abnormal and gave me you know great trepidation at the time because this was

(31:17) the person that through my hiring process was emphasizing to me that I needed to understand that there was no such thing as a medical like it was just there you go that's yep that's my winter site manager Renee so she was trying to get a medical Evac for herself this is the person that hired me and made me sign paperwork after she made me understand that there is no medical Evac process we're just stranded there so it was the weirdest thing ever when she started trying to call for an Evac for herself and wow an Evac she need she

(31:58) wanted to get out of there she was feeling so bad that she just need to leave something happened to her um I believe that she believed that she had a stroke because at the time of the incident she had no other way to have words for it but I believe that she and many other folks from my crew were the victims of directed energy Weapons Systems attacks wow so I'm TR to read here did she end up getting evacuated uh she was removed on the first scheduled Flight of the season officially it was not any privilege given for her

(32:44) circumstance wow so they didn't they didn't speed it up but so that's scary because um the Savannah syndrome it's been back in the news again it came out I think a few years after that um and they've been claiming that it's uh they being either the three agencies and the media which I don't really trust either of them claiming that oh it's some type of microwave weapon which I guess it could be you know it's just a matter of what the wavelength is that we're talking about but the thing that's scary

(33:13) about scalar weapons is that this stuff goes right through solid matter um you can have those beams go straight through solid matter doesn't matter if you've got Concrete in the way it's going to go straight through it and then you can reproduce that energy at a distance and who knows what that does to the body um Thomas Bearden who I believe you are familiar with I've been you know going through a lot of his old videos and when he starts talking about this

scalar interferometry one of the other aspects

(33:40) of it is a medical healing aspect in terms of this kind of like time reversed wave they call it which can kind of revert um the uh state of the cell or you know anything back to its original position it's uh definitely controversial to speak about but now the opposite of that would be you know a weapon that can damage people that can uh he argues past disease from one cell to the other or you know I imagine it can do some pretty horrific things out there so are you then of the opinion that a lot of the Savannah syndrome stuff

(34:13) is coming from directed energy weapons like this the stuff that people have been reporting in the military and the EM embassies Etc absolutely yep all all of these weapons are you know up the sleeve SES of our enemies six ways from Sunday this is part of the issue is that we need to realize the broad spectrum of stuff that's available in the market contemporarily it's it's not like this just one thing you know that's terrible there's there's a lot there's there's companies that have this stuff in market

(34:50) right now so there was a company that was previously called elrad and now they go by the name of Genesis and these are companies that sell commercially directed energy Weapons Systems they are available currently for law enforcement fire departments they're they're sold under the guise of being hailing devices or long range Communications devices for emergency use but if you get trained on this stuff you learn that there's you know there's a dial and there's a green zone there's a yellow zone and there's a red zone and

(35:33) you know they say that the officials are trained to never put it in the Red Zone you know cuz then you can kill people but my question would be why do you even have a Red Zone on the dial to begin with but these are the products that are commercially available to our overseers that you know in in a panic next thing you know that dial goes to red and some scared police officer just decimated a crowd with a microwave weapons blast but these are these are the technologies that exist today the trainings that are available for local

(36:12) law enforcement if they want to use a backpack Deployable variant of this technology also exists so that you know if you have the right money and the right paperwork this stuff is on ipresent in our society already yeah and I was looking through this document about energy and in this there is a part trying to find it down here if I can't find it I'll just dig straight to the images that I have that pretty much talks about directed energy weapons directed energy weapons have been getting talked about in the defense

(36:50) contractors for years if not for decades yeah here it is right here actually so energy Horizons airspace cyber inter structure under materials and systems under extreme conditions we can see directed energy listed both for air and space right here as well and also you can see propulsion listed for air as well in here um and then we can see our government uh Partners here as well NASA nro NGA you know what scares me when I look at this particular uh clip right here is that the air part would be you know we see OSD Navy NASA FAA this is

(37:27) where I think we're talking about shooting beams out into the sky when we look at the space one now I think okay well we've got this ice cube neutrino detector or these harp radar antennas on the ground imagine if we had them in outer space on satellites shooting down you have better field of view I mean one of the big limitations is the field of view and how far you can shoot it now I think they can bounce them off the ionosphere which makes them have huge huge range but if you have satellites that can do this then you can just zap

(37:54) anyone on the whole planet um yeah these are just different cogs in a machine at that point all these different independent systems have what they can accomplish uh singularly but then there's a lot to be said for firing up different systems and um crossing the streams so to say of different systems with each other yeah so people definitely need to be paying attention uh to these types of systems that we have out there and hopefully opening their mind to uh what we're capable of especially when it comes to Havana

(38:30) syndrome as well it it wouldn't surprise me I think that if uh you know that we're being kind of LED down a different path with the Havana syndrome stuff because they don't want people looking at these types of systems wondering what can we pull off there and then um you know like you said about the mass fatigue you know imagine if this is a weapon that's not just hitting a single person but you can hit like a huge body of people or a group of people a city of people with this type of Technology it

(38:56) does make you wonder about whe manipulation and and those types of effects as well um now uh Eric when you were in Antarctica what was like the impetus when did you realize that something was wrong I mean you may have already had like you know you didn't trust rathon when you first went out there but was there a moment where you were looking around digging through stuff looking through the utilities or whatever where you thought um this doesn't seem right there's something going on here the first time where I I

(39:25) had actual knowledge that things were not as presented and on the shadier side was an event where I discovered that the EF system that we had been officially told was was disabled deenergized not functioning and I learned that that was not true that it absolutely was energized the system was up and running and I came to this knowledge just because I was trying to work on a circuit that was next to that circuit and because things weren't um labeled correctly I guess you would say um I had to you know check as to why you know

(40:11) some circuits were on that were supposed to be off and that's when I learned that it was the EF system is was up and running and that the circuit that I was looking to De energize was the next circuit over so it was pretty much just suggested that I should just get back onto my task and you know hustle up because now the circuits had been safely identified and what's your understanding of what the purpose of that elf Hardware is that's probably the second device right the ice cream neutrino detector

(40:43) number one EF is number two EF is number two and again I would say that directed energy weapons platforms are multifaceted so I'm going to make suggestions to the things that I

believe can be accomplished with this type of Technology but I do not want to limit um the list of things that these things can do just to my understanding and Imagination because I think that's um one of the first problems we have with these systems is not appreciating um how manifold they can be okay that's fair yeah go ahead uh what

(41:30) do you think regards to in regards to the EF it's been known for years that these systems work with submarine Communications so hence there would be secrecy that would want to be applied in that capacity alone and then we get into the spectrum of the directed energy weapons side of it and we can go from weather modification to earthquake manipulation to fullblown insertion of thought into mind like a like a mind control consideration these are all things that we have to lay at the feet of these massive transmitters that are operating

(42:24) on frequencies and doing things that you know you know they're secret for a reason but if we start to investigate what the paperwork says is possible well then that's what should be giving us pause when when people do the research and see that you know well these are the frequencies that they suggest um intrusive thoughts can be applied and the thing that I want to uh also harp upon here and I don't mean that a as a uh double and Tandra but um the the thing with uh that I think people need to understand about radar

(43:05) and detection systems that you've uh said many times as well is that it's not simply a passive device that is listening these the same technology that we use with Radars what can be used to create a phase conjugate effect where you now have your waves cancel each other out and you create this scalar potential which seems like you can imagine like an invisible beam of potential energy and then you can rebuild that energy at a distance so when you think of it that way radar is very easily converted into

(43:35) a weapon and that's where I personally think a lot of this technology goes back to and this is where I think my investigation and Eric's um you know investigation into what happened in Antarctica have this crossover is that we're just missing a very important aspect of physics that we have thrown out and once you bring it back in it gets really scary because then you start talking about a lot lot of crazy stuff being possible you know stuff that I think that you know most people would and then it's so E I mean it's

(44:05) actually so easy to consider I mean one of the things that Tesla was getting at way back when was that here we are we're all we're all actively functioning in the her scen wavelength band that's the section of the phenomena of electricity that we're utilizing that's not the limit of anything like when you say scalar or logitudinal waves that is still just yet another chapter in the book of electrical frequency there's a lot more frequencies out there that we don't even bring into the conversation but it's

(44:46) almost Limitless when we look at the cosmos like Tesla says you know frequency and vibration there's a lot more than just simple hying wavelength activity yeah I think Tesla was right personally and I I want to talk about with you about that in a little bit here um real quick question before we move on from the elf though is I I found this diagram on Antarctica's elf

website or some universities website here do you know any are you familiar with any of these other locations it's got South Pole listed here but it's also got MC

(45:21) Murdo and Palmer are these also stations have you heard of any of these by any chance absolutely yep so uh been to McMurdo and to South Pole I have not been to Palmer but those are the three facilities that are operating uh as the United States Antarctic program under the National Science Foundation it's those three facilities that are considered the American aspect so do you think they all have Elf trans uh antenna and transmitters on them um if the South Pole has the ual EF antenna I don't gather that McMurdo

(46:02) or Palmer would need the antenna so to say but I wouldn't be surprised if they weren't some sort of Technology at their locations that afforded some sort of um I guess the word I'm looking for would be like like steerability targeting almost to assist in its delivery from South Pole that by having as you can see on the map those two other facilities that if the South Pole was to fire through them I believe that there would be something utilized through the other two facilities to help in directing it to where it's supposed to

(46:45) go yeah and the thing that kind of creeps me out about this image that I'm looking at here is how you can see the lines on these and the and the inter interferometry zones on them as well and in fact just like a week to or go there was a weird anomaly that was actually like this size that we're looking at on this graph in this exact location that everybody was talking about um and this does make me wonder especially when I go down to this next graph we're talking about the uh uh precipitation region and

(47:13) if we're talking about stuff like manipulating the weather I'm sitting here wondering like why do I have all these interferometry zones and connection points between all these locations and these VF receiver sites that are on this graph here because it makes me wonder like are we not just measuring the weather but potentially you know impacting it as well um and yes it does seem like you know for a lot of people out there that's probably you know we're pushing what they're willing to believe but I think that once you

(47:40) start to dig into what Tesla was capable of you'll start to realize that like our our planet is one big capacitor and if we manipulate this ionosphere magnetosphere we can manipulate you know the climate potentially and everything about our lives there was a report from the Air Force back in the early 80s and I have this in my POS it was given to me back when it was a big deal and super secret and I was told to like watch yourself with this but it has since um become much more public knowledge but it was a report that the Air Force had

(48:13) about how they would have control of the weather by the year 2025 wow what if they got there a little early it wasn't a research and development project it wasn't maybe will'll pull this off this was a report on what they were going to have Direct Control of by the year 2025 some people in the chat right now too are saying that there's other other bases around that have elf transmitters like this and if you were to imagine that all we need to do is create an interferometry Zone then you'd want

(48:48) these kind of all over the planet or in various locations where you can then just cross the streams on any point of the planet that you want and like I was saying before take that and apply to satellite like we were just looking at that that Navy paper which I think I've oh no I still have it open here if I pull this back up again um you look at this it's like you don't a lot of people discussing the sosus array I don't think you get a lot of people that have any idea how extensive the sosus array

(49:19) is that's been very relevant for my research so um little side note I've been investigating MH370 and people think oh well this plane just crashed somewhere in the middle of the ocean and we're just never going to find it we just didn't ever find it and they kind of gave away the game when the Titan Sub in uh near the Titanic imploded this is a sub that only holds four people it's a tiny little sub and the Navy just comes out five days later after every single cable news stations going how much

(49:52) oxygen do these people have left and they go Navy goes yeah well we heard that implode like 5 days ago we just didn't tell anybody and by the way we're going to go pick it up because we triangulated the exact position of it using our sosus system that's out there well spoiler guys that system was Declassified in like 2012 it's been out there for well over 10 years like we can pinpoint acoustic sounds anywhere in the ocean and I don't think people realize that do you have any other insights to

(50:18) the Sosa system yeah it pervades every inch of every wet spot on the planet really how did you find out about it I was in the submarine service for a short period of time oh so you knew about it before the Titan sub stuff I knew about it in 1994 oh wow so this is guys like if you are out there and you are in let's say ufology and you've been hearing about these uh Usos unidentified submersible objects that have been moving really fast like the Navy and the military knows what's going on in the water we've

(50:55) got these acoustic systems that are out there we have to be extremely naive to think that something that crashes into the ocean or is moving around the ocean that we're not that we're not hearing it out there and I think a lot of the frequencies these things give off are very unique as well it's not like oh we're accidentally hearing whales or something like that was sophisticated systems like Eric just said I actually went out with um there there was a TV series called the Alaska triangle MH so

(51:23) I got contacted by them and I went and filmed an episode in see season 2 episode 9 they sent me out to ketan Alaska to locate um unidentified submerged objects they basically said there's been reports out here and do you think with what you know and your skill set do you think you can go track these things down and I said sure So I actually went with the Alaska triangle crew located a underwater spot where there was unidentified submerged object activity the production crew the captain everybody was all excited as we were

(52:03) recording every bit of it and everybody was being all congratulatory oh you you know you found it well they edited all of that out from the episode they edited you out or just that

part about you finding they edited out the activity of finding it so they played all of the parts where we were searching and hunting and there's statements being made by me like oh not finding any thing here you know just natural like they really pushed out the part of not finding and removed the part of finding wow well yeah the social system system

(52:41) thing is is pretty wild I was just reading through it right there on the Wikipedia of it and it goes back even much further than I thought so I think that our surveillance apparatus is another thing in my opinion people need to get their their minds around it's not just directed energy weapons but like we are seeing and and everything that's going on on our planet there is no hiding anywhere in the ocean or anything like that oh not at all and that's that's where all the real activity is going on on this planet you know 70% of

(53:09) the world is covered in water and I can tell you right now whatever is happening below the surface of the Waves um dead men tell no tales and history books are written by The Victors so whatever the winning submarine Captain says happened that's what happened that's scary man especially for somebody like you sir who has actually you know worked on submarines before um so what about did you have any experiences with uh or what can you tell me about the AR um the hardware system that's out there on

(53:43) Antarctica oh I'm sorry oh um a o I'm sorry you're getting not the double we'll get to that one later yeah yeah so a o was the atmospheric research Observatory at the South pole station it was run by Noah which um people are learning has a very interesting there you go that's a great shot green laser beams uh that's nothing nothing suspicious there yeah please disperse um and that actually looks um to not be the arrow building because it's too small so that appears to be some other facility what

(54:25) is this article calling that um it says the space agency's research station in Antarctica doesn't so that's a different facility with a I Concordia oh Concordia yeah Concordia station so is that a separate area in the same that is a completely different facility than the one that I was at so now we're just seeing you know more of this freaky um green ler activity the research that I have done has made me understand that these lasers especially green ones take a ridiculous amount of energy to fire for

(55:13) fractions of a second but I can tell you that with my own eyes I observed the unit firing from the arrow building at South Pole um for many minutes on end sorry I think I read yesterday that they fire for like every hour every 30 minutes for like five minutes straight or something does that sound right to you and what do you think that they're I've never heard a frequency on it it was um from my perspective when I was there it was made out like it was some sort of you know random thing that they did sometimes and sometimes I would see

(55:57) it sometimes I didn't but there were certainly plenty of times that I would not be looking in that direction and it could have been firing every 15 minutes for all I know yeah um I know all I know is I see green laser beams I'm going outside and painting my roof blue uh I'm just just to be safe uh it actually says in this article that is emitted for every every or for 60 seconds every

five minutes during the winter time which uh it's pretty bizarre um it says what it's used is to measure the likes of temperature

(56:32) cloud formations and aerosol particles which seems pretty mundane to me do you have any other thoughts about what other uses might there might be for something like this yeah I mean I I I believe that all of these systems can provide for the benign primary purpose they're presented that's the cover story cool but then we have to as human beings apply discernment and look at what else these systems can also do and then question whether people would be doing that so in regards to what else can this system do

(57:12) besides um weather observations and Atmospheric considerations we have to look at what the technology of chemical lasers are and some options for very long range laser likee commun Communications these are you know technologies that are on the table for being discussed as something we might be able to do in the future but I think enough precedent has been set that we the people of this planet are learning that for the most part by the time that something gets to market for them to bill us for a product that we've already

(57:52) invested in decades ago for the research and development for these Technologies to be used for war for a few decades first um before we the people are then um tolerated the benefit of the technological advancement of our investment is just a sad state of where we are but it's it's observable so these are just again new technologies that we are becoming privy to after Decades of use by the military industrial complex to kill people now they're just like all right well we're done killing people with these

(58:32) Technologies but boy we're about to profit this is propit season now yeah and for the people that don't believe um you know just take a look at this report that I've pulled up here directly from the Air Force I mean they're taking it seriously so this is the part where it seems like a lot of that information is is just out there for people um and and that's part of scary so one of the things I've heard you say about maybe the green laser beams or maybe all of it combined is the idea of faster and light communication

(59:04) um do you believe that that's one of the capabilities that of these fac of potentially the Antarctica facility or other ones absolutely and I I do have um scientific paperwork in the archive section on my website which supports the plausibility of such technology is that when we get into phase array transmitters constructed similarly to the unit the Ice Cube neutrino detecting unit at the South Pole I mean this is this is how they would do it this is what we're looking for this is the science you oh you got to trust the

(59:38) science well trust me this is this is the science of quantum entangled you know faster than light Communications there are folks out there before me before you that have let us know that there is an off is an offworld Fleet I mean what are we going to do this is just the the cards that we we've been dealt if you're going to have vessels leaving this planet and going at Great distances to accomplish whatever it is you're putting them to task to do you're going to need to have a communication system to keep in touch

(1:00:11) with them and the South Pole station has that capacity yeah I think that uh this is something that I talked with uh Professor Simon Howell he's got a YouTube channel you guys can check out um and he has a contact that worked with I think it's like the European SETI um and SETI is the organization that's trying to look for signals out there they basically told them we've received signals but not just have we received signals but that we have fashion like communication and we've been covering it up and before people

(1:00:39) discount that I would say go look up Gunter Nimtz I went and looked him up and he has a very specific uh scientific experiment that he set up with prisms where he was able to show that when the light he reflects the light off of one prism and it goes to the next prism and the distance here is traversed instantaneously the moment that the light laser beam exits the one prism it enters the next prism instantly he was supposed to do a um presentation in like 2005 2006 just didn't show up it seems like a repeat thing and then 2019 some

(1:01:15) uh students or uh maybe they're I don't know if they're physics students but they were at a competition I think it was in Germany and they they proved the experiment uh worked and it's they've gone and redone the experiment to actually detect if it's moving faster than the speed of light communication and they measured it at like 24 attoseconds which is some minuscule number uh out there so I would urge people not to just discount these claims just on the basis of not believing it to be

(1:01:42) possible any comments there so there's so many things that we haven't I mean our brains haven't even imagined what's possible and we're we're still limiting ourselves to a definition that's ludicrous like similar to what you were just saying they now have um gemstones for lack of a better term that can be you know cut so that the surfaces are arranged in a particular fashion and then they can rotate these gems at a high rate of speed so that when they inject light into one of the cut

(1:02:16) surfaces that now because of the rotation of the gem in its surfaces now that gem will actually bounce the light around in inside and contain it and this is a whole other New Direction of science because now if you can put this light into this gemstone and contain it there's again now there's conversations are on you know have you just created a whole new world is this a new dimension what's going on in there yeah I read about those experiments I mean it's it's talking about holding photons into super

(1:02:53) position uh using uh specific lattice structures is usually what they talk about when we talk about crystals we're talking about like the crystalline structure of the atoms being set up in a very specific way organized way which can allow some of those it's very similar to the idea of a metamaterial and then we get into peculiar rules and regulations of physics where now we start talking about things being you know superimposed in every direction which means that what we're looking at is all possibility at once it's like

(1:03:21) wait what do we what do we even talk like this it starts to get really profound and fast because then people start talking about Creator and creation and you know what what what do

these things mean you know what it um oh sry someone in the chat pointed out piso electrics as well which you talked about the pyramids people have argued that the pyramid might have been a piso electric type of power plant when you talk about some of the types of crystals when we're talking about piso electrics like quartz is a piso electric Crystal they use it

(1:03:52) in people's watches that don't have any batteries because when you squeeze it produces electricity so there's already magic out there that people don't even realize on their day-to-day basis but what do you think you know given what you've gone through and what you've experienced what do you think the nature of our universe is what what is this how has this changed you spiritually or in those aspects oh great question um my my understanding of things would be it's way less material and more more

(1:04:26) energetic it's life is more verb than noun it's more about action and decision and doing than it is about possessing or having or wanting so I think that there's I guess power to deciding something and a lot of intention and investment has been spent to make the vast majority of people wishy-washy and that um if people just simply chose to do something in the world around them that it would have a lot more impact than they previously considered and that people should feel more empowered to take part um in their community and make

(1:05:32) decisions and do wherever you are wherever you may be do whatever you think is right always and do that as much as you can because there seems to be technology investment whatever you want to call it um by a new definition that wants people to do less I like that mean I like that because what I've been throwing out there is this idea of the only way that a lot of this technology is possible in my opinion is that uh that the holographic principle must be correct and a lot of people say well that means that we live in a simulation and that

(1:06:16) life doesn't matter and I want to tell people the opposite and I think that what you just mentioned it's like when you look at this it should bring people hope in my opinion it should tell you this is a world that you can make a huge difference in that you can help build up that you can make a better place for people and that's how I see it so I don't know what is your would you agree is that a good uh characterization of of your opinion absolutely I think the power of the intention of each individual and then collectively as a

(1:06:49) group is so obviously important that we can observe by how much investment is already applied to make sure that we are of a unified opinion of something but currently it just happens to be to the to the bid to to the highest bidder but we can obviously see that there is intent and investment on what the mass of the population considers that's that's paid for that's observable we can we can speak for hours on end about what's being most invested at this point in time which is causing the most conversation amongst the most

(1:07:35) people I mean this is just marketing 101 at this point in observable but certainly that activity is going on the the minds of the masses Are Holy owned at this point social media was a mistake you just heard it right here from Eric they've taken control of our minds that's probably the only thing more powerful than a directed energy weapon or a neutrino quotquot also

provable by science because easy there's an easy experiment that we can apply right now right if I'm wrong right if all of you are not addicted to your technology

(1:08:13) the only thing you have to do to prove me wrong is simply walk away from it right now sorry I didn't hear that I was too busy uh tweeting my my fault yeah yeah I mean they had the plank challenge back in the day right you know 30 seconds of planking increased to a minute to 5 minutes I challenge people to do that with their technology if you're not addicted it should just simply be easy you know how long can you spend away from your phone how long can you exit your house and go somewhere without it and I think that's a great challenge

(1:08:46) for everybody who's out there is watching not right now make sure you still watch this interview but after this interview maybe go for a walk just get outside get away from the computer for a little bit uh I think that would do all of us um some good now going back to Antarctica real quick and then I want to talk to you about just broader suppression and stuff like that did you have any let's say scary experiences while you're out there what was the the scariest experience that you potentially had um you know being part of the uh

(1:09:14) fire brigade uh if you want to call it that or stuff that's out there yeah go ahead they're they're absolutely were moments of sheer Terror um in between the the benign m you know routine stuff um one story in particular was we had uh alarms go off which was common you know things went into alarm and we would you know get fired up and gear up and and do what we have to do but on this particular particular occasion the alarm had come in that it was for the balloon inflation facility which was on the lower level of what we

(1:09:54) refer to as Ryo so if the Biff if the balloon inflation facility was in fact on fire that means that it could continue to burn up and over to the cryogenic facility and the cryo facility had about a half a million gallons of chilled helium and it was chilled down to 4° Kelvin which is quite cold and it was our understanding in the training that we got for all the different facilities and the dangers as First Responders was that any any leak on the cryos system is catastrophic that it would go from basically contained and functioning to a

(1:10:45) leak that would then go to like a catastrophic like a like a bevy situation because the expansion rate of helium at that temperature um to the atmosphere is about 450 to 1 so it it would have been a discharge of phenomenal proportions and on this particular event we were alarming that this building was on fire so myself and my co lead um went to our Lockers in in due form and because we would have to exit the building in Winter conditions at the South Pole when we had this type of circumstance we would start dressing the other person so

(1:11:35) that all of their gear was in the right spots for the temperature and not breaking hoses and stuff we were going we were going full asba like full bunker gear fire response for these types of events so we had to do things in a way that kept the gear from breaking and it was stuff that we learned from trial and error so we would always just make sure we would set the other person up correctly so in the process of gearing each other up we have our LMR radios which are just you know like you've seen the police and fire department Ed with

(1:12:07) the lapel mics and we were listening to team one who is our Our First Responders when an alarm or an event occurs and what they basically do is they when when myself and my team starts running to the lockers to gear up with the bunker gear and scbas this team team one just goes straight to the site of the alarm to gather Intel and confirm whether or not the alarm is legitimate so in this circumstance we were getting geared up listening to the radio chatter for team one arriving on scene and then letting us know that it

(1:12:50) was in fact uh a fully employed Fire coming out of the balloon inflation facility and that they were waving off because they they did their job so so then my co and I were the were to respond to what was now called in as a as a confirmed active fire at the balloon inflation facility and there we were geared up with you know fire extinguishers over our shoulders cuz we didn't have fire trucks we we were the fire trucks and we had our extinguishers and we were walking core wordss that building and it was um extremely dark it

(1:13:29) was moonlit it was back lit that night and I remember I was terrified because I just I kept thinking that I'm I'm about to see this building just explode I'm going to watch it go round for like a fraction of a second I'm going to get to see this building swell out and then that wall is just going to come across the ice and hit me in the face at Mach 12 and that's I just I thought that we were walking to our death the Split Second they confirmed it on the radio she and I we we just stopped

(1:14:06) communicating we just went through the motions everything just went nonverbal we grabbed our stuff we walked in the direction that we were obliged to walk and yeah I just I didn't think we were going to make it but long story short we we got to the facility there was a a hot air furnace that had an issue and there's um smoke pouring out of that and we extinguished that situation everything was hunky dory and it was just um terrifying for the time being yeah and for people that don't uh respect how scary that is there's been

(1:14:45) several videos of like chemical plant explosions that have been on the internet over the last 10 years and they are some of the biggest explosions I've ever seen like people see them from a distance uh one I remember specifically a guy is in Texas with his daughter in the car and they see this plant exploding like in the distance and they don't realize how huge explosion is going to be and it ends up blowing over the whole car potentially blowing out their eardrums and like that's how just like in in one moment you see this tiny

(1:15:16) explosion next thing you know the whole screen is just yellow and orange and red and that's why you can imagine from Eric's perspective walking towards that going there's a fire and it's next to half a million pounds of helium four which I want to ask about here in a second how you could think that I mean if if that blows up it's going to happen it's gonna be over instantaneously all like you said all you're going to see is something coming at you and then that's it extremely scary so I think you're

(1:15:45) you're definitely Brave to do that job out there for sure now why do you think that they had I think you said in our preall there was like 450,000 pound pounds of helium 4 out

there that seems pretty interesting that they've got all that uh it was actually it was gallons 450,000 to 500,000 gallons of it I should probably use my units of measurement correctly for liquids or in this case gas so the um the known uses of it were for the South Pole telescope that on the focal plane which is the sensor array for that device to

(1:16:29) look into the cosmos it's not Optical like glass it's a a sensor setup that they call the focal plane and the the chilled helium goes from Storage temperature of 4 degree Kelvin they then reduce it down lower to a quarter of a degree above kin and then that's the temperature on the focal plane so that they can then look outward into the cosmos and have an you know unfettered view of what's going on so this is getting me suspicious Eric because liquid helium is one of the rare elements that produces Bose Einstein

(1:17:14) condensate at absolute zero temperatures it's a super fluid so it becomes this liquid where it it creates it gets bosonic uh properties and for the people that are out there they don't know the difference between a firon and a bon is whether or not it can compact down to a single point so a firmon would be anything like my phone the structure of the atoms is my phone that means that it all is in separate spots has this mass that I hold on to but when you get to bosonic situations that's like a laser

(1:17:43) beam where you can focus the photons down to a single point and this is where the idea of a Bose Einstein condensate comes into play now you can see here either our liquefied helium 3 maybe I'm saying the wrong one here they said they found they form two atom Cooper pairs which are bonic and cond condens uh condense into a superf fluid these Cooper pairs are substantially larger than interatomic separation this is also the explanation that we are given on uh super conductivity is that electrons form Cooper Pairs and then when you read

(1:18:15) the the uses for liquid helium it says it's commercially used for super conducting magnets which the thing that I found from my research is there's two things that are extremely important for Magical technology and number one is super conductivity superc conductivity the idea of the electrons flowing freely and producing a coherent wave is where we're getting some of these macroscopic Quantum effects this is you know when I say macroscopic Quantum just imagine magic happening and then the other thing

(1:18:46) is we need very small microchips and processors and transistors um and you know this is where if you dig into semiconductor companies there's not a lot of them and a lot of them are in Taiwan and their stock values have just been going straight up into the air so when you tell me that there's 450,000 gallons of rare helium 3 that's been super cool to its uh Bose Einstein condensate levels definitely has got me scratching my head a little bit if anyone out there is listening or watching wants to leave a comment in the

(1:19:21) chat on YouTube about what they think this might be getting used for um if there is some connection to Super conductivity related to this uh telescope they have would love to hear your guys thoughts um awesome so any other um you know either uh Hardware that might be out there that we're not familiar with or uh is there any other uh stories relevant to the

Antarctica um kind of uh time that you spent out there that you think are worthy to know and if not you know what would you want people to know I um you know about your

(1:19:58) experience I think I think that my experience is similar to everyone else's I'm just connecting the dots faster I think we all are suffering um like the walking wounded in this modern-day Battlefield and I just happen to be um with the team with a crew that became privy to this situation first and foremost and that we're just trying to let everybody else know because they're they're in the same throws of war and I don't want to I don't like seeing anybody get sucker punched and right now everybody's

(1:20:33) getting sucker punched and it's just not right because people aren't aware of the enemies that they have around them and so then to change gears how did you start to be able to connect those dots when was the point for you where you learned about the capabilities of this type of technology and from me digging into it especially directed energy weapon stuff people think that that's you know wow that's some new technology that's out there but looks like it's been out there since at least the 80s so that might be

(1:21:03) the old I guess I guess for me officially it would have started with my time um my short exposure to the submarine service back in 1994 and you know these are these are the facts of the matter right when I was in basic enlisted submarine school we watch the movie The Hunt for Red October um because it was a teaching mechanism we were educated that Tom Clancy is not an author The Hunt for Red October is not a fictional tale you can add there's so many complexities that come from this **truth** right um but long story short in the movie The

(1:21:55) Hunt for Red October which is a documentary for how we got the Seawolf class submarines but there's something mentioned in that movie and that is known as the Magneto hydrodynamic drive that's the most important part of that movie that they just gloss right over but it's it's the technology that allows the Red October to provide that caterpillar pillar drive that silent Drive the interaction of massive amounts of power to the medium of water to provide thrust and flow because so is that right there is

(1:22:43) the door to walk through when it gets into the concept of propulsion systems that people would consider offworld or UFO or UAP because the only difference for a Magneto hydrodynamic drive on a submarine the the medium of the water going through it is no different from the scientific standpoint then the medium of the atmosphere which is just a less dense version of the ocean so it would just simply require more power and it turns out that more power isn't actually a problem like our in military-industrial complex would

(1:23:30) want us to believe that having power at infinite Amounts is a challenge um when you overcome that obstacle and you have copious amounts of power available for any harmonious system that you want to build I mean literally the sky is the limit is a funny way of putting it because it certainly wouldn't be a limit at that point W that's a really good Insight because I had never really considered the idea that submarines might use this technology but I did watch a couple months ago a YouTube video where someone

(1:24:07) built one of these um using a 3D printer and they you know made it more and more efficient there was no moving Parts it was just magnets and electrical current and it created a uh propulsion effect and was actually pretty powerful and it looked actually very similar to this picture here on the right um yeah that looks like a hub battery design yeah and my guess is that given if some guy on YouTube was able to put one together that you know produced like you know you could see the thing moving like pretty fast that the the Navy and

(1:24:40) the government with their defense contractors probably can make some pretty incredible stuff with this so this was your first for okay in The Hunt for Red October and you experienced that so you if I'm gathering correctly you saw some crazy stuff with your time uh you know working on submarines and that led you to you know ask the question what are we really capable of absolutely yep I I became aware in 1994 that Los Angeles class submarine was pretty much the greatest Testament to the technological advancement of man

(1:25:19) that almost no man will ever get to see that there was stuff going on that people it was just beyond their understanding and and we know this stuff we know this is how the government works we know this is how our money gets invested I'm just letting folks know that yeah I happen to get my foot in the door in the submarine service and witness firsthand that yes it's nuts how far ahead of the curve they are that's wild and I have heard some rumors that some submarines might even use some types of overunity devices

(1:25:55) because the benefit there is you're not there's no like electromagnetic signals coming out from your your submarine the idea is you want to be quiet in your submarine right you don't want anyone to be able to know and quiet by definition is just uh not putting out observable frequencies by any definition so if you can switch your frequency to something that's not being observed well there's a win yeah so guys I hope you're listening to this we might be giving away military Secrets here um but I think our

(1:26:25) adversaries already know about it so hopefully we're just educating the public if there are any government people every everything I do is for we the people of this planet because unfortunately lunatics by every definition have decided to represent we the people of this planet as if we're all against each other which is obviously not the case yeah we the common people on this planet have everything in common and we deserve better than what the lunatics that pretend to represent our best interest have been providing with

(1:27:05) the money that we've invested towards them and that's something we have not failed them yeah that's something my buddy uh Jake Chanley uh has said a lot I've run across him he was he's known as the uh the shaman of January 6 but turns out he's a really smart dude and one of the big questions I asked him is well is it safe to get this technology out to the public I I quarreled with it internally myself uh he came back and said well the worst people on the planet already have it so how how can it get any worse than

(1:27:35) that might as well let some of the good people have some access yeah right yeah I can follow that logic a th% I believe that um we the people are way more resilient way more

adaptable to the **truth** than those that would withhold it want us to believe and these statements to the opposite that you know oh people would freak out people couldn't that's that's part of the paid propaganda to get people to believe that we the people can't handle any real of course we can handle any reality it's reality we're

(1:28:11) real people we're part of it we'll always be able to deal with the punches for life let them rip let's just let's see what's really going on and watch how rapidly the people can mitigate any problem that they become aware of so how do you think do you have any thoughts on how to get this information out there um to the people like uh the Y files just did a big episode about free energy and they said well uh just make the schematics publicly available you know don't patent it um I'm not sure I

(1:28:47) necessarily agree but and I'm not sure there's any easy answers but what is your thought I I think that I kind of do lean in the direction of that suggestion because it does seem that open- sourcing stuff would be the faster Avenue to the Freedom of Information and the use of the people with that being said the question in general like what do I feel to do about this stuff um is just continue to fight the fight I have been trying to get the **truth** out for a few years now and what I'm learning again in

(1:29:22) this is this is my direct firsthand experience that I need to warn all of the listeners about there the vast majority of these content creators are shills charlatans conmen profiteers federal agents you name it what they don't care about is the **truth** what they do care about is who likes them and making sure that they um speak stuff that's pleasantries because they don't want to offend any part of their demograph wow that was really well put I might have to clip that later because that's exactly how I view um a lot of

(1:30:10) the UFO Community a lot of the podcasters and reaction tubers there are some real ones that are out there and I appreciate them a lot but I have far between yeah it's few and far between it's a lot of people is a problem is once you put the profit motive in there and I call it the **Reddit** syndrome as well where it becomes less about what you're saying and whether or not what you're saying is the **truth** and more about how what you say makes people feel and yeah it's like a post-**truth** world at

(1:30:38) that point it's oh you're telling me everything's all love and light and if you don't raise your frequency high enough you're not going to impact anybody positively because you're so big and mean yeah it's just it's it's ridiculousness at this point and to me these are just other programs that have been inculcated in our society to you know slow the role of the energies of people that are trying to do the right thing yeah so tell me how did you obviously you're somebody who I think is

(1:31:12) a proponent of Tesla and his theories out there I think that anyone who digs into this will very quickly find Tesla and realize this goes back to him and that he probably is one of the smartest people out there what was your first experience with finding out about Tesla oh jeez um being being from Long Island Tesla to me is a big deal his Warden Cliff facility was right there

on the North Shore of Long Island and a lot of students of Tesla will tell you that he said that you know there are certain points on this planet that are

(1:31:46) better for the study of energy than others Tesla identified the area on Long Island that he called Warden cliff and apparently nobody's ever disagreed with him on this location because you have the shm nuclear power plant which is a Stones throw away and you have Brook Haven National Labs also Stones throw away so apparently the study of energy on the East End of Long Island right where Tesla said was a good spot to study it there's just ongoing studies um by different factions and different names so I think there's a lot to be

(1:32:22) said about where he was coming from in his understanding of I would say the harmony of nature around us versus what a lot of people like to call science because science often times has a lot to do with our limited observations whereas folks like Tesla were working in Realms which afforded and understanding that there were certain mystery aspects that were being utilized in the equation and although you can certainly lack um calculations so to say to these mystery Sciences or understandings there were still certain observations that you

(1:33:20) couldn't deny so contemporary science wants really hard to um answer everything when real scientists function from a direction knowing that you have to be able to operate with certain voids of information that will always be there those are the Mysteries we don't get to answer certain questions but yet that's the reality that we function in and it's observable yeah and that's what science is I think a lot of people forget that science is the study of observable reality a lot of people in today's day

(1:34:08) and age think science is whatever their favorite science influencer YouTuber tells them which is not how science works it's the other way around science is the scientific method developing a he's the physicists at South Pole I mean these are some of the the biggest brain physicists on the planet working these experiments right and I would I would hammer them with a cold hard fact because everybody you know they get Egos and stuff like that and I would say you know you do realize that the only thing a physicist can tell you of value is

(1:34:37) what they just saw that's all they do and everybody wants to make it out like it's some big deal but all they're doing is observing something and defining what they saw well thanks Guy so how did you find out about Thomas Bearden because I know that's a a you know a a synchronicity I hate using that word but I guess I'm GNA use it that you and I both have as we both found out about Thomas I found out about Thomas beard many years ago with an exceptionally peculiar client that I had and it was in this

(1:35:20) interaction back and I guess this would have been a prox 2004 or five that I met this person and he started educating me on the Thomas bearded information a lot of stuff about um Nicola Tesla what the current state of our technology was at that time that we were discussing things and where Tesla technology was already permeating into um some aspects of the military-industrial complex uh as an example Le would be the um oh there you go that's um that's the basement from the client that I went to his name was

(1:36:02) Toby circus Balentine and he is a man with quite the reputation in family history in regards to the alphabet agencies such as the OSS in World War II and also the creation of the CIA right on the heels of World War II so those are those are two Tesla coils in that image that were both um in his basement when I first arrived to do work for him and he was quite the character I think that's just incredible that you show up to somebody's house and then they got Tesla coils in their basement and telling you about Thomas

(1:36:46) Bearden you know that that to me is wild especially he literally sat me down and we would we would watch videos he was he was he was a very Innovative person Toby so when we would watch videos he had also gone in so far as his he had a he had a projector screen but right in front of the projector screen he had put down he had purchased a large piece of like um like window screen like if you were going to repair your own window screen so he had a large section of this material and he had it hung a few inches

(1:37:22) in front of the other projector screen so that when he projected um it caused a 3d effect and this was like his own way of making his own little 3D projector so it was you know the the the screen in the front with the projector screen to the rear and there was a difference in depth from the one to the next and it was a it was a a functional workaround to give you like a 3D image so I mean this is what it was like dealing with Toby is that everything was um a bit more intelligently done that sounds like holography which is very

(1:38:00) interesting because Optical phase conjugation is how you get to holography and from digging to the um MH370 investigation in case I I found out about holography and Optical phase conjugation from the Thomas beard and stuff and then I found out about macroscopic phase conjugation which is do you remember um way back when when National Geographic first had sticker appliques on the cover that showed Holograms MH so when I was a plumber on Long Island I had a a client I had the weirdest CL I just I it was amazing all

(1:38:38) the different people that I met one of the people I met I worked in the guy's house he had his laboratory set up I looked at this guy shooting lasers across his lower level of his house it was in like mutton toown or something but he was the holograph that the National Geographic tapped to make those covers that was him really yeah it's weird how there's this stuff that seems mundane that we just see it and we don't think twice about we just go well that's cool looking but you never think about like how does that how

(1:39:13) do we actually do that why is that a thing that we can make a hologram like that I worked I worked at a laboratory in saset on Long Island that at the time they were working with sheets of glass and a liquid crystal in between the panes of glass and they were trying to make the Liquid Crystal have letters show up like a computer screen it was it was just the dawn of liquid crystal display laboratory work and I was there working on a sink listening to the scientists scream and yell at each other trying to make it

(1:39:52) work that's funny um so I want to talk a little bit about suppression and the a the all domain anomaly resolution office so you told me before in a preall that you actually talked to

the a Aro what was your experience like talking to them and what is your impression of I thought that the gentlemen at Arrow were decent folk that got dealt cards it seemed like they were generally interested in the information that I was putting forth it seemed like they had a general appreciation for the veracity of my statements and the documentation that

(1:40:39) I presented to the point that the conversation came full circle and they quite bluntly asked me what are they supposed to do in the future when they run information like mine up their chain of command that they absolutely believe that there's you know information like mine and other information out there they said what do they do when that stuff just gets wholly ignored which was what they were anticipating is that you know they're getting good Intel but they're not going to be allowed to do anything with this

(1:41:21) and they just basically said like you know like like human being to human being like what do you think we should do and I just told them straight up I said you you need to quit your jobs and start working for the right team I said that's just that's just how life goes I said if you if you're going to ask me that's my answer if if you're taking good Intel and you're going to watch it get brushed under the rug I said you you only have one direction to go and I said that's as you know as far

(1:41:52) away from this as possible POS you know that was my interaction with them as well is that I remember the guy that called me in in January and he was telling me about the football game because it was like you know national championships and bull season going on and you know it was just like talking to a normal guy which was great but um it did you know he I talked to him a little bit about some of these like February shootdowns from last year which were this UFO event that happened and you know he's kind of telling me Oh no that

(1:42:22) was just balloon and what have you and I'm sitting there just going man like I feel like this guy is never going to be allowed to tell the truth about what we are really technologically capable of which made me a little bit sad you know how do you think do you think that that is a main uh mechanism of suppression or I guess the better question is how do you think that they are suppressing this information I think um so many people are job scared that they found themselves in circumstance that they don't feel

(1:42:58) financially free to exercise the decisions that they want to make and I think that's something that we need to pay attention to the mechan of society around us because I believe that most people will find that they themselves have allow themselves to get into such a circumstance and this is one of the main control me mechanisms of society in general I mean everybody was threatened with losing their job if they didn't wear a mask so they put a mask on I mean it was it was pretty obvious that there was an operation going

(1:43:40) on yeah so money worked money that's all it really takes it takes away somebody's job you threaten them with their job um and you know I work in healthcare it uh um I'm no big proponent of wearing masks I personally think it's silly I don't think that I don't believe in my Asma Theory and I don't think that a cold virus is going to be stopped by a cloth mask over my

face but I did wear them when I went to the hospital because they made us wear them and I I like having my job and I didn't want to lose it um so I

(1:44:13) think that that's a that's an underappreciated aspect of how this is kept quiet you know my opinion is that there's not as many people out there that know about this that what as what people think um and therefore you know a lot of people just do whatever they is going to give them that paycheck and then they go home y but what about the idea of you know do you think a lot of people are under ndas related to this technology or you know what's your thoughts in terms of I think a lot of people have I think a lot of people have

(1:44:43) absolutely found themselves in some sort of non-disclosure situation um which also gets them right back to having their their finances threatened so it just it's par for the course nowadays that people will gladly sign an NDA on the front end having no idea what that means on the back end and you know what that means for We the People is that we're getting Bamboozled six ways from Sunday because it's going to take some really bold people to step up against these ndas um one of the things that I was

(1:45:24) interesting about the work that Greer did recently was that he made folks realize that you know if if you sign an NDA or an organization that's involved with illegal activity well the NDA doesn't mean anything then because nobody you know it just it doesn't work like that so I think that's another thing for folks to consider is that if the stuff that you are covering up is not good stuff well then the NDA probably doesn't apply anyhow I mean these are people that should just be charred and one thing I heard I think it

(1:46:06) was on a space the other night is that people were saying well if people are doing illegal stuff who's going to prosecute them anyway well I think a lot of people don't realize that like people who are doing the prosecuting are also under the thumb of everybody else and they don't want to lose their jobs either did you have to sign an NDA with the arrow in your thing with them or at all I I signed I signed an NDA with arrow for the provision that I would not speak about the location of the facility or the people um that were

(1:46:42) questioning me got other than that I am free to discuss any and every other aspect about my meeting with them because this again this is this is where people don't realize is that you know everybody wants to say you know oh this guy's full of crap because if this was the case he'd be dead but you you know what that's just all cowardly crap and the fact that I'm here doing what I'm doing uh is is actively thumbing my nose at all the people that say that cowardly crap we as individuals have a lot of

(1:47:19) power and people need to start exercising it could I have gotten shot in the back of the head when I entered a skiff for the Senate intelligence committee or Arrow you know technically yeah I could have but I still had something to do I still had things that had to be said so I went and lo and behold I'm fine so all this baloney about you know you if this guy was legit if he had something to say that's that's part of the program to keep people from talking I'm I'm here living testimony saying if you know

(1:47:58) something that's going on if what that faction is doing that you're aware of is to a detriment to the vast majority of the people on this planet if you don't speak up fast and furiously you are part of the problem and people will be coming to get you that's a good point and that coincides with what Arrow told me presuming that I haven't I'm skeptical about everybody I talk to now because I've been scammed and what have you but the only thing they told me was they said I can talk

(1:48:35) about anything related to our conversation and this was just over a phone call but that they didn't want me to reveal their names uh which makes sense I mean they get a lot of lot of hate out there um what was the experience like when you met with arrow you know uh in terms of like they were experience was they were extremely appreciative of me spending time with them and explaining what my observations and understandings were of what was going on at the South Pole station it appears that there are aspects of our

(1:49:15) own government whatever you want to call it our checks and balances system that have run a muck I mean I can't argue that again this is all easily observable but with that being said it appears that there are concerned aspects of our government that are completely aware of Rogue factions and activity that have sprung up through our own systems that are now going on without oversight and there are people that want to reel this back in but there is uh a substantial amount of bureaucracy even to such a noble

(1:50:00) task and how secretive was uh you don't I don't want to know specifics about where the location was but you know were there people armed guards outside where you had to go in and meet with them or was it more unassuming uh in terms of oh so the um for the Senate intelligence committee it was right at The Heart Building so it it was a known location it was their headquarters and um good luck trying to get in there yes um but then the the other facility um I was gagged on discussing the location but what I could state is that

(1:50:42) it was just it was how do I put it it was um a right under your nose location in the middle of civilization some place you never expect would be there was no signage up that said top secret there was no barb wire fence there was no official guard you could walk right into this building and out of it you would have had no idea and this is um these are the types of facilities that I have oddly enough found myself in through my entire career on Long Island was I was always coming across these weird facilities so

(1:51:24) then you know when it came down to this Arrow testimony I was there with um my roommate who was also stationed at the south pole with me she was also coming to give testimony um when we entered the the building I immediately pretty much soon as we walked in we took a few steps and I was like come here come here walk right back outside come here and um I clarified her I said you remember all those different facilities that I told you about on Long Island I said watch what's about to happen when we go

(1:51:57) back in this building I said you saw it said we walked in took two steps in I said it look like a regular building right she goes yeah I said watch what's going to happen and then we

proceeded to go through the motions of you know go in go to this elevator Bank hit this button hit that and next thing you know it was like full-blown it was like to start to get smart with all the different barricade doors and this opens and that opens and now all of a sudden there's a massive amount of security personnel

(1:52:29) and Pat downs and questions and wandering and this person is officially from the Secret Service and this person is here to you know check on behalfs of this person and this person needs to check on behalf of there's all different organizations giving security inspections to represent different departments that have access to the conversation that's about to occur and it was just it was you know it was a sight to see it was there was a lot going on that day that's awesome man I think that's just a fun anecdote for

(1:53:06) people to understand because it shows how it's just hiding in plain sight you know it's a good analogy to the technology as well the technolog is hiding in plain sight as well you know we looked today during this conversation that all these websites that are showing technology lockie Martin's websites has a whole section undirected energy weapons that are out there um and people think that it's not possible or it's just magic and it's not just possible but it's been in effect for decades you

(1:53:31) know the Magneto hydrodynamic Motors and the submarines that Eric found out about in the 90s guys this is a long way out there and they say well why would they just kill Eric or kill me and the stuff that I'm talking about because that's not how it works you know General Flynn mentioned on a space he said well there's a lot of forensics nowadays you know if they kill somebody there's a lot of evidence Left Behind somebody's got to go do the deed as well and you got to silence that person and you know maybe

(1:53:56) they did that more in the 60s and 70s and what have you and maybe the 80s but now it's just a matter of disinformation it's matter of disc's another thing for folks to consider in the grand scheme of keep hope alive uh the other reason I'm not dead because I'm on the winning team that's how that works in life too yeah is that currently there are folks that are scared shitless of what I'm going to do next or who I might divulge the next conversation that occurred yeah well a lot of people lot

(1:54:29) of lose right that's a reality too that people haven't considered um is that yeah there's there's a lot of activity going on there's all kinds of different factions doing all kinds of different things and I would assume that if somebody wanted me dead I'd be dead or if someone was scared shitless to make a move on me I'd be alive I'm currently alive me too thankfully so Eric I I really appreciate the conversation that we've had here today um I find your story uh you know very interesting I I do find

(1:55:05) that there's a lot of credibility to the stuff that you say you know you don't go out there and make a bunch of claims that are unknowable information you know you make claims that is uh science that can be looked into that can be verified uh and I wish that Arrow would look into what's going on in Antarctica and with these defense contractors because I think that

they'll find the stuff that you're saying even some of the opinions that you've made about what's possible with the technology I think they'll find

(1:55:31) that it is true as well and that the public deserves to know that so in the last few minutes I'd like to give you opportunity to uh plug anything that you want to plug I know you've got your website deciphering dotv where people can watch a lot of Clips go over your experience um see a lot of the uh scientific references that you post out there um and then is there anything else that you want to tell the audience or anybody else that might be in your shoes or our shoes let's say uh disclosing information and and what advice you

(1:56:00) would give them I I would appreciate if folks can go over to deciphering dotv um that is my website that's my my platform for freedom of speech so I hope to do what I can to get more information out there and it'd be appreciated I'm just trying to trying to help get the **truth** out there so more things coming from deciphering dotv in the not too distant future as I try to grow a platform to help others get the **truth** out there but with that being said you know what what can we do now something that we can

(1:56:37) start today together to make a better future for all of us is what I call become unmanageable because contemporarily we as a group of individual consciousnesses have basically become too manageable and they are managing us um to our own detriment so I would ask everybody in the audience do whatever you can to become unmanageable I appreciate the advice and I think the audience does as well Eric Hecker everybody Antarctica advanced technology and suppression thank you guys very much for joining us here tonight um also we got to get you Eric

(1:57:28) we got to get you on X Man X is the place to be these days a lot of people in the chat were asking about getting you into a space you know interacting with you I don't know what your opinions on are e on are about on Elon but um it seems like it's the least suppressed place out there um I think it can help to grow your the knowledge that you're trying to push out there to the world so thank you everybody appreciate y'all and have a good evening thank you sir

MH370 Update & Alien Whistleblower Claims - YouTube

(00:08) [Music] [Music] [Music] [Music] [Music] [Music]

(01:30) [Music] [Music] [Music] [Music] [Music] n [Music]

(02:47) Malayan 370 contact 120m n good night goodan 37 breaking news tonight A Malaysia

Airlines flight with 200 39 people on board including four Americans has gone missing [Music]  
[Music] [Applause] [Music] I remembered the line from the Hindu scripture the Bhagavad Gita  
Vishnu is trying to persuade the prince that he should do his duty and to

(03:52) impress him takes on his multi-armed form and says now I am become death the  
destroyer of worlds and here we go we are live Ashton Forbes here with you guys thanks for  
being here on my live stream uh we are GNA be talking about some pretty F uh fun stuff here  
tonight uh thank you very much everyone who's in the live stream everybody who jumped in  
early on I appreciate you guys for getting on early uh I don't like to do really long Waits so  
hopefully you didn't have to wait

(04:55) very long um I'm going to read out a few of the people here that jumped in early dton  
thanks for jumping on hey you guys were here early Kathy D nice to see you guys in here uh  
Lang gigy thank you very much man appreciate you I'll get your name right one of these times  
um Ray clay skito Enemy Number One UFO nut good to see you guys William frickle good to see  
you Peter Smith nice to have you here cat cans always good to see you uh Dorian good to see  
you as well sir um hey this side up good to see you

(05:31) Nikki glad you made it salty decimator yes blue one in the chat thank you John Doe nice  
to see you here as well uh hello amethyst Alex good to see you ocean eyes there you are nice to  
see you ocean eyes try making more for dummies John Mack nice to see you amethyst with the  
alien sign investigate Earth podcast good to see you guys hope everything's going well it's orb  
time for sure blockchain is here here for the alien hope you guys like my thumbnail uh I think I  
said hi to Aaron but if not hi Aaron how's it going DJ

(06:11) zero action lfg salty decimator nice to see you drew Foster nice to see you as well uh  
Justin channels awesome appreciate it yeah smash that like Banner good to see you appreciate  
you man um quiz cotal nice to see you Zachary buddy James nice to see you oh yeah we are  
going okay and uh I'm gonna stop everybody else thank you guys very much for being in here  
appreciate you uh appreciate everybody who jumped on early to say hello okay guys so let's  
shoot the breeze for a couple minutes here um to share the link on X I believe you can

(06:54) just retweet or something my live stream that should have popped up alternative you  
can go over to YouTube and you can watch us on YouTube as well I did upgrade the package  
today because uh popular demand everybody wanted to see me in 1080P uh so I did uh upgrade  
it's really expensive on streamyard but that's fine I I definitely make enough money from the uh  
Social Media stuff to be able to afford uh whatever \$40 a month or it is so thank you guys hey  
from hotlanta nice to see you there hello from the shower

(07:30) yeah Nikki wow oh pepper uh pepper Zulan shout out for the nordics shout out to the  
nordics over here Dei training for all of you guys the great maned Wars guys the uh the nordics  
the nordics won the great maned Wars okay so I hope you guys liked the uh the thumbnail if you  
didn't see the thumbnail um there's a little bit of a hint in the thumbnail for today today we are  
going to talk a little bit about aliens oo not too much but there been stuff that's been popping

up regarding the aliens stuff and uh I'm going to address

(08:05) some of the claims that are out there and the and the history of of what's been going on with regards to this so if you didn't see my thumbnail here it is look at that there you go there's the thumbnail it's one of my better thumbnails so this is a government agent strangling a blue alien holding a gun to him and if you're not sure why that's a relevant picture um then you probably haven't been watching enough or paying too much attention to UFO Twitter drama so over the last really I just guess day

(08:39) or so a whistleblower has supposedly come out and there's a big space with like a thousand people in it the other night uh there was there's been posts all over UFO Twitter about it and supposedly this whistleblower uh I I joined the space for a little bit and there was some red flags going up right away for me um so I will make a statement about the Whistleblower situation and that um first thing I want to do is do a quick rundown of some of the the posts on Twitter that have been um getting some attention and some of the content I put

(09:19) in as we have people trickling in and then I'll get to that stuff we're going to it's mostly going to be a discussion stream tonight um and I don't think it'll go too long but I always say that so we never really know so let me go ahead and get this set up okay share this and appreciate everyone who is here we've had a big following recently on on live streaming especially on Twitter supposedly Twitter is going to increase the live stream uh Revenue payouts as well which is pretty exciting for people

(09:55) who are content creators which I I guess I consider myself a content creator I've been putting a lot of work into post on social media in terms of high technology um so if you've been looking especially through my post today uh and there's the if you were to retweet this people will see it there thank you very much for thank you very much for retweeting it all four 14 people already retweeted it's only been 10 minutes um so I want to address let's see where do we start with here let's start with

(10:23) there's some pretty amazing science stuff that's out there guys if you've been watching me you've been watching me post about uh free energy we did a big stream on it you can check it out on YouTube you can check it out on Twitter uh yeah X as well should be a replay of it um and we are going to be talking a lot more about um uh free energy and cold fusion in fact later today I'm going to give you guys some definitions so that we can clear everything up so there's not any misinterpretations um so I had I have

(10:54) and will continue to post a lot of cool stuff and updates regarding that as well as stuff like uh super conductivity which is AE requisite I believe to achieve uh cold fusion um so check those videos that those videos and that content out now as well I did a post about the Barnacle analysis here and uh let's go ahead and go through that real quick while people are trickling in so if you are interested in the MH370 stuff I'm going to start with that here tonight there's only a couple posts about it uh I'm just going to read

(11:26) off the Barnacle analysis post a lot of people one of the number one questions people ask me is what about the debris what some debris washed up doesn't that prove that the plane crashed actually the opposite the amount of debris that washed the shore is Tiny this is how much debris washed the shore look at this three pieces are confirmed tiny pieces this is less than 1% of the plane this piece is misleading this is an interior panel is not the whole big engine they didn't find something this big so when you look at these tiny even

(11:57) if you take the highly likely pieces and realize that this is not not a giant piece like it claims to be here you realize they found basically nothing basically nothing certainly not enough to prove that a plane crashed um do I think this technology will be made available to normal people someday yeah that's the point here um yeah we there's only one adult American passenger on board the plane for the people who are curious and that was Philip wood his girlfriend was all over CNN and major news station saying

(12:30) that they didn't believe the official story this is the irony where people say that like I'm hurting the families well if you were to listen and talk to the families you'd realize they know there was a cover up I don't think they're ready to hear that their plane was teleported by some orbs uh but they'll come to terms with it in time just like everybody else um okay so oh that's a good point is something else I do want to go over or and at the end we will look at one of the videos that I thought uh there was

(13:02) some new actually we'll do that right after the Barnacle analysis okay so most people are aware of the few pieces of debris claimed to be from MH370 uh that were found that washed up in Africa and found by civilians so it was not found by the official search just people don't seem to understand that the official search found literally nothing while people don't realize the massive inconsistency between the debris and the supposed crash site in the South Indian Ocean which is indicated by the ersat satellite pings that's the only

(13:35) reason why we think the plane went in the South Indian Ocean um NC boy in the replies here brought up a really good comment which is that there were two phone calls to the plane one right at 1839 UTC at the within minutes of when we think the plane disappears in the videos and then the other one is at like 2313 like 6 hours later but but there's nothing on the time where this plane was supposedly flying through the South Indian Ocean why don't they call more they called twice you got a plane flying Rogue and

(14:07) you just call it twice pretty unusual much of the debris including the Rolls-Royce engine Cen which is picture number one here this is the r Rolls-Royce engine Cen this is literally a piece of the engine if you guys were watching the news last week you would see that uh a piece of engine cing from a Southwest plane ripped off during takeoff same deal that's what this is here um this would not have been able to drift thousands of miles to South Africa where that piece was found in the time a laded not in 16 months probably couldn't

(14:41) even make it there in years uh I mean you look at this this thing is not like it's going to drift it's just going to like sit on the water floating it's not going to be like drifting like 10 miles

per day or whatever is required over 10 miles a day so it's actually impossible the experts out there have no no explanation for this whatsoever they just don't talk about it because the thing about phony experts that are out there is that they cherry-pick the data that they use to build their story The thing about m370x

(15:10) which is so compelling is that we didn't cherry pick any information we took all the evidence back in all of it the only thing that we had to dismiss was the satellite pings after 1840 UTC that's it and as you're going to see from the rest of this debris post there is some serious doubts as to whether or not this plane ended up in the South Indian Ocean and if that plane didn't end up in the South Indian Ocean what's up with the pings are the pings wrong are they fabricated I'll leave it to you to

(15:41) determine that so not one piece of debris washed up in Australia not one zero washed up in Australia and I apologize for some of the spelling mistakes here I didn't really do a good job editing this it looks like two additional problems have arisen the largest Barnacles found on the fla Ron suggest it could have only been floating for 4 months compared to the 16 months uh since when it was found since the plane had disappeared well wow that's important because there's no way the debris could have drifted all

(16:18) the way to The Reunion Island from the supposed crash site in South Indian Ocean in just four months 2,000 miles in 120 days it's like 15 miles per day how fast was this debris drifting literally impossible does anyone address this nope they just completely gloss it over you'll hear Larry Vance on the uh uh um what's it called reality check podcast with Ross kohart Ross kohart reaches out to Larry Vance A Guy where if you watch it he looks like a a flustered angry redditor just literally adamantly saying

(16:58) he knows what happened the plane has no evidence whatsoever but claims he knows exactly what happened because he looked at the flap Ron he was able to Divine exactly what happened to the plane says it multiple times gets asked about the fire scenario completely Dodges the question won't even address it and then they have Florence dangi which admittedly Florence dangi is at least a smart woman she knows to ask the the very first question where's the debris field um but I don't think she's ready

(17:25) to accept the idea of us being able to warp an aircraft which that's fine that's fine I I have faith that these people will come around but Ross kohart doesn't reach out to me a guy who I would say I'm probably in the top three or five most knowledgeable people about MH370 in the entire world which is fine and why doesn't he want to talk to me because the more people that talk to me the more the evidence gets out to the world and you may say yes a lot of people are going to think that you're crazy whatever but a

(17:55) lot of people will wake up and realize yeah you're asking some pretty basic questions that doesn't take any phds to figure out debris can't just go thousands of miles in a few months doesn't work that way debris when a plane crashes in Australia doesn't show up in South Africa should show up in Australia you know people again the thing about MH370 that's so compelling

is people just have to use basic critical thinking it doesn't require any advanced degrees just basic critical thinking in order to figure out what

(18:31) happened to this plane you need to just stop believing whatever you're here on TV you need to stop believing what people who call themselves experts were just phony say and you need to just use your own mind and ask basic questions and you'll realize there's no chance this plane crash in the South Indian Ocean um so then the other problem was that when the French researchers tested the flaperon in a tank so they got this so the what happened here just to give you a little more context is these experts went to try to say okay well

(19:04) let's figure out if the debris would have washed up in Reunion Island so they throw some boards into the water and they find out right away there's no chance it's going to end up in The Reunion Island I think they claimed it was going to end up in the Middle East or something like that so do they mention that do they bring that up nope NOP they cover that up and they say okay let's do another one so they get the Americans to give them a replica flaperon they throw this replica flaperon in the

(19:29) water and they quickly go Yep this this will confirm that it will get to Reunion Island okay well there's a problem is that when they throw the flap around in the Water The Edge sticks out the problem with that is when they looked at the Barnacles there are barnacles on the edge that would have been sticking out there's actually Barnacles on both edges indicating that this thing was submerged so how exactly could and the thing that's important about this is that it need they needed it to be sticking

(20:01) out of the water because the the most of the drift doesn't come from the ocean currents it comes from the wind blowing on the piece that's up here so this would actually been nice for the wind theory that it's going to somehow float to The Reunion Island but it's contraindicated by the Barnacle growth on the flaperon itself if that thing was sticking out of the water like that there wouldn't be any Barnacles in the part that's sticking out of the water so the debris actually counter to what a lot of people think out there the

(20:30) the debris actually contraindicates the crash scenario at the minimum it contraindicates a crash scenario in the South Indian Ocean in fact I would argue the debris rules out a crash in the South Indian Ocean now you can find some drift model analysis scientific papers that are out there uh unfortunately all of those papers are confirmation bias models are actually not science either science is literally the study of observable reality coming up with with a model as confirmation bias to convince yourself that you're right is pretty

(21:04) much anti the uh kind of the exact opposite of science for the most part um and anyone who's lived through covid should know that because we had if you don't believe me go look at the imh model in terms of what it said would happen to hospital beds and number of people that would die and all this stuff they were off by a magnitude of 10 a magnitude of 10 um and this is the kind of same that happens when anyone does models anywhere is that models should really never be looked at no matter what if you want to have just basic rough

(21:36) guesses and to really drive the point home debris drift analysis has literally never been used to find any aircraft ever in the water or any crash as far as I know um in fact when they tried to use debris drift analysis for Air France 447 that was out there um it actually delayed the search by months because it was inaccurate and and this is again just goes to prove to you that debris drift analysis cannot be used to find planes and and to reverse engineer locations of planes there's too much stuff going on with the currents and and

(22:08) the wind doesn't consistently blow in One Direction um so this is pretty damning now once again we never found anything in the South Indian Ocean despite the most expensive and extensive search in human history the debris in Africa contraindicates that crash site and if that is wrong that means the imrat pings must be fabricated or incorrectly interpreted That's The Logical conclusion that one must make the ersat pings after 1840 UTC are the only significant evidence that the MH 370x investigation has had to

(22:44) Discount the real story of MH370 is that of a fire emergency event and undisclosed advanced technology being used on the plane which if you guys have been following me for this long period of time you would already know that if you are new to the investigation check out my post from the last few days watch the redacted podcast you'll come to the same conclusion now let's look at the follow-up post that I made so I decided to make a follow-up post and I don't really like how I was looking in this this was from months and

(23:13) months and months ago obviously my hair is not the same length in this uh picture uh in this video but uh the key part is this part up here at the top and let's go ahead and I am going to play I'm going to play that for you guys so you can watch it though because I want people who haven't been paying attention not part of the case I'm going to listen this is called the flight path explainer it's actually still very relevant because this is what really happened in the plane this is supported

(23:44) by more evidence than any other story to date uh we don't have to Discount Witnesses we don't have to pretend like Witnesses were lying uh we actually just look at all the evidence that's out there hello everybody this is Ashton Forbes here to bring you the mh37 7x flight path explainer the plane takes off at 1642 UTC from qual lur headed to Beijing at 1719 UTC the pilot says good night Malaysian Airlines flight 370 around 1721 UTC a lithium ion battery fire explosion occurs and is seen by Mike McKay on an oil rig 300 Mi

(24:19) away he sees fire for 5 to 10 seconds nine Witnesses along the coast hear loud noises at the same time the plane goes dark in the case of a fire the first response is to pull the main buses and restore the circuits one by one until you've isolated the bad one if they pulled the buses the plane would go silent the plane heads towards panang lwi International Airport the pilot knew the train was friendlier towards lwi which was also closer than qual lur at 1730 UTC there's a communication with another pilot who hears the voice of one

(24:49) of the pilots of MH370 at the same time eight fishermen on a boat 10 Mi off the coast see the plane flying unusually low consistent with a depressurization emergency event

attempting to provide oxygen for the passengers the Malaysian Minister of Defense claims the plane was not identified but admits they knew it was a non-hostile civilian airliner the plane flies over Lanka at 1752 UTC when the co-pilot cell phone pings a cell tower the plane doesn't land either due to the fire or because they have communicated a

(25:19) rendezvous point the plane continues to the nicobar islands until around 1840 UTC when a witness KT sees a glowing orange plane with dark smoke coming out of it this is consistent with the crew battling the lithium battery fire with Hon fire suppression devices releasing bromine a hydrogen gas soon after the videos begin they show smoke coming out of the back of the plane consistent with the fire the plane is descending in the videos consistent with an intercepted Chinese only reported communication that claims the plane was attempting an

(25:51) emergency landing and disintegrating the plane's altitude is low in the videos as proven by the cumulus clouds that only form between 1,000 5,000 ft also consistent with the witness of sighting and then I let the videos play out here and uh let's go back to that okay and yes so uh whoops did funny how Dicky great we should set him up with Tiffany gas of the M that MFR is not real guys she posted a picture in a bikini on Twitter uh I I generally don't get into whatever stuff like that but wow uh guys I might I might change my mind and

(26:44) say that the reptilians are my favorite if uh if she if that's something she needs me to say guys I might have to go away from team mants and go to Team reptilians um but it would be funny you know because like I I don't know I do actually does if anyone knows story real quick about what her story is and what she saw or whatever please let me know I've never heard the follow up on that this is the this was the post I was trying to click on right there which was funny how Dick Gregory was way ahead of

(27:10) everyone he was he was very ahead of everybody however the claim and this is for everybody out there who's watching uh the claim that there was four out of five people on the patent holders that's not true that claim with the Rothchilds and the four out of five patent holders is not true it is true that the carile group is part owners of free scale semiconductors that part is true um but the four other people that were supposedly on the plane were not even on the plane we we checked we we checked we

(27:36) double checked we triple checked they weren't on the plane at all now the reason why I find that conspiracy theory interesting is because the 20 free scale semiconductor scientists are without a doubt the motive for disappearing this plane like there's no question I did another piece on Espionage which uh let's go take a look at that here as well uh just yesterday and then we'll look at the last one oh actually let's let's finish this one up first okay sorry I didn't even I didn't even read this okay so the United

(28:07) States helped come up with a cover story that would send people on a wild goose chase searching for MH370 in the South Indian Ocean this narrative was first floated March 13th or 14th I find it kind of depends on the news article you find but this is so five days six days after the planing goes missing so playing goes missing March 8th three four or five days after now all

of a sudden unnamed us sources are saying that they are going to move the search to the South Indian Ocean if you were alive back then and you were an adult

(28:40) back then this was the weirdest thing ever they were searching in the South China Sea then they're like nope just kidding we tracked it on radar going to the Andaman Sea and you're like well why didn't you say that days ago and then they're like okay and now us sources it's like why are us sources the ones telling us where they think the plane went and in everybody's minds they're going oh well they must have seen the plane and they're secretly giving information to Malaysia about where they

(29:05) saw the plane go but if that was the case we would have pinpointed the exact location of the plane instead they're like no we've got these satellite pings and they don't release the satellite pings until May 28th which is like 10 weeks later pretty weird why was the United States dictating the search area I went through you guys can go through if you do Google Search your date ranges to just the few days around these dates right here plus or minus a couple dates you will find these articles that I pulled these

(29:36) quotes from the analysis conducted by United States and Malaysian government may have narrowed down the search area for the jetliner that vanished in route from Quam Port to Beijing leaving little trace of where it went or why so we know that's a lie why was the United States why was the White House contacting Malaysia every day the White House does that seem normal to you was the White House contacting the Kremlin when we had to get Britney Griner out of prison no it was the state department some reason the White House was ConEd in

(30:09) Malaysia because they were conducting they were developing a cover story that's the reason why we were searching in the wrong location they had to avoid the fact that we they knew exactly where this plane really disappeared they didn't want anybody to accidentally find like a piece of evidence that would have proven that the plane got warped out of the Nicobar Islands uh so they had to have people not paying attention to that until they came up with some story they could invent that would distract people

(30:35) and where what kind of story do you come up with you send them to the middle of the ocean and then you tell everybody yeah we just didn't see it and we're never going to find anything sorry too bad the United States government actually stopped searching within one month one month the United States government stopped helping with the search and then Obama visits Malaysia in April first time president has visited Malaysian 50 years guys I'm trying not to be a conspiracy theorist here but everything

(31:06) just adds up towards them being the ones this is the United States are the ones who did this they were the ones implicated we the ones filming it we the ones developing the cover story it is this was this is Jay Carney White House spokesman you guys can if you remember from back then he was a White House spokesman for Obama it is my understanding that based on some new information that's not necessarily conclusive but new information an additional search area may be opened in the Indian Ocean White House spokesman J

(31:36) Carney said yesterday without disclosing the nature of the information they couldn't bring up what even what the information was because they had to make sure that they had fabricated the satellite pings beforehand they developed a story and then they came up with this idea of oh well we'll just claim it with some satellite pings that prove it we'll will'll release 10 rows of Excel data to uh experts and then those experts will independently figure out that yes this is this proves the plane was in the South Indian Ocean

(32:04) despite doing the most expensive search in history not finding one piece of the plane not finding any black boxes despite the fact that supposedly these satellite pings should pinpoint the location in the South Indian Ocean again guys we just have to use critical thinking either we either the satellite pings are correct and we should have found the plane we should have found a giant debris field we should have found the debris field underwater we should have found it above water everything was floating uh we searched everywhere or

(32:32) that's wrong and if that's wrong means those satellite pings were fabricated the experts that came up with a novel analysis for determining how it proves where they went are sure they did the math right so if they did the math right it means the satellite pings the data is wrong one way or another I don't care who is wrong I just know it's because I can use basic logic and critical thinking it's also no coincidence that Boeing and Rolls-Royce didn't publicly comment or release the engine data the excuse that they gave

(33:01) was that Malaysia didn't pay for the service does that mean the data was shut off I would almost guarantee that Rolls-Royce was still getting the engine data and rolls-royce's engine data would have proved the conspiracy it would have proved that all of a sudden the plane was over here and then the plane was over here it would have proved it rollsroyce and Boeing are you know either go us or UK government contractors were easily easily able uh be forced to lie under National Defense and National Security they are implicated in the

(33:34) cover up United States is so is Boeing so is Rolls-Royce United States sent the plane to a remote part of the ocean because it would give plausible deniability on why we would never find anything even 10 years later that's the answer why send them to a random spot in the South Indian Ocean you look at the flight path and it's like okay I mean look at this flight path here this is like a normal flight path they go to Penang this is emergency event now they're going over here because they're most likely trying

(34:00) to rendezvous with uh the cop tiger and Cobra gold exercises my guess is they had communication with the United States military United States military says come over here come over here this is where you we'll let you land in the ocean here and we'll pick you guys out of the water and then they get there and they get Warped Away by some orbs that's my personal pet Theory but of course we can't know for sure because we don't have communications that are publicly available from inside the cockpit it

(34:28) could also have been remote controlled over here uh using the Boeing uninterruptible autopilot guys if they can teleport a plane they can definitely remote control plane now this is

why you hear this narrative from so many NPC sheeple people that go the ocean's really big and anytime somebody says that you say Okay point on the map where the plane ended up because we searched everywhere and either those satellite pings are right or wrong they have the plane running out of fuel that's what the narrative has it

(35:02) running out of fuel meaning it can't go anymore there's one expert that claims oh it's just it's off by 20 miles that makes no sense because when you're flying around in a plane searching searching in the ocean for debris what have you you can see for tens of miles if not hundreds of miles so it's not like they were flying around and they just oh you just missed it it was it was 10 miles away from where you were looking that's not how it works when you're flying around looking for debris

(35:28) they would have gotten away with it too if it were not for two perfectly insync military videos **leaked** to the public these videos are real they tell the true story of what happened to the plane they tell about the coverup that happened um in my opinion it is undeniable that that's what went that that's what happened and then people say Okay um and let me just address this claim here as well and I'm going to talk about this after I finish the recap no I am not saying aliens took the plane no once again no I am not saying aliens

(35:59) took the plane I'm not even convinced there are aliens on this planet so no I don't think so I do not think aliens took the plane if you want to think aliens took the plane that's totally fine but I do not want people misrepresenting my opinion of it because here's the thing and this is the reason why so why did aliens not take this plane why is it not aliens in the MH370 videos the actual in addition to the fact that the orbs show up after we're already filming the plane which would indicate that's already an operation of

(36:33) some type this already means that either we caught aliens zapping MH370 we got the one in a million just happened to be filming you know just happened to be filming when the orbs came in and the aliens Za the plane or we were planning this the whole time so that's probably the strongest evidence now the death blow to the alien narrative is this the reason why a lot of people believe it's aliens is because they believe what we're seeing in the MH370 videos is impossible that's the reason so this is

(37:04) what I've concluded from you know not necessarily arguing but there were a lot of people were even who were on my side that wanted to convince me it had to be aliens and their argument was well it's not something we can understand therefore it must be aliens which is actually a pretty bad argument um let me switch over my screen share here I want I want to pull this up while I'm talking about it okay so a lot of people just think well it's not something that we have so therefore it must be aliens but they

(37:34) don't think well what does the military have when we look at this video here and we look at this video right away we can tell we're not looking at UFOs you know we're not looking at flying saucers here we're not looking with there a craft that has somebody inside of it we're looking at a ball of energy an energy field around an object that is only at most 20 or 30 feet in

diameter and that is not big enough to be having little people inside plus the move M of these orbs look at the movements of these

(38:00) orbs that is being remote controlled by a computer program that is not somebody flying around with that level of precision not an alien or a human but here's the kicker we figured out how the technology works so this is the main reason why this is not aliens that we're looking at here we figured out how the technology works if I was unable to figure out how the technology worked if it was actually something that was impossible to understand then I would say it must be aliens if it was so far that we would

(38:34) not be understand but it turns out it's macroscopic phase conjugation this is a scientific term it uses mixed wave interferometry the only thing that you need to understand to even begin to realize this is possible is that we can produce gravitational waves and we know that's possible because ligo has measured gravitational waves so we know they're real so this is the the reason why it's the death blow to the this is aliens hypothesis is that we figured it out we actually figured out scientifically what

(39:05) we're looking at these videos which means that it's not unknowable it's not some impossible technology that we can't figure out it's a technology that has been figured out potentially for decades not just 10 years ago when this happened but Thomas Bearden was talking about scalar physics and the idea of a cold explosion which is literally what we're seeing here this is a cold explosion in this video the cold black event here is cold that right there it's a cold explosion Thomas Bearden was talking

(39:32) about this in 1985 now that's why this is an aliens but that doesn't mean that it's not reverse engineered technology it absolutely could still be reverse engineered technology I can't rule that out in fact that's my number one hypothesis is I think that I don't think we magically figur this out however it is possible it is possible that we figured this out on our own this goes all the way back if you go I've dug through the history of the suppression of this science watched a lot of

(40:03) documentaries and more links than you guys can imagine at this point I'd say the best one is Jesse Michaels Thomas Townson Brown uh documentary on YouTube check it out if you're interested um and it goes to show that we've been looking into this stuff since the Philadelphia Experiment The Philadelphia Experiment might have been the first time we figured out that we can actually Bend SpaceTime we were trying to make a battle cruiser go like clak it and instead we accidentally bent space time around the object this caused a uh a

(40:33) time dilation effect to occur which is why it appeared to be teleportation but it's not teleportation it's warp speed why is it called warp speed because we're warping SpaceTime around the object this is what's causing it to have this warp effect so I'm not using the term teleportation it's not Star Trek teleportation it's Star Trek warp drive that we're seeing here and I'll go into what these terms mean here in a second as well I'll probably do that after I finish this last piece um but that's a

(41:00) good question I want to make sure everybody understands what my position is so that it can be portrayed accurately I'm saying a lot of crazy stuff but I'm not saying that this is aliens and I'm not saying that we can dematerialize something and rematerialize it somewhere else what I'm saying is that we have the capability to bend SpaceTime itself and control over gravity and that we can manipulate this to bend you know manipulate space time and create a warp effect so hopefully that helps uh answer that question out

(41:25) there but I totally understand why new viewers who are just looking at that video for the first time are going to go that's aliens because to be honest with you for the first week that's what I thought too and then I started digging into it more and I'm like oh wait and then once I figured out that the science was out there it's been out there it's been suppressed that's when I went okay yeah this is us for sure and we've been hiding this technology now why is that important and this will bleed into some

(41:46) of the other conversations we're about to have this tells us what the whole situation of disclosure is all about this presents a very strong argument that disclosure is actually just a slow drip acclamation process where they're trying to get people comfortable with this level of Technology we're not hiding aliens we're not hiding crash retrievals who gives a about that that doesn't mean anything compared to what I just showed you on that video what I just showed you on that video will change everything

(42:16) about our whole world everything that's what they're hiding that's what they're hiding they want people talking about anything else except for the fact that Tesla was right once people figure out that Tesla is right that we have an ether science out there is going to change the Pandora's Box gets opened up we're going to figure out how to unify Quantum field Theory and general relativity uh and Einstein was mostly right but not completely right and you could argue that yes this might be

(42:45) making them this might be making them push disclosure faster because this is what real disclosure is real disclosure is the technology that will change our world why does nobody talk about in the UFO Community nobody like one of the only people who's even close is Jeremy Reese the alien scientist and he's trying to do it himself Bravo to that guy he does interviews with people who are like looking into this stuff and nobody watches them because nobody cares about the actual science everybody just wants to know how many CL cheeks they

(43:14) get to clap and whether not the aliens are blue or purple or white like Jesus guys who gives a who gives a about that who cares if the military shot down UFOs what I I want to know is can we use that technology how long have we had it and how can it change our world you know so that's this is this explains it so for Joe Rogan anybody else who's watching it out there why the secrecy why the disclosure it's not because they're covering up aliens people can handle aliens it's not not going to change anybody's daily life at

(43:50) all like okay there's aliens exist great okay I'm going to work tomorrow still you tell me that we live in a in a holographic principal Universe a simulation and that there's an extra

Dimension that everybody can have free energy I'm definitely going to be questioning whether or not I'm going to go to my slave job for 9 to 5 tomorrow that's what they're hiding that will change everything about our economy it will change geopolitics uh it will make us realize that nukes are also a distraction guys

(44:19) anyone out there freaking out about nuclear weapons dude you are living in a bygone civilization nuclear weapons are not a threat in fact they might be a ability we can probably destroy a nuke within a second of it lifting off and it's just going to blow up wherever it gets lifted off and that's probably like the worst thing that we could do we could literally just annihilate any nuke that comes at us annihilate it like break it apart teleported back on to somebody nukes are not a threat to this weapon in fact they's obsolete so when

(44:49) people talk about oh they're putting nukes into outer space dude what the f what are you talking about nukes in outer space bro we have directed energy weapons that can shoot beams down from outer space and in the interferometer tree zone annihilate anything that hits it that's what you should be worried about that's what's really going on in outer space they're not setting up nukes outer space god man it's just it's ridiculous okay so what's going on with MH370 then so what was the point of it and this is

(45:20) a very similar post to what I've made in the past it's Espionage but it's not just Espionage it's counter espionage guys there was an article that came out two days ago in the Daily Mail **China** is stealing 300-600 billion dollar of intellectual property every single year hi Amanda 300 to 600 Mill billion dollars per year that's how much **China** is stealing from United States companies that's a huge amount us Chinese us-based Chinese Nationals are the number one Target well free scale semiconductors is an American

(46:01) company and you had 20 employees on on this airplane that's almost 10% of all the people on the airplane it's like 99.5% of all the people on the airplane were from one company that's an American company and eight of them were Chinese Nationals and 12 of them were Malaysian Nationals usually CCP Chinese Communist Party backed entities pay them or what happens is they go back to **China** and they get large grants they say here you go you were researching let's say plasma physics we'll give you \$10 million to

(46:35) research it in **China** now and then they take the intellectual property what they learned in the United States while working for those American companies and now you're working in **China** now look at that technology again that we saw on that plane what we saw happen to it what would **China** do to get access to that technology I would argue they would do pretty much anything pretty much anything to get access to that technology so since 2000 since the year 2000 24 years ago there have been more than 1,200 theft lawsuits against Chinese

(47:07) entities by American companies and you may say Okay 1,200 divided by 24 that's only still like what uh five or 10 per or however what is that 50 uh boy my math is not doing great right now uh I don't know 20 per year something like that either way that's only the ones they caught the people that's the ones where they caught them the rest of the ones they didn't catch

him so that's the number that the people actually caught the issue actually got so bad you guys may not know this United States

(47:40) government developed a disruptive technology Strike Force so in February of 2024 apparently this Strike Force is only a year too old which is weird what you actually should to literally develop a strike force so the DOJ just this is two months ago go announced charges against two or three people **I want you** guys just listen to this this guy gong transferred more than 3,600 files from an R&D company including blueprints for sophisticated infrared sensors designed for use in space-based systems to detect nuclear

(48:18) missile launches and track ballistic and Hypersonic missiles what he stole cers secrets guys he's talking about the cbers program right there they're just not saying it straight up but they're talking about cbers that's literally what space based infrared system is that's the point of space based infrared system guys that's what we're looking at right here I mean this is from 10 years ago so whatever this guy stole that he's been arrested for is probably even the next generation of this people really still

(48:53) think we're looking through individual satellites down at the Earth guys it's not 1990 anymore it's 2024 they've got groundbased computers that grab the data from the satellites and produce a virtual virtual playback day nighttime is not a problem it can be nighttime they have perfect capability to look make night time look like daytime um the angle is not a problem in fact the angle here indicates a low earth orbit satellite so the reason why this video is so sensitive is because this potentially gives away more about our

(49:26) spy surveillance than any other video that's ever been **leaked** to the internet in the history of the United States government more than anything ever so when you wonder what would people do to cover up these videos realize that the intelligence Community would do literally anything to get people to not believe these videos are real not just because of what they say about the airplane but because of what they say about our surveillance capabilities to our to our foreign adversaries and before you ask me yes I

(49:57) am conflicted by whether or not that we should be revealing that information as a patriotic American but then they should tell the **truth** about this they should reach out to me months ago I've been talking about this stuff for eight months instead they've been trying to attack me discredit me send every **debunker** piece of after me uh trying to deny the videos posting fake **debunks** try to get people not to talk about them uh influencing podcasters to do attack videos about me um potentially using whatever YouTubers they have at

(50:28) under under their assets to make up fake defamatory content about me bro you lost your chance man I was trying to be nice so I guess people are just going to find out about our surveillance uh apparatus and people can come to their own terms whether that they think it's real so gong allegedly transferred trade secret files relating to the development of Next Generation sensors capable of detecting low observable targets while demonstrating increased survivability in space as well as the blueprints for mechanical

(50:59) assemblies used to house cryogenically cool uh the victim's company sensors so notice here they talk about low observable things I mean again we're looking at the damn we're looking at this this is what we're looking at this like he's he's leaking information about this system people are wondering like you know and this is the thing too is like these are Hypersonic weapons these orbs by definition I think these orbs are what we would call Hypersonic weapons they're enclosed in a plasma

(51:27) sheath it's exactly what hypersonics require and that's how they can bypass the requirements of friction as they're as they're floating around this is how they can go underwater as well so we find all these UFOs that are trans medium well here is your answer it's a plasma field around it this is how they able to float through the water float through the sky float through space doesn't make any difference they've created a plasma field is displacing them from SpaceTime simple as that and if I'm wrong about any of this

(51:56) fine you know what I I don't really care at this point um I'm happy to be proven wrong I would love if some actual scientist would try to actually prove me wrong prove me wrong um but instead what I see happening a lot and this and I'm not going to call the specific person out but you get uh condescending people who and you know it's basically the equivalent of a **redd**itor who says you don't understand how this works or blah blah blah one guy replied and had like post a p post a link to his blog and like 10 posts about

(52:34) like the history of plasma physics and I'm like just answer the question explain how it's wrong well no you need to read a 2,000-word essay I'm not doing that if you want a point that it's wrong present your facts if you can't present your facts in a tweet in a bullet point format then I'm not going to bother reading it okay I'm not interested in condescending send in replies from academics who don't know about physics or electrical engineering you know I have talked to electrical engineers that work for the

(53:04) government that work on these programs and they not only tell me how it works but they also reference the scientific uh Minds that came before us that have the papers that are out there I've looked at the papers as well so if you want to argue about it not being real or whatever then bring your facts don't tell me stories bring your facts I'm not going to read your blog if you can't figure it out and make it simpler for to understand and the world to understand that no one's really interested okay um now the second part

(53:34) of this is very important because the same announcement has charges for stealing semiconductor technology by I'm going to butcher these guys last names let's just call his last name bazazi their father and son today's charges against three additional defendants for seeking to illegally transfer us software and semiconductor technology with military applications to benefit Iran and **China** highlight the critical importance of our fight against this national security threat so what's the motive for MH370 we

(54:07) got 20 freescale semiconductor Engineers on board This Plane we have a patent for a um coherent matter wave beam and this is how it all works you create coherent matter you you

cohere electrons and that's when the magic begins to happen with regarding to anti-gravitational technology that's how you produce an anti-gravitational wave is you create coherent electrons when you create coherent electrons their spin changes from one half which is a fermionic spin to one and that's a bosonic spin meaning now you create Quantum

(54:39) macroscopic effects um that's the the scientific terms for my smart smarts out there so if high temperature superconductive microchips can enable Star Trek level technology then it seems plausible in the MH370 videos that the United States was running counter Espionage operation preventing the free scale Engineers from reaching China but it's not just that because you could just kidnap them you could do anything else now maybe it's convenient you have them all together maybe you want to make sure you R Wrangle them all

(55:11) up at once that's actually an interesting thought but you can shoot a missile at them if you just want to destroy the plane so this was something more than that potentially they were trying to bring the people back uh or maybe not kill them all we don't know but this was a message to our adversaries and if you've read the letter to Ashton Forbes or listened to it then you'll know this next part who's your daddy and that's just a little throwback to that letter because I think about that letter A Lot super creepy

(55:37) okay what questions you guys have on MH370 while I have another sip of my drink okay so the next thing I want to show as well I want to show you guys that we can actually see where the orbs come from now not exactly but I'm maybe being a little bit disingenuous that let's watch this drone video combo here so this is the video that I posted yesterday it's got like I don't know 200,000 views or something like that um so I clipped this up for for you guys for my fans out there uh I'm gonna have to make this full

(56:28) screen now I want to show you guys that in this video you can actually see where the orbs come from so we can see the first orb right there right in the beginning so in the satellite video you can actually see the first orb doesn't catch on to the plane right away so the first orb is like tracking the plane and then unfortunately it goes off the side here so we don't get to see it but in the second video we can tell that the orb spins around the side of the plane one time and then it catches on and gets

(56:50) locked into rotation and this happens right away and it takes about six to seven seconds for the second orb to show up and you're going to see the second orb actually whip across this the bottom right corner of the screen here again if this video is fake these are way too many details to be adding in like we're literally watching the direction of travel from the orbs as they whip into the screen watch this there it is you saw that see the orb right there orb right here in the bottom right we actually see it and then

(57:24) they move right back right away and it's already in position but not only is it in position it's already locked in it's already creating two points of a triangle right away which actually gives us information about what's happening here is that this first orb is somehow determining the center of gravity of the plane or Center of mass of the plane and it's already created the triangle

formation which to me indicates this is some type of advanced AI produced by a supercomputer or either by a quantum

(57:52) computer and it is potentially um direct figuring out the remote control trolling in real time and it may be type of thing where it's like once you figure out the center of mass you can it can calculate it instantly and figure out where the orbs need to go but here's the other kicker the third orb comes in within three seconds so the first orb comes in struggles to track the plane figures out the exact center of mass locks in second orb comes in and third orb comes in right behind it look at that third orbs

(58:21) right there already as well so once again I want to show you guys that so you understand like the significance of this like this is I mean somebody faked all this this a lot this is like a whole storyboard it's not like there's some reference where you copied this all these details would had been originally thought of and come up with people go well they just made something up dude what they made up a lot of small details that fit scientific terms that we only know 10 years later so again there's the

(58:50) first orb it's not locked in right away it kind of shakes around the side of the plane here and in the other video we can see exactly what it does on the side of the plane and then it gets locked in the second orb Takes a Minute takes a few seconds then there's the second orb second orb instantly gets into rotation now they're already forming a triangle and then the third orb comes in third orb immediately completes the triangle honestly that would be enough alone for me to be convinced these videos are real even without all the

(59:19) excess details and I'll just let it play out because I want the people who are out there who haven't seen these videos to realize that we're looking at real videos of MH370 now look at this look at it spinning around this plane here how realistic that is and when it goes past the plane and then when it zooms in now this this is one is just so you can see the lines in front of it this is one where we change the color channels look at the lines those orbs are being pulled forward they're creating space in front of them like a

(59:54) gravity well that are pulling them forward and then I I think I flip it over here then to the closeup and in the closeup I slow it down because look at the heat signatures in the orbs look at the how they pass in front in the in the front of the plane and through the tail of the plane they can they even get accurately warped when they're going through the tail of this smoke Trail that's going on here as well which to me you tell me how somebody fakes that you tell me how somebody invents that out there

(1:00:27) I have no idea how somebody would even come up with that so somebody asked a good question and I'm not I don't mean to say this to call them out or anything I want this is a good question that should be asked what if I said I made this video at least three people have already claimed that they made the video and they were all liars um and I've already said one way in which uh and and and now that if somebody comes up and tries to do this after I've given away the game here but one of the first things is that if you

(1:00:58) were the person that made these videos the first thing you would do is you would point out some of these details that we had never seen before like the orbs you said hey I made the videos and one of the ways I can prove it is that I had the orbs coming in from the bottom right side of the screen and from this other side of the screen and I this is how I came up with that you would you would have all that information because you're the one who made it up you're the one who invented it you would have

(1:01:22) inside information about how you created the videos that nobody and the investigation would not have uncovered yeah no no I know you're not the guy I just I know I these vide nobody made these videos is the **truth** um and one person convinced like all the idiots on **Reddit** that he was the person that made the videos which it just goes to show how stupid and gullible those people are um his name was Joe Lancaster I'm only saying his name because he deserves it he he lied about the videos you go look at his Twitter profile you

(1:01:49) can tell the dude A couple screws loose um but he he wouldn't he wouldn't admit that he lied even though it's clear that he did he got caught in the livee people looked up his **Reddit** account they found out that he was making comments about how he knew the videos must be fake based on other stuff which you would never say if you were the person who made them you would just have claimed it right away and then he made the the Fatal mistake was that he claimed he uploaded it to a location that didn't

(1:02:13) exist at the time um and this is the problem is that if somebody's gonna if you're G to lie about these videos there's too much corroborating evidence and there's too many small details another thing that was very obvious that showed that he was lying was that he was asked why he made the video blue and he said oh I just I just decided to randomly do that and this is the part where too A lot of people would argue that the videos don't come in Fler videos don't come in blue they do I've

(1:02:37) got a list of seven different videos that are military videos that are in blue thermal just like this so they do um that's not even a debatable point and so this is the thing too where like it's very easy to tell if somebody's lying the only way anybody I would even begin to take anybody seriously who claims they made these videos is if they have the source files from their their work while they were building the videos because I've done some video editing now in the last few months and I'm talking

(1:03:04) basic crap like put texts on boxes even that takes a long time and I have like the source videos and files and and the work that I put together these videos you would have a mountain a hard drive full of all the assets you use all the stuff the like the different stuff you were like framing it all together layering it all together you would not you wouldn't just have the final product you would have a bunch work and somebody would have come forward for \$150,000 if that was the case um so that would be the bare minimum the problem now is that

(1:03:34) the videos have gotten so much attention that and it's obvious that the military is implicated in these that the CIA or whatever threel agencies they have access to these videos so

they could literally just use AI to like remove the orbs and the zap from these videos and then come out and and have some py claim they were the person who made them or whatever so that's why even now I'm going to be skeptical and I'm gonna have like a list of questions for anyone who were to come out in that scenario on

(1:04:03) first question is why did you not accept \$150,000 Bounty like where have you been and then they'll go oh I I wasn't paying attention which I'll say because we've had hundreds of millions of views on this if you're a guy who made these videos and you're going to pretend like you haven't been there you haven't seen what's been going on this has been all over social media I've done 80 podcast appearances um you know there's just no there's no hoaxer is what it comes to

(1:04:26) down to so let's see um yeah and we found other stuff too with the rainbow pallet is like just literally a software setting you just flip it the most likely scenario and this is even gives us more information about military videos is that the black and white ones that we saw the Fler videos they probably intentionally turned them to black and white before they disseminated them to the public because they're giving away the least amount of information about our intelligence apparatuses possible if you

(1:04:56) know that we can do crazy thermal coloring in our super high quality infrared cameras then it tells adversaries a lot about our surveillance capabilities um and that's really what the government is trying to avoid now again too bad they shouldn't have lied about the videos okay so where's my list of notes okay so we went that okay another quick Sip and once again I want to thank the people who joined in late who I appreciate you guys on here yeah other people are pointing out the rainbow gradient is pretty standard if you guys

(1:05:25) were to go to the **debunker** **Reddit** which is finally dead thank god um these people were coming at me lying about me non-stop there's a lot of mentally ill people on there and I mean literally mentally ill people who have been going after me uh and the the thing about the **debunkers** is they make they make false claims from a positions of phony Authority and what do I mean by that is that you'll see the bunkers go out there and say these videos can't be real because the videos don't come in that

(1:05:53) color which is a not even something they could Poss possibly know so when somebody makes unknowable information and claims about unknowable information that they are not experts on um that should be 100% discounting of their credibility entirely 100% And if you guys have been following the Saga as well uh the number one worst person on the planet **debunker** **Mick** West has also produced multiple false **debunks** about these videos I have blocked him because I'm not dealing with these like mentally ill nut job **debunkers** anymore

(1:06:26) um but he 100% produced a fake **debunk** for jittery contrails which was absolutely proven false he was explained by people that use the software why it was false and why the jit contrail was because the contrail is blue in the uh thermal video and so is the background the stabilization software they used to produce the fake **debunk** was thinking that the trails in the

background were part of the background so what that did was it made the plane shift out of frame with the background and they used that to claim that this prove the videos were

(1:07:01) fake he was adamant he's been adamant about that for since November since November the very first thing I told him it was artifact of the stabilization software didn't listen experts on the software cameras said that is normal didn't listen to them either I have all this recorded um and then somebody went ahead and just proved it without any doubt they they made the video black and white and then they did use the stabilization software and the jittery contrails went away in fact I will prove it to you right

(1:07:31) now so you can't unfortunately listen to what **debunkers** say they they are 100% willing to fabricate fake **debunks** um you know and that's just a sad state of humanity and and The Human Condition in general is that people are so unwilling to be wrong that they are willing to fabricate fake evidence to support their phony beliefs even in a situation where if these videos were real it would change all of humanity that's why I consider people like this to be enemies of humanity by definition is that for you to be so

(1:08:00) adamant that you would fake fake evidence to get Humanity to stay in the Stone Age and stay as cavemen because you just don't want it can't believe it to be real that is serious mental issues beyond anything I could ever comprehend in my life so look at this you can see right away when you stabilize it correctly in black and white where now the background is not seen as or the smoke is not seen part of the background there is no more jittery trails in the uh with the plane just normal contrails it's really smoke but whatever if they

(1:08:31) want to call it contrails that's fine so that proves that that **debunk** to be fake and the problem the reason why this is important the reason why discrediting **Mick** West is so important is he's also the one who's responsible for the Pyromania VFX that also does not match so I got him to finally admitted on the record that he admitted it doesn't match uh I will I guess go ahead and show that and I I'm G to unlike them I'm going to be fair and I'm going to show what they claim was the they claim this was the

(1:09:04) nail in the coffin right here Zoom this in they claimed this Frame was a match you can see that it's actually not a perfect match you can see along the edges here that it's not a perfect match you can see Blackness showing up here and when you watch people use this you'll see what they do deceptively is they they they just like Point arrows at spots that are similar and they say this must mean that it's the same but they don't point out the parts that don't match including a bunch of extra Dots here that don't exist a

(1:09:33) lot of this stuff doesn't match at all and then they never point out that the middle is completely different The Middle's completely different completely different and so the argument for them is that and and this is their true argument I'm not you know misrepresenting this they argue that someone changed every aspect of this around they moved all the pixels around to get it to look like this black thing in the background but they moved all the pixels around that's not how uh VFX Works stock effects don't work that way

(1:10:04) the point of a stock effect is you just lay it into your video uh we have four examples in major media where this stock effect was used and never once has it ever been changed pixel for pixel like the debunkers claim that's a statement of fact um and so to really the thing that will eliminate this idea here um this misperception is when you watch the whole effect then the deception becomes extremely obvious this is overlaid this is the one pixel uh sorry the one frame that is similar it is admittedly similar

(1:10:38) all blast waves are similar we actually found three different things that we can actually match up better along the edges than this one the rest of them are not even close you see the frames after this are not even close in fact the Pyromania VFX doesn't even have the same number of frames it actually has many more frames than the frames of the uh the video so this is and once you've seen more than one frame you can tell right away this is not imagine trying to move all these pixels around here look at

(1:11:08) this imagine trying to move all these pixels around that would never never happen so this is why I always just tell the bunkers how many pixels match that ends the debate immediately because if they were correct that it matches it would be a pixel for pixel match and they know it's not um so there you go I did that Justice now hopefully won't have to talk more about debunk because I hate wasting my time on debunk but this is why Mick West has no credibility anything else he comes up with should be seen as suspect and

(1:11:35) people should not take him seriously um when it comes to these videos at at least these videos um the number one expert in the world on these videos you're looking at them it's me I'll be happy to tell you if and when these videos are debunked um and that's probably only going to happen at this point when the United States government makes a claim okay so okay that's enough of the annoying stuff let's focus now on some definitions I want to talk about so a lot of people we have been talking

(1:12:03) about um we've been talking about free energy we've been talking about cold fusion and we've been uh I've been showing you guys uh anti-gravity uh as well and uh also been talking about warping an object so these are four different terms and yes I'm saying all four of these things are real um but they're different and it's important to understand the difference um cold fusion is like what I showed with salvator pis patent earlier today compressed plasma a lot of people out there think that we need to build a

(1:12:43) a large hyron collider that's 20 miles in uh diameter or what is it circumference in order to produce like a cold fusion effect we do not we do not the thunderstorm generator is most likely doing some form of cold fusion uh compressing plasma and confining plasma within strong magnetic fields is the secret that's what Tomahawk or what are they called tamax are using as well as the thing I posted earlier today um in fact I'll go ahead and share that again which is this other uh uses normal normal magnets hard magnets not

(1:13:23) electromagnets this device here so and this is from like weeks ago as well so they're using not even electromagnets and the benefit of not using electromagnets is that it takes a lot

to cool the electromagnets uh and as well as if you're trying to achieve the superconductive states which is what's really required superconductors are like a big piece of achieving cold fusion and if we can get room temperature superconductive magnets which is why this post is so important if we can get room temperature superconductive magnets

(1:13:50) magnets that you can just stick and now you can have uh plasma producing cold fusion within it this is going to change everything about power that's out there um so that's what cold fusion is the idea of compressing plasma within a very powerful specific magnetic fields now how is this different from free energy free energy I'm talking about literally just uh a device that maybe is uses magnetism that does not produce cold fusion that doesn't require plasma at all that can just tap into the energy of

(1:14:26) The Ether itself the extra Dimension that I've been talking about The Ether um and this is a situation where we are producing coefficient both of them I believe can produce coefficient of performance greater than one uh which is over Unity but from the other perspective it's like imagine a magnet system that can run a motor and then that motor is producing enough energy to keep the motor going but also power my lights my computer everything in my house and my apartment that is free energy something where you just get it

(1:14:57) going so you plug it in for a second so that it it just starts up and then you unplug it and it goes on forever a perpetual motion machine that's free energy and yes I'm saying both of these things are possible cold fusion we don't even need an ether for the cold fusion now I believe that some of the principles of cold fusion probably use The Ether to be possible um but I don't think we necessarily need the ether to be real for Cold Fusion for free energy we do need the ether because the ether

(1:15:24) is essentially an unlimited source of energy that we can tap into and the idea there is it's like a well an oil well that is never ending that we can just dip into as many times as we want so I am saying that both of those principles are possible um and I am opening myself up to scrutiny for anyone who wants to prove to me that it's not possible now of course I know that's not how claims work is that technically I need to prove the claims well I'm looking at in two videos I'm looking at a cold explosion happen to an airplane

(1:15:57) that's warping the airplane away um and the only way that that's possible is if there's an extra dimension of negative unlimited negative energy neg entropy um of The Ether that we see so me I'm just reverse engineering it what this means for me is that I'm looking at the teachers test they answer to the teachers test I'm looking at I've seen the answers all I need to do now is figure out how to do the work and how to get there and that's what we've been doing with this investigation that's why

(1:16:24) I'm so confident that's why I know that science will check out and this would only be possible if those videos are real here's another key aspect of those videos if those videos are fake why did somebody fake them with science that's considered fringe science but actually checks out that there's actually a history for that science being real The Ether was it somebody

who was like Thomas Bearden that was just like who faked these videos and was did Thomas Bearden fake the videos because he

(1:16:50) wanted to prove to people that scalar physics was real you guys get what I'm getting at like this was not a random person sitting around that thought about this if it was some random person they would have faked the videos with mainstream science they wouldn't have faked it with this idea of portaling an object in endothermic event now the other thing that I want to explain is the difference between the EM Drive uh and warping an object the simplest explanation for the difference here is Star Trek impulse Drive and Star

(1:17:26) Trek warp drive Star Trek impulse Drive is producing a beam of energy behind your craft that's essentially unlimited and I do think that this also does require to have an ether but it's like taking the concept of free energy and saying okay now that we've got free energy I'm just going to produce like a a stream of uh microwaves or really any type of propulsion that's necessary I believe that the EM Drive uses microwaves evanescent microwaves or something like that the idea of the EM Drive is the cone

(1:17:56) and the way that the cone bounces it B basically produces a Thrust actually I think it it produces it Opposite this way and that's essentially the equivalent of Star Trek impulse Drive I am saying that that's possible as well and I think that the way they describe it is like it's the the waves are pushing off the the virtual particles anytime anyone says the word virtual particles to you they're talking about The Ether virtual particles just a madeup word people are using because they don't want to explain that the

(1:18:23) ether is real now so we have impulse Drive I am saying impulse Drive is real but it's not the same as warping your craft if you are warping your craft you are using gravity manipulation and with gravity manipulation you are actually able to bend SpaceTime around the object you able to create a gravitational Wave It's the fundamentally equivalent to surfing on a wave but on a gravity wave and that gravity wave is going to propagate at or faster than the speed of light presumably at the speed of light but if

(1:18:54) you can separate yourself entirely from SpaceTime and you can tap into The Ether the extra Dimension that's out there light actually travels faster than the speed of faster than the constant speed of light that we perceive it to travel at um but even at the speed of light it would look like the objects just teleporting from one location to the other so we don't necessarily need to travel faster than that if gravity does turn out to be limited to the speed of light as we perceive it through uh the vacuum of SpaceTime still works

(1:19:23) justifying um and with gravity manipulation I'm talking about displacing your object from local gravity using some type of anti-gravitational effect like we see the orbs doing but also when we see the orb Trail in front of them separate creating space and creating that space creates a geodesic geodesic is just creating a gravity trail that you are following along um and that is essentially what they're also doing to the plane itself is they're creating a gravity wave through interferometry a zero point

(1:19:54) system so when you have your zero point system all the waves are going to cancel each other out perfectly that's going to create your scalar potential that's going to produce your gravity wave when the coherent electrons begin to flow around the plane once you get the coherent electrons flowing then you're going to have your negative one spin your counteracting force and now you're going to have your potential for producing a gravity wave supposedly people I've talked to they can produce

(1:20:17) gravity waves and gravitons if you want to call them that uh that are very powerful so that even though this seems like take a huge amount of energy jackar fatti has argued that it doesn't take a huge amount of energy uh Salvador Pas argues that we can produce a huge amount of energy so I don't know exactly how it's going to play out probably somewhere in the middle there my guess is it doesn't take as much energy as we think when we have the system optimized but that we can also produce basically

(1:20:42) unlimited energy and free energy based on what I've mentioned if you have access to free energy then it doesn't matter how much energy it takes to warp a craft you can you can get that amount of energy um but I don't know all the details to be perfectly honest with everybody I am a noob when it comes to physics Advanced physics let's say and uh electrical engineering but I am learning quickly okay so those are the definitions that I wanted to explain here for everybody tonight hopefully that makes

(1:21:11) sense um no I will not be talking to Patrick Jackson that guy is a fraud sorry sorry to break it to you guys guys you shouldn't listen to people that claim unknowable information so this Patrick Jackson guy is a fraud uh he claims that the orbs are a defense mechanism and he draws circles around orbs in the sky and claims to know what types of orbs they are and stuff like that if somebody is telling you that you're being **scammed** that's not something he could know he didn't ever work for the government or

(1:21:42) anything like that he was literally a Ghost Hunter that was his job okay Patrick Jackson is a fraud um I don't know why I have to say that to people he's not an expert on orbs or anything like that he's just **scamming** people for money so you know don't get sucked into it again and this is going to talk we're this is going to be the thing that we're going to get dig into next is that when people have uh fantastic claims you need to scrutinize them and I understand that this applies to me as well and that's

(1:22:12) why I have two videos 19 Witnesses whole sto real story corroborating events um mountain of evidence you actually don't have to believe anything I'm saying to verify everything I've said to you is true including the science that's the difference between what I say and people that say these are the the orbs that are the planetary defense system like what the you talking about this is the same thing when people start telling you stories about aliens they're telling you stories stories are not evidence stories

(1:22:43) are experiences and people are free to have their own experiences the problem that comes along play as people take their experiences and they pray on people that also have

experiences and then they look for commonalities and those people feel Vindicated when somebody else tells them something that makes them feel good and this is exactly what happened recently with this whistleblower that came out so let's go back through the profile let's take a look at that so uh where is it was it yesterday and I most likely will not be

(1:23:16) posting about this I didn't even really enjoy posting about it yesterday cuz first thing I'm going to do actually is make my statement about aliens so here's my statement about aliens um aliens probably exist somewhere I think that there is life out there in the universe um I personally don't care whether or not aliens exist or whether not aliens are visiting us it makes no difference for me in my life uh disclosure I believe is being distracted by the idea that everything's about aliens and that

(1:23:44) takes away from the stuff that really matters I think anybody that is out there that's trying to make disclosure all about aliens is somebody that you should be very suspect of uh of course alien being real would be a big Revelation but it's not going to change anything about our world and that's why it's not as important as the technology that comes along with it and if they're trying to make you talk and think about aliens you're not sitting there talking about how a craft can float and how

(1:24:11) aliens can get here from zet reticuli uh which is what 40 light years away it would take like 1,200 years uh even at like a fraction of the speed of light because then you have to figure out oh we must be able to go faster than the speed of light which means oh our physics must be wrong that's the only thing that compels me about aliens so I don't care what people want to believe with regarding to aliens uh I personally am agnostic about it I think they might be here but if I had if you made me say what my statement or what I think the

(1:24:42) nature of the aliens is I'd probably say ultraterrestrials they're probably in the water like Tu Carlson said that to me that makes the most logical sense okay so that's my statement about the aliens um and I think that a lot of people have had experiences with aliens and what have you um and those I don't want to Discount those experiences I think people have real experiences that are out there um but that does not prove that aliens are out there that are visiting us there's a lot of answers for

(1:25:12) a lot of stuff that happens out there and we have to go with the evidence in general so what happened I guess this was the 21st this was two days ago at this point two nights ago there was a whistleblower space and I went oh new whistleblower what's this going to all be about and uh supposedly whistleblower that was in the James Fox upcoming documentary which is going to be called the program and I went okay if this guy's going to be in James Fox's documentary I better go check out and listen to what he's

(1:25:44) saying so I listened to some of this space uh the only interest and and then actually this was the next morning so I went ahead and I I found a thread that talked about all the claims that were made during the space cuz I only listened for like 20 minutes when I was listening to the claims for 20 minutes I immediately had red flags going off Sirens were going off uh he was

pretty much just talking about aliens and what the aliens look like and how they communicate telepathically with people I had the same Vibes I get when I listen to

(1:26:13) Patrick Jackson talk about the the defense mechanism of the orbs it felt like somebody that researched a bunch of ufology and that they were spreading what they had researched as factual information that they had seen firsthand when it wasn't firsthand information they had one claim where they had supposedly been in contact with a blue alien face to face uh and that they telepath telepathically communicated with them which is another huge red flag because who the hell is this random guy that he's communicating with aliens face to

(1:26:46) face and if he is especially part of the military then there's going to be dozens of corroborating Witnesses there's going to be a date a time a Loc and he didn't say any of that stuff and of course everybody in this space nobody's asking the guy about any verifiable information every just asking him what was it like when the alien telepathically communicated with you and how many species of aliens do you think are out there that just doesn't matter at all like if you're trying to vet the guy we should be saying okay

(1:27:15) when did this happen what was the date I mean if I see an alien I'm going to remember the exact date time location everything about it I'm going to have a million verifiable where you can check into it instead he had none no verifiable evidence whatsoever none um so to me that's when I bounced out when everybody was talking asking silly question also for the record he somebody asked him about the MH370 videos and he said he didn't think the videos were real so there right away I'm not going to believe anything you have

(1:27:50) to say because if you're making statements like that then it makes no sense at all it tells me you're not coming from a place of scientific background you obviously haven't looked at any of the investigation any of the research um and that's a big red flag because what that tells me is that he's just telling stories not giving firsthand accounts of information that he has um and his stuff started to fall apart pretty quickly today the only claim that was interesting and again a lot of it's just there was nothing

(1:28:17) unique that he was saying it's like you could just pull all the stuff out of ufology and it felt like he was just a ufologist that was telling his story worry uh about you know his experiences or what have you um the only thing though is that I think he did claim that they have the way to travel large long distances quickly which is faster than light travel warp travel that's out there um which again that's really the only thing that's compelling because that's what we need to have for any of that stuff to

(1:28:47) even be possible so then my verdict was if this was James Fox's star witness then the deunk are going to shred this guy like they were going to shred him to pieces um and in fact I'm going to shred him a little bit here today as well because some stuff has come out he was claiming that he was part of the UAP task force as well and then he had to issue a correction and say no he wasn't part of the UAP task force he was actually just on a UFO Forum with people like David grush or whatever and that's pretty weird if you

(1:29:22) are all of a sudden you go from being on the Tas Force now you're were just on a forum kind of loses a lot of the weight behind it and now I'm wondering how were you really face to face with a blue alien as part of your job seems kind of weird if you're just about part of a forum that's out there and where's the verifiable evidence for all of that um plus when you start to hear these stories and it's not about hey man free energy is possible and so is warp travel if that's not the first

(1:29:51) thing somebody's saying then I'm going to be skeptical because that will change our entire world hey man free energy is possible hey man cold Fusion's possible that's how UFOs have enough energy to get here from Z reticul or hey we can warp an object from one location another we can literally teleport something that should be the very first thing that anybody who is a true whistleblower that's seen advanced technology and seen aliens would want to tell the world they shouldn't be sitting there talking about

(1:30:20) oh the telepathic communication the way the telepathy of the alien works that's not really knowable information are you a biologist now like what what exactly is this and again people's experiences are their own they can have their own experiences for sure but when it comes to credibility it's it's pretty bad yeah so this is the reason why um I I don't give this any attention and I'm not giving any further attention after this but I want to go through it with people because I want people to be

(1:30:50) critical thinkers and being critical thinkers doesn't mean believing everything that's out there doesn't mean believing everything that I'm saying as well it means thinking for yourself and and thinking and critically means asking these types of tough questions even in situations where you want to believe so badly you know I want it to be real I want the aliens to be real but you know is the information you're getting really uh valid is it vetted so then the big thing that came out as well was that

(1:31:18) vetted podcast came out and said this guy's been talking to people behind the scenes he's been talking to people behind scene so I do a followup post I didn't even want to do the followup post but guys when vetted says that this guy was apparently telling people that he was commanded to kill the blue alien that he was telepathically communicated with guys I'm going to report on that if you are a military guy and you're claiming you were commanded to kill the thing and I trust vetted I trust that he heard this from

(1:31:49) someone um because I've talked about and he's just a normal dude now did he get false information I don't know but that's quite the claim to make and uh so you know supposedly this guy did that I think he's come back today and said he was going to clear that up but now we've got a claim where you supposedly telepathically communicate the blue alien um and now some people are saying that you said that you killed were forced to kill the blue alien by the other government that's my thumbnail

(1:32:16) right now and then you've got this other situation where you said you part of the UFO task force and you're not and you lied about that these are pretty damn I mean to one's

credibility now if people may say well Ashton you know maybe he just misspoke well I got bad news for you chat he got caught red-handed in 4k so allow me to share my screen one more time this right here in the bottom left is Jeffrey Sans oh and also I missed holy whoa Jake whoa thank wow \$100 man wow thank you very much that is crazy that's a lot

(1:33:04) thank you Ash and friends who have sacrificed your time to find the **truth** that had been covered up for a decade the history will remember you thank you Jake I appreciate it I hope so as well I hope that I live long enough to uh live up to those expectations and for that to happen that's a huge donation man guys you don't need to donate your money to me although I appreciate it uh in fact X is supposedly going to increase monetization and make it so that you can actually make money off of streams right

(1:33:28) now I don't make anything off of streaming on X at all um but uh if that happens then who knows what'll happen with all this um but thank you very much man that is extremely generous and uh greatly appreciated thank you very much Jake crazy wow how did I not see that earlier whoa okay so anyway and if you're a supporter of this this Sans guy I apologize Jake but this is a video here from months ago this was actually last year this was during the UFO Congressional hearing so this was last June or July there's our

(1:34:07) guy right down there in this clip he says I know grush I've been with him the whole way through I worked with him during the UAP task force so he's misrepresenting his claims all the way back a year ago caught in 4k now he's saying saying no he was never part of the uip task force he was just on some Forum so pretty damning um now let me find there's also one more and this is going to lead us into our next thing here we go let me pull this back up okay okay Tim McMillan and for the record guys I don't know who all the UFO

(1:34:55) celebrities and stuff are uh most of the people in the UFO Community hate me on both sides um because I'm pushing the Paradigm where nobody else is pushing it and I'm actually talking about real science when as far as I can tell like less than like five people in the whole Community talk about real science in the UFO Community but anyway Tim McMillan is some kind of UFO person I don't know whatever some kind of UFO Comm person cursory investigation later confirmed by Congressional and DOD sources determined this individual was

(1:35:26) not credible well over a year ago the fact that you have ever been included in any documentary in the first place is beyond laughable so this guy claimed that he was vetted by AO but he didn't say what that meant just being vetted by them doesn't mean that what you're saying is true it means they just looked at you and they didn't necessarily find you credible so um so this is pretty much the death blow right here if this statement is True by Tim McMillan that's the death blow for The credibility of that person uh Mike

(1:35:59) Colangelo or whatever this guy's name is he's like some kind of UFO news person um he's kind of an idiot as well honestly if I'm just gonna be honest with people um but he is right on this one James Fox is most likely deleting the interview of Jason Sans uh out of his documentary as we speak right now which shouldn't be very surprising given the fact that this

dude's credibility didn't like last one day um and then people were able to pick him apart and this is the reason why uh let

(1:36:33) me see here I'm sorry I'm looking at my list and so then I found this post from Gary Nolan who I'm probably gonna get blocked by Gary Nolan after this apparently he's pretty touchy I have nothing against Gary Nolan but this statement here I don't blame anyone especially not James for interviewing the guy in science you make decisions based on the information available at the time that's not how science works at all in fact that's called just making up in the top of your head you caveat any speculations and

(1:37:02) update with new information that part is partially true when you use a scientific method you come up with a hypothesis you find the evidence and then you go back to the hypothesis if the evidence does not check out that's what science actually means for people out there science stands for the scientific method so this is what led me to make my post quoting Gary Nolan where I say science stands for the scientific method the lack of scientific research seems to be the major problem in the UFO Community when is someone prominent in

(1:37:34) this community going to look at the MH370 video seriously James Fox wrote them off as fake as a \$3 bill that's a direct quote from James Fox back in September without doing any analysis James Fox did no analysis whatsoever chimed in saying that they were fake as a \$3 bill this actually polarized much of the UFO Community against me when James Fox made this statement completely inappropriate statement for someone like James Fox to make a guy that is interviewing a dude who claims he telepath telepathically

(1:38:07) communicated with the blue alien what kind of vetting is James Fox doing for his work and his documentary if the two most incredible videos in all of ufology he thinks are fake but he's willing to talk to a guy with the most story ever whose credibility doesn't even stack up to basic scrutiny this to me is a huge strike against James Fox and his credibility I know there's a lot of people out there that like James Fox might be offended by this but that's just the facts just because you like a guy does not make

(1:38:36) them correct so now he's alleging that a non-credible people with no verifiable information to claim to have seen aliens in his upcoming documentary he's interviewing them that's not science it's the opposite of what the UFO Community needs the UFO Community doesn't need more more people telling their experiences of having their vcards stolen by aliens or people summoning we need hard evidence we need science we need explanation for how an alien species could get from Zeta rtic to us we need to understand how that

(1:39:10) changes our laws of physics that's what we need that's what true disclosure is so I look at this video and this is for you Gary Nolan and realize this video is scientifically accurate the Heat signatures are consistent with topological monopoles the convergence is consistent with kum's law the negative energy that we see here this cold event this endothermic absorption of energy is consistent with scalar physics and an ether this is what people should be thinking about is maybe our understanding of the world isn't totally

(1:39:43) complete maybe we still have some learning to do that's out there um and here's okay so here's the next thing I want to say is that and thank you ocean eyes I appreciate you the reason why the people in the UFO Community won't look at the videos now that we've kind of gone through this context is that they all want aliens that's all anybody cares about is aliens aliens aliens Jeremy Corbell doesn't give a about anything else except for aliens guy doesn't even know what a superconductor is and why that's

(1:40:17) relevant even though it's like the most important thing when it comes to anti-gravitational technology super conductivity is it's the most important thing when it comes to Cold Fusion super conductivity instead everybody is so adamant that they've got to be the one to disclose aliens to the world and that will somehow change our whole planet when it won't this is also the reason for the cover up again the technology now the other thing is the crash retrieval stuff so I posted about this but I just don't

(1:40:46) really I don't really care I think that people like Chris melon are Gatekeepers that's my opinion from this investigation people like melon aren't looking at this people like Lando aren't looking at this I would say I'm 99% sure Lando knows the science in these videos is real and that he's hiding it because they and and Chris melon probably too because they know it's a national security issue so Chris melon **leaked** private messages from a senior US government official discussing crash retrieval

(1:41:16) program going back to the 50s and then basically calls out the Air Force as being Gatekeepers he says we're dealing with the recovered UAP that landed in Kingman Arizona in the 50s we're vacuuming up info as so and so gets read in we now know the management structure and security control systems and ownership of the crash retrieval we also know who recovers landed or crashed uaps under what authorities we also know that a still highly classified Memo by a secretary of the US Air Force in the 1950s is still in effect to maintain the

(1:41:52) cover on UAP so this is actually important because it does I think corroborate my opinion that the technology we see in the videos while it's our technology we did not naturally get there it's a situation where we reverse engineered the technology we saw floaty crafts and then somebody smart like Thomas Thomson Brown was like hey how does that work maybe we can figure that out now I'm not 100% convinced of that that's just my prominent Theory my opinion I think that it is possible we could have figured

(1:42:24) this out without aliens as well because we may have figured it out when we figured out how to split the atom during the Manhattan Project but if you watch Tucker Carlson on Joe **Rogan** you will find that Joe or Tucker Carlson floats an idea that nobody has floated the idea that what if we got help with the atomic bomb as well what if we reverse engineered the technology around splitting the atom the same way we potentially reverse engineer about gravitational manipulation that was a very interesting point that talker Carlson brought up and

(1:42:54) it kind of resonates with me a little bit so to me I personally think that we might have reverse engineered that if so this Chris melon uh post seems very important but again this is just

a distraction this post from Chris melan everybody's gonna be talking about it for weeks trying to dig into it every person in the UFO Community talking about blah blah they said this this shows the crash retrievals are real that stuff doesn't matter all that does is try to help us to figure out where the technology came from the stuff that

(1:43:22) changes the world is not aliens it's not crash retrievals it's the technology it's understanding how the technology works that's why the MH370 videos are the most important videos in ufology maybe the most important **leaked** videos from the military ever presuming that they're real because they show us how the technology Works in a way where we can reverse engineer it once again this is why it's not aliens in the videos because it's not unknowable it's not that we look at that we can't figure out

(1:43:49) what's going on we looked at it and it only took us less than six months to figure out exact what's going on scientifically in those videos corroborated by real science real scientific papers real patents and science that goes back at least to the 1980s probably to the 1940s now that's what **I want you** guys to be thinking about here tonight so let's do a couple questions if anybody has any questions I'll open it up for the next five minutes and then I'm probably GNA log off after that it's

(1:44:17) been a great stream I hope you guys have appreciated this uh I am kind of mixing in my content here a little bit of MH370 content as well as a little bit of uh science content so uh I consider myself a high science influencer I guess you could say that I want to get people's I want to get stuff out there that people think can't be real out into the Public's mindset into the zeit people ask how do we reveal this information how do we reveal this information to the world do we make it open source no the information is

(1:44:52) actually out there and it's been out there the whole time all the science has been out there this whole time we just had to look at it so what we need is we just need people to wake up the way this information will get **leaked** to the public and it'll become mainstream is when enough people look at it and go no that's real when enough people believe that the ether is real that's when the world will know that it's real that's when we'll get free energy and that's a pretty tall task but

(1:45:18) that's what it takes um let's see what we got where are the passengers in the plane we have a frequently Asked question post that I post for that it's most uh common question uh I think that probably most of the passengers died from the fire event uh xixi uh smoke inhalation toxic fumes not a good combination but there is circumstantial evidence some people lived I think the plane was Zapped warped uh somewhere near the Mal Dives and then flew South to Diego Garcia I think if anybody survived they were in

(1:45:50) Diego Garcia and they probably were given a new identity and probably put into something like witness protection where they can never speak again and if somebody came out was like I was on the plane they they'll just kill you or make you go disappear oh this is a good question for Nikki and thank you for watching this this whole this whole time I wish I could be

high right now um how did this how did this information make you more spiritual great question the answer to that question is because when you understand that that we live in a

(1:46:19) holographic principle and I don't like calling it a simulation because our reality is still real we're still living we're still experiencing this world with one another I don't want to end my life in fact this almost makes it more fun to live in this world because all I want to do now is make it a little bit better like if you're playing let's say like Minecraft and like when you're playing Minecraft why do you bother to build a cool house when the game ends at any point your house is gone well it's not

(1:46:44) about the house being gone it's about the building it part same thing as our reality this makes me more spiritual because you realize that our universe is a construct if our universe is a construct then that means there must be a Creator somebody had to have created it maybe there's an interlaced jellyfish alien god out there that created our universe spaghetti monster maybe it's a maned maybe it's a humanoid maybe it's just a ethal being um maybe it's like in the Bible just some type of being that

(1:47:14) transcends what are uh what we think can be possible maybe it lives in the higher Dimension you know I don't know what I do know though is that for a lot of to be real including the extra Dimension um our reality must be a construct of some sort and that's what makes me more spiritual when I think about it because to me what I believe I I would say I'm most closely aligned with Buddhism at this point now I think I find comfort in a lot of religions I was raised Roman Catholic um and that's why I know quite

(1:47:43) a bit about the Bible and I believe in a lot of the teachings of the Bible uh but I do think that reincarnation makes the most sense that our bodies are a vessel and that that vessel you could call it our Soul does live on and that it can transfer from one body to the next I think that our bodies are a receiver and that our soul is being beamed to us kind of like in the movie Avatar to me that's what makes the most sense and I would almost argue that we are all one and the same person all 4,000 people watching

(1:48:10) right now we're all the same person and you may say well how's that possible we're all living in the same time but time is an illusion time is a flat circle um each of our frames of reference are different and we're all living with within our own frame of reference and if you were to look down at all of time from the extra Dimension time's a flat circle you can enter that time anytime you want so I can die and I can come back and I can be Nikki I am Nikki I am John I am every person in this chat I'm am casual as well and in

(1:48:41) each of those lives we are learning and advancing our spirit and our soul uh making ourselves more knowledgeable about our universe and our reality and maybe it's true that we we reach level of Enlightenment where that cycle becomes broken I don't know so hopefully that's some good questions let's see uh Deep dive into Thomas Thomson brown maybe maybe uh the documentary Jesse Michaels did was really good definitely recommend checking that out uh publish the findings it's like it's a matter of

(1:49:11) where the way this is going to play out my strategy um I deleted this post because it was a little too corny but I still stand by it which is that when you are playing against an enemy that knows you're playing cards and they know what you have in your hand then you just flip your hand over why do you flip your hand over because you're playing mind games with them you want them to know that you know uh that they know so if they can read every message in my phone they can watch everything that I do then I'm GNA make my strategy

(1:49:40) completely uh transparent so that the whole world can see my strategy my strategy is to make this information so mainstream that it becomes self-evident that's because of the weight of the evidence if I was just telling stories that wouldn't be my strategy the evidence is so strong I just need more and more more people looking at it and that's my strategy and the way that I do that is I show people that because the science is real in those videos so is a lot of incredible other stuff like cold fusion like free energy like warping an

(1:50:10) object like impulse drive like faster and light communication there's going to be medical healing aspects to this as well which I've mostly avoided um but that's that's what that's my strategy and at some point it's already happened you guys can see I have over 16 million impressions this week alone that's a lot um and the more people that look at it uh the more people that will wake up yeah I would say a Great Awakening is happening I have not yet connected with Dr Joseph P farell I would love to talk

(1:50:39) to him especially considering he pretty much nailed exactly what happened to this plane like a week after two weeks after it disappeared watch the interview of March 20th Joseph P frell whoa the dude was like calling it like that it was a message from one government to another government he just didn't have all the pieces if he had seen these videos I think he would have figured it out before me um but the difference is to me which makes it so compelling is that like I just followed the evidence to lead to my

(1:51:06) conclusions he was working from a position of just knowledge about how intelligence communities uh function and operate so that's the part where when I come to a fact-based conclusion based on amount of evidence and I see somebody else that already comes to that exact conclusion I'm like wait how the how did you know that kind of the same with talking to Tom monok if you guys have not watched the interview with Tom Monto highly recommend doing so please watch it on my YouTube channel because I will get some minor amount of compensation

(1:51:34) which I appreciate I'm use that to upgrade my stream uh but you can also watch it on X if you want somebody made the comment that every elect every undergrad electrical engineer and physicist should be forced to watch my interview with Tom mon talk because it actually explains where we got the science wrong it explain going back to Maxwell's equations and I think that 99% of what Tom monok and I discussed was on the money until you get to the end where we start talking about the nature of reality and you know if aliens can exist

(1:52:01) and what have you that stuff is obviously subjective and opinion but the science part

of it the first hour and a half is like if you're interested in science it will blow your mind and it will get you uh up to speed in terms of what we've been talking about uh what is the connection between the orbs and the tr3b which is warp D I don't know I truthfully I don't know much about the 3B stuff and this is what I think makes my disclosing this stuff credible is that I don't know much about ufology I don't even know who the major

(1:52:31) players are in the UFO Community except for certain people that are out there um and so I'm not sure if the tr3b thing is real if it's disinformation but if we've been reverse engineering this stuff since the 40s then it would not surprise me if we have that the tr3b I think is the triangle shaped crap but it's black so it does make me wonder when we see this triangle formation you know in the videos this equilateral triangle it does make me wonder whether or not when we're seeing that out there if we're really

(1:52:59) seeing a solid triangular craft or if that people were just seeing three orbs in a triangle formation and assuming it was a craft I don't know yet um I would say check out salvator P's patents though good plug for him yeah people that find out the science they get they get off that's another reason why I've been happy to become an influencer because this protects me if if this stuff is real then I am definitely a Target and I absolutely believe it's real um but I'm not going to let that change my life I'm

(1:53:30) not going to live in fear if I get offed I get offed um but I don't think that's what they would do anyway because it protects me because if any of that happens there's going to be not only does it not solve the problem the the moment somebody asks me five more Ashton appear out there and I would please if you're watching this and something does happen to me first of all I'm not suicidal in any way nor will I ever be in this life uh no matter what happens I would never be suicidal but if anything happens to me I want

(1:53:54) everybody out there to pick up take my evidence I've made it all publicly available take the Reigns push the investigation forward that's what I want that's how I'm protected as well when it's just me it's easier for them because then all they have to do is discredit me if five more people rise up and start talking about it then it becomes a big problem uh Gary Nolan I'm not interested in talking to Gary Nolan honestly I think he's a smart guy don't get me wrong but he's not really talking

(1:54:22) about the concepts I'm interested in he talks about the Consciousness uh thing he was referenced on the Tucker Carlos and Joe Rogan thing and when I was listening to it I was just like I'm yeah I do think there's probably a connection with Consciousness and the phenomenon and that maybe be the the missing link between everybody that's out there and the aliens if they're real but that's not really my priorities at all so as much as I think Jerry Nolan is a very smart guy I didn't mean to rap on

(1:54:47) him or dig on him uh in this uh I don't think he's in the right field for the type of technology that and I'm I'm really interested in talking the physicists and the electrical engineers and and people that are directly government contractors uh that have inside information

evidence for Diego Garcia is the B7 B 7 fire suppression device that watches up in the malds that must have been empty the 20 Islanders that saw it from a small island nation of 3,000 people in the early morning saw it flying south towards Diego Garcia and

(1:55:17) then the last piece of evidence is the Philip wood the only American adult passenger posting on forchan saying that he was being held prisoner that he was drugged and that uh he had been separated from the other passengers and the exif data on the picture it's just an all black picture uh pointed to Diego Garcia so that's the evidence I it's not obviously proof that the plane ended up in Diego Garcia but it makes sense it's the middle of the ocean super Advanced military base has a CIA black site for

(1:55:45) holding prisoners there that's the place where you go hide the plane you don't fly the plane to **Russia** like Jeff wise thinks it's stupid um there's no way you could hi that but hiding the plane in the middle of the ocean where commercial Jets can't land is is pretty good there might be a time dilation effect but we're not talking about Manifest this plane's not showing up in 10 years or something like that time dilation is proportionate to the distance traveled at the speed of light so unless this

(1:56:11) plane flew around the earth like infinity times the time dilation effect wouldn't be powerful enough I do think there's a chance that the plane could have been time dilated by minutes or hours but not by years so it could have shown up like an hour later or a few minutes later but most likely it was almost instantaneous when it showed up on the other side um the physics gets really weird though the physics actually would argue that you can even hold the plane in suspended animation and then release it at a later time so that's

(1:56:41) where the you have to start realizing like time dilation is real and that space and time are interconnected and then that's where really weird stuff and this is probably another reason why they hold back gravitational manipulation because manipulating gravity means manipulating space and time itself and this is now where weird stuff happens one of the concepts I do want to dig more into is the idea of retro causality and whether or not we can actually go back in time I know we can go forward in time that's not debatable that's just uh

(1:57:07) time dilation just says we can go forward in time so you could if you go at the speed of light and you go to Alpha centari and come back for you it's going to be uh well let's say let's say you go faster than the speed let's say you have instantaneous transmission for you it's going to seem instantaneous but by the time you come back here it's going to be like six years in the future seven eight years in the future that's that's travel into the future you haven't got any older but you've shown

(1:57:30) up and now it's the future so you can travel to the Future that's not debatable the question is can you travel to the past and that I think the answer is no but we we're going to learn more about that is Roger Stone extra trust real great question uh good questions also I'm going to take this moment here while we're winding down to give you guys a Discord invite I know a lot of people wanted Discord invites um just please keep in mind we run a pretty tight

ship in the Discord I mean I haven't had to

(1:57:57) boot I've only had to boot a few people ever um but just don't be in the in the Discord and uh you can enjoy talking about some fun stuff so I posted a link to the Discord make sure also people get confused when you join the Discord you have to verify in the verification Channel if you mess up then you have to come back a few minutes later and try again and then you have to wait like 10 minutes and then you can post okay okay let's see uh let me see what other questions we got here oh yeah there was also the photos

(1:58:35) of the people that looked similar I haven't really talked about that very much because it's kind of I know people call you racist if you say people look the same they did some of the people actually did look really the same posted on Facebook in like 2020 so there is some chance those people would have forced to live out their their days on Diego Garcia that would be pretty dark imagine the pass that live have to live on Diego Garcia for the rest of their life and never talk about it that'd be pretty weird we need to be kinder to

(1:59:00) each other so Amanda is my favorite follower uh she's been around since the very beginning pretty much when I had very few followers and she always has the big the nicest comment says we need to be kinder to each other online and in public uphold our family values and remember how important it is to become peaceful to Peaceful terms despite conflict totally agree um yeah mh37 Z woke up a lot of people according to skinny Bob absolutely um oops what are the government uh which which so which governments paid off the

(1:59:32) fam could be **China** could be Malaysia could be United States most likely United States would have paid them off um and yeah so people do find a lot of wacky videos and they want me to look at you know not wacky but videos of show anomalous events um but for me once you've seen these videos like nothing comes close close like you're never going to we're never going to probably get videos like this to have this much evidence to go along with them ever again and these videos are enough this is all we need to prove the science real

(2:00:01) the technology real and then after that maybe we can help explain why people are seeing you know floaty lights that are changing directions instantaneously in this guy um yeah I probably want to talk to more people about the beard and stuff I asked some of my back Channel people about Bearden apparently there's nobody else like Bearden Thomas Bearden was one of a kind apparently I wanted to find out if there's anybody else that knew about scal physics and stuff like that okay see here sorry I'm trying to skip ahead some

(2:00:35) of the comments publish a book if I lose my job I will write a book and I'll probably just take all the work that I've done and edit it a little bit and turn it into a book um just for the point of getting out there but I wouldn't surprise me if people refuse to publish it just because of the sensitive nature of it in general and the suppression you States government doesn't want a book like this going mainstream you have to realize the United States government is much more powerful than what people even imagine

(2:01:02) them to be yeah what a time to be alive I think about that a lot um the thing about it being a time to be alive is like if I were have chosen a Time if you were to say if I'm a soul and you're saying give me any time you want to be alive this would probably be the time I would pick the time in which we are a civilized society that is on the echelons of Star Trek level technology it's incredible I think it will come out in my lifetime I hope so um who Chef reactions I'm gonna have to probably look that person up oh I've

(2:01:47) already checked out Amy ESD I was like one of the people pushing Amy esdes most recent interview when you see Illuminati bot posting the Amy ESD video he's actually posting my video and I know because I'm the one who did the edits with the captions I probably should have put a little water tag in there um yeah the Greer stuff I mean overunity is real so doesn't mean that all these people that have free are showing free energy devices are real but some of them probably are almost almost certainly okay just for you Sandy Lou reviews

(2:02:24) called Jason SS Ashton Forbes 2.0 can we give him hell Lou Angeles whatever here's your shout out complete uh dude probably got too many too many boosters he wears a he drives a scooter and wears a helmet that's like three times too small um he got apparently like he was in with lu zando and then he had some falling out and now he's like a slighted person you find a lot of these people in the UFO Community are just losers that like they were in they were on the inside and then they got they got grifted and then they become spiteful

(2:02:57) hateful people and now they're just like permanent **debunker** people it's just both sides of UFO Community are just horrible man horrible people um let's see what else we got oh God I'm probably way far behind okay I think I explained all the Diego Garcia stuff anything else yeah already posted the VFX I I talked about the VFX thing go back earlier in the Stream you'll find me talk about that um I actually I talked about that quite a lot during this stream um there's one called taken and

(2:03:36) there's manifest and then there's also lost are all very similar to this I think there are strong arguments to be made that predictive programming is real uh especially Star Trek I mean Star Trek alone people argue that Gene Roddenberry had gotten inside information the bombs that already gone off and we are the mutants I think you could argue that we are the aliens as well that wouldn't surprise me I don't know exactly what the nature of our reality is why we're here wouldn't surprise me

(2:04:03) if we're on some kind of prison planet and we're being kept uh prison kept prisoners uh the retroality tests were not flawed uh it's funny because this kind of goes to show how YouTuber want to be physicists out there don't aren't really the experts they claim to be um I don't trust anybody that has Deb buk in the name of their video I looked at the retrocausality experiment and uh it I I logically speaking I can't figure out how it doesn't prove retrocausality um so and I've heard people's Arguments for

(2:04:35) how they've claimed it including sabrin whatever her name is the physicist and seemed like she misunderstood uh the situation um so uh yeah I I I do think that retrocausality is

probably proven to be true true but I just haven't wrapped my brain around it that's just my opinion though um let's see okay yeah I'm going to probably drop off here in a minute oh yeah I'm super far behind I'm gonna skip ahead here guys what is your view on Corbell and nap um I think that they have good intentions uh I think that if they

(2:05:13) didn't catch on to the MH370 videos and I I I highly question their uh intuition and their investiga uh research because all you have to do is look at the evidence and realize how overwhelming it is that's out there um I also think that Corbell is too married to the idea of aliens being the key theme of disclosure um so to me I think they're pretty suspect the fact that uh Corbell told Joe Rogan that he thought the videos were fake um pretty much shatters his credibility in my mind this is a guy that claims to be on Cosmic time that

(2:05:50) finds nonanomalous videos of floaty jellyfish things that aren't doing anything magical and then tells people oh there's another video but no you you can't see it uh that's the one where you see the thing going in the water and going up an outer space okay well show us that video you know Jeremy Corbell has never leaked anything even remotely even a fraction as compelling as the MH370 videos that's just the truth about Jeremy Corbell so if Joe Rogan listened to more people like me and less people

(2:06:21) like Jeremy Corbell we might get disclosure going a little bit quicker because we need people that actually know how science works not people that get super capacitors confused with superconductors um so and I think Jeremy Corbell has been on like Joe Rogan like six times which is honestly just an embarrassment for Joe Rogan um he needs to find people that like know what they're actually talking about when it comes to the science of uh how a UFO could float um because the reality is I think that what Jeremy Corbell is doing there

(2:06:51) is is not getting us closer to disclosure um okay so that's it um so the last thing guys I want to show here is I'm gonna take one more shot at James Fox uh so if James Fox had any credibility before he was interviewing dudes that were discredited talking about their aliens or what have you um this is going to be a nail in the coffin for him that is James Fox this show is called Chasing UFOs oh get the out of here that didn't just happen James come in James James James you copy what's going on James there's alien looking through

(2:07:45) the godamn window of the office right now there just was it's outside right now I unlike many people don't think this video is a mask a mask can't have blinking eyes and reflection in them it just can't so I'm leaving Colorado with a lot of unanswered questions really really James the MH370 videos are Faker than a \$3 bill but that's you I'll leave you guys on that one chat you decide who has credibility and who doesn't have credibility uh thank you guys very much for following tonight I

(2:08:23) appreciate you I'll play you out with that video one more time oh get the out of here that didn't just happen James come in James James James James you copy what's going on James there's an alien looking through the goddamn window of the office right now there just was it's outside right I unlike many people don't think this video is a mask a mask can't have blinking

eyes and reflection in them it just can't so I'm leaving Colorado with a lot of unanswered questions

Transcript:

(00:15) Legion 370 contact 12 [Music] 9 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] [Music] [Applause] [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed

(01:24) form and says now I am become death the destroyer of worlds [Music] [Music] oh wow I was muted that whole time I

(03:27) apologize okay well we're going to try that again thanks guys uh for being here apologize if you just jumped on station Jason Chris D Aaron cat can skinny Bob uh John hold UAP Zack lah uh Sandy Victor um JL Chadwell Vince from thought I think I got youil Joe Kathy D Aaron sham 6 anley whis Cipher Bernie nice to see you man nice to see you sorry I muted myself in the beginning apologize apologize um did we get everybody else so you guys just got a little bit extra DJ zero action I was just testing you guys see if you guys were here paying

(04:11) attention Annie William appreciate you uh thanks Professor Jay the interview with Tom uh was really good I I have to agree on that one um if you guys haven't checked out the interview of Tom mon talk I'm I'm probably going to take a clip and then and post the the YouTube link to it tomorrow tomorrow um definitely worth checking out uh thank you Sandy appreciate it super sticker I don't know what that means but thank you very much uh let's see TL Jack nice to see you there we go you guys can hear me now

(04:46) awesome okay I'm just we're letting a few people trickle in here thanks Z jalapeno for being here George I don't recall uh fod hello aliens yeah hello guys I'm all in on the uh future IC interdimensional mantids I feel like maybe that's the The Missing Link here um so yeah appreciate the the kind words as well uh Victor says liked watching the stream last night tonight's stream is not going to be about dunking on **debunkers** or anything like that uh I don't really like doing those streams uh

(05:20) I don't really like having to be a negative person in general but when you are disclosing uh free energy and warp travel and conspiracies big enough to be you know country versus country uh you got to go ahead and you got to use every weapon at your disposal uh you can't

back down at all to people um we have to learn from the people that tried to disclose this information in the past and not say make the same mistakes that they did um when we look at the Y Files episode today we're going to find out

(05:49) that a lot of people have been suppressed it's been really easy um cynicism is a big problem uh when people are very cynical then you find that it's impossible to disclose information they go well why don't you make one okay well here's one well that's nothing or then they go why isn't the government like uh you know why isn't talk about on CNN or you know they don't realize the government will make you sign a non-disclosure agreement or take your take your invention and and take away

(06:15) your Discovery from you uh it's it's pretty crazy so let's go ahead and get started uh first thing I want to do is cheers everyone as well thank you very much for being here appreciate you guys yeah so this is probably where I want to start here with Limitless as comment this is the most fascinating conspiracy out there I think I agree I think that's why it gets it resonates with people so much is that it's an incredible uh conspiracy um in terms of what's being hidden from us and we're talking about

(06:48) MH370 but also free energy uh today you know we talked about free energy so the thing about MH370 that's so compelling guys is not even though probably just the conspiracy angle alone is pushes it to one of the top conspiracies of all time the idea that a country would uh get involved and destroy a plane and then hide it but it's not it's not the top right we have done stuff like that before tww flight 800 highly speculated the United States government shot down the plane lied to the world about it

(07:19) they found a bunch of debris the difference with MH370 is we didn't find any plane the debris that washed up washed up in Africa but we've got satellite pings that indicate the plane should have crashed near Australia and no debris washed up in Australia we didn't find one body we didn't find one piece of luggage we find less than 1% of the debris in a location that's too far for it to have drifted in the time it was found it has questionable Barnacle growth on it that indicates it might not

(07:47) have been in the water as long as people think we should just probably think freely because when we realize and look at that evidence we go huh this plane can have crashed in the South Indian Ocean and we looked everywhere and we found nothing no black box is nothing in the South Indian Ocean The Logical conclusion should be something else happened to it maybe it crashed somewhere else or what have you but this is where the MH370 videos come in they're extremely detailed realistic we've got two videos both from

(08:16) military sources and we're able to find a guy that the timing says that he's the guy that **leaked** them and when you look at those videos we see the plane getting warped out of the sky using physics that could only make sense if it was already out there somewhere else someone had seen it and discovered it and suppressed it because it means the military's had it for potentially decades so the conspiracy leads to the videos which leads to this idea that we can

warp an object and if we can warp an object

(08:44) we're talking about science that is very Advanced and this is where we dug into then and we started digging through that science uh our buddy Dave rosi proposed the idea of a fourth orb and the idea of macroscopic phase conjugation that's pretty much all he said he never explained to me how it all worked he kind of gave me some thoughts in terms of how to think about it and then we started digging around then we find Thomas Bearden Thomas Bearden teaches us that scalar physics can do the exact thing that we need for macroscopic phase

(09:16) conjugation and then we find mixed wave interferometry and by looking at uh Optical phase conjugation and we find out it's a similar concept and it can use gravitational waves and this is how we find out Thomas Bearden and this leads to also free energy if you guys look at my earlier post about MH370 back in October read the letter to Congress I literally call out free energy in the letter to Congress this was before I even started looking into electrical engineering you can just tell that that's what a

(09:47) requirement is when you look at these videos in order to be able to warp an object we basically need access to unlimited energy um and it turns out that sure enough there are free energy devices out there actually of many different kinds over Unity coefficient of performance greater than one but now there's two different things going on and this is where I want to start by clarifying something for the people out there that think they're going to **debunk** me first of all I welcome uh any **debunk** attempts

(10:10) into free energy and what have you we are going to violate uh the law of conservation of energy we are going to violate that law we're going to have to rewrite it and we're going to have to add an energy to it uh negative energy essentially uh that we can get a limited amount from uh from the vacuum uh from The Ether now they call it part uh you know um virtual particles is what they say oh we've got virtual particles well another way to look at is we've got an ether of unlimited uh energy that we can tap into

(10:42) like an like we're tapping into oil but it just is an infinite amount all around us all the time and we are going to cheat the laws of thermodynamics that say that you can't get more energy out of a system that you put in and we're going to cheat that too remember we've been talking about it came from Dave Rossy watch hard **truths** number three I think it was open our system up like Pac-Man's mouth open it up open the system up to the energy all around us all the time there is enough energy in this martini right here to

(11:12) vaporize all the oceans on the face of the Earth cheers if anyone out there doesn't like what I'm saying it can prove it wrong go for it go for it I'm challenging you and yes I understand that making statements like this is not proof technically no uh the confidence comes from the fact that I know it's real and I know that it won't be able to be disproven and that the phys the physical equations are going to have to be Rewritten um so we are going to be violating a little bit but we're not

(11:48) going to necessarily violate general relativity we can bend SpaceTime and you may say well if we can communicate faster than the speed of light then you're going to violate causality maybe maybe not what if time dilation corrects for it I'd be curious if someone can prove that's potentially wrong or maybe we are maybe it's like I talked about Tom mon talk yesterday and maybe it's deterministic time Loop just a Time Loop where you anything was ever changed in the past was always changed or maybe

(12:18) there's multiple loops and they're all interacting with one another at different points and you can have something like the Mandela effect happen maybe I don't know what I do know is that we are going to be able to get access to free energy and that's what we're going to be talking about here tonight so we need to see the plane field very clearly and the plane field if we watch the yfiles episode is interesting it means there's a lot of suppression a lot of people getting disappeared um the government actually I

(12:44) think one of the key points was the law that the government put into place that said that they can take anybody's invention anytime they want in the interest of National Security and um that resonated particularly with me because I've been told that the inertial mass reduction is what's been kept hit it and if you think about that that is anti-gravity that is Star Trek that's that's warp drive and what we also learned from the yfiles episode is that free energy is anti-gravity when you start to produce over Unity you also it

(13:18) comes from the exact same basis for science as gravity manipulation does at least and there's several different ways to perform anti-gravity anti-gravity is just a force that you know um uh let's say uh goes contrary to the force of gravity which is you know we're going down all the time as time moves forward so if you're a **redditor** out there **I want you** to go ahead and close your eyes and avert avert your eyes and close your ears uh plug your ears because you're going to get triggered today if you are a **debunker** or what have

(13:49) you and that's totally fine you know that's that's the world we live in here today uh not everybody's going to come with us to Star Trek age we're just going to take the people that uh do understand that this Technologies out there as real and as possible um I'm I'm an investigator so I'm not a scientist although I am learning I think that if you want to be able to investigate something you have to learn about it so being an investigator is part understanding the stuff that you

(14:16) are investigating but is also being a history buff where you are going back through the history of something so that you can understand where it all came from and that's what we're doing and it's also about building a story that makes sense this is what we did in MH370 investigation MH370 investigation led us to the potential of uh scalar physics and led us to Thomas Bearden which has also led us back to free energy once again and how to explain free energy and why it's been suppressed for so

(14:45) long uh Tesla was right all the textbooks in the United States are wrong crazy to say that it doesn't take us rewriting all the laws we just need to rewrite the law of conservation of energy

um and we just need to understand the laws of physics a little bit differently and once we understand this we will achieve unification theories of general relativity and Quantum field Theory uh we will be able to get over Unity we will be able to get free energy as we understand it a device that when I talk about free energy a device that will

(15:17) just perpetually run and produce energy for say an entire house that can be you know probably I don't know for a fact but probably like the size of a wallet very small very small device um and why is this scary because that means Fallout was right Fallout was right we're probably going to destroy ourselves pretty much inevitable just not going to be nuclear weapons it's going to be something much much much more dangerous than that um so this is in my opinion also the answer to ufology Is that there is an ether uh

(15:47) there is free energy possible through that ether that ether actually helps us understand why our physics equations are wrong it goes back to Maxwell and after they rewrote his equations uh it pretty much ruined everything and that's why we're stuck in this world right now we're in where we don't realize that we have access to unlimited energy anytime we want gravity manipulation and therefore SpaceTime manipulation as well so cheers to that uh so we're bringing The Ether back if you had said the word ether in let's

(16:20) say even the 70s or 80s people probably look at you like you're in the woo like oh do you are s into divining crystals and stuff like that sure whatever not anymore now I think we're at a point where we can bring ether back ether is cool it's a cool word I like it I think it helps describe the underlining framework and fabric of reality like the canvas that the artist is going to paint on uh because it makes sense it's true nothingness but it's not that it's nothingness it's the opposite of what we

(16:45) have and energy negative energy that's exactly the thing we need to stabilize our equations to not be able to break them it also helps us with this idea of symmetry which we see in physics all the time equal and opposite reaction we have energy we must negative energy we have mass we need negative Mass uh so that's the reason why I personally like it um and again I'm happy to be proven wrong if that's not the case but uh there's already as we're going to look at to here a huge body of

(17:12) evidence that's been out there for a long time including patents that will you know prove that this type of technology is possible my goal here as a high technology influencer if you want to call me that sure I don't care is to make sure that this technology does not get suppressed that's my goal people are definitely suppressing this they might be silencing people and people don't potentially have the same benefit that I do in terms of having a huge following where if I go missing it's very sketchy

(17:41) you know other people that are doing this in their garage they go missing No One's Gonna ever know no one's gonna ever know so I'm not going to be the person who's going to invent it I'm just going to be the person who's going to expose it that's my goal um this Tech could make endless money yeah it's true they are capitalizing on it that's the answer so if you

guys look through my replies one thing you'll find as well is that people say well why not build it and I just

(18:05) said in response how much would you pay how much would you pay for a free energy device that can run the power of your house how much money do you have in your wallet you know how much would you pay for that would you pay 50 or \$100,000 uh can I do polls in here Dam I wish I could do polls in here I want to know if somebody if I could if I charge you uh give me ones in the chat if you would pay \$50,000 for a free energy device that would run all the power in your house all the time and you never had to pay a

(18:33) phone bill again one in the chat if you would pay two in the chat if you would not pay \$50,000 for a free energy device portable generator runs forever charges your own home I think the reason why this is important to understand is you are a one or a two on this is that you need to understand that the economics comes into play economics how much money do you have and how much are you willing to pay for a device like this people are profiting off them and if you know how to make one uh what if you get an NDA the moment you

(19:02) make one and try to sell it becomes public to the government and the moment you try to go on TV within show it you're going to get everybody saying that you're a cheater you're a fraud and you're G to have the imedia either not cover it or they're going to cover you in a negative slant and they're going to make you look like a crackpot why would I do that I'd rather just sell it for the 50,000 to people out there and make the money um pretty scary though but just copy one's not it's not as easy as

(19:25) copying it there's that's the thing the reason why it cost \$50,000 because it's the raw materials to make it's not like you can just make it with anything I can't just make it with my vodka Shaker you got to have the materials that are required uh you know and this is the this is the rub that people don't realize so people wonder why why have people not produced it why have we not been able to prove these results in a lab because all the best labs are private Labs by the big defense contractors they're all special access

(19:58) programs and when you have this kind of situation then you sign ndas you cannot disclose any of that information you go to prison become Bob Lazar if you really do if you do come out there and you say it and you become Persona nonr so this is what's potentially holding us back do you ever notice like we don't have any major scientific Revelations coming out of the United States have you noticed that have you noticed that a lot of the stuff that comes out of the United States comes out from the Department of energy on their

(20:25) Twitter profile with all the the things that they fund and this is what I think people need to realize about it is that the United States government controls the technology release of technology in this country and this is why Thomas beon talks about looking at the Russian uh literature is that they may control it as well but they potentially don't have the same levels of suppression that we do or the same setup that we do maybe they don't have the same defense contractors that we do um and we also this is why we're seeing stuff like lk99

(20:57) coming out of Korea and China you guys don't think we have room temperature superconductive meta materials no it's just locked up in Lockheed Martin and uh Bigelow Aerospace and SAIC and North of Grumman and all these people and they control it why would they why would they lease it leak it or Let It Go the thing about Fallout the reason why I say we're like Fallout it's not that we're going to destroy ourselves with nuclear weapons it's that large companies and conglomerates have access to information they're monetizing

(21:22) it the way that they want to like a business as opposed to the way that society would want it in terms of it being free where everyone can have free source and free flow of information this is what makes it so that they leak out what they want now one example from Fallout in this is that um spoiler alert guys spoiler if you don't want to know spoilers with Fallout pause it right here and Skip ahead about one minute okay you've had your chance so in Fallout part of the uh idea and appeal is that the government has stolen free

(21:51) energy and that they are hiding it and that uh in the reason why they didn't promote is because they don't make any money off of it how do you make money off of free energy how do you make money out of Open Source information for free energy How does the energy industry make money if you have free energy you don't you don't make any money off of it you don't have any control if you control the the energy market then you control the world in essence energy is the source of everything uh yeah don't patent it or

(22:20) you dead honestly I would argue the opposite you should patent it do patent it that's what Salvatore Piest did the only way it gets out there is this patent nobody's listening to your opinions about your device unless you patent it and you get it out there so people can see it It's Tricky uh so if you patent and get it out this is what Salvatore Piest argues that he did is he put the information out there so that people could patent it or so that the so that corporations could not patent and save it for themselves

(22:46) and hoard it and as long as SAAS lives up to his name and allows people to use those patents then I think that's very noble cause because now nobody can come back in the future in like 2030 and say can't have North of Grumman say sorry we control the patent to you know uh Pisto Electric and do superconductivity or a compression Fusion device because no Salvador P has it on paper that he invented it already Ahead of that so it's interesting and we did learn in the Wifes episode as well that uh patents can easily be taken over by

(23:19) the government easily um so this is something again as well where it's like how did Salvatore Piest's patents even get out there was it a mistake did somebody have a loophole and he got him out there did somebody Step Up are they're warring factions in the government some of them want the information to get out there and people would say oh well those patents are disinformation they are what's the term that people use limited hangout it's kind of a stupid term uh then go ahead and prove it show that it's not possible

(23:48) you know it's the same thing that you're asking of the other people so if it's wrong and it's a fake so what doesn't harm anybody if it's real then those patents are have the ability to

change our entire entire civilization and then we have to understand why those patents are possible and that's what we're going to be going through here tonight okay so cheers once again uh looking at some of the comments in the chat in Fallout they blocked peace talks so that they could sell shelters that's

(24:25) the whole point of the fallouts how do fallouts make any how do shelters make any money bomb shelters for a company unless you have War uh and why is that important to think about right now well if you look at my most recent post on Twitter uh before this you will see that the uh we have people a congressman in Congress waving Ukrainian flags for sending money over to Ukraine and sending money to Israel for proxy wars that we should have no business being involved in because money is racket Wars are not meant to be one they're meant to be

(25:01) Perpetual persistent never ending and that's exactly what's going on and the reason why that's so awkward regardless of which type of which side you're on in fact I'm gonna show this video I can't believe I wasn't going to show it actually now because just my god um because I think people need to see how phony everything in our world is that's out there also man followers guys love you guys uh I love that everybody's kind of following along with this if you are on uh X consider coming over to YouTube uh

(25:36) it's I can't reply to messages and X if you want to watch and be a little bit more intimate and watch the whole chat go off people are popping off over on the YouTube side uh go you're not gonna have sound for this particular one but you guys don't need it you you know what the sound of people cheering okay here we go okay miniature Ukrainian flags and it's not just that like you know one or two people brought them they clearly handed them out to everybody and some people are like n I'm good without it because

(26:19) it's the cheesiest thing ever miniature Ukrainian flags for everyone upon celebrating that we're giving more money to Ukraine and a war that they never had any chances they could win it's literally like if if imagine this video but instead of this you've got **Russia** and **Russians** um and they are waving Texas flags for allowing Texas to fight against the United States and break free how silly would that seem **Russians** waving Texas Flags to break away from the United States now granted some people probably approve of it but for

(27:00) the people that find that thought offensive imagine what this looks like to like ethnic **Russians** that are in the donos OR Crimea regions this is just a war that we should not be involved in it's a war over land over the old Soviet Union the USSR and it's a proxy war That's What It Is by default and the worst part is we're disclosing technology that makes all wars obsolete uh both warping objects sending nukes back on people annihilating nukes as well as free energy free energy is like what are we fighting over

(27:34) exactly we don't like that politician or this politician guys the reason why they don't take the politicians that are in office out is because then they're just going to get worse people in it's not like we're going to just take over the world make everybody American we're make all the

Chinese people American North Korean people American just not that simple and you take out one of their people it's like it doesn't do anything you know there and I would almost guarantee that there's back door

(27:59) channels between all the politicians that pretend like they're Waring on the front end um and **Russia**'s never going to take over all of Ukraine either and even if they do so what let those let them their people figure it out man okay so let's dig into the fun stuff now okay so I want to differentiate between two concepts first of all uh let's go [Music] to let's start with uh uh I should think I want to go back to that I want to start with the how po off from the wi files we'll look at more wi

(28:40) file stuff but I only clipped one for now there's at least three amazing segments from this oh you're not gonna be to hear this uh let me switch this around hold on good news guys I did actually go ahead and save this the file for this so you guys can actually listen called empty space isn't really empty at all it's actually full of energy so instead of being like kind of a quiet empty Lake it's more like the froth at the base of a waterfall or something yeah so empty space is not empty and this is what people are saying

(29:11) right now as physicists are saying oh well there's virtual particles and the virtual particles pop in sky space okay well here's a simple answer there's an ether and we have unlimited energy and access to it but when you go to look at the numbers you find out that there's enough energy in the volume of a coffee cup to evaporate all the worlds oce if you could get it all of it enough energy to boil and evaporate all the oceans on Earth from a coffee cup of empty space this energy is called Zero Point

(29:40) Energy yeah so and this is the idea if we tap into The Ether we have unlimited essentially so there's two concepts that go on though coefficient of performance greater than one is that we have our system and we open it up to the you know uh space time itself and now we can produce coefficient greater than uh greater than one the way this is I would equate this to is the idea of uh fusion power in terms of the tomahawks and the sun when we look at the sun is that the sun is producing what seems to be nearly

(30:10) an unlimited amount of energy that's going on due to the gravitational forces and their interactions that are happening um but really it's just converting um matter into energy by fusion power now the other way to look at it is the idea of just straight up free energy two different concepts we got going on one is splitting uh spinning plasma through magnetic fields extremely powerful magnetic fields that's going to be our fusion power we've got going on and then the idea of free energy is that you are tapping into

(30:37) the well and the well is just unlimited energy negative energy uh so we have two different concepts that go on so when we show later on here this uh post that I think is getting pretty huge out there where we are looking at the electrical currents spinning around here we are looking at Fusion on a small scale low energy reactions I believe would be the correct uh explanation for that type of interaction um just so that people don't get confused between the

two two concepts they are potentially have a relationship between them and are linked

(31:10) um but it doesn't necessarily require one both of them to be true no I do think they both of them are true though by the way and it's generated from the zero point field Nicola Tesla Nicholai kerev and other scientists called this field The Ether the E yes we're bring bring the ether back ether is a field in which everything exists but it exists in a dimension that our brains can't perceive particles blinking in and out of existence have to be coming from and going somewhere that place is The Ether

(31:42) the base layer of reality but even though we can't see it this layer can be disrupted with electromagnetism Tesla famously said if you want to find the secrets of the universe think in terms of energy frequency and vibration soal Kaboom so there we go energy frequency and vibration I I left a Tesla quote in there at the end because Tesla was right we do have an ether we do need to be thinking of energy frequency and vibration in terms of how everything works for the most part there's not a link between everything in the universe

(32:15) but there's definitely a link between the idea of having an ether unlimited energy free energy um and also the idea of faster and light communication and faster light travel for how we got here from warping something is that we need the ability to move faster than the speed of light that means that our reality has to be a medium in of itself and that means that we are experiencing a refraction of light through the medium that we're seeing and if we remove that now speed of light can increase uh and go faster than what we perceive and then

(32:45) this opens the door to a bunch of questions of course about time travel specifically um but that's what we need to understand as the basic Point here now let's now take a look real quick at this device that we're looking at here and I'll go ahead and say once again that this is you know I am a influencer uh technically and officially so if I am somehow wrong about this I open myself up to criticism on it uh but I am fairly confident here that this is fundamentally the equivalent of what Bob Greener has been

(33:19) looking into with respect to the thunderstorm generator and other low energy nuclear reactions that are occurring is that we don't need people ask well you know how can this equate to a particle collider that has you know 20 miles around or whatever they are however big they are huge right and the answer is because you can scale stuff down you can get the same reactions on a smaller scale uh and that's what people out there in the field are figuring out is they're figuring out the Core Concepts and then they're creating other

(33:48) similar devices that can produce the same reactions but on a smaller scale and I think that's what we're seeing with the thunderstorm generator as well um when we watch some of the wif's clips I think it will explain there was actually a part in it I don't know if we're going to get to it tonight that actually goes over the exact concept of the thunderstorm generator with an engine that somebody made a really uh fuel efficient engine that that was out there oh so you can't hear this I'll

(34:16) I'll go ahead and say what he's saying he's just commentating because some people want to know exactly what's happening here I think it says 220 volts DC of 240 Vol 240 volts DC and then he does I uh so 240 volts DC and then you can see the pattern here so when you look at this pattern here you see it as a smooth smooth consistent pattern uh and that's what he's pointing out here um I may not know all the engineering Concepts that are going on but this is what he's pointing out he's pointing out

(34:59) the difference I think he says DC but I only have one headphones thing in here and if I'm saying that wrong please let me know 240 volts look at the pattern so here's AC alternating current look at the pattern difference here this one looks like the water is being funneled down through the tube this is the difference in what he's talking about here so so theoretically I think what he's explaining here is at the center here you're seeing um this Fusion effect and people say well you can't do it on this scale

(35:38) but look at sonal luminescence as well um I think that there's several ways that we can do it on smaller scales um also this doesn't this look like the Pyromania VFX Edge as well I think this shows as well that this kind of edge where you have stuff coming off of it is a very common um pattern uh when it comes to electromagnetic forces uh and somebody in the chat L uh I've never said your name right lay lay uh says how where does Element 115 uh fall into all this answers I don't know I don't know where Element 115

(36:16) falls into all this um that's a Bob Lazar claim uh what I watched Michael Peron on the alien scientist and he was arguing that you can use gamma rays to potentially achieve a stable form of element 115 theoretically I don't think it have been proven um but the idea I think would be that you could use it as a fuel source um because it's such a heavy element but what we are talking about I think obsoletes all that we don't need any of that um we can tap into the underlying framework of reality

(36:48) itself and Achieve unlimited negative energy and then the question comes into play is how much energy does it really take to warp an object I think Jax are body based on his equations and his s force uh I think it's a his s force equation H he would say that it's a variable that the variable shows that we need a very small amount of energy I think it's a variable um small amount of energy in order to be able to warp an object but then from the Salvador Pi side he's more of the side that we don't

(37:20) need a small or we can produce we need a lot but we can produce almost infinite so the question there is which one of them is right I don't know at the moment we'll find out more as we go along okay yeah he said it's VFX get him get him um time crystals I have to look more into when people say time crystals like I think they think in their mind like a crystal that's going to push time back but I think more it's more of the idea of like having certain structures where you can allow for superc

(37:48) conductivity to flow freely or it could be the idea where like time can get Frozen in super position not sure though may have to look into that in the in the later time um let's switch over

here Nicolo Tesla generates I don't even know how much of that is guys a lot 10 10 million I think 10 million so yeah the idea that we can generate a huge amount of energy basically from nothing moscovium is a form of bismuth I don't know that is that true chat Guys somebody fact checked that Joe and I are the schmuck Brothers

(38:28) yeah if you're not the schmuck Factor the schmuck Factor was hilarious Tom Monto uh just real quick everybody out there who's watching if you have not checked out Tom Monto feel free to do so um on the YouTube channel you can watch the live stream I will re-upload it although I don't think I need to do much editing on it I'm going to spend tomorrow doing a lot of editing on some of the past previous streams okay let's get to the next post which is anti-gravity unlocked now there was an article I was

(38:58) actually a little late on the uptick this morning that had been passing around people linked to it to me I think maybe even last night uh about Dr Charles buer who is a NASA engineer I've seen his presentation I think it was with Tim ventur I think he did a past one or may I think it was on a past Apec uh and I went and watched that and I thought um he's definitely like on it he's he's researching anti-gravity but my true opinion was that I didn't think he was on to the type of anti-gravity

(39:28) that will break SpaceTime itself he was more looking for stuff like the bfield brown effect the idea that uh and the Casmir effect the idea that we can get you know maybe if we put plates together the right way we can get a upwards force and uh this article came out and a bunch of people linked me on it from the debrief let me go ahead and share again and I will go ahead and just read the quote off I went through it you guys can look through yourself I think the two most important quotes from it were that the NASA engineer and co-founder of

(40:00) Exodus propulsion Technologies has revealed that his company's propellantless propulsion device which appears to defy the known laws of physics has produced enough thrust to counteract the Earth's gravity that's a lot that's a lot of thrust that means you have enough thrust and you can make a little saucer a hoverboard or you can make you know if you can do a little bit more than that you can make an object that can go into outer space that's impressive this discovery of a new fundamental or new force is fundamental

(40:30) in that electric Fields alone can generate substantial Force onto an object and allow Center of mass translation of set object without expelling mass so they're basically just saying yeah we're getting energy out of nowhere we are producing the a Thrust that cannot be described by just the amount of energy we that we're putting into it and this is essentially the EM drive this is something that been proposed and out there for I want to say over a decade uh if I had to guess and it was kind of **debunk** they

(41:05) were actually going to put one of these in outer space and test it and then when they tested it uh there was like some kind of air like it blew up or something before they got to test it fully not suspicious at all uh so I was already thinking the EM Drive might be legit even years ago so imagine my surprise when I was looking uh into Professor Simon Howl's work how this

doesn't link correctly oh what you guys should have told me this I want this link to be better well whatever when I was looking into his

(41:46) work and I found that he had had a source that told him that faster than light communication was possible and with faster and light communication being possible I dug into his claims about uh the science behind it which led me to Gunter Nimitz Gunter Nimitz had developed an experiment where he had shown that fast light communication did seem to be possible as impossible as it sounds and his experiment was actually he didn't show up in 2006 to a presentation to demonstrate his experiment just didn't show up it's a

(42:17) repeated Trend apparently in this line of work and it had been forgotten for decades or you over a decade and then in 2019 some people in a physics uh contest in Germany went ahead and proved that it was real just uses two prisms and what happens is the laser when it gets through one end of the prism it instantly shows up on the other side instantly faster than light just like that so I find out about something called evanescent modes and evanescent wave guides evanescent waves do not propagate energy and Decay exponentially

(42:52) as they travel from their Source it does sound like somebody just made something up to explain what they were seeing so if this ends up being corrected don't be too surprised uh it's unclear whether or not this type of fast light communication or trans transfer of information violates causality with arguments on both sides if you guys dig into evanescent waves you'll find these same arguments there's people heated on one side saying that it does violate causality other people saying no it doesn't and this is the

(43:19) part where you have to figure out what is the idea of time travel and what does it really mean does time uh time dilation correct for it so you automatically show up in the future if you violate the speed of light not sure only the future can tell us the answer to that one um but it was recreated and shown that yes they tested tunneling with electrons with a prediction that they would show up in 500 to 600 attoseconds but it was ended up being measured in 24 attoseconds section at a seconds supporting that the particles were tunneling zero

(43:52) real time that means from one prism to the other instantly showing up in the second one so then I was Googling around doing research and this was back in February so actually a month ago or two months ago almost exactly and I came across a subreddit small subreddit a small subreddit seems to be okay where every once in every once in a while you find some genius in these small subreddits who's just popping off and it's like you find a diamond in the rough and you're like this guy knows what's going on

(44:28) and I found a post is the EM drive a negative energy evanescent wave Thruster I thought whoa that's weird I was just reading about evanescent waves in the faster like communication explanation from country Nimitz so I started digging into it and the poster was the user knew like everything like I think I have a link down here I do here it is let's take a look at it and so I start digging into the comments first of all they have a lot of sources here and I read through a lot of these sources and they present the idea

(45:02) that this could be correct um and then somebody I wonder if they're still here they deleted their name no that might not be the right person yeah so I think I think this was the person the op I think was the one who was arguing and people come in and say no can't be real what have you um and they come in with their debunking points but the reality is it's not as clearcut as it is as it may seem um and this person comes back and they kind of present a lot of arguments if you guys want to read through this

(45:35) highly recommend it and a lot of support scientific papers that it can be possible um and this is what I like because I like when you have these conversations it helps us understand and get to the truth without necessarily suppression underneath it so I'm not going to dig through all the comments and quotes but I spent one night few months ago reading through like every single one I came out convinced that em drive seemed like it could be possible and it seemed like it could be based on the same science that supports faster

(46:01) and light communication to me now two months later the missing link between all this is the idea of an ether the idea that we have an underlying framework to our reality that has potential for unlimited negative energy and once you find that out then the EM Drive is basically a trivial application of this uh and the only question to me is how much force can you generate with it you can probably get to a point where you can get to huge amounts of forces but you're going to need to engineer the heck out of that thing you're going to

(46:28) move that thing to a point where you where it's extremely efficient and I think well we fine is there's even simpler answers like using the unlimited energy to instead just bend SpaceTime entirely as opposed to this would be the equivalent of a Star Trek impulse Drive let's call it that where it's like I don't want to go the speed of light I don't want to zap myself super far away I just want to you know come in for a landing that's why you would use something like this um let's read this quote I don't

(46:57) even remember this quote but the dielectric function is negative in the case of an evanescent mode this means that energy of the evanescent mode is negative in the impedance of is pure imaginary as I mentioned you cannot measure it it is the same you like you cannot measure a particle inside of a tunneling a barrier in quantum mechanics so this I thought this was an interesting quote especially because it then kind of links to the idea of negative energy which is stuck behind this imaginary not imagin but this um

(47:29) virtual framework that we can't see directly um so pretty interesting that we have potential support now um from Charles Bueller that this em Drive might be real because I think that it will be uh pretty very uh crucial in terms of understanding the idea of unlimited energy um so we showed that okay I think we're almost ready for the wi files thing guys yeah yeah now the last thing I guess I'll show is this uh we're going to come back to this at the end so we're going to do if you guys want to stay we're going

(48:05) to stick with the science here for now at the end we're going to come back to uh the MH370 video here because uh we might do a little bit of editing but I'll definitely show you what

I mean with respect to why this video is so awesome so let's skip back from this oops close let's break out the w Files video if you guys have not checked out the Y files first real quick please check them out uh subscribe to them I'm GNA hope that we're not going to get copyright strike here for this but

(48:40) whatever we do it doesn't really matter I'm not really not gonna uh you know quibble about it the whole point of this is trying to get the uh you know information out there to everybody but I just just get give them a shout out we are going to be supporting them so awesome okay this episode of the wi files is brought to you by rocket money gave him a little shout out to free promotional advertisement um let me get my notes up here so this episode of yfiles as a summary goes through the idea of whether

(49:16) or not free energy can be possible the suppression of it uh other devices as well such as um Stanley Meers uh hydrogen water water engine talks about a product that's very similar as well to the thunderstorm generator that existed in the past um there are shout outs in this to several people uh he shouts out the first one let's see is probably how P off and I posted that clip that's out there we also see a brief shout out to Tesla but we also see a shout out to Thomas Bearden during this as well so there

(49:56) were a lot of connection oh and Salvador Pas so Hal POF um Thomas Bearden and Salvador pias that's quite the combo man if you are trying to reach out to me and uh you know be on my team those are the people that I want on my squad those are the people that are talking about the exact same stuff that I'm talking about uh so pretty incredible this is why I got pretty excited when I was watching this here today uh is that when we dig in into this here in just a second all the people that we've been investigating

(50:31) researching saying that are legit all are getting shout outs in this um and I think that okay if you want my my quick take on these people um because some people are going to say oh well these people are disinfo or controlled opposition or discredited or whatever how PUD off oh he believes in remote viewing and what have you so what so what if there's an ether I can understand why you would believe in that this is why a lot of scientist when you see magic then you start to wonder what other magic is possible um I think that his Concepts on

(51:02) Zero Point Energy from what I've read are on the money we looked at his Wikipedia page in the past seems like the **debunkers** were trying to falsely discredit him by quotes from biologists were sitting there trying to talk about electrical engineering and physics uh that's nonsense H then um Thomas Bearden I think I have like the utmost respect for for me Thomas Bearden is probably one of the most important Engineers of the late 19 00s he's up there I think with uh Thomas Thomson Brown and probably predates

(51:32) Thomas Thomson Brown by a little bit but he's way up there and then Salvador pz um somebody that I'm in direct contact with that I've done two interviews with uh absolutely convinced that his patents are real I do agree and think that the you know the secret sauce is missing from the patents he doesn't go into exact numbers to produce the exact effects that

he's talking about instead it's more of a frame work for here's how you can do it and that actually gives more credit to his idea that he is

(52:02) saving those pads from being able to be patented by thirdparty contractors because this gives you enough wiggle room where you can say okay I'm going to use that to create some other product that's similar but it doesn't let people own the underlying framework of the concept smart I hope that's why he was doing it I think it is from talking to him several times uh so let's get into this I think we're going to start with the patent secret patent Secret secy laws in the 1950s and 60s and right before we do that yeah

(52:32) let's I'll post a link for you guys for the wi files I mean they don't really need my support they've already got what 3.6 million followers and the amount of views that each of their stuff gets is millions this one's only one day old already has a million views so they don't really need my support but I love AJ I think i' I've liked his stuff since I saw his crop circles piece um I don't know how to pin stuff so if ah mod can pin that to the top I appreciate it appreciate you guys

(53:08) let me eat a olive and we'll get going here so uh Gooby good to have you here if there's a lower equilibrium energy state of the quantum vacuum then the entire universe could be destroyed by the sudden release of this energy from its current state yeah but we've been around for a long time and it's the same reason why I don't worry about the sun exploding sure Sun could explode and wipe us all out we wouldn't really know we don't have an exact uh understanding of it we think that it's going to last

(53:49) for billions more years um but I think that just as easily as our our universe could be destroyed it could be recreated uh and if time is an illusion then what does time even mean anyway yep wi files is great appreciate you guys also happy 420 to my marucha uh injectors out there I hope you guys are enjoying your 420 uh and I hope that if you are watching this right now you are you are enjoying it and we're definitely talking about high science so uh hope you appreciate it uh yeah if you on YouTube as well go

(54:26) ahead give us a like uh give us a subscribe if you're on YouTube um that does help me out in case I do end up losing my job over this or get disappeared or whatever you know um so I appreciate that let's go ahead and start this up I'm GNA skip ahead so the first five or six minutes are pretty much just um he does an endorsement which is fine but we're not going to replay it the concept of patents can be traced back to ancient times but the formal patent system that we know today came from Renaissance Europe the first known

(55:03) patent law was enacted in Venice in 1474 and it was a revolutionary idea designed to encourage Innovation it offered inventors a temporary Monopoly in exchange for sharing their inventions with Society but some inventions are legally patented and hidden from society yeah so right off the bat what even is a patent why do patents even exist patent is that I can say I I made this therefore I have the rights to it if you have the rights to it then you can profit off of it and so that seems like a good thing right I mean if you

(55:35) want to make something you should be the one who should be able to make money off of it so patents will expire when patents expire then anybody can make it anybody can make money off of it as far as I know and I haven't confirmed this uh perpetual motion devices cannot be patented that's pretty unusual why wouldn't be able to be patented shouldn't everything be able to be patented it's almost like the government knows that it's possible and yet they therefore they don't want anyone to be

(55:59) able to patent it because they know it would become a [REDACTED] show if everybody's claiming that they've got free energy devices out there so um and I do think that there's a lot that are out there and they probably aren't all produced the same way and so if you can't patent it then what do you do okay and that's the case you just quietly sell them to people and you make those people sign an NDA so that they cannot profit off of your invention and because the NDA basically says if you show this to

(56:25) anybody then I'm going to sue you or if you sell this to anybody then I sue you and I take all your money that you made from it interesting right in 1951 oh real quick I just see I don't want to forget this I will show share an invite link right now to the Discord before I forget which I will forget if I don't uh this will only last for one day so if you're watching this tomorrow may not work first 25 people that want to join there's your link you got to be watching YouTube uh YouTube link has been posted

(57:02) there you go the United States passed the invention secrecy act this allows the US government to keep certain Technologies and inventions secret legally if they decide something threatens the country's economy or security it's stamped with a secrecy order and classified well great okay so we just passed a law in the 50s and when I don't even remember what year exactly was that I need get the exact here hold on in exchange for sharing their inventions with Society but some inventions are legally patented and

(57:36) hidden from society in 1951 the 1951 so let's just do the rundown Philadelphia Experiment happens in 1943 the bombs drop we drop the a bomb in 1945 1947 Roswell happens the CIA gets formed and I think the Air Force correct me if I'm wrong there chat I think the Air Force and the CIA get formed in 1947 and then in 1951 we make it so that we control all the patents any patent that we want out there United States government can just take control of it if they think it's too much of a national security risk hey

(58:14) yoga nice to see you as well so that's pretty wild so the timeline there is like okay it almost feels like the government knows we figured out something huge and now from a military perspective we need to be able to control it imagine if we've had this technology for over 70 years and that we've been manipulating this technology for that long I don't know for a fact that that's the case wouldn't surprise me part of the thing part of the reason why when we look at the MH370 videos a little bit later again and

(58:45) we'll look at the the black and white one is it tells us not just about secret information has been kept that kept suppressed from us and secret technology has been suppressed and the

conspir the angle it gives us a time frame for how long as well we're not just looking at radar dishes shooting up at a plane wiping it out or zapping it we're looking at floating balls of energy and plasma circling around the plane in a zero point system this is more sophisticated than I just figured it out last week and now I'm going to put it

(59:18) together this is like you're making it more and more complex or more and more advanced miniaturized um adding mult mle different functions to it this is the part where I realized right away this is this has been around for a little while we're not we're not dealing with something we just figured out yesterday um and that's when you dig into the history of it that's what I think that y files does a good job of here um let's look at where did I have it okay we're going to skip ahead a

(59:49) little bit he talks about some of the earlier inventures here after this of various devices that have been suppressed um I found this this extremely Illuminating I think that a lot of the devices and inventors people have talked about in the past they've talked had what asked me to uh kind of look into and research and I find a lot of credibility with quite a bit of them I don't think I agree with everything later near the end of this he actually quotes uh Rick Dodie and I don't really trust Rick Dodie personally um because

(1:00:18) he speaks a little too freely about information it doesn't seem like he be privy to specifically I'm talking about the idea of when people talk about aliens and how many races of aliens are and what they're like and stuff like that I just don't believe them I I don't think that they've met 56 races of aliens I think that they're at best reading information that they read secondhand um as opposed to science and hard science where we can actually prove the concepts are consistent with the

(1:00:44) laws of physics which is what we've been doing or in some cases boldly claiming the laws of physics need to be Rewritten entirely and that's what I've said about conservation of energy uh Thomas Bearden presented that we needed this idea of an energy and we'll dig into that here in just a second if I forget remind me but if we add an energy to our equation then we can uh cheat the laws of conservation of energy or rewrite them fundamentally okay let's look at 1845 here this is where Hal POF jumps in

(1:01:22) actually I think I already played the Hal POF part but I'm probably gonna just play it again Stan's engine didn't waste energy at all it created it but that also violates the first law of thermodynamics the conservation of energy that states that energy cannot be created or destroyed but what if those laws are completely misunderstood that with the right technology the laws of thermodynamics don't have to apply at all mainstream science doesn't like that idea mainstream science can go pound

(1:01:55) Well turns out that Stan water car was his least important invention that donnut shaped device was another invention that created energy and the reason it was classified well it didn't run on gas it didn't run on water it ran on nothing baboom Ran So Stanley Meyer didn't just have a car that ran on water he had a donut shaped device the doughnut shape is Art toroid

and if we were listening to Tom monok yesterday when you make a doughnut with the Electrical uh wire ringing around it then the force of the magnetic field

(1:02:34) goes through the center of the donut so this is a and please if any I'm getting this wrong correct me or give me a little bit of leeway here because I'm still learning but the idea here again is zeroing out our magnetic uh Vector potential and if we zero out our magnetic Vector potential then we have a situation where we get this PO this scaler potential this potential gravitic potential that's out there um this is where we are going to be able to combine the ideas of gravity manipulation and free energy together both of them are

(1:03:05) based on the same fundamental properties and ideas um and I may go back and try to look through my video with Tom uh with Tom as well where he talks about that maybe clip it um because I thought that was a really important part to understand yeah the Forbidden physics donor early on this investigation I realized that toroids seem to be a fundamental shape required for a lot of these effects to happen um and it's maybe like if you're into sacred geometry a fundamental shape of the universe uh in general um and and I

(1:03:40) think that what do they call them the Hop fibrations is also a type of toroid as well people have argued that black holes are toroids um or that they created toroidal magnetic fields around them so you see the same shape all the time M Donuts exact the Mundo Cathy you got it and so a lot of this as I keep talking about with researching it is figuring these Concepts out and then um using that information to vet the future information that we get we know toids are the answer so we're going to give a little bit more credit to the idea of

(1:04:13) things that are based around toids doesn't mean we're going to automatically believe it but it does seem like it's going down the right path and if you do this yourself I think you will come to the same conclusions that I have um now we could never even got here without MH370 videos and that's because we're looking at those videos as the ex it's like looking at the teacher the answer to the test we have we got the answer to the test we know what's possible we're staring at it now we just

(1:04:38) need to see does it match up with historical physics does it match up with history and general turns out yes it does yep turns out the max equations were written incorrectly people have been yelling about it for years mainstream Academia doesn't believe it uh and they're wrong okay so let's look at okay let's scroll ahead a little bit here I don't know if I want to redo let's go to this part after how point field Nicola Tesla Nikolai kerev and other scientists called this field The Ether The Ether it's coming back also

(1:05:15) we're spelling it a e t h e r capital A guys let's give it a let's put a little respect on the ether's name okay put a little respect on its name we're going to make capital a e eer that's going to separate it from the eer that's technically it's okay to spell it like that if you want but I'm going to spell with the a The Ether is a field in which everything exists but it exists in a dimension that our brains can't perceive particles blinking in and out of existence does this sound

(1:05:45) familiar chat The Ether is something that our brains cannot perceive that requires an extra Dimension what have I been saying for the last four or five months we only require two things to understand that the videos are real we need to understand that there's an extra Dimension that we cannot perceive and that space is not empty and that from the palm of our fists the amount of energy in this little area can produce enough energy to evaporate all the oceans on the face of the Earth this helps us understand  $E = mc^2$

(1:06:17)  $mc^2$  and why that's such a powerful equation why we can create atom bombs atom bombs are just the beginning of understanding what's possible that why that's technology from 80 years ago no one no one on this planet I don't think is afraid of atomic weapons anymore unless they are uh second and third world countries that have not been up to speed with everybody else have to be coming from and going somewhere that place we did this part already oh is The Ether the base layer of reality but even

(1:06:46) though we can't see it this layer can be disrupted with electromagnetism Tesla famously said if you want to find the secrets of the universe think in terms of energy frequency and vibration he tried to harness energy from the zero point field using the tower he built on Long Island Tesla link below Tesla was right chat Tesla was right uh all the textbooks in the world are wrong just like Thomas Bearden said I'm on team Tesla uh this does not mean that the Einstein is necessarily fully incorrect I think that Einstein's

(1:07:23) equations are still extremely powerful uh but Tesla goes and shows that it gets a lot crazier than that now Tesla's Warden Cliff Tower tapped into this endless supply of energy the tower was considered an overunity device an overunity is when something gives out more energy than is put in now mainstream science claims this is impossible again because it breaks the second law of Thermodynamics but for over a 100 years chat F the second law of Thermodynamics open up your system boom F the second law of Thermodynamics

(1:07:58) second law of Thermodynamics is a [REDACTED] forget that law scientists and inventors have prove that claim wrong Zer Point Energy devices also violate the conservation of energy that yep we're rewriting the conser law of conservation of energy guys if you're following me we're rewriting the law of conservation of energy I'm actually saying that yes I'm saying that um yes I'm saying that we can warp an airplane uh yes I'm saying it's Star Trek time uh yeah that's what I'm

(1:08:29) saying hard to believe but it's true energy can't be created or destroyed but those inventors don't claim to be creating energy from nothing they're tapping into the energy that already exists everywhere all around us that's the thing that people don't realize we're not creating energy out of nothing we're tapping into the energy that's all around us this comes down to two forms low energy nuclear reactions cold fusion which is a misnomer it doesn't have to be cold it's just Fusion

(1:09:01) uh releasing extra energy we're talking about alchemy producing heavier and heavier elements um and then straight up free energy the ability that you can create a system that's so

powerful that it's essentially producing unlimited amounts of free energy um so the terms are very similar they're linked a little bit but they're not necessarily synonymous now let's go ahead because one of our favorite people is going to show up here so he talks about this guy Floyd Floyd Sparky sweet now see if you recognize

(1:09:34) the voice here fascinated with electricity he dreamed of a device that could take energy from the vacuum of space so after retiring in the 1980s you wanted to see a free energy device right you're looking at it you're looking at it chat what is going on there we what even is how do we produce energy we just spin something around and that produces energy for us just have it spin so if we can have something just spin forever we can have it just produce free energy forever as long as there's no input or as long as it's able to produce

(1:10:11) enough energy and keep itself going and then have excess output that's over Unity that's what it is uh and that's a very rudimentary form of it this a very simplistic form you if you imagine the idea that we could utilize all of the potential energy efficient L extremely efficiently then we get to a point where you start here with free energy but then you get super Advanced we get to the point where we're in the three body problem and we are shooting even a proton and then having it self-replicate

(1:10:40) to the point where it creates a giant structure at the location where it shows up scary stuff man he made one he called it a vacuum triode amplifier or VTA so we have 120 volt fan as you can see it's turning at good power it is providing quite a breeze and it's real usable power okay chat that was Thomas Bearden talking I'll recognize that guy's voice anywhere it's generating real usable power Sparky's machine could do more than operate a fan he FedEd 0.

(1:11:22) 3 M and produced almost 224,000 Watts this was so I don't know mwatts is not a lot but 224,000 Watts seems like a lot from a very small amount this clearly seems like there's some electrical engineering uh exponential growth essentially unlimited energy that's being produced very small amount producing a very huge amount of energy continuous and demand power if you attach more equipment it would simply harness more power No Limit and here just coming into view you see five 100 watt lamps 5 100 watt lamps here chat there's

(1:12:05) five 100 watt lamps going on right there this this device is just running now the haters and the bunkers are probably say well there's a battery hidden somewhere what have you uh and what Thomas beard is saying is that you can just keep putting more and more stuff on just going to harness more and more energy scary stuff and what's going to be a creepy is what's going to happen is that these types of devices also have inertial mass reduction as well they get Mass reduction they start to get lighter they

(1:12:36) can get to the point where they start to float freely this is where you start to realize there's a connection between The Ether unlimited free energy and potentially uh gravity manipulation ordinary Garden variety household lamps brilliantly lit so there's 5 100 watt of very real power here again coming right out of the and for the record it does not all float it's not so somebody asked a good question is why doesn't the MRI machine float well it's not its

purpose purpose of the MRI machine is to detect small

(1:13:11) magnetic fields um and it doesn't mean that this is going to float but the idea here is that if you produce the overunity device in a certain way uh and you don't know how you're producing it you're just you know finding the results but you're not engineering it for specific purpose you can build it in such a way that there is a gravitational manipulation happening in the local area uh take the idea of okay so let's say that in this area right here where my hand is there's also the ether is in there as well we don't

(1:13:39) see The Ether we see my face here what have you but if we were to take away the area and all the air here and everything suck it all out and start pulling from The Ether there then there's going to be a pressure field around that that varies it's different from the pressure field everywhere else this difference in the pressure field is going to create what we would think of as anti-gravity uh and this is the idea that now where wherever your object is that's producing this it's sucking the energy out of The Ether it's like it's

(1:14:05) creating a sinkhole like a drain and when it's doing that drain it's creating a gravitational effect as well and this is where you have to be careful this is where Thomas Bearden mentions in some of the previous things that we did with him you have to be careful because this can damage your body potentially you know now it's one thing if you go through a Gateway that has a field all the way around it but if you're in the field itself what's that doing to your body relative to the other parts of your body

(1:14:30) imagine like my my face and head getting older but my body staying the same age creepy because again here's the thing too is that time and space are interconnected SpaceTime is one and the same thing so from this perspective even if you're warping space like with a wormhole you're also warping time as well this is what gets creepy with respect to the medical healing asp aspects of this is that the way this seems to work from a medical healing aspect is you're going back in time you're reverting the cell to its older

(1:15:02) let's think of it as wave function it's pretty bizarre stuff it starts to get pretty magical in some of these aspects and I'm not all laying on the medical healing side of it I don't know all the details of it this is not medical advice or any of that I know how people are about there uh for now I'm just saying that free energy is possible and that we can warp a plane so go ahead good luck to bunkers 224 4,000 WTS from a box about the size of a deck of cards that's enough to power your house recharge your

(1:15:31) electric car or light up a baseball field it doesn't matter what you connect the Zer point field will give you all the power you need well that seems pretty good to me uh something the size of a deck of cards probably the size of this phone that can power all the devices in my house all of them including my refrigerator and including my air conditioner those take probably the equivalent amount of all the rest of the energy in your entire house light bulbs take basically nothing even computers generally don't take that much now if

(1:16:02) you start to set up super computers maybe it takes a lot uh but that's pretty damn impressive this is real usable power it's stable it is not transient it is not noise and it is not any other kind of spurious effect let's listen to it again I want to look at it right here usable power this is real okay so we can see again this is all about just spinning this wheel and just letting the wheel spin here usable power it's stable it is not transient it is not noise and it is not any other kind of spurious effect this is a real effect

(1:16:53) it's all coming from that little Tiny Box sitting behind the 500 watts of power that box right there is what's producing it box of that size now it's a little bit bigger than the size of a deck of cards to me it's more the size of like a laptop that or like maybe let's say a GameCube looks kind of like a GameCube actually that this thing is producing all that energy something that small and this is this video what just looking at this video it's definitely '90s at the latest probably in the 880s this video

(1:17:27) was made so imagine that this is just the most rudimentary form of free energy and then we can miniaturize that even smaller and smaller that potentially we've been doing it for 30 40 years miniaturizing that imagine what kind of free energy devices we can have and this is where you have to be careful because if you get too efficient now you get to the part where your you know your energy device is literally warping gravity around it you just you can't have people go near it when it's turned on could get

(1:17:54) extreme powerful behind the lamps that or think of it like this now we see the orbs in that m370 video our device inside there that can manipulate gravity that can defy the laws of gravity as well as create their own geodesic and produce the singularity that we see a giant gravity wave that whole thing might just be the size of this box in 2014 the whole thing the uh coherent matter wave beam patent by locki Martin is 10 microns across microns the whole thing to do all that might just be like a box this size and

(1:18:34) then it can just float around and it looks like an orb because it generates a plasma field around it wild and it may even be generating its own gravity field around it you know it's displacing itself from Gravity that's what we think is happening when we look at those videos and that's the exact same concept as the free energy device when the free energy device starts to warp gravity it's all about curvature little box is putting out all of that power well over 500 watts and yet it is receiving less than

(1:19:08) 1/3 of a millatt of input power okay so real quick guys if it turns out that the World Turns to fall out everybody out there who's watching right now has to agree that we all go back to 50s Deco style I want to go all the way back to 50s deco I want everything to look like it's a diner uh I want to have all the you know appliances and everything go back to the old school style let's just let's just keep it cool again you know we gotten to the point now where everything's so uncool I'm GNA go back to that style and

(1:19:39) Fallout uh we have to agree that when Bitcoin gets obsoleted by this because everybody's got a supercomputer and there's no such thing as who's running more than

somebody else we all have to go back to just bottle caps something super basic we're just going to go back to bottle caps and that's going to be our currency like something real stupid you know like just the bottle cap thing I that's what I love about the most is just some basic thing that's at least material you know and then different

(1:20:05) ones that are like rare are going to have higher quality and be worth more than ones that aren't rare that'll be how we go back to it so Sparky filed a patent yeah oh yep you know how this goes well at the grocery store A well-dressed man approached Sparky and showed him a photograph it was a picture of Sparky and his wife in their house house taken from outside someone had been watching them he walked me all the way to my building telling me what would happen to me if I didn't stop my research how they took that picture

(1:20:38) through my window I'll never know dude just imagine you're getting stalked by this the three-letter agencies back in the 80s and there's like no DNA analysis at all either so they can just kill you any way they want imagine that they have scalar Weaponry from like Radars and maybe even satellites at that point and they can just just shoot interferometry beams at you through the roof of your house and just fry your brain remotely and then everyone just says oh you had an aneurysm it's not looking good for my

(1:21:04) life expectancy chat not looking good Sparky reported the incident to the FBI oh that's like the hen calling the wolf for help it was things got worse Sparky and his wife started getting harassed okay first of all right here or just in general who's that guy on the left that's Thomas Bearden that's young Thomas Bearden I imagine that would have been him in his 40s he died when he was like 84 85 somewhere in there 82 85 somewhere in that range two years ago so this is Tom beard in his 40s he was going around

(1:21:42) running into dudes who are developing free energy devices filming it if Thomas Bearden was a little bit older he might be me he might be a guy that is being an influencer he was a pre-inflated the free energy device that right before this we didn't show it but people ask show me the free energy device well there you go you just saw it you just saw it now you may say okay well I want to see the schematics I want to see exactly how it's produced Thomas Bearden talks about a lot of that too he's got a patent he's got a literal

(1:22:31) patent out there uh what's it called magnetic uh Thomas Bearden uh motionless electromagnetic generator go ahead and look it up chat you know what I'm going to put it in the chat for you guys motionless me motionless electromagnetic generator so you say I want to see how it is well there's your padn there you go you've got every single thing you could ask for if you're a mainstream academic scientist um there are there are peer-reviewed papers Aronoff bom effect go look that up we've got patents and we

(1:23:09) got a literal picture of a dude here on the Y files literally talking to a guy who made a free energy device where they just showed it on video for us I give you everything you demand their phone rang hundreds of times a day from pay phones all over the country the call stopped when someone broke into Sparky's lab and stole his notes then one night two men stopped by

to speak to Sparky and his wife the men left and about an hour later Sparky collapsed frantic his wife called an ambulance but when they loaded Sparky

(1:23:44) they refused to let his wife in the ambulance 20 minutes later she got a call Sparky was dead heart attack w a lot of heart attack guns going out off out there although Grant Sparky looks a little old I'm not going to say that automatically is a conspiracy 24 hours later a few black vans showed up at the house the FBI confiscated all Sparky's equipment and research and that's the last we've heard about it Kaboom that's the end they confiscate everything uh say goodbye to uh Sparky say goodbye to his

(1:24:21) research and resonance resonance does seem to be the key remember what Tesla said frequency energy frequency and vibration so if you imagine a wheel that's going forever the key here seems to be getting getting into into a pattern so imagine that you are a runner and when you're a runner um one of my favorite shows out there is called physical 100 physical 100 is a Korean show um and the Korean show takes 100 people and they go compete it's like old school American Gladiators but it's scaled up

(1:24:58) for the 21st century and it's taken a little bit more seriously not as much fanfare uh but the idea is that in a lot of cases like who what which if it's person A versus person B is it just a bigger person that wins no there's also an element of willpower so if they're running on a treadmill idea if are you in the zone when you get in the zone feels like you can just go forever same idea when it comes to Resonance when we are producing these types of overrun devices if we produce it inefficiently then it's going to stop

(1:25:25) it's not going to work if we produce it with perfect efficiency if we get it into a point where let's say our magnetic fields are in perfect resonance with one another as they spin it just keeps going forever this can be a situation where it can go as long as the magnetic field holds up as long as the magnetic field doesn't get permanently changed and maybe it will in some devices but imagine a device that is perfectly optimized so that it won't and now you have a situation where that wheel is

(1:25:48) going to spin forever um this is the idea of exponential growth as well you get to a point where it's like maybe you get close to like 8 98% efficiency but what if you can get to that last 99.9% efficiency where you can get this thing where it's just going essentially perpetually like it's going to last for a hundred years if it lasts for 100 years that's good enough that's essentially free energy if it doesn't have to be maintained more than even every five years I'd argue that's still

(1:26:15) free energy and this is where if you go look at the dread Coe device which is a perpetual motion machine it only needs a spin essentially every two years and this is very rudimentary device that probably only uses a couple magnets as opposed to something that is much uh more powerful and more efficient and more optimized that's how I want you guys to think about it okay let's skip ahead to anti-gravity which I think he oh and Richard Dodie we're gonna skip past Richard doie we're not doing Richard

(1:26:46) doie I just I'm not convinced of Richard DOD stuff according to multiple inventors many of which are now dead alien technology might not be so alien after all Italian researcher Johnny dto created a large ring to go around the human body its purpose was to alter DNA to reverse aging now made of heavy copper the DAT ring manipulates the magnetic field around a human body look guys it's a toroid again how come Donuts just keep coming every single time over and over and over again hey look Cosmic suits here everybody Cosmic Summit welcome to

(1:27:26) the chat appreciate you man if you guys want to meet me you can come meet me at the cosmic Summit in June uh going to be hanging out with some awesome people uh Jordan from alile uh science is GNA be there uh Johanna James that uh is got a Twitter or Tik Tok and YouTube channel uh Randall Carlson's gonna be there Robert shock's gonna be there Bob greener's gonna be there Malcolm bendle's going to be there um we're going to have to have some good security because it feels like we definitely

(1:27:55) can't have anything happen to these people we have uh High Precious Cargo at that uh at that convention it's going to be awesome to meet all those people I can't wait I will be handing out some passes on my uh YouTube channel uh for that probably next month some uh online passes so you guys can watch uh and hopefully with George's permission I will be able to do some promotional recording stuff uh and recording of some of the stuff that's out there using gravity and and frequency it was inspired by The hza

(1:28:29) Valley in Pakistan where people rarely get sick and routinely live for over a 100 years now most researchers say their longevity is because of exercise and a healthy diet but dto had a different theory he said the extreme heat from the valley and the cold from the nearby Glacier created a magnetic anomaly in the area this protects DNA and slows the aging process the D ring was even tested at SLO katering hospital it successfully lengthened the subject's telome the part of our DNA that shortens as we age the

(1:29:03) ring worked and just like Sparky's device Do's device could levitate then the FDA became so I think I missed the part about anti-gravity but he I before this must have been a 31 minute Mark he talks about how the device can produce levitation in some of these objects and this ring excuse me the thing about that ring that we just heard was that has medical healing application he just said reverse aging I'm pretty sure at this point that Dave Rossy has definitely had his age reversed and I'm skeptical as well about

(1:29:40) Tom Monto I'm just I'm skeptical guys I'm now a conspiracy theorist so I'm coming out with the conspiracy theories that Dave and uh Tom have reversed the aging process because this guy's literally talking about right here in front of me and and uh that now this this kind of Technology if it's produced the right way it's going to create this Mass reduction effect and that's from early on when we talked about the United States government be able to hide the patents this is the

(1:30:07) idea of reducing mass in your object Mass reduction this is what the government's hiding all they have to hide is the mass reduction and everything related to mass reduction and

that takes away gravity manipulation and it takes away free energy as well this is why I'm so convinced that all this is real that there's a very common thread here which while it seems incredible this this is civilization changing um it seems plausible as well that this could actually be pulled off it doesn't require some huge complex

(1:30:39) deep conspiracy it's just pretty straight up there in the open and all the evidence is out there in the open as well involved and everything went downhill yep they shut down D's free drinks guys free drinks on on George I can't wait get a couple drinks in me and then the next thing you know we're going to be we're going to be talking about free energy we're going to be talking about Mass reduction um who knows we uh yeah it's GNA be a fun time for sure especially with Bob Green you're there I haven't

(1:31:09) met Malcolm Bendle but I've heard great things it's gonna be it's gonna be wild chat it's gonna be wild G make everybody take away their video cameras after before that happens though research not long after that dto is hit by a car that ran over him times oh he he got hit by a car that ran over him several times what a coincidence why is it that every single free energy and anti-gravity researcher starts getting hit by random cars this car ran over them several times just had to make sure

(1:31:44) they finish the job and then we haven't even gotten to pinov and ning Lee and Amy ESD uh they have just anti-gravity research and people that have been finding free energy have had the worst luck ever honestly the worst luck oh whoops what did I just do crap well oh was that ning Lee right there I think that's ning Lee US government and then everything went down downhill yep in 20 there she is so there's ning Lee right there um superconductors and uh ceramic uh ceramic superconductors and anti-gravity seem to go together as well

(1:32:23) watch my tom Monto interview yesterday Tom monok talks about the idea of why superconductors are important it certainly seems to be related to the aspect that the magnetic field bends around the superconductor according to the London penetration depth um that seems to be part of the key because what we're trying to do to achieve that stress in the vacuum of SpaceTime is we want to get our magnetic Vector potential to zero you get the magnetic Vector potential to zero and now you start to get these stress in the ethers

(1:32:52) the great analogy that Tom brought up yester yesterday so imagine there's a rope and I'm going to pull on my rope this is my rope I'm pulling on my rope so I can pull a little bit and the vector potential as long as I pull equally on both sides the vector potential here is zero the force here is zero now if I pull a little bit harder the force is still zero because both sides equalize each other out but there's some point where if I want to pull too hard this rubber band is going to break why is the rubber band breaking

(1:33:20) shouldn't the rubber band not break if the force is equivalent on both sides because there's something called the stress the stress energy tensor and the stress of the uh the the vacuum permittivity of free space itself so if you pull and stress it too much now you're going to break your rubber band even though both sides are equalizing out in terms of their Force

imagine this same effect happening all we have to do is take away the magnetic potential so how do we take it away the simplest way is you put it in a

(1:33:50) faraday cage where the uh electromagnetic forces can't get in there anymore more another way that you can do it is you take a superconductor and you have your superconductor create a very powerful antimagnetic field if you want to think of it like that uh I think that alter mag or alter magnetism is that what it's called might end up being this in general or another form of it and if you do that now you can create extremely powerful stress tensors within our vacuum of our SpaceTime now this is essentially how

(1:34:19) you begin to get very rudimentary gravitational manipulation SpaceTime manipulation and if you can start to control that through let's say a coherent matter wave beam now you can start to either contract or expand space you expand space in front of you or you contract space together now what does this lead to the idea of an alub Berry Drive you contract space either in front of you or behind you and you expand space on the other side and now you're going to get a Thrust effect but everything within the field is going to

(1:34:50) look like it's just moving stationary yeah so we need to keep some of these scientists alive man um this is pretty wild also just if you're interested in thunderstorm generator update because this is another form of uh in my opinion cold fusion so it's not free energy although it is over unity and in a sense it is producing excess energy but this is where I would line it more on the low energy nuclear reaction side is that there's a Vortex happening which is causing cold fusion which can happen at

(1:35:18) high temperatures low energy nuclear reactions and you're getting coefficient of performance greater than one off of device it's basically an engine car engine pretty incredible uh this is the stuff that we're going to look into more as well uh we just there's a lot of stuff to look into but Bob uh Bob Greener has done a bunch of research on this Johanna James has done research on this it's based on Malcolm bendle's work um and he has been promoted on Joe Rogan by Randall Carlson and Randle Carlson

(1:35:45) also promoted him on Shawn Ryan as well okay uh so we talked we looked a little bit at the anti-gravity ningle let's go to 38 minutes so at 38 minutes we start talking about the suppression the American physical Society you know why my ears peaked up when we got to this part this whole by the way this whole video mindblowing there's like a dozen Connections in this video between all the research around free energy anti-gravity and all the stuff that we've been revealing and discovering as part of the investigations mh37 Z the

(1:36:25) American physical Society has everything to do with um everything to do with superconductors and Cosmic Summit says it's not an overunity device but Bob greener's paper about Vortex generators did show coefficient of performance greater than I think 1.05 so in my mind that would be overunity um but it's still it's not necessarily a device where you're going to get more electrical energy out than you're putting into it so from the perspective of it's not a device that's going to run forever it's not the same

(1:36:56) idea instead what it's doing is it's releasing excess energy in the form of heat and it's increasing the efficiency of the engine and of the engine it is producing no exhaust so it's like a uh a clean engine that gets higher fuel efficiency than even a normal engine does which to me is Magic enough honestly hopefully I'm doing that Justice George so APS Society this is where I k99 just like a month ago I k99 got another um injection into it in the form of some other variant meta materials that were also uh super conductive and

(1:37:37) we saw mezer effect flux pinning and they showed equations as well they showed a fundamental zero resistance uh I saw some science influencers say well it's not zero there's a Nega there's a tiny amount and to me I think that they're splitting hairs on that aspect but I will leave it open to being wrong so the American physical Society interesting because if they're involved in suppression then that begs the question of How Deep The suppression goes in general why has room temperature super conductivity high temperature

(1:38:07) super conductivity which was shown by the American physical Society last month why is that not all over the news in the United States kind of blows my mind um and one of my bold predictions if uh I don't think we're going to look at tonight but if you guys Google or not Google but look up my Twitter post look up bold predictions you will find out that I have predicted uh in the future that we will get room temperature superconductivity potentially both via metam materials and induced highfrequency vibrational SP uh uh high

(1:38:39) frequency vibration and then I we will also get free energy uh over unity and that eventually we will approve that we can warp an aircraft as well those are some pretty bold claims in my opinion there's a tremendous amount of push back about zero point or alternate energy why mainstream Academia elected officials and even the media say free energy is impossible any scientist who claims otherwise is attacked sometimes professionally but sometimes they're attacked physically why money and power I was asking rhetorically but yes money

(1:39:19) and power when Dr Tom fom was working at the US patent office he came across inventions that could solve our energy so money and power money and power is what this all comes down to people out there wonder I think one of the most common questions I get why do this to a plane why warp a plane why suppress this information money and power why am I talking about geopolitics why do I discuss geopolitics because like the letter to Ash and forb said all the world's problems are due to political reasons money and power those are the

(1:40:01) political reasons that's why all of this stuff happens they don't release free energy because of money because there's no money in free energy if everybody had their own power supplies and could do their own thing and power their own houses you also wouldn't have power over everybody as well not just metaphorically but also literally as well so this is the thing that becomes very scary this is is where I think we are living in actual Fallout actually the game and move and show we're living

(1:40:30) in that we simply don't re realize it the corporations are our overlords the corporations

are connected to our politicians and they're the ones that fund our politicians campaigns a lot of the politicians are directly tied to the military who have an oath to defend the country and to not reveal information that would help our adversaries National Defense foreign policy foreign security this is the reasons why the technolog is hidden this is the reasons why disclosure is hidden from us it's not about the the the tets

(1:41:03) and the reptilians and the mantids or whatever that's not why they're hiding this people are hiding this for selfish reasons in some cases what they think to be Noble reasons as well I want my country to have the most power over anyone else Good To Be An American if you're not an American if you're not a five eyes Allied country the CIA can take you out anytime they want there's no retribution there's no justice whatsoever at least for me people would probably try to do an investigation I

(1:41:30) hope you guys if I were to disappear get run over by a car multiple times I hope that you guys would blast that and blast all my videos and blast the 50 million times I've said I'm not suicidal out there and that I look both ways before I cross the street and that's the reason why even if this ends up being fake that I'm taking no chances just in the even if it was a 0.

(1:41:53) 1% chance that that this stuff was real and I think it's more like 99.9% even if it was just 0.1 I would still do exact same thing uh I'm not taking any chances when it comes to this this is as you can see here as we've been watching this people have been disappearing related to this stuff for decades and decades and decades and the people that don't get disappeared the ones that come out and they're whistleblowers like let's say um and and not all these people are equivalent Thomas Bearden even you could say Bob

(1:42:22) Lazar look at what they do to them look at what they do to Hal POF he's one of The Originators originating let's say influencers or promoters of Zero Point Energy they then link every other thing they can to them every esoteric aspect every other claim they've ever made every other thing that's gone wrong in their life including Malcolm Bendle they claim they're **scam**mers they claim that they're fraud defrauding people uh but they don't attack the facts they don't attack the idea they attack the person

(1:42:49) so this is why it leads back to this element of suppression that's out there that from the suppression standpoint you don't suppress people by arguing the facts you argue the person you make the person radioactive person Persona n grada that is how we suppress information in the 21st century that is what general Flynn says when I literally listen to one of his spaces the other night this is the reason why I respect General Flynn as being the former director of the uh the DIA the yeah DIA um defense intelligence agency these are

(1:43:26) the people that know about defense intelligence agency CIA uh the intelligence Community if you want to call it that the larger intelligence Community um they know about it they know what's happening behind the scenes we should listen to the stuff that they say I don't think that anybody is all good but we need to align ourselves with people that are trying to get the information out and that's what I'm doing whether or not you trust Flynn that's fine whether

or not you trust Bob Lazar whether or you trust Rick do Dodie

(1:43:49) that's fine I think that some of what Rick Dodie says is 100% true as well but when you start talking about other stuff that is very difficult to believe that doesn't have any evidentiary support that doesn't have a basis in science uh you open yourselves up and you expose yourself now this is good to bring up because now we're moving over to Salvador pz the thing I like about salvator pz is that he put his patents out there he's done interviews with people but then he kind of disappears

(1:44:13) now I think that he's been not talking to people now because he's been told not to um but it actually works in his favor the same reason why retiring from MH370 even though now we're we're back in the thick of it already after only a month um why it helps out sometimes being quiet helps out as well let people absorb the information look at it themselves as opposed to it always being about who the person is and what they're saying and whether or not you like them or don't like them so let's go

(1:44:47) to I don't know what video this person's talking about but you can find this wi Files video I put a link to it in the chat you can Google the Y files and check it out as well now one of my favorite people on the planet shows up in this video oh and and by the way here he talks about that how green energy is a total **scam** as well if you have the ability to have unlimited free energy we don't need green energy we don't need solar power and we don't need wind power and why is this important the arguments

(1:45:14) that that AJ brings up is that solar panels don't last forever and when you have to throw them away now that just becomes more junk in the trash bin in our uh huge landfills that are getting bigger and bigger and bigger this is not unlimited this is not a renewable source even renewable energy even green energy still has pollutants related to it and then he mentions wind power what's the downside of wind power well they're ugly as hell and they kill birds birds fly into them and they get killed by the W

(1:45:45) by the windmills spinning around and then he says nuclear energy and you may say okay I don't really care that much about those maybe just a matter of what's the the least worst thing and that's fine that's a fair argument but the least worst thing is just unlimited energy tapping in to the negative en energy of the The Ether itself unlimited and doing that in a way where we put our device let's say maybe in Antarctica underneath a mountain so that it's not going to kill anybody and then we just

(1:46:13) transmit that energy everywhere across the world using superconductive power lines that waste no energy at all that's the future um and that and then at that point we don't need wind meals and we don't need solar panels and we don't need fossil fuels we have unlimited perfectly green energy only downside is you might not want to go near it because it may uh speed or slow down your time and then what you might step outside the field the next thing you know everybody ever knew has passed away um and that's what teleporting to

(1:46:46) the future is all about that's what gravitational manipulation is in my opinion is teleporting to the Future Okay Sal Tas here we go I couldn't believe this shout out by the way your fault the technology to fix this is there and has been for 100 years here we go a scientist hello uh I recognize you Salvador p is getting the shout out on the wi files we had Tom Bearden and Salvador Pas get shout outs and I wish I had talked to Hal POF I think that he's also a guy that just doesn't do a lot of interviews out there wow a guy that I've

(1:47:35) been talking about almost every day for the last two weeks Thomas Bearden and Salvador p a guy that I literally communicate with whenever I want and have interviewed twice that I've been promoting this guy's patents out there the best part of Salvador Pas showing up on this is that I was going to post his compact Fusion reactor patent AJ talks about it specifically I was going to post it today AJ scooped me I I have been it's on my it had been on my list for weeks to bring up the compact Fusion reactor because he's

(1:48:10) essentially talking about a device that can produce cold fusion potentially in a more efficient way than some of the other aspects that are out there there he is why files is following me wait are they following me are they literally following me I don't know I'm going to look it up later but it it feels like they're at least secretly following me because this is getting weird and they haven't done anything on MH370 yet because I think it's a little bit it's too it's too out there still for them

(1:48:39) but if they're talking about this they're getting there man they are getting there named Salvatore P has multiple patents strikingly similar to allegedly impossible that that was piso electric induced superconductor high temperature superc conductor I just posted that last week just posted it last week went over it down here on the bottom left uh is the inertial mass reduction I mean I recognized them both of these I think are from the inertial mass reduction one on the top left and uh or top right and the bottom left and

(1:49:10) then this one down here is the gravitational high frequency gravitational wave generator I I recognize all the all the images guys I mean what dude what okay ventions I mean imagine if he talk to me look at this I feel like AJ next week is going to be talking about locked Martin's uh coherent matter wave be patent guys AJ if AJ's out there watching this and he talks about my coherent matter wave beam Pat or locky Martins next week yo bro you at least got to not copyright strike me when I watch your video and react to it that's

(1:49:46) I feel like that should be the minimum cuz I'm the one promoting all these things on social media like nobody El is promoting this except for like Jake Chanley nobody else is talking about this everybody else is going oh it's a limited hangout blah blah blah at least don't copyright strike me when I when I play your video he's patented devices that use electromagnetic fields vibrations and Quantum field fluctuations to manipulate gravity mass and energy neral Mass reduction device for Trans medium

(1:50:19) craft guys my my post like I could find my post from like last week on this I did a space guys if you're just watching this there's almost 4,000 people watching this most of you guys are

on Twitter go over to my YouTube channel justex action on YouTube you can find the live stream going on right now if you're watching this recorded go to the live streams scroll down through it until you find the one uh space uh Salvadore Pi patent space with Jake Chanley we literally talk about these patents for two hours is one of the best

(1:50:49) spaces you could ever listen to that's why I recorded it on my on my YouTube channel we go over we read through the abstract what these devices do and then what they mean for Humanity Jake Chanley actually brings up the tr3b um and Jake Chanley and I are like Yin and Yang in terms of like when we come together we create Harmony because I look at it from like the Deep scientific perspective and the historical and the and the Science History perspective and he looks at it from the historical aspect related to uh

(1:51:19) the Spirit uh Humanity all of ufology probably knows better than I do as well um and so and we both can see the implications of what this means for our civilization for us as human beings for us in our conscious bodies and what our life means and what the purpose of life is make sure you check out the space and then the stream guys you you will not regret it getting salvator pi to come to the summit oh that's a good idea so again I I've talked to salpas and I I don't know this for a fact but I think

(1:51:50) that he's being held back from putting himself out there uh which we should respect he's done enough I mean just putting these patents out there is enough but when his time comes that he can come and speak freely again um I will make sure that he talks to some of the right people out there so because this stuff I think is just it's going to get more and more popular guys it's kind of like how people ignored Bob Lazar you know back 20 years ago and then people start to come to terms with the idea that these concepts are

(1:52:17) possible and that they're real and once they start to realize these concepts are real like Salvador pises patents then it starts to like get really serious like one day I want to see Salvador Pas on Joe Rogan now you can just watch my interview with him and I think it'll do just as much justice but I would like to do another interview with Salvadore Pas because when I first talked to him a lot of you guys pointed out Ashton doesn't know what he's talking about like all the scientific Concepts electrical

(1:52:43) engineering concepts are going right over my head and now I understand them he talks about the Maxwell equation being written incorrectly uh he talks about kum's law as well um he talked about all the concepts I just didn't understand their significance at the time and now I understand it and now I look at the concepts and I'm like oh wow like he was giving me the secret sauce he was giving us the the secret sesan sauce guys uh you know whatever is the what's the Rick and Morty sauce Guys somebody help me out in the chat um he

(1:53:16) was given it to us he was not just giving it to us overtly he was giving it to us in code he was saying here's the science that you have to look into to look into this science and you'll figure it out and that's exactly what we've done it's like the Matrix no one can be told what the Matrix is you have to realize what it is for yourself and then when you do that then you've empowered

yourself now to know the **truth** he has a patent that allows for faster than light speed travel he has a patent that can change the course

(1:53:43) of asteroids through a magnetic field and my favorite salvator P invention he has a patent for a tiny solid state device about the size of a DEC cards that can generate unlimited clean energy he's talking about the fusion compaction device in the top left here of this image these two on the left are the fusion compaction device I haven't even posted about this yet I was looking back through my post I was asking people in the Discord the other day have I posted this yet because I didn't remember and they said no and

(1:54:13) there's AJ scooping me AJ is scooping me on my own my own man Salvador Pas and his own patents out there there there it is wow AJ and the Y files you guys are doing great work I want to give it you that I'm happy this has been successful for you and this this uh YouTube has already uh gotten over a million views in on in one day one day a million views I thought I got a lot when I was on redacted and I think we've accumulated like a quarter of a million on YouTube I think I didn't look at his Rumble but probably at least

(1:54:47) 150,000 and then on Twitter now I think it's another 100,000 views I mean even if you add that up your generous it's like a half a million this one already got a million salvator p is getting huge and his high frequency gravitational wave generator which is not even listed on this picture right here when the kim.

(1:55:07) com Saga happened the high frequency gravitational wave generator is one of the posts I posted out there it got I think combined between people uh like reposting it and doing quote posts like over 1.5 million views so people have seen the high frequency gravitational wave generat when AJ just talked about moving an asteroid he was a little bit incorrect there but I'm going to give him a pass he did a great job in this video he actually talks about obliterating an asteroid or planetoid and that is very important why did he put planetoid in

(1:55:37) there because he wants us to think about the idea that if you scale this technology up you can have a technology that could destroy the entire planet that's the scary part all you have to do is scale it up now you get weapons that can destroy the planet destroy the sun create our own black hole or potentially create our own Big Bang we might have created The Big Bang ourselves or our ancestors created it no way to know for sure or maybe there is no big bang in the universe is infinite who knows we'll

(1:56:05) find out I don't pretend to know all the answers I just tell you straight up that we can have free energy over Unity coal low energy nuclear reactions uh engines that produce zero exhaust or fundamentally zero exhaust and that we can warp a 777 from one location on the to the other what a time to be alive it's Star Trek time and then potentially Fallout time from the vacuum so how come his inventions aren't suppressed well because the patents are owned by or have been assigned to the United States

(1:56:40) Navy now I'm sure that most clean energy anti-gravity inventors are frauds but not all

of them I believe the technology does exist and I believe it's being used right now by government contractors correct amundo AJ correct amundo the technology exists salvator Pas got his patents approved because the Navy had to step in when the patent officer said no this breaks all the textbooks this doesn't seem to be possible Navy had to come in and say yeah you got to approve it we have it it's operational that's the story I was told

(1:57:18) that's the way it's played out the technology exists in special access programs saps black budget programs this is why we can't pass an audit because we're potentially paying billions of dollars to create floaty freaking orbs floaty orbs that can float around and defy gravity and they can bend gravity so efficiently and so powerfully that they can warp a 777 10 years ago 10 years ago it's 2024 we could do that 10 years ago in 2014 this is why 60% of all the budget is basically just lost we don't know where

(1:57:57) it's at black budget programs there's Engineers out there that are working on it that know about it and just like Salvador Pi if they say a little bit too much they get silenced they got to be quiet this is why Hal Poff doesn't come out a lot of them just don't give a [REDACTED] like Hal Poff is like dude I'm 80 years old I know magic exists I get to work on it every day I don't give a crap what uh random podcasters or influencers on ufology think they don't care Dave Rossy goes on on Twitter and like yep I you know if

(1:58:29) you're interested hit me up for over Unity he's got a twin TW pin tweet on his Twitter that basically just shows violation of conservation of energy and I'm gonna show this one again because last time I showed this people were like whoa and I think he got him a lot of posts you guys should definitely check out Dave if you're interested look at Dave's thing here yet again the second law of Thermodynamics is violated while maintaining conservation of momentum and energy in this video this is a plasma generator much

(1:59:16) like a rotary Spark engine I think is what he says the difference is it is happening in the middle of a rotating magnetic Vortex so imagine you have a rotating superconductor potentially doing this exact same fundamental property the power it's taking in is dispersed in the vortex like a hurricane or a tornado what what does that remind you of maybe like a toid shape it throws debris all over the place but it stays in the swirl so there you go follow my buddy Dave if you want Dave was a are you guys ready for this reveal you guys ready for

(2:00:13) this let me go full screen Dave was mentored by Thomas Bearden Dave has been mentored by Thomas Bearden Dave is also potentially been mentored by Hal POF he's a DOD contractor out there so two of the three people in that video that we just watched by the Y files Dave Rossi has been at least at some point in his life mentored by those people and he did two podcasts with me and salvator P so technically you can connect Dave Rossy to three people in that video all three that's pretty damn impressive to me um so if I were you uh and out there

(2:00:53) and you know you can see that I follow him uh this might be a guy you want to be interested in especially when they're when they're profile says specializing in breakthrough propulsion coefficient of performance over one parentheses over Unity devices and solid state

anti-gravity superconductivity for the record I know Dave Rossi is not suicidal and so if he goes missing it would be also very suspicious I just want to make that sure that people understand understand that but you guys don't have to believe

(2:01:25) me if you don't want if you don't want to follow don't follow now these contractors don't work for the US government they work for the shadow government a shadowy government with its own Air Force his own Navy his own fundraising mechanism and the ability to pursue his own ideas of the national interest free from all checks and B es and free from the law itself well that sounds very fine uh Shadow government that's free from the law itself so if you remember the Hal hudoff Jesse Michael interview with uh Eric

(2:02:06) Weinstein literally talks about they set up the defense contractors in such a way with the information that they would be shielded from Foya entirely now if you've been stalking my replies you'll notice that there was a supposed Foy of a signal message between was it Christopher melon and uh Sean katrick well the problem is you can't foyer private Communications you can't in fact foyer any information about private companies because that's not how foyer work foyers can only foyer government information from government

(2:02:41) agencies so it's pretty weird how somebody would have claimed that their private signal Communications would have been foed since that's not possible um and that's the reason why they set up the information with the defense contractors like locked Martin north of grummond saic Bigalow Aerospace boan Phantom Works um probably more than that as well because the defense contractors then can go work at those people's Labs where they have the millions and billions of dollars of equipment that's been put into back

(2:03:11) black budget programs that is why we can't pass an audit and they can have energy levels that are high enough and Equipment that's strong enough to be able to produce the anti-gravitational effects and the free energy effect that we are seeing and we have been researching today in the wi Files video there's your answer you want to understand ufology you want to understand why we are experiencing a suppression of disclosure now you have your answer this All Leads back to free energy everything does disappearing the

(2:03:44) plane the reason why we don't know about aliens or UFO crafts or what the nature of the alien phenomenon I'm just calling them aliens but I mean non-human intelligence which is an all-encompassing term that includes the idea of a future humans or cryptoterrestrials or ultraterrestrials the be that our see busy be that are visiting us I don't know and I don't care what the relationship is I'd like to know what's going on with it but I can't say that I know for sure all I know is that we got some crazy advanced

(2:04:11) technology that we are hiding related to physics Concepts that will rewrite the laws of conservation of energy that will cheat the system of the laws of thermodynamics and that we have been hiding it for a long time did we figure it out ourselves I don't know did we have some help and did we figure this out because we saw floaty craft and we were like oh we can do that let's figure out how to do that I don't know uh I'm trying to figure it out but that's where we're

at right now so if

(2:04:43) you're out here with me and you've been following for the last eight months that we've been digging into this and you started where I started where I was like none of this can be possible to the point where we're at now like yeah this is 100% possible and we've had it for a long time then you know how crazy this is that this is real but you also know that the way the evidence that is real is incredible as well and now we're gonna go take a look at that the MH370 videos how did we know this was

(2:05:13) possible and if this isn't possible how come we found some videos that show that it's true did somebody make these videos that wanted us to think that all this science that's been suppressed is real that's a pretty damn big uh hoax to come up with or is it possible that conspiracies are real that the government does do malicious things and covers it up and they would do anything to cover up this science that's out there I'll leave that for you to decide so let's take a look at this video that I posted earlier

(2:05:48) today I want you to see the massive amount of detail first thing actually I'm going to do is I'm going to show the version of the MH370 video the original thermal video because I want the people out there there's a lot of people watching right now A lot of people are probably going this guy is crazy there's no way there's no way that we could have this type of advanced technology how did this guy even come up with this how did he figure this stuff out why is he making these claims because I saw these videos

(2:06:18) that we're going to look at right now I saw these videos by the way I've been posting these videos I get copyright tried uh not tried but I get copyright warned on like 30 second or one minute long clips that I post I'm probably gonna have that happen today related to the Wi file stuff when I played these videos I've never been copyright tried ever for playing them so if somebody made these videos they certainly don't want any money for doing so they didn't show up for \$150,000 that we had out

(2:06:47) there for months and months and months nobody St for no one wanted the money nobody want to copyright strike anybody and somehow when we looked into the investigation on the plane we realized that we never found any plane that somehow these videos tell a story of what happened to MH370 that fits with more evidence than any other Theory to date by far by far more the only evidence we had to throw out the only evidence is the satellite pings after 1840 UTC 10 rows of data on Excel spreadsheet that's all we had to throw out you throw

(2:07:24) that out all the other evidence is out there all the evidence that everybody else discarded all the witnesses the fire suppression devices um everything else related to the situation that happened out there the batteries all the sketchy stuff the free skill all that gets pulled back in all that's back in again to me it's undeniable these videos must be real as hard as they are to believe how could they tell a story of what happened in the plane better than any other story today and how can the science also be real and be suppressed

(2:07:52) as well that we've been finding out that we've just been digging into the simpler answer as crazy it is to say is that these videos are actually what happened to the plane and it shouldn't be that crazy because nobody's ever made a military video like this before we're literally looking at the military drone right here with the load out underneath the wing where there's a modular slot on the mq1 C Great Eagle where we literally have you can just Google it right now mq1 C gy Eagle you

(2:08:19) can find the assets these assets also if you Google um uh Sig int payload the very first hit if you just Google Sig in payload signals intelligence payload which we had already determined is a requirement for all these assets to communicate one another to communicate with the spy plane uh for the person to be you know manually tracking this drone from like Texas or whatever signals intelligence is what they need top hit if you Google Sig payload is the mq1 C Great Eagle okay I mean show me another hoax video where somebody hoaxed classified

(2:08:52) military assets before they were even publicly known what was capable people still don't even think that we have rainbow pallets like this because all the ones that get Declassified they turn them black and white but if you go look and you go look at some of the old like missile tests you'll find that they're all in black or a blue Fleer just like this rainbow Fleer not all of them but a lot of them are we have like eight examples pretty wild man so let's watch this um I'm not going to repeat all the

(2:09:21) evidence but you can tell they're manually tracking the plane the camera Shake is accurate they zoom in the shake increases there's no jittery contrails it's a byproduct of the stabilization software and for the answer to that is because the contrails here are blue and the background is blue so the stabilization software thinks they're one and the same but the stabilization software can tell that the plane's a different color so it's separating the plane from the background this is why

(2:09:44) they fabricated the fake JY bunk jittery Trails **debunk** and the simplest way to prove it is we were able to turn it to black and white and we turned it to black and white then this became White and the background became black and you were able to prove that the jury contrail part was because that it was was thinking that this was part of the background I mean it's such a simple explanation now look at these orbs who the hell is inventing these orbs on a fake video with a perfect Heat Signature around them that shows that it's an

(2:10:13) energy field not a ball not a metal ball and with the geodesic in front of them in this version of the video you can see the the geodesic pretty clearly now really quickly I'm going to switch to a different color change Channel version where you can see the geodesic in front of them super clearly look at that geodesic look at that line it's expanding space in front of the orbs what the f what the f chat now let's finish watching this part so we zoom in we're manually tracking our plane and when we look at this the Heat Signature

(2:10:49) when it zooms in even more and you can tell are manually tracking and they're struggling to keep the the plane in frame because there's a lag there's a lag look at the heat

signature you can see the Heat sign spinning around on their axis here you guys want to see another detail real quick that I just discovered you can see the second orb coming into the screen look in the bottom right there it was you saw that right there oh I went a little too far the second orb comes in from right over here on the bottom

(2:11:19) right there it is you see it and then it's instantly right there we saw the second orb come in on the side of the screen as well what I didn't notice that until earlier today you can see the heat signature is spinning around on its axis and in the black and white video that we're going to look at right after this you actually can see it being disrupted much clearer here as well in the in the back of the plane as well is this going to let me slow it down it's probably not and then the convergence and the plane's

(2:11:54) gone and when people think oh this is a Pyromania VFX guys this zap is three frames and I think that the screen is 24 frames per second so this is like a tiny fraction of one second that's how fast this plane disappears you look at the Pyromania VFX and it's like a whole second long it's much longer than this that should alone should rule out the Pyromania VFX but for some people it doesn't cuz they think that oh they just manipulated that and and then somehow one frame being a similar match on an

(2:12:27) edge rules out another thousand frames of video that can't be explained at all so let's switch over and I'm GNA pull up I'm actually going to pull it up on my Twitter page because I want people to see it in slow-mo the Black and White Version the black and white version in my opinion is is amazing let's do present oops okay so this is the black and white version um and the black and white version this is a just a color changed version of it so people have edited it this is not the original version or

(2:13:10) anything like that I don't want to confuse anybody um the point of it was initially to show the stabilization software was um what the reason for the JY contrails was but when I started looking at it more I started realizing that first of all you can see the the clouds a little bit better not not as good as the other color change Channel version but these are real volumetric clouds that we're looking at here in three dimensions um but the orbs really stick out in this version and so we see that first orb and then you're going to

(2:13:37) see this second orb coming on the side here as well there it goes second orb goes there and it's like instantly on the plane and instantly inform formation which seems consistent with the satellite video I was comparing both of them for like an hour today back and forth like trying to see if I could figure out like you know exactly are the orbs like in perfect synchronization which I think they are but it's really hard to do because the Drone video like goes off the screen and back because if if we could really

(2:14:05) compare and be like this orb comes in down here and then you can see it in the satellite video and we know the satellite video is not like inverted or mirrored then to me that's like how do you fake that how do you fake that that's like better than Marvel VFX I mean I already think that it is but here again like look at the orientations and spins on these orbs here

as they go around the plane like when you look at it from this perspective you're like whoa this is like this really looks like you're

(2:14:33) actually seeing it like right in front of you where you you can tell the three dimensional movements of the orbs here and how they spin around like look at that you can see the Heat Signature much more clear because it's white and black so like the Heat Signature even from this distance look at that how much that sticks out and when I rotate here you can see them spinning you can see it spinning on his axis super clearly as well like especially this Frame right here look at this like it like accurately kind of

(2:15:01) like Blends when it goes past the plane as well and we're not even in the full zoomed in part yet and then it gets to the part here where it comes you know again it's off the frame now again which is like why if this is fake why do you have these frames where the plane is like accurately out of view while the person Zooms in and then these parts here like this part's just crazy um I want to show it in super slowmo watch this in super slowmo look at this look at this getting blurred here from the tail look at that

(2:15:40) and went through the back side of it's on the opposite side now we can tell look at this blurring it over here correctly as well what did they fake this they manually touch up each frame how'd they do this to me looking at this I'm like how do people think this is fake like so who made this in my mind the only person this is not a lazy random person who decided to hoax this again you can see it going through the other side of the plane here that when it goes through the tail like that and even the front here as

(2:16:23) well I think that uh that one frame I missed it that frame right there the frames where it's like correctly going over the plane and there doesn't seem to be any discrepancies and we know it's an energy field these are the frames where I'm like if that's VFX that's that's pretty damn good and you can literally see that the ball spinning on its axis too I mean how many computer programs were needed to pull this off the black and white version I'm going to take what you just saw right here I'm going to slow it down

(2:17:01) in my editing software tomorrow just like this part right here so that people can see this in the super slow-mo because I don't think a lot of people are switching the slow-mo up which you can do yourself on Twitter do that yourself on Twitter I highly recommend it look at it yourself it's absolutely incredible I don't know how somebody fakes something to this degree I've never seen a like this to this degree in my whole life ever before so last thing we're going to do tonight and I thank you guys for being

(2:17:28) here this is the biggest stream I've ever had right now where's uh 4,750 people watching this between Twitter and YouTube uh thank you very much for watching if you are watching live or if you are watching uh on the recording I appreciate it I am Ashton Forbes uh up over here up over here uh I can't actually see what it says this this is my Twitter right here just X Aston over here you've got my YouTube channel also just X Aston so if you want to follow along on that if you want to be part of disclosing free

(2:18:00) energy or if you want to be part of proving that MH370 videos are real um feel free to follow along I appreciate you we are one last thing I want to say about it and then we're going to do a quick Meme and then we're going to close out uh is that uh there's three people that I wanted to talk to when I started I had very aspirations some may say it's egotistical or arrogant that's totally fine I wanted to talk to Bill Maher I wanted to talk to Joe Rogan and I wanted to talk to Tucker Carlson so far I'm zero for

(2:18:33) three uh but I think that if you are following that should be our goal and the reason why that should be our goal is I don't think the government can ever admit to this so the next and I think that they control the media and the media will never let us talk about this uh but the next best thing that we can do is we can talk to some of the biggest influencers that are out there some of the biggest podcasters that are out there that will entertain this I think the person that would have the hardest time talking about this is Bill Maher

(2:19:00) because uh I think that he's the most NPC brained uh CNN brain person out there although he is somewhat awake uh he might be open to this in general and the reason why I would like his show is that I also know about geopolitics and regular Politics as well so I'd be able to handle my uh you know handle myself if I was on a panel related to this stuff and I think that we would blow the minds of any other politician or Entertainer and that's usually what his guests are like Joe Rogan has the biggest reach

(2:19:27) he's the biggest podcaster out there I respect what he does I respect the types of conversations he has with people including the one with Tucker Carlson that he had yesterday so the reason that to go on Joe Rogan is although it would uh polarize people a lot on the topic there would be a lot of people that would hate me they would think that I'm a grifter or a liar or whatever they'd be wrong but they would think that but it would wake up the most amount of people that are out there the goal of

(2:19:49) this is to make it so awkward for the United States government that they have no choice but to issue a statement about the videos where so many people are going dude what how do we must know how why are we lying about it what are we lying about if they want to come out and say yeah we fake the videos okay give us a reason man why did you fake these why are they consistent with all the science that everybody's saying that you're suppressing why do I have Thomas Bearden who was on the WI Files episode here

(2:20:18) talking about that we have free energy capabilities and talking about we can manipulate gravity through scalar physics just like this through scalar infmetry just like what we see in this video government telling me an answer give me an answer and then of course the last person is Tucker Carlson um redacted podcast huge shout out to the redacted podcast also a big shout out to Heather birdie if you guys uh need a graphics she's helped me out with Graphics she's going to help me out with some more Graphics I hope you guys like

(2:20:48) what's going on and all this stuff I'm going to hopefully get a good exit video as well from her if you're interested in her Services check her stuff out um her Twitter tag if you want to

follow her uh is dead Bluebird X so follow Heather birdie if you want to get Graphics she's been helping me out with that and uh yeah big shout out to the yiles and then Tucker Carlson he knows Clayton Morris redacted had me on that's part of the reason why we've had such a Resurgence in this is that people saw the redacted

(2:21:22) interview they saw the way to the evidence they heard about the leaker and they went wait okay maybe I don't know if I believe in warping a plane but there's something's not right here and that's what I wanted people to realize from that interview Clayton Morris knows Tucker Carlson they both worked for the same News Network we'll call it in the past and I hope that Tucker Carlson sees this because when I watched the Tucker Carlson interview with Joe Rogan it helped me to realize that he's got

(2:21:48) information that he's getting from people such as is Gary Nolan maybe Lou alzando um uh and and people like that but he doesn't know what information he can accept what what is real and how do you bridge that Gap the answer how do you bridge the gap when you're getting fed information you don't know what can be possible what's not you go to the scientific method you go to the science you go look at the scientific method you look at the science and you say what is consistent with science as we know it

(2:22:17) and what do we have to change about the science in order for the stor that we're hearing to be true in this case all we have to do is rewrite the law of conservation of energy and we are going to violate the law second law of Thermodynamics simple as that once we do that once we understand there's an extra Dimension an ether that's out there we bring the ether back everything you've seen here today will get proven to be true welcome um I might so somebody asked well you know did you not ask Clayton to

(2:22:46) get you in touch with Tucker so I got a lot of feedback as well for I had like one of the top replies in Joe Rogan's post about the the interview with him um they're like oh you shouldn't don't look desperate or whatever I'm not I Joe Rogan follows me I can DM Joe Rogan if I want uh so I could DM him if I want it's the the objective is not to get them out there I want those people that want to talk to me I follow all of them they can get in touch with me if they want if they want to talk about the biggest

(2:23:15) story in the history of the world we can talk about it they can reach out to me that's I've made myself available to them absolutely Ely the part about this that's important is I want them to want to talk to me uh I'm not desperate to get it out there time is on my side I need the world's Collective conscious to raise to a point where the idea of free energy and the idea of warping an airplane is not so taboo that I they're going to be afraid to talk to somebody about it Clayton Morris wasn't afraid to talk to

(2:23:42) me about it many of the other podcasters I've talked to were not afraid and I thank all of them very much um so thank you guys very much on that let's go ahead and make a meme tonight and then we'll close it out guys thanks again everybody for being here uh let me switch this over okay um okay the meme that we are going to do tonight is the angry the angel delivers

angry note meme now I need to get the right version of it I want this one um Angel delivers notes meme generator I think we can only pull this

(2:24:38) off in this one because I don't want if I have to I'll use this one I don't like the one that's sideways like this I want the one that's up and down um that's also the wrong one is it this one that's not the right one either this is the one I want okay here we go got it okay this is the one I want oh perfect perfect there we go guys there's our meme right there uh live meme making the MH370 videos have been **debunked** hand it off this is us to the

(2:25:44) um to the **debunkers** out there **debunkers** can go to hell go ahead and give them a little taste give you guys a little little action on [Music] that guys we're getting back to our core we're getting back to Our Roots uh a little bit of a a little bit of drama a little bit of science uh a little bit of uh conspiracy and then a little bit of memes that's how we're doing it thanks everybody for hanging out tonight I appreciate you uh God bless everybody out there hope you have a wonderful evening thank you for following mh3 70x

(2:26:29) and we will chat again tomorrow have a nice one guys peace Malayan 370 contact 120m night 3 breaking news tonight A Malaysia Airlines flight with two 239 people on board including four Americans has gone missing [Music] [Music] [Applause] [Music] I remembered the line from the Hindu scripture the Bhagavad Gita

(2:27:34) Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am to come death the destroyer of worlds

Hard **Truths** Podcast w/ Ashton Forbes ft. Tom Montalk - YouTube

<https://www.youtube.com/watch?v=kwdwwTEmXP5>

Transcript:

(00:24) is hello everybody and welcome to the hard Tru podcast I'm excited to be here this is your host Ashton Forbes thank you everybody for being here with me today I have guest Tom Monto very excited to talk to him he's an author of montalk.net uh he's uh written three books Fringe knowledge for beginners Discerning the alien disinformation and nosis he is an undergraduate who or he was an undergraduate who studied physics and electrical engineering and since then has been pursuing independent research in scalar physics and

(01:03) suppressed inventions he is also an experimenter who's networked with hundreds of other experimenters and researchers to get to the bottom of the Paranormal and alien phenomenon so without further Ado let's welcome Tom to the stage hey Tom how's it going today man hey it's going great let me get my light out here out of the way there we go oh yeah

no problem thanks for being here with me today thanks for talking uh I'm excited for this I'm excited to do a little bit of science conversation and

(01:26) then dig into a little bit of the the Paranormal side too and get your thoughts on everything that's been going on in in the world and and what have you yeah sounds good so I guess first where I wanted to start like get straight into the science which is scalar physics so I've been recently researching scalar physics myself I have this big list of science topics to look into related to electrical engineering and scalar physics was on there and when I started digging into I found out about a guy Nam uh Thomas Bearden and started watching

(01:57) his presentations and actually before I even got to that I was just Googling on YouTube and who did I find there I found your video and this was before I knew who you were at all and and I watched it and I went wow this is mindblowing to me and then I think you actually ended up replying to some people in the post that I made about it and then I realized oh you're Tom a talk you're the guy that made this actual video so uh we can show a little bit of the video but beforehand I kind of want to know what got you how

(02:26) did you find out about scalar physics what got you interested in it you know did that play out for you in your life Yeah so basically for me it started when I was 12 or 13 years old when I started reading all the UFO books at my local library and once I started digging into the UFO literature I noticed that some abductees were describing the propulsion systems of these Advanced Aerospace Vehicles as that COA blue document refers to them uh and so that really got me interested in how do these things even work and it just so happened that I

(02:58) was reading Popular Science magazine at the time and in the back of that magazine there was a an ad for Rex research and Rex research throughout in Nevada it's run by one guy and he went through all the archives and old newspapers and everything he started digging up all the suppressed all these suppressed inventions and you photocopied them and put them into uh little information packets that they called in folios so I down so I I ordered his catalog and then I ordered a ton of these in folios on everything

(03:28) from whel Reich to towns and brown to the Ean free energy generator psychotronics uh you name it I ordered dozens of these things and I was obsessed with them I mean I was reading them every day uh throughout Junior High and high school so that really got me interested in alternative inventions and I was doing a lot of experiments at the time with weather engineering ergonomics uh I tried I tried to replicate the Ekin free energy generator but the tools that I had at the time really weren't what I needed to really make it efficient I

(03:59) mean it produced electricity but it wasn't overunity because there was too much friction and air gaps in there and so on uh and so when I when it was time to graduate high school I uh I decided to go into physics and electrical engineering specifically to get a get the mathematical framework that I needed to better understand how that all worked you know because I mean it's one thing to understand conceptually but if you want to actually build it and apply it you do have to know the math you know just like a mechanic has to know the

(04:27) specific routing via the electrical circuits in an engine in order to you know work on it so it's the same thing here and uh so I went to college I did physics I did four years of undergrad and then my scholarships ran out and I realized you know what I don't want to continue on that track into Academia because I was working with grad students at the time I was working in the ACT uh I was working in the plasma physics Lab at the University of Iowa with my professor and I was winding these huge coils for the the for the plasma machine

(04:53) so it's like it generates an intense uh magnetic field like so strong that if you're in the same room and you hold like metal wrench in the hand even like 20 yards away that wrench will get pulled out of your hand That's How Strong yeah yeah so you had to keep all metal objects away from these things when they're running and U anyway so I I was more of a technician you know it's not like I was actually designing the equations or you know how the how the plasma worked at the time because I was

(05:17) only an undergrad but it did give me some exposure to Academia you know the politics of it I worked with grad students and I saw you know the kind of Hoops that they had to jump through in order to uh get approved for certain lines of research and even my plasma physics professor at the time I think he was working on something that wasn't officially approved in the sense that he said that oh we're just studying nonlinear waves and plasmas but in his back right pocket he always carried the New Testament a little pocket version of

(05:46) the New Testament so he he was a devout Christian working on this physical stuff and when you get into nonlinear plasma phenomenon to me I got the impression he was looking for signs of life in the pl mhm he never said it out right but just putting everything together I think that's secretly what he was doing and you know which is a smart move because you can't really try to get funding for that you know he can't get a grant from the government for uh you know trying to trying to find life in plasmas I mean

(06:13) that's that's sort of a two out there you you'd lose your reputation if you did that so have you ever have you read Joseph P Farrell's stuff or anything about the idea of you know sentient plasma what is your thoughts on that I think it's possible because in a way uh you know a lot of the Soviet scientists who studied the human aura the human biofield they called it a bioplasma because they assumed that it was uh sort of an electrical charged field that penetrated the body and was also around

(06:41) the body and from what I remember some of them theorized that it was it consisted of delocalized electrons in other words charges that were in a Quantum superposition State all over the body and this Quantum superposition State uh allowed these electrons to respond to things from outside of SpaceTime okay and actually if you look into steuart Hammer off and Roger penrose's work on Consciousness they also theorize that within cells there are these structures as you might know called microtubules and these microtubules they're like

(07:14) these really they're like nanot tubes essentially but they're living in nanot tubes and they're made of these little things called diers okay and inside the dier there's a there's a little

pocket where delocalized electrons exist okay so it's it's an electron that's not in a specific State it's in a superposition State it's Quantum sensitive and that somehow allows it to tap into Consciousness non-local Consciousness in order to translate that nonlocal consciousness's um intentions or

(07:40) thoughts or whatever into physical biochemical form neural form you know activating neurons and so on okay so there's there's something about Quantum delocalized electrons that seems to be sensitive to metaphysical Fields I guess you could call it so that's my thoughts on that so do you think that's a really inter in thought is your belief I guess the bigger question I'm going to ask you is what is your belief on you know why we exist at all but I guess what I'm wondering is would you agree or disagree with the

(08:09) idea that we are like avatars that are having like Consciousness kind of beamed into us or what's your thought on that yeah I think so because the people who say that Consciousness is merely an epiphenomenon of matter they're what they're saying is that matter is primary and if that were the case then you should be able to um predict everything that matters would do like an electron or subatomic particle you should be able to predict you know down to the nanosecond what it's going to do next because I mean if it's

(08:36) just matter then it's ultimately just billiard balls hitting other billiard balls right so if you know all the initial conditions if you know the nature of the system you can predict its future outcome and that's what's called determinism because it's the cause determining the effect but once quantum physics came along it was proven both experimentally and mathematically by von Neumann and uh some others that that cannot be that that cannot be the case that at the quantum level uh nondeterminism in other words

(09:06) unpredictability is baked into it and there is really no way to fully 100% predict everything about a Quantum system so you know physicists with all their technology all their mathematics they cannot predict what an electron will do next with 100% Precision because there's always something else there's always something else that is non-physical you know that's non-deterministic that influences its behavior and so when you think about the human brain or you know all life in general uh being involved with these

(09:36) microtubules and delocalized electrons well there you go there's your answer that that's the answer as to what is causing these electrons to move in an unpredictable way and not just electrons but photons do you know other subatomic particles so in other words as much as physics wants to boil everything down to an equation once you get down to Quantum to the quantum level the only thing that they can really do there is statistics they can only do statistics because they don't know specifically what one thing will do but they know

(10:03) generally what a bunch of things will do or a bunch of measurements will result in right so it starts becoming fuzzier you know more probabilistic more indirect and they can only talk in generalities usually yeah that reminds me of the double slit experiment you know in terms of the wave function and the wave function breaking down this idea of deterministic versus

probabilistic I think that was my first introduction to um quantum mechanics in general the first time I looked at when I went well that's weird that doesn't

(10:28) make any sense did you have a similar Revelation ever in your life where you thought quantum mechanics is kind of maybe the secret to understanding a lot of this stuff yeah it sort of dawned on me once I really got into it in college you know taking several semesters of quantum mechanics um and also at the time I remember I was walking downtown in Iowa City at the University of Iowa and there was a Hari Krishna guy you know dressed in the orange you know clothing and everything and and he was selling books and I happened to walk by and he and he

(10:56) acquisitioned me and and uh I started talking to him and he was selling a book on quantum physics and Consciousness okay so I bought it and that book kind of opened the door to me because it does get into the nitty-gritty mechanics of how quantum physics could potentially tie into Consciousness like where is it within that entire mathematical framework where Consciousness would enter into it you see uh and you know just to just to kind of summarize that quickly where Consciousness enter into quantum physics is in determining or

(11:28) influencing the phase the phase of the quantum wave function in other words how the waves are aligned with each other in in a more General sense okay and Consciousness seems to have an influence on that and that's how it's able to get an inroads into the everyday world that we know here which is like the macroscopic world as opposed to the quantum world but uh you know just like in Chaos Theory where a little tiny effect has a big effect well the quantum World consists of all these Chaos Theory butterflies okay and when

(11:58) Consciousness influences one of those it can Cascade upwards and amplify upwards and scale until before you know it you've got a living human being generating sounds you know in the form of language for example or or a human being pressing the nuclear button and blowing up the entire world that entire thing boils down to what's happening at that little tiny Quantum level see the little tiny Quantum level and because that's where things are sensitive enough that something from outside of SpaceTime

(12:21) can enter into it and influence everything that follows from that interesting I like that thought and it does make me wonder about Consciousness in general and I think I want to ask more about that a little later but I guess one more question before we dig into the the scalar physics would be uh do you think that there is uh any um incompatibility between let's say faith and science what's your view on how Faith because you were talking about you know your professor that you know has the Bible in their back pocket and then

(12:48) they're doing you know plasma Advanced Plasma Research what is your thoughts on that well I think Faith begins where science ends because science doesn't know everything uh science likes to put one foot in front of the other you know in order to get to the next step you have to be able to calculate it you have to know the certainty of it like it's logic you know it's logic that follows from certain premises certain observations and it goes forward and forward

and forward and forward down the line of reasoning but

(13:15) at some point you're going to hit a dead end because in order to get to the next step uh you need luck essentially if you think about it I mean there's so many scientists throughout history who got stuck at a certain point and they didn't know how to how to proceed and then they would have a dream that tells them what the answer is or they would have a synchronicity or some some opportunity they stumble across some book or they make some insight by accident some observation by accident okay those

(13:43) things they don't there those things are non-deterministic they're not something that you can reason yourself to words or necessarily you know crunch your way toward words with more and more experiments you know certain things are just synchronistic and I think that's where I think that's where the Hidden Hand of God or Consciousness or higher Consciousness reveals itself in these these tiny moments that change the future forever you know when you hit that impass of logic and matter and experimentation and data five senses you

(14:13) hit that impass in order to jump across you have to have what you have to have a leap of faith a leap of faith to take a chance do the experiment you know you don't know if it's going to work out you have to have faith that it's going to and you do it and then you find out whether it's correct or not you see so I think I mean they're not incompatible they're just uh they occupy different domains of human experience and they both have to work together well you're already blowing my mind because the way

(14:35) you thought way you phrased that I thought wow that's almost like the difference between the the wave function and the deterministic it's like where when it breaks down like maybe that's the essence of Faith itself where it's like we haven't figured out what the future is but once it's been determined now you have something that's tangible and uh that you can touch um right so I think what I want to do is I have this I kind of so like I said at the beginning of this I found you because I found your

(15:03) YouTube channel found your description of scalar physics I read it or watched it blew my mind I actually went and edited it down um right after that because I was like okay I got to show people this and uh so I think I want to play the shorten version I have I think it maybe is like three or four minutes um and then get your reaction to it and if I missed anything in there as well then have you kind of weigh in and then I'm going to ask you probably some more questions on scalar physics stuff because I just think it's the scal of

(15:29) physics has honestly blown my mind um feels like it's science that's out there that nobody even realized was existed um so I think we have quite a bit to talk says that the gravit let me uh restart that let's do this okay yeah how long is this oh okay it's only about 3 minutes here we go the postulate says that the gravitational potential arises when there is a Divergence in the magnetic Vector potential and when the electric scalar potential changes with time in a curl free way let's break those down so normally as we

(16:02) discussed the magnetic Vector potential curls into a magnetic force field but when it doesn't curl and instead diverges or converges that's what scalar physics says produces a gravitational potential Divergence of the magnetic Vector potential is key Divergence is a math term meaning that there is some kind of expansion or compression in the field in other words the field vectors point away from or towards a Common Center and that's the opposite of curl which involves the field circulating around something rather than converging

(16:37) or diverging from it as for the electric scalar potential that can also create a gravitational potential under certain conditions normally as explained the electric scalar potential has a gradient that forms an electric force field and if this electric field changes over time then according to Maxwell's famous equations you get a curling magnetic Vector potential that produces a magnetic field but what if the curl of the magnetic Vector potential is suppressed or canceled out what if you set things up so that the magnetic

(17:11) Vector potential does not produce a magnetic field a simple example of that for anyone curious would be a spherical capacitor with an oscillating electric field then what you get instead is a changing gravitational potential so instead of a transverse electromagnetic wave you would get what's called a longitudinal electric gravitational wave transverse means that the field Wiggles side to side as it travels which is what electromagnetism normally does and longitudinal means that it compresses and expands in the

(17:44) direction of travel which is what these artificial gravity waves do I'm talking about things like ball lightning and exotic vacuum objects the belled brown effect thesis Wireless Energy Systems longitudinal forces and rail guns the exploding wire phenomenon Stefan Marino's magnetic ionization device low energy nuclear reactions plasma based free energy systems so with that one postulate that the magnetic Vector potential and the electric scalar potential can each produce a gravitational potential under the right

(18:18) conditions you open the door to Star Trek level technology so there we go that was amazing it kind of blew my mind now and I've been watching a little bit Thomas beard and I'm not an expert on this at all so my understanding is that when we're talking about um like an electric field we're talking about like essentially a straight line when we're talking about a magnetic field we're talking about kind of a loop or a curve a curl as you would say and then when we're talking about the potential

(18:46) gravitational field we're talking about like the stress like squishing a ball back and forth um what am I how close am I on there and how can can you expand upon your video and understanding of how SC what scalar physics is and how it can lead to gravitational manipulation yeah I'm glad that you played that video because it had the diagrams it had the equations and and trying to explain that without that and without a whiteboard is is very is very difficult right I mean you can do it and analogies and

(19:16) metaphors but uh it takes longer and then the longer it takes the more you wear out people's patience so it's it's a trade-off between being long and boring or short but complicated

right yeah uh yeah but yeah that that pretty much sums it up now I think that the most important thing to understand is that which is what I said at the beginning of the video which wasn't included in this particular edit is that the everyday forces that we're familiar with we we know magnetism you know you got magnets that stick on

(19:41) refrigerators we know electricity when you turn on the lights or you know you get static electricity in your hair or your clothing okay and we know gravity of course because you know pulls us down so these things those are all force fields because there are fields that exert force on their respective type of matter you know whether it's an electric charge whether it's a magnet or whether it's Mass you know mass that gets pulled down by gravity okay so these things is what we're familiar with and all of our Electronics

(20:10) technology whether it's phones or radios or computers uh those follow from the principles of electrical engineering and electrical engineering follows from the principles of electrodynamics which is how electric and magnetic fields interact to create electromagnetic waves okay so but but the problem with all that is that it's only the surface level it's it only skims the surface of what how reality actually works so imagine you know you got waves on the ocean and imagine if you only ever paid attention to waves

(20:41) and you had no concept of the wind that's whipping up the waves or the underwater current that is steering the waves if you have no concept of that and you only focus on the waves then how much of reality do you actually understand you don't you only understand maybe how to how to use the waves to surf for example but you don't know anything about how to create a sailboat to actually harvest the wind you know or a submarine that can harvest the underwater currents so there are technological applications that are not

(21:05) included under current modern-day electrical engineering because the theories that electrical engineering is based on are incomplete I wouldn't say that they're necessarily flawed they're just incomplete they've closed certain doors that they should not have closed and this goes back to the mid to late 1800s because in the early the early 1800s okay the early 19th century that's when people like uh like Amper for example and some others were doing experiments with the very earliest experiments with electricity and some of

(21:36) them discovered that if you send electricity down a wire it'll create a magnetic field that alters a compass magnet you know the direction that the compass points so they realized that there was a connection between magnets and lightning essentially which is kind of crazy to think like how do you how do those things even connect well smart people did experiments and they figured out how everything behaved and then they handed all that data over to the scientists and the mathematicians at the time one of was James Clerk Maxwell and

(22:01) he he was he was a mathematical genius you know in a sense and he took that data and he figured out the rules by which electrom or electric and magnetic fields interact with each other and how electromagnetic waves are produced uh and he also figured out that light that light itself is half electricity and half magnetism that are kind of wrapped up together in the form

of a photon well although actually at the time he didn't know about photons because that came a little bit later but yeah he realized

(22:30) uh he he worked out the mathematics of how that all relates okay but while he was working out the math there were certain Avenues certain doors as I mentioned that he could have opened um but he thought to himself well as far as we know uh The Ether because they believed in The Ether at the time this medium that fills all of space he said well I don't think I don't think that the ether is elastic it doesn't have elastic properties so we can discount any sort of compression like Divergence convergence because remember in that

(22:58) video I talked about Divergence and you know Fields can converge or diverge from something so he he figured that okay well there's no evidence of that so let's just put that aside and he did and he just went on with just electric and magnetic fields and so he put out his uh paper on that different versions of it like two volumes of the of the theory behind that and then a couple decades later uh Oliver heavy side he was another genius but he came more from the electrical engineering angle um he picked up Maxwell's work and he kind of

(23:29) compactified all those equations there were 20 equations and 20 variables that he compactified down into what's called Vector form Vector notation and in that video for example when I listed out those equations with the little Cross of the curl and the Divergence and all that that's those things were his inventions he came up with those particular mathematical mathematical techniques to describe how that worked the problem though is that he had an irrational hatred for uh what are called potential

(23:57) fields in other words h the force this is why I'm getting into this which is that when when I talked about uh the force fields that we're familiar with like gravity electricity magnetism those are force fields but force fields in themselves don't exist alone they're actually uh expressions of something deeper something simpler just like the ocean waves are expressions of the wind and the underlying Water Dynamics okay there's stuff that's deeper simpler more fundamental than these force fields and those deeper

(24:23) things are called potential Fields one of those is called the electric scalar potential which sounds complicated but it's just voltage right so when you think about like a 5v USB connection or 1.5 volt battery well that's because the the two ends of the battery have a difference of potential of 1.

(24:42) 5 volts which is which is kind of like electrical pressure like how much work that that particular battery can do that that's sort of what's determined by this voltage value so but voltage in itself is uh it's a it's a potential so electric scalar potential when physicists say electric scalar potential they're just they just mean voltage so there's voltage which is like V you know the symbol V and then you have another thing called the vector magnetic potential and that is also something that's deeper than you know electricity

(25:08) gravity magnetism and this Vector potential it's uh Maxwell described it as a kind of

electromagnetic momentum so imagine if you have a rope in water and you pull the Rope through the water okay it's going to drag some of that water with it along the sides of this rope and so this water is going to acquire some of the momentum that the Rope you know has imparted to it and that's how he sort of visualized current going through a wire so when you send electricity down a wire it drags some of the ether with

(25:35) it so there's this ether flow that goes along the wire and that's what he considered the electromagnetic momentum or the magnetic Vector potential and when this flow of ether curls when it has a vorticity in it uh the axis of that Vortex that's a magnetic field line so that's where magnetism comes from magnetism comes from the curl or the vorticity in the so-called magnetic Vector potential which is you know one step below magnetism in terms of Simplicity and you know the same thing with gravity you've got gravitational

(26:05) force fields and below that you got the gravitational potential which is like a kind of space-time stress like a like a pressure and when you have uh a gradient in that so like when this point here has this so much pressure and this one has a little bit more this one has a little bit more gravitational potential that line This is the slope between them is what generates gravitational force so if you put matter like right here it's going to fall it's or it's going to fall this way it's it's going to fall that

(26:31) way because it's going to go along the slope so you know this is just like a little Glimpse at the mathematical underpinnings of things and I think it's important to understand that these force fields that we know they are just more complicated expressions of simpler things but see here is where scalar physics comes into the picture scalar physics acknowledges that these potentials that generate the force fields that we know that these potentials can be distorted in other ways that don't produce the forces that

(26:59) we know so it is pot it is possible for example to have an electric voltage that does not have a gradient in it um and therefore does not produce an electric field for example if you have like a hollow metal ball okay so imagine like a metal ball it's Hollow and you put a bunch of electricity like a bunch of electric charge on it that ball is going to charge up to certain voltage okay but but the interior of this hollow metal ball the the voltage is going to be completely 100% uniform throughout the entire space inside this bone okay and

(27:31) if it's uniform there is no gradient and the equation says that a gradient in the voltage produces the electric force field well if there's no gradient there is no electric force field all you have is a uniform potential uh and so that shows that a potential can exist without producing these force fields and then the question is well what else then can you do with these potentials that don't produce the force fields that we know what else can you do with it and well that's that's the interesting question

(27:57) because you can take voltage this this uniform voltage field and you can vary it over time you can like you know make it oscillate from high voltage to low voltage to high voltage to low voltage in a uniform in a spacially uniform way and if you tell that to a physicist you know what

they'll say a mainstream physicist they'll say okay well what does that do that doesn't do anything because if there's no gradient in the voltage then there's no electric field and if there's no electric field then

(28:21) you know it can't move current through wire it can't send electromagnetic waves out or whatever and so they just ignore it because they're like like it's useless there's nothing you can do with it but what if that's not the case what if it actually uh affects the stress of SpaceTime itself and produces gravitational effects time dilation effects uh you and these other applications uh and that's what they're not that's what they're not paying attention to that's what they're those

(28:47) are the doors that they keep closed but scalar physics says no it might actually mean something so let's look in experimental records for any sign of uniform voltage that changes time or a diverging magnetic Vector potential for example where do we see that where does it show up and is there anything in the experimental record that indicates there's something to it and the answer is yes a lot of these suppressed inventions whether it's free energy anti-gravity longitudinal radio wave systems things like that they they seem

(29:19) to employ physics principles that are along these lines it might actually be the Divergence of the magnetic Vector potential that they're using to do these amazing things to alter time to create propulsion for example uh and so that's what scalar physics is it's about taking an alternate route to what mainstream physics has taken by going back and looking at the simpler foundations of electrodynamics as we know it and opening those other doors that mainstream physics has closed you hit so many of my questions

(29:48) right there that was amazing um because I was going to ask about Max while he brought up his 20 equations um you I think you kind of touched a little bit maybe I'm wrong but on heavy side in terms of him potenti coming in and uh take you know simplifying those equations uh and and would you agree that we lost some of what our capabilities are when it comes to electrical engineering when when that happened absolutely because so so what heavyside did was he he got rid of the potentials so the magnetic Vector

(30:17) potential and the electric scalar potential he basically got rid of them and he formulated Maxwell's four famous equations only in terms of the electric field and the magnetic field the the force fields that's all he did and you know I don't have a whiteboard with me but I don't know if this will work let's see if I can even show the equations there we go all right so so there we go these are the four Maxwell equations in Black okay it don't work too well I can bring them up as well okay but see see

(30:47) the stuff here in red the red here and then then the red down here okay this is backwards that red stuff that's what Maxwell left out or not heavy side that's what he left out okay and so everything in Black that's what you'll find in a textbook is uh that's what you'll find in a textbook is the standard Maxwell equations and everything in red is what he left out and and the way that they leave it out is by doing what's called a gauge fixing it's called gauge

fixing and what

(31:16) gauge fixing is is when when they go through the process of deriving these maximal equations that relate electricity to magnetism uh when they do that eventually they hit upon the uh the magnet or the the convergence of the magnetic Vector potential and they hit upon a uniform voltage field that changes over time it shows up in the math and so they get to that point and they're like well that's con that's inconvenient because we don't want these potentials messing up our Maxwell equations so what can we do H what can

(31:45) we do oh here here's what we'll do since the Divergence of the vector potential which is like the triangle with the dot and the a you know Divergence of a uh since since we don't know what that is and we've never measured it uh it can it can be whatever we wanted to be so let's make it zero and so they literally take an eraser and and erase it out of the equation by setting it to zero and then they proceed as normal and they're like hey look we've got the four Max will equations there's no potentials involved

(32:10) and everything's good but because of that mistake because of them doing that uh this gauge fixing you know one of the gauges is called the coulomb gauge and that's where you set it to zero and another one's called the uh the Lorenz gauge where they set it well they relate them to each other but in an opposite way so when you plug that into the equation they cancel out so it cancels out all the scalar stuff so if you do one of those you just wind up with Maxwell equations that don't use any of

(32:36) this Fringe technology effects whether it's gravity stuff time dilation you know space contraction SpaceTime engineering they left that out of there and and I had right here on the paper in red I mean that's that's what would have opened the door for them but they kept it out and you know I would I would like to think that they kept it out for innocent reasons maybe at the time you know they were all material or positivists and if you can't sense it with your five senses then it doesn't exist that was like a virtue back then

(33:03) you know to get because you know because they were rebelling against uh the church and religion right so they're rebelling against it and so but but then they went to the Other Extreme of almost like worshipping matter instead of Mary right so it's it's kind of crazy they went from one extreme to the other uh and yeah it it resulted in in a very bad blender and all of modern physics all of modern electrical engineering has been built upon that faulty foundation so it's no wonder that over the past hundred years

(33:33) physicists still cannot produce gravity in a lab artificially I mean I'm talking about mainstream mainstream science I'm pretty sure they can but yeah mainstream science I don't think is doing it I think maybe just in the special access programs have I had to guess special access programs and certain Fringe inventors or physicists like for example Eugene penov yeah right he he he's done a lot of good work with gravity like generating gravitational impulses using not only superconductors but also um well

(34:02) superconducting discs that you fire an extreme electrical current into and this this current discharge through a superconductor generates uh coherent macroscopic Quantum wave functions which have gravitational properties and um speaking my language now okay do you think that's possible because the superconductors are you know warping the magnetic fields and there as you were explaining like zeroing out the magnetic field in that localized area or how do you think that's possible I think that plays into it I think that plays into it

(34:31) but the the thing about superconductors is that when you have charges that are in them or collection of charges all those charges I me I'm talking about electrical charges like electrons right those charges that are involved in that they are quantum coherent they're in a in a coherent State and this is a very important point this is what I have in my notes to make sure to mention because it's it's a very important point you see electrical engineering electrical engineering it doesn't care about any of this Quantum

(34:57) stuff necessarily it doesn't really care about the what's really going on at a fun fundamental level okay and so when you send let's say one amp of current through a wire okay one amp of current through a wire they don't they don't care whether it's like a trillion electrons moving very slowly at like 1 to 10 centimeters per hour through this wire they don't care if it's that or if it's just a few electrons that are shooting extremely quickly down there I mean as long as the

(35:27) the the proportion of charge to how long it takes to pass a certain point equals one amp is all the same to them okay but at the quantum level there is a huge difference between sending a bunch of electrons down a wire versus a bunch of electrons or or electrons that are in free space or in a through a superconductor that are going down it and the difference is that here we go here here's a prop so when you have a wire and electrons are going through it they're actually it's they're actually

(35:56) bouncing around like crazy through the metal lattice you know all the copper ions and so on the copper atoms they're bouncing around and it's only the general drifting that creates the current that we know as one amp okay that's why they heat up too right because they bounce into the atoms create friction yeah so that's how the old light bulbs work you just send a bunch of electrons through this resistive wire and then they hit so hard into the metal that it imparts energy into it and then it starts to glow and

(36:20) generate light okay um but the problem is there's no there's no um organized movement to it it's just like it's just bunch of noise that's drifting down down this wire and so at a Quantum level each electron and its Quantum wave function is not aligning with the quantum wave function of the electron next to it or down the wire and so all these things all these Quantum effects are canceling each other out so they cancel each other out and sum to zero and uh there's no then that's the reason why why uh

(36:50) current through a wire doesn't have any macroscopic Quantum weird woo woo properties because all the quantum stuff has been canceled out the electrons moving semi-

randomly down the wire which is very very different from when you have a superconductor uh especially like a rotating superconducting disc like about clob's early experiments which NASA tried to replicate uh if you have something like that then the electrons are moving well they they're delocalized inside of a inside of a a superconductor but there are other ways

(37:22) of getting them to move collectively where their wave functions sum together because they all perfectly align like this right and the more they align you stack you know more and more and more waves across each other the higher the amplitude of the wave becomes until the wave is so big and has such a high amplitude that it starts having effects on the macroscopic scale like producing gravity okay you know gravitational impulses so uh polov and another guy named Claude uh poer p o h e r i don't know if that's how you pronounce his

(37:55) name but Claude poer he's got videos on yoube tube where yeah he also fires extremely high currents electrical currents into superconductors and from that generates what appears to be a gravitational impulse beam or wave that knocks a pendulum upwards so he's got this arm this metal arm swinging a top this like uh superc conducting disc and when they fire into the disc this arm you know swings up and then the weight kind of pulls it back down so there's something there's something non-physical causing

(38:23) this to move and as best as they can determine it's some kind of gravitational wave but it only comes about when you uh have Collective electron movements okay as opposed to electrons going down wire yes is that like Cooper pairs or you think what is it the B BCS is that the other terminology I can't remember what that stands for three people's names usually that's the collective coherence essentially that gets formed in superc conductors yeah you get uh different kinds of coherence Coupe repairs I think

(38:53) would be the the simplest one and actually there's a debate about whether coup repairs even exist or if it's something else going on but yeah but but but you know those things you know superconductors are a way of uh bringing purely Quantum phenomena into our everyday large world uh and so like for example when you get an MRI done you know like a CAT scan if you get like an MRI done uh that uses very powerful and sensitive magnets called well they're called squids super super conducting Quantum interference devices that's what

(39:21) they're called but they use quantum principles and superconductors in order to be able to measure very weak magne Fields but not only that but they can measure the magnetic Vector potential directly so besides MRIs I think squids have other applications uh in scaler physics the only problem is I can't buy one because they're like 20 to \$30,000 used for one squid you know so all this magical stuff a lot of it just requires a lot of either either extremely high currents extremely high electrical pulses or high voltages or you know

(39:53) these these expensive squids or something like that and that's the reason why scaler physics isn't better known because you have to kind of explore the extremes of things in order to to access these weird effects I'm glad you brought that up because I think a lot of people wonder why can't I just do this at my house why can't we make it in my house and I think that

the what's getting made in the special access programs because these people have budgets of millions and billions of dollars they have super expensive

(40:18) equipment uh and I think if you were try to draw as much power as you need in order to create like really visible amounts of the effects you know you're going to get noticed or you're can have a very high electricity bill I would imagine that's out there um so when you were describing your uh the the hollow ball was that the uh like oscillating spherical capacitor that you were mentioning in your video as well cuz that was something I just was having a difficult time wrapping my brain around as well where you have this uniform fe

(40:45) uh charge I believe it was if I'm correct me if I'm incorrect within the ball as well is that yeah yeah essentially the difference is that if you just have just a metal ball you know just by itself that's only one layer that's one electrode so imagine if you take this hollow ball okay and you cover it with some sort of electrical insulator called a dielectric meaning something that blocks electricity so you put a dielectric around it could be wax could be some sort of plastic or uh if if you're really rich and in the Black

(41:13) Ops programs you would cover it in barium titanate which is a kind of material which has an extremely high dielectric constant anyway so you do that and then you cover it in another metal ball so essentially along you know the surface you have two layers you got the metal layer the insulator and then the metal layer actually that's that's three layers but you know and that's what forms a capacitor and what a capacitor is is it's a means for storing electrical energy so for example if you put positive voltage here negative

(41:42) voltage here you get an electric field between them and this electric field can store energy uh and when you put a dielectric in between it it allows you to store even more energy than you normally would in that space so the higher the dielectric constant is the more energy you can store in there so that's what that's what a spherical capacitor is is where you do that around the entire spherical shape so and I don't want to move totally away from this but I don't want to forget this is that are you

(42:08) familiar with the metam material of magnesium bismuth zinc in terms of ufology is that the same concept you think there because isn't bismuth uh one of those materials it's like essentially a the what is dielectric is that what you said well bismuth is actually more of a semiconductor okay it's more of a it's more like a metalloid semiconductor kind of thing but that is also useful because earlier when I mentioned um trying to create Collective electron motions or Collective electron currents that are

(42:38) coherent uh the problem with using things like copper for example the problem with using copper is that as I mentioned the electrons knock around like crazy in there uh and there there's other issues too it's called like the skin effect where the higher the frequency that you're trying to pump through there the more the electrons want to push to the outside and go along the skin of the material so you're missing all this awesome copper in the middle to try to conduct it uh but but long story short semiconductors are

(43:02) halfway between conductors like metals and non-conductors like the dielectrics that I mentioned okay so the halfway in between and that has certain benefits for for uh smoothing out and spreading out the electricity that you're trying to send through something so so if you want to have like a sheet of current that's moving collectively down you would want something like a plasma or something like a like a semiconductor in order to to do that more so than copper or more so than pure dielectric which you can't send electricity through it

(43:31) you can only try to try to compress it like a spring electrically so so bis me and the Magnesium thing um that one and and we're we're talking about samples that have been retrieved from supposed alien you know alien vehicle crashes essentially and and we don't know if it's really aliens or if that was like early 1950s or 60s Black Ops technology that they're experimenting with uh although interestingly enough um one of my professors in college who taught in my quantum physics classes I I

(44:00) met him before going to college on on a like a like a summer program at my high school and he took me to his lab where he's working on and he showed me what was it called it was called like EP epitaxial something vapor deposition that's what it was epitaxial vapor deposition and that's where they fire these gasified metals and substances at a surface to coat it and alternating layers of very very thin elements and he showed me a cross-section of this material and here later when I saw the news or or the video of that UFO footage

(44:30) it was identical but that was but that was supposedly retrieved decades earlier you see so it's it's interesting how science eventually comes around to what the UFO the UFO Community finds out you know years of not decades earlier yeah definitely it definitely feels like we are I don't know to me it just feels like reverse engineering like our science is catching up to the weird stuff that we're seeing float around totally but real quick I want to ask a few more questions on the scal of physics stuff and first question is do

(44:57) you believe there is an ether in terms of uh you know do you think that's the answer for how a lot of this stuff is can be possible because I think a lot of physicists would say given our conventional understanding related to Einstein's theories that we can't do a lot of the stuff that we're talking about right now what are your thoughts well you know the reason why modern physics kind of discounts the idea of The Ether it traces back to that Michaelson Morley experiment uh and that's where uh was it the early 1900s

(45:23) or late 1800s I always forget but anyway that that's where they literally tried to detect the motion of the earth through a stationary ether so they figured well you know the Earth is orbiting the Sun and if it's orbiting the Sun it's moving so therefore it's moving through a a medium that fills the universe a medium that fills the universe and if that's the case then light in the direction of movement should behave differently the light that's moving perpendicularly to it it's it's kind of like uh it's kind like the

(45:49) Doppler effect when you have a sound source that is moving away from you and then the frequency gets lower you know like motion affects frequency and wavelength of of waves so

they did an experiment where they where they compared how light moves um you know in the direction of motion versus perpendicular to it uh and they expected one of these to be shorter they expected this one to be shorter to have a different wavelength or a different frequency and what they found is that they're actually both identical which means either that The

(46:16) Ether was moving with the Earth or the ether did not exist that's that's what they were thinking at the time and and that's when Einstein came along and so Relativity Einstein's relativity W out because it didn't depend on an ether to explain a lot of these phenomena right the problem though was that that this interferometer experiment uh they're sending light this path Into The Ether um but they weren't taking into account the fact that when you do that the this path length itself

(46:44) it also shrinks so there's length contraction in the way so the light that goes here it returns sooner than it would this way and that s of that that ended up canceling out uh any sort of change in the velocity of the speed of light you see so when they measured it and it ended up being exactly the same thing it's because essentially they were measuring light with light itself so when light speed slows down uh and your clock also slows down and your ruler shrinks well it's still going to be the same proportion you know so you're still

(47:12) going to think that oh well the speed of light is always the speed of light and that's the the central premise of Relativity that the speed of light is always constant no matter who the Observer is no matter if it's moving not moving in a gravitational field or in in in you know free empty flat space um but that wasn't see relativity was only one of the many ways that that you could explain some of these experimental observations uh there was a another parallel Theory called the Laurence ether Theory by Hendrik Lorentz

(47:39) okay and his theory did involve an ether and and all the math was essentially the same as relativity it made the same predictions it worked just as well but it required the existence of an absolute stationary ether that permeated all the space and so physicists you know they kind of compared the two and they said well um both of these theories they got essentially the same math and they both exp explain the same experiments that we've observed but this one has something extra that relativity doesn't

(48:10) even need so let's go with relativity because it's a simpler theory that accounts for all these known observations that's the reason why they went with it the problem is the reason why they couldn't distinguish the two is because they didn't have the technology at the time in order to do the experiments to distinguish whether there actually was an ether or not so because they didn't have the tools they assumed that that thing didn't exist and wasn't relevant just like earlier you know when they

(48:37) discounted the vector magnetic potential and the electric scalar potential and the whole scalar stuff they discounted it because they didn't they haven't hadn't yet detected it in experiments so do you think that then there is I presumably that there is an ether do you think Tesla was right what are your thoughts and totally and you know what the ironic thing is

nowadays physicists talk about the vacuum being not empty space but teeming with a zero point energy field with virtual photons virtual particle flux and and and now

(49:04) they talk about vacuum polarization as if the vacuum itself is a dielectric medium so they're talking about The Ether it's just the terms yeah it's like not to look like fools for like see here's the problem if a physicist nowadays says that he or she believes in The Ether they're gonna laughed at yeah you can't you can't use that word but if they say that yeah you know I totally believe in in the vacuum virtual particle flux they're like oh wow smart smart person you know thumbs up and uh

(49:32) it's funny how much of it's just semantics right I'm bringing ether back by the way though I'm bringing it back I don't give a crap people think I'm crazy because I think I agree with you on that but yeah a lot of it's just oh what's your terminology and what have you so anyway continue if you want it's it's it's a it's terminology and it's also the also the principle of it because okay you know granted The Ether that people believed in during the 16 17 and

(49:52) 1800s it might the real ether might not exactly behave exactly the way that they that they figured um but it's pretty close and I think I think if you take that with the whole virtual particle stuff uh you can take both of those forward and and and converge upon a concept of The Ether that is accurate that is practical that cannot be uh cannot be disproven because it's it's solid you know it's like it's it's a real principle uh and so we do have to go down The Ether track we just have to

(50:21) make it more correct and more accurate to reality than than what they had in the 1800s essentially so do you think that we've already figured out a unification Theory then of quantum field mechanic or Quantum field Theory and general relativity do you think it's been suppressed or what are your thoughts on that uh I do believe that well all right so the way that I would put it is that even starting back in the 1800s when when Maxwell came out with this Theory and then ol ofer heavy side came along and kind of uh handicapped it

(50:50) I do believe that there were certain people um probably in government or maybe in private clubs or something like that who who started taking those other doors and they started experimenting with some of these principles because you know during during the time of the the late 1800s that's when you had Tesla already starting to do his Technologies so technology was already starting to evolve at that point that could go in very interesting directions so people had the tools back then to go down that route uh it's just that mainstream

(51:18) public science was kind of like a like a like a ship that's been cut off from Shore and is now just drifting into into Oblivion essentially and it's been drifting into Oblivion for the decades since then and and nowadays we hold quantum theory and and relativity high up on this pedestal as if that's the end all be all and then of course you got string theory and people who believe in dark energy and dark matter and Quantum Loop gravity and all these things but what if all of that is is barking up the

(51:44) wrong tree what if the wrong turn was actually taken a century ago and if you go back and you go with this parallel path that is the way to control gravity that is the way to control time and space and so on uh and nothing that some people even in the late or even in the 1890s were doing that so because back then in euphology you had things called the the uh Airship or the mystery Airship sightings of the early 1890s where what looked like these cylindrical cigar shaped crafts uh would you know a lot of people would see them and some of

(52:15) them would land and the person would come out and talk with someone and ask ask one person to mail a letter for him it sounded like a human to me it sounded like like people were occupying these things and experimenting with them uh and so so perhaps that was some of the earliest uh Black Ops stuff that was going on and it's only continued since that time now in terms of quantum physics and relativity I mean it has a lot a lot of validity to it of course but if you really get down to the fundamentals of each Theory you start to

(52:46) realize that physicists who subscribe to it even they themselves don't fully know what they're talking about or they don't fully know what it says about reality what things actually are at at a substanti of you know fundamental level they can only describe how things behave for example uh to give one instance of that uh the Einstein's field equations which is something that Jack sarfati is always talking about he always talks about the Einstein field equations all right well on the left side of the

(53:12) equation you have all these terms describing the curvature of space time okay so how much space and time warp that equals a constant you know a bunch of constants times uh the the stress energy tensor which is how much matter and energy and momentum is compacted into a given volume of space so basically the equation talks about how much a particular group of matter and energy and and momentum creates curvature in space and time that's all the equation is and then and then serati he adds a constant on the right side of

(53:42) that equation which he calls S I don't know if s stands for surfa or schmuck but it's one of those two you know uh schmuck I'm pretty sure yeah yeah yeah for yeah I talked to him the other week yeah so so you got you got the schmuck Factor on the right side of that equation okay and and this thing uh it amplifies or it decreases how much a particular uh clustering of matter and energy affects space and time so his his point you know and I can follow along with a lot of what he says not everything but a lot of it uh his point

(54:16) is that if you can control this this s variable the schmuck variable then you can control how much matter warps space and time and if you increase that to an extremely high level using this uh this this frill meta material that he's always talking about so if you do that as an example then a given quantity of energy whether it's electric energy magnetic Mass whatever can have an extreme warping effect on space time and that's how you can uh I don't know open a portal perhaps with a with a 9-volt

(54:45) battery you don't have to have the the capabilities of nuclear power plant next door just to burst open space and time and that's the issue with a lot of um mainstream approaches to

let's say travel or opening singularities or you know warping space and time things like that is they're always going off the assumption that the Einstein's field equation is what it is and there is no schmuck Factor you know it's just it just is what it is and so therefore it takes a gargantuan amount of energy and

(55:15) mass or matter you know moving in crazy ways in order to warp space and time and that's why they've never been able to do it because it's it's practically impossible and yet go ahead I no I guess it was going to say cuz you know that that Rings true with what Jack told me as well and his whole Theory doesn't take a lot of energy to produce these types of gravitational effects and that also reminded me of what Thomas Bearden said on the psychotronics uh video I was watching the other night where he talked

(55:43) about the Philadelphia Experiment and he said that you could make a battleship levitate with a flashlight and that's I think essentially what it saying you don't need a lot of energy because you just have this tiny battery in there in general but do you think that you think that Sara's uh you know theories like that can actually really realistically produce the types of gravitational effects that we need to have you know macroscopic visible large gravitational effects actually make a portal what is

(56:09) your thoughts yeah well his s factor uh he himself when he talks about it he he from what I understand he frames it from the Viewpoint of some sort of a relative permittivity in other words essentially that the dielectric constant of the vacuum can be modified uh I might be wrong but I think that's what it is cu because you know he says he says that on one hand but then on other times it seems like he says no that's not it so I'm not quite sure what he means there but that's the impression that I got it

(56:36) has to do with the dielectric constant or the index of refraction of The Ether essentially that when you modify that then that modifies everything that modifies intermolecular forces uh the electric field magnetic field gravitational stuff you it modifies all of it because you're you're modifying the The Matrix code essentially you're kind of modifying space time at the root and uh and the issue with it is that normally uh when you have no gravity round and no funny manipulation of scalar physics that s equals one

(57:07) so it's not apparent in Einstein's equations that there is an S there because if it's just one you know something times one equals itself so that that's that thing by itself is all that's needed in that equation for it to work out but there might actually be an actual s consonant there or S variable there which can be technologically manipulated and I'm pretty sure that that that if that exists then that is what's being manipulated through let's say the Divergence of the vector

(57:31) potential and that a scalar physics stuff you remember the the stuff in my sheet of paper that was written and red yeah I believe that that that that extra stuff I believe is what modifies that s constant so there's potentially like a unification between Jack's theories and other people are you familiar with salvator p as work as well yes yeah I've read his patent recently and watched some of his interviews so I think he's pretty I think I think he's pretty spot on however

he does lean more

(57:58) mainstream than surfa does because when he talks about warping SpaceTime um he's the one that believes that a huge amount of energy is required uh in in a compact area and that's why he talks about setups like a like a like a Charged electrical disc rotating rotating at extremely high speeds like 30,000 revolutions per minute which I mean if you try to do that for real it would it would blow apart with any man-made material that we're we're familiar with uh he he's supposedly in the projects

(58:26) that he worked for he did do setups of that but it was like less power and like slower rotation so it would I mean that was still feasible but I think to scale it up to where he wants it to be might be hard and instead of having physical rotating things which oh which by the way speaking of Joseph Frell uh the Nazi DEA you know the the DEA device uh some some people believe that it used rotating Mercury right yeah I'm planning on looking at a rotating Mercury because it seems kind of interesting yeah rotating Mercury like ancient van

(58:55) technology like you know supposedly that's where that comes from the Ancient Ancient pre pre mahabarata um epics in India the civilization that came a little bit before that they they were the ones that had this advanced technology according to their mythology in India uh and and they had flying machines they had what appeared to be nuclear weapons for example there's like accounts of it in their myths of those things I mean for all we know it didn't even happen on Earth it could have happened on some other planet and the

(59:21) myths were brought here to Earth you know for all we know right that's maybe that's why there's no archaeological evidence of some of those things but that's that's a little side topic but point being but point being that salvator P when he wants to have a a rotating charge disc maybe you don't need that maybe you just need rotating Mercury because it's metal that's rotating and you just charge it to high enough voltage and uh perhaps you get some interesting effects well I mean you

(59:44) wouldn't even have to like pump voltage into it necessarily because when you take Mercury and you roll it over the surface of glass you get something called the tribo electric effect and that's where it generates its own static electricity so so if you've got this swirling uh uh Vortex of mercury essentially you would get it's it producing its own high voltage field for all I know I mean that's just like a side note I'm like I'm going off on T good I think that this is this is my

(1:00:11) message to Jack out there because I guess we've had a little bit of falling out for some reason um but uh no no fault of my own but I think that a lot of people like for me it's like the **truth** is somewhere in the middle like I've interviewed salvator pz I've interviewed Jack Sarfati and you know it's like physicist versus engineers and they have different ways of seeing stuff and I kind of think that there's definitely in my opinion at least a way to manipulate gravity out there and maybe the answer is somewhere in the

(1:00:35) middle maybe it doesn't take huge amounts of energy to pull off but maybe it's not simple as just using Einstein's equations um is that kind of how you see it as well I mean you seem like a guy who kind of me takes a measured response on everything yeah if you go back in time and you look at when quantum physics and relativity came around it's not like the the pre physics of that time period like the Newtonian classical physics it's not like that was proven false it was just proven incomplete and you know Newtonian

(1:01:02) physics is a limiting case or a subset of quantum physics and relativity so in other words if if you take this complicated Machinery of quantum physics and relativity and you say okay well let's assume that it's actually simpler than this and it's a little bit simpler there and uh you scale it up a little bit you know all those little weird Quantum things they start canceling each other out and what you're left with is classical physics as we know it like you know the like billiard balls hitting other billiard

(1:01:26) balls and transferring energy momentum the things that we learn in high school and Junior High about science that is what falls out of quantum physics and relativity when you make certain simp simplifying assumptions so what that means is that quantum physics and relativity are very likely subsets or limiting cases of something that goes even Beyond it and you know a simple example of that is what I have you know on my sheet here which that you've got the Maxell equations which are you know tiny and then you just add a little bit

(1:01:51) more to it but that little thing that you add to it that's like a suet of the subset so so I do think that um you know scalar physics can take us a Step Beyond and we do have to look at the areas that have been ignored up to now okay couple more questions this I'm loving the science conversation by the way and I think the chat is as well so we're going to keep going this direction for now um one thing that I want to go back to briefly is do you believe that dark matter and dark energy are real do you think that

(1:02:21) we've simply misunderstood some other property interaction of The Ether and the VAC from the SpaceTime well you know dark matter and dark energy the only reason why those have been invented as explanations is because the equations that they're going off of are those incomplete equations there are they're working with an in incomplete version of gravity and SpaceTime and relativity and general relativity and so once they encounter these actual anomalies and measurements they they have two options they can

(1:02:54) either change their Theory or they can make new predictions that are false based on the old theory that is incomplete and I think that's the route that they've gone because it's a safer route it's it's safer to respect you know the elders and and go with the existing science and don't question it and merely merely point it in a New Direction than to say oh no you guys were flawed you you missed things for the past Century you know all those hundreds if not thousands of phds were looking looking in the wrong direction

(1:03:21) you know that's what bugs me because you've got people out there and I'm just going to throw shade on NE Tyson cuz it's uh in Vogue right now but you know you got him going oh

we can't understand this we can't understand a Double SL experiment we don't know what dark energy and dark matter are and it just we don't know you know and they go on and talk shows and talk about it it's like well there has to be an answer you know maybe we should look back at what we thought was true before you know

(1:03:46) maybe it's not as simple as you know expanding upon what we've already developed but actually like taking a hard look at what we already thought was true and then looking at it through a new lens out there what is your opinion on some of what I would call the science influencers that are out there do you think that they're getting in their own way do you think they're stopping progress well it's it's become invogue well so so back in college when I was doing my quantum physics classes my

(1:04:10) professor said to the class that it's not our job to understand why or what is actually happening it is our job to do the calculations and get the results to do the measurements you know I mean what what kind of mindset is that and and I think it was his way way of maybe coping with the incomprehensibility of certain aspects of quantum physics because you know uh what was a Richard fman said that if you're not uh uh mystified by quantum physics then you don't truly understand it something like that I'm

(1:04:39) paraphrasing but basically it's become acceptable to treat quantum physics as people treated uh you know Catholicism back in the Middle Ages which is God works mysterious ways don't point out the contradictions if you do you don't you're displaying Faith so if you want to have faith just don't question just do you know just do what you're told pay pay your indulgences and and you'll get to heaven one day that's a good analogy yeah because I you know I think there is this certain weird Dogma now that's been

(1:05:09) built into Academia and uh it feels like a lot of people are afraid to push the boundaries and I think that in my opinion science isn't as much as science is iterative um it really goes in Leaps and Bounds in my opinion not necessarily in like tiny little foot pths and I think people kind of forgotten that you know there's been people that made huge strides and I think if we were to look back in history we would see that a lot of these uh great scientists that we rever were probably thought of as crazy

(1:05:37) or you know what have you back in the past you agree yeah they were and and our our perception of them nowadays is a very Whittle down caricature of who they actually were like Isaac Newton for example Isaac Newton what what do we remember him for okay the Apple falling on his head he looked up at the moon and connected the two like gravity to or orbital motion okay okay um but he was an alchemist as well he was deeply into Al Alchemy and occultism because he because at the time there was no political correctness there was no uh

(1:06:08) you know government grants and things like that that kept everyone in line so hey if you're an alchemist and you're trying to figure out gravity it's all part of the same picture of trying to figure out what's actually going on uh and of course but but the nowadays we just trying to try to try to ignore that that shadier side of him you know the the Alchemy stuff but

but it's but it's it's modern society that that's at fault he was complete in himself he was his own person but we only want to take that

(1:06:30) little tiny extract of him that suits our blind spots and our biases and that's that's wrong you know that's wrong it's like uh the same thing with science nowadays any anytime a major anomaly occurs that doesn't fit Theory they're confronted with a choice do we hush it up or do we go against the entire establishment and most of the time they they hush it up you know and same thing in archaeology or biology genetics whatever things that are just too controversial it's like it's like Planet of the Apes

(1:06:58) you know the original Planet of the Apes movie with Dr Zaius trying to trying trying to keep keep things hush and that's where we are so intellectually and scientifically we are still in a kind of Dark Age even nowadays and you know and that's why it's no surprise that after all these decades and you know particle colliders man billions and billions of dollars spent like what do we have anti-gravity yet in the mainstream no no we don't meanwhile meanwhile we have these private contractors working with black ops

(1:07:28) military flying around in you know super do super duper ships and going at like mach 60 or whatever and doing right angle turns in midair they're doing that why because they don't have the reputations to defend in the private little Labs that they're working in it's no surprise wants to come out either because you know you you would just get attacked by mainstream Academia where it's like they're getting paid hundreds of thousands of dollars a year and they get to work with magic why why would

(1:07:54) they want to come out and risk any of that right well exactly and that's an impediment to disclosure the fact that you do have all these people and organizations and the entire military industrial complex getting rich off of their asymmetric power advantage over the mainstream and so in a way you know NASA and Academia it's kind of like a like a circus Sideshow to to to divert us from the real thing uh and so and so that's why me personally that's that's one of the reasons why I left I did I

(1:08:23) didn't want to go into Academia because I knew I'd be entering into this Ed politically restrictive uh environment I didn't want to do that I would rather make money in some other way unrelated to all this and then do my physics on my own time on the side because that gives me total freedom to do and say whatever I want you know no ndas no worries about grants and reputations and you know hoping to one day get tenure or something like that uh it's it's more freedom but at the same time of course

(1:08:47) it is harder because if you don't have as much funding then you can't do as much so it's just kind of a pro and con to each well I appreciate your work um let's talk a little bit more about scalar physics and uh radar uh what do you see do you see a connection at all between scalar physics and radar yeah well so so radar you're just using regular electromagnetic waves you send them out and then the reflections you Monitor and depending on their timing you can you can deter and the direction you can determine how far away

(1:09:15) something is I me that's the basics of radar uh but of course radar can be taken in more complicated ways where not only do you send it out and get it back but you you monitor how what you get back how how the wfront of it is shaped uh and that that gets more into like holography and some really complicated applications of radar uh which still is Think Like phase conjugation great so so phase conjugation that's something that Tom Bearden talks about all the time because because Tom Bearden he uh he was a

(1:09:45) retired lieutenant colonel in the Army right he spent 20 years in the Army and he has a he has a minor well he's got degrees in mathematics and I believe engineering something like that so he's got a backgr in it and then when he was in the military he also got a grant to study some other some other things so he picked up a lot of different you know various types of scientific skills uh enough enough to probably make sense of what he what he heard through the grap Vine while being in the military from like these these

(1:10:13) closed off special access programs and so on he probably picked up a lot of it and then he put the pieces together himself using his knowledge and so that's why when he talks about a lot of these Fringe scalar physics applications a lot of it seems very spot-on but then other parts of it seems to me it's almost like he just did the best he could to try to piece things together and he himself didn't even know 100% about how it worked but you know so he talked about it in a more General way without really giving the math I

(1:10:41) mean me coming from a physics and electrical engineering background the math for me is final in the sense that if you can dissect it and look at the math then you can tell what's actually going on and whether it's actually true or false okay but if you don't have the math and you only have Concepts then it's more in the realm of maybe like okay yeah this could make sense but we'll have to test it out I'm not quite sure you know so Tom Bearden he talks about a lot of it uh not in terms of

(1:11:05) math but in terms of principles and ideas and theories which is good I mean it's really good for for exploring new ideas and and trying to figure out the esoteric applications of scalar physics however I would have liked to see a little bit more math in some of his stuff so that I can kind of look under the hood and see if it's if it's uh truly valid and if there are any other ways of interpreting it than what he interpreted as now so okay so going back to radar what what Tom beon talks about is where uh you take electromagnetic

(1:11:35) waves okay and you overlap them in such a way that they cancel out so imagine you've got a wave like this okay but you've got another wave that goes down like this so you got one amplitude one electric field Vector pointing this way another electric field Vector pointing this way and if you overlap them in space then you get cancelling electromagnetic fields so it's a basically it's called a um Vector summing see see Vector you sum these vectors to zero now physics would say um if you sum it to zero then you just got

(1:12:04) empty space there's nothing there but that's not true because what you do have is you still have stress on that SpaceTime Point okay it's just like if you have once again the Rope

analogy yeah yeah yeah exactly so if you have like a rope okay and you pull it from one end at a certain amount of force like 10 Newtons it's going to fly off in that direction it's going to accelerate in that direction if you apply 10 Newtons in the other direction it's going to fly off in that direction now

(1:12:27) if you apply 10 newtons on both ends equally what happens it's going to be stationary just as if you applied no Force at all and so modern physicists would say okay well there you know the force is summed to zero it doesn't matter if it's zero force or it's minus 10 and plus 10 or minus 100 or plus 100 it's all going to sum to zero so therefore there is no motion and these are all equivalent but they're not equivalent because one has no tension the other one has more tension in the rope and the other one has a lot of

(1:12:52) tension in the rope and eventually the Rope is just going to snap hm so good point so when you sum these vectors together electric this way electric that way or you know magnetic this way magnetic that way when you sum them to zero it's going to put stress on SpaceTime and if you do it enough SpaceTime just like the Rope is going to snap and that's when you get a portal or a singularity you know you reach you go beyond a certain threshold of what SpaceTime can sustain and you're going to essentially create like a like a mini

(1:13:22) black hole or something like that you know due to all the SpaceTime stress and you know in this case yeah and and if if you try to do that using just uh without the schmuck Factor if you just try to do it just the regular the regular way then you're you're going to need way too much electromagnetic energy to I mean there's just's no way there not not even a nuclear power plant could could put out that much power to rip it open but that if if you got that s factor that you can manipulate then it's kind of like it's

(1:13:49) kind of like a like like putting oil in a door lock so that you can pick it more easily okay you can pick it way more easily make the process more efficient exactly yeah you you catalyze it's like a catalyst okay it makes it more efficient and at that point yeah sure you know you could you could like I said a 9volt battery to lift an airplane or something like that or or so on um but okay yeah but but even even without that even if you just cancel electromagnetic waves and you sum them to zero uh that results in well you get rid of the

(1:14:16) electric you get rid of maybe the magnetic so all you're left with then is a potential remember remember how I talked about how force fields arise out of simpler potential Fields what if you get rid the force fields you still got the potential Fields so you've got this potential field beam that you're essentially aiming and it can't be detected by ordinary instruments because ordinary instruments like radios or you know something like that they only rely on the electric force or the magnetic

(1:14:40) force that's what moves them so without that you can't detect it but potentials still have an effect on matter okay they still have an effect on matter which was proven via the aharonov bom effect where what they did was they they had a setup where you had like a coil of wire okay it's like a like a toid or like a really long coil of wire and when you have a coil of wire

all the magnetic field is concentrated inside the space of the coil there is no magnetic field around it however there is still a

(1:15:10) magnetic Vector potential circulating around the coil in the space outside of it and so they fired an electron through this magnetic Vector potential in the absence of any magnetic field and they found that uh when they did some Quantum experiments with it that this Vector magnetic potential would alter the quantum phase of the electron it altered it on a Quantum level and you know some physicists will say well that doesn't mean anything that doesn't have any effects but it actually does I mean it can affect things in very

(1:15:38) surprising ways all right so you know to answer your questions radar if you take a radar beam and you sum it with itself in an opposing way like a phase conjugated way then you kind of cancel all the vectors out and you get a scalar beam that you can do things with now Bearden said that if you take two such scalar beams and cross them okay in the region where they cross the scalar stuff starts canceling itself out and then you're back to an a regular electromagnetic wave right and so so in this way for example you can take two

(1:16:08) scalar beams send them way far out cross them at a very remote distance and you're essentially creating like an electromagnetic Fireball in that spot with nothing in between that's detectable because it's all scalar in between but but you know but but it's becoming it's becoming real again at that point where it intersects and that is the thing that I would like to see the math for uh he he does cite a couple papers by Whitaker from 1912 or 1907 I forget now but it's the early 1900s by Whitaker where the math is in

(1:16:38) there uh I only took a look at it once and I need to take a look at it again to really try to nail down how that process would actually work so so right now I put that stuff you know the the crossing beams and so on I put that in the very likely but not fully convinced yet category for me so I'm still exploring it as I'm trying to say interesting um yeah that's that's I mean you hit every single aspect I was going to ask you about there as well um and I think that's probably good for the scalar

(1:17:04) stuff I guess one other aspect I want to ask you about is what do you think about Antarctica um you have anything because have you are you familiar with Eric hacker at all and his claims about the um ice cube uh antenna or um at all in terms of basically saying that it might be a directed energy weapon and not just a receiver and that they may be have having FAS and light communication going on down there you have any thought on any of that yeah I heard about that and actually one of my physics professors in

(1:17:31) college was working on the neutrino detectors down there supposedly yeah yeah so so I know someone who supposedly works there um and do you think there's more going on down there than meci or what's your thoughts well yeah so so typically when you have big projects like that where a lot of money is put into it and especially an Arctica uh or like CERN for example big projects like that usually they are Dual Purpose where you've got the public purpose and then you've got the secret you know black ops

(1:17:54) military purpose to it now I don't I don't know if Ice Cube specifically would be a particle beam weapon however I do know or I strong strongly suspect that CERN is capable of it and the way that they're doing it is they're doing it through what they call particle beam dumps which is after they've run their experiments and they've got all the circulating energy they need to dump it into something in order to get rid of it so they can work on the machines and do maintenance and so on so they got these

(1:18:19) giant graphite cylinders the size of school buses made of graphite okay so they're made of graphite and so they just take the beam and they divert it into this graphite block so that it can absorb the energy and they can get rid of it however when you do that you generate a very big strong beam of extremely high neutrinos or high energy neutrinos higher than even what the sun puts out okay so that is a kind of quantum technically technically it's like a Quantum particle beam weapon that they're doing through these graphite

(1:18:50) blocks uh which to the public they're saying oh no it's just a way of getting rid of energy yet that stuff is there and it's they admitted it themselves that it generates a copious amount of neutrinos when they do that I think that's a small example of dual use right where there's something underneath the nose of everyone that is being used for some other purpose potentially and I can't rule out therefore that Ice Cube and neutrino detectors and things like that don't also have uh a connection

(1:19:15) which is interesting because CERN graphite blocks high energy neutrinos and then Antarctica neutrino detectors what is it about neutrinos there's something special about neutrinos that that is common to both and uh you know maybe maybe that's something worth looking into interesting well thank you for your thoughts on that I think I want to ask about K of blue here because I I promise we would get to it even though we've been having such a great science discussion I feel like we could talk for several hours more about the science

(1:19:42) side of it here um have you had an opportunity to look at this kona blue document this uh was Declassified by a a o I believe I looked at the dates it looked like it had been kind of approved for declassification back in February um today uh I don't know if you're familiar but for the people who are listening to this um there was a Tucker Carlson Joe Rogan podcast that dropped today it leaked last night early uh I snapped a clip of it from some other people that basically said that Tucker Carlson had sounded like Tucker Carlson

(1:20:13) had been told by Lou Alzando because he was the head of ATIP and there's some reference to a tip and his connection there that uh Lando had been known that this document was real that this PR a special Access program called kona blue is real and that he was sworn to secrecy had to send a document for it seems like he told Tucker Carlson this Tucker Carlson told Joe Rogan on the podcast and when we look through this it talks about some pretty incredible stuff and I want to get your opinion on whether or not you think this is real

(1:20:43) disinformation partially disinformation what aspects of it are compelling to you um some of the things and I'll go ahead and just share it real quick as well so that we can just kind of

take a look um this should show up let's double check can you see that as well yeah yeah okay so they have stuff like there's different they breaks it down into different centers so you have this National Institute for Discovery which is data collection experimental division medical division data analysis you've

(1:21:13) got your Advanced Technology Center uh regarding access to recovered advanced technology pretty interesting uh collecting oral histories from certain sources that were out there consciousness Center um and collecting critical data utilizing remote sensing that's very interesting in my opinion um and then your integration Center which is taking data from other centers that are out there now some of the aspects of this that I thought were interesting I may have to go to um oh yeah here's the summaries of

(1:21:43) them in general um some of the stuff that I thought was interesting it talks about remote viewing in here expand on remote viewing and remote communication retrieve data and transport across dimensional and space time barriers maybe we just start with that what is your thoughts on remote viewing and transporting either Consciousness or matter across dimensions and SpaceTime given the context of the science that we've been talking about here well my impression from reading this document is that in this in that particular section

(1:22:12) they're talking about remote viewing and about sending your Consciousness beyond the boundaries of SpaceTime it could be into the future into the past into parallel timelines other dimensions something like that and retrieving information and bringing that back so because it was all under the same heading okay so that that was the impression that I got and in terms of what we've been talking about so far um it seems to me that even okay so even under Maxwell's equations uh that talks about electromagnetic waves when you

(1:22:40) solve those equations for what a wave actually does there's one solution where you know it goes forward in time as you would expect but there's another solution where it goes backwards in time and so these are called Advanced and waves okay so max Wells ations don't rule out signals being sent back in time from the future they're they're baked into the math itself there's nothing there's nothing ruling it out uh and so I think that's one example of information potentially breaking the

(1:23:07) space-time barrier you know um in relativity they talk about how information cannot be sent faster than the speed of light and so therefore you can't really send information back in time either because in order to go back in time you have to break that SpaceTime bubble you have to go beyond light beyond the the SpaceTime light bubble uh light cone in order to to send something back but uh when we're talking about scalar physics in terms of potentials like magnetic Vector potential the electric scalar potential those things

(1:23:37) are not as um well the technical term would be invariant they're not as invariant as uh the electric or the magnetic force fields are so if you send signals using scalar waves they're not as Bound by the laws of physics or the by the laws of determin M and regular you know SpaceTime and relativity and so on because they started getting a little bit more non-

deterministic there's more Free Will and Consciousness involved there and so therefore if there's anything coming back in time from the future in terms of

(1:24:08) signals it is very likely these uh these scalar waves rather than uh electromagnetism or or things like that it's more more likely these scalar waves are coming back in time and for those of you that are into quantum physics and are into David Bohm and his Pilot wave theory for example the question has always been what are these pilot waves that guide the trajectory of the particle in like in the double slit experiment for example well I think I think the pilot wave is not only a wave that goes forward in time but also

(1:24:37) things coming from the future and because the future is multiple like there's different probable Futures you actually have multiple signals coming back from different probable Futures all combining in the present and that entire structure of this forward time and reverse time influence this is what creates the wave function as we know it you know it's both forward time and reverse Time stuff and the actual medium the actual uh yeah the actual medium of communication that's being used there is

(1:25:03) very likely these potentials and the reason why I say that is because in quantum physics as I mentioned with the with the aov Bohm experiment it is the potentials that affect things on a Quantum level so if an electron uh through the double s experiment goes a little bit this way instead of that way what is it that nudged it what is it that nudged it and it's very likely uh a mix of forward or past to Future and Future to past scalar potential signals that are intermixing in the present creating like an interference pattern

(1:25:31) almost like a hologram in a way and the particle kind of follows that trajectory if you want to use Bohm's thing so I just wanted to deviate on a I love pilot wave theory uh honestly that's even before I started digging into this science years ago I always thought for some reason when I heard pilot wave theory I just seemed to connect with me um and the aof Bohm effect as well seems like something that people should really look into it gets repeated pretty much all the time and the science that I've been digging

(1:25:57) into Thomas Bohm mentions it many times as well yeah one thing I want to highlight about the pilot wave theory is that a lot of people say that the pilot wave theory is deterministic in the sense that when you have this field this pilot wave which you can calculate when you have this pilot wave affecting a particle the particle is being pushed on by this Quantum force in a mathematically predictable way which takes you know all the non-determinism out of quantum physics so people try to say that this theory is deterministic

(1:26:23) but it actually isn't because Bohm himself in his book he admits that this pilot wave has an extra term on it which is like a random Quantum fluctuation term so as much as a pilot wave can be mathematically described there is noise that exists in it that makes things unpredictable and the question is where does this noise come from I think it comes from Beyond Space time from the future probable Futures Consciousness the soul you know all these things they those are the things that add that unpredictability factor so it's not it's

(1:26:53) not fully deterministic yeah so what do you think about time then because I would almost argue what you're saying it reminds me of uh the True Detective season one time is a flat circle that time is not necessarily linear as we perceive it what are your thoughts well I do like what sarfati said about time I actually agree with with a lot of what he said about causality but retrocausality and the fact that intuition is like a you know the future flowing into the present whereas memory is the the past flowing

(1:27:18) to the present like entanglement entanglement with future probable Futures versus entanglement with the past I thought that was pretty insightful and I agree with that uh now just in terms of time though I think that I think that everything that can happen in the many worlds Theory anything that could possibly happen has already happened in a mechanical sense so the the analogy that I like to use is like a like a road map or like a tapestry where the entire carpet or the entire road map is already on paper you

(1:27:45) know it's already laid out and all the roads that you could possibly take are already on the map right but the actual road that you will end up taking has not yet been ided so it is actually your Consciousness that is moving through a pre-existing Matrix or tapestry a road map of possibilities right so the universe as a whole has a universal wave function which encodes all of its possible States from the very beginning of time to the very end of time and it encodes all these possibilities and that is the road map that we as

(1:28:17) consciousnesses are traversing okay however we are traversing through it collectively it's almost like you and I we are well right now obviously we are synchronized in time because otherwise we wouldn't be able to have this conversation so your Consciousness and my Consciousness we are synchronized in time right now Friday April 19th at 8:30 PM eastern time so we we can talk uh what this really means is that continuously our Consciousness is Phase locking or entangling with all the other people that are doing it at the same

(1:28:47) time and so we're all kind of chain ganged together moving through this road mapap or this tapestry of possibilities into the future and that's what creates our sense of time um now I don't I don't think it is you and I individually that is deciding to go you know second by second into the future I think we are being carried Along by uh a kind of I guess what Rupert sheldrake would call a morphogenetic field basically basically a collective Consciousness field that is binding us all together and is moving us

(1:29:16) through time the same way that water and River carries swimmers down the river okay so we're being moved along Through Time by I guess what the ancient Greeks would call the Demi urge you know some sort of a universal thought form uh construct that is propagating time on its own and then we are just along for the ride and kind of deciding where in that time stream you know we want to go more a little bit here a little bit there which then affects which Road intersection will'll take and and so on um it's kind of complicated but

(1:29:43) ultimately I think everything is consciousness it's just a matter of uh what rules and agreements Consciousness abides by you know yeah yeah no that makes sense so would you

say that opens the door to stuff like remote viewing do you believe remote viewing is possible I think so I think so because our Consciousness isn't it's only bound to the clock because we are in these bodies which have this particular DNA which has certain Quantum properties that synchronizes us all to the same time rate essentially uh but if you if you bypass

(1:30:16) the biological brain If you bypass the the five senses then you're no you're no longer bound to uh only perceive or interact with this current moment in SpaceTime so that means you can project it to the Future project it to the past to parallel timelines to parallel possibilities uh I think the only limitation really is the degree to which your Consciousness can entangle with those less than real or less than um relevant possibilities whether it's it's it's probable pasts or parallel timelines or probable Futures you see

(1:30:49) when when Jack surfa talks about closed Tim like curves for example when he talks about closed time like curves curves what he's talking about he's talking about physical time travel uh back in time into the very same path that you came from which then ends up leading to your same moment that you left from right so it's just closed curve deterministic yeah it is deterministic because as long as you stay in this Loop you have no ability to deviate from it so you have no free will so whatever you end up doing is a thing that you would

(1:31:13) have always done to get to that point that you left from and that is the best that relativity has for dealing with time travel however if you start getting more into quantum physics instead of Relativity then you're not dealing with just determinism you're dealing with non-determinism which if you want to combine the two the way that it would look is that uh your futures aren't singular your futures are are multiple you know like like one point can split off into many different possibilities so if you go through them

(1:31:43) back into the past it's not just one loop it's a bundle of Loops that Circle back on another bundle of Loops that are all intersecting at this present moment and so what that means is that if you do time travel uh instead of a closed Tim like curve it's more of an open space-like curve for anyone who knows what relative you know what space like means in relativity it means you're going faster than light you're going outside uh determinism and uh you're interacting with probable Futures

(1:32:09) probable past in a fuzzy non-deterministic way that is the key what Jack talks about he talks about deterministic Closed timelike curves and I'm talking about open space-like non-deterministic fuzzy curves and so so there's a different kinds of time travel there's one that creates the exact same path that you left and then there's another that uh involves more indirect interaction and this is interesting because according to this math and I'm talking about this paper by Daniel Greenberg and Carl Sagan his name was

(1:32:39) called quantum theory looks at time travel in that paper they kind of game out mathematically what would happen if you did have this fuzzy time travel between probable Futures and probable pasts how would that look and what they concluded is that uh yeah yes within that entire Dynamic you could have these closed timelike curves exactly like surfa talks

about however you could also have fuzzy time travel where this probable future interacts with this probable past that it didn't even come from but it's close

(1:33:08) enough that it could sort of interact the problem is the interaction isn't 100% entanglement it's not 100% correlation it's not deterministic it's non-deterministic it's fuzzy it's semi correlative and what that means is that if that time travel comes back in time like that they're not going to be 100 % real they're not going to be 100% tangible or physical they might be more ethereal like a ghost or they might be physical but only let's say 1% of the time so the person they're trying to

(1:33:35) interact with maybe most of the time they miss ever being able to meet up or you know it only happens under very weird rare circumstances and so what does that plus the etheric ghostlike nature of it remind you of it reminds you of a lot of UFO encounters or Paranormal Activity right it's like it's either a person experiences something that is there but sort of ethereal you know like a shadow person or some sort of translucent form or something like that or it is physical it is tangible but it can only happen at

(1:34:06) very brief Windows of time like abductions where you don't remember most of it afterwards or it can only happen in the middle of nowhere in the dead of night you know these very special conditions those two things that Encompass euphology and Paranormal Activity it's weird how the laws of fuzzy time travel imply that and so I think about that a lot you know it's kind of yeah so is that you think that's kind of equivalent to many worlds and string theory and the idea of like the Mandela effect is that kind of where

(1:34:33) your thought process is going then people don't know Mandel effect is the idea that like yeah sometimes we can retroactively change the past and then we have like false memories of what things used to be well the thing about retro retrocausality is that it's not it's not always necessary to change the past that we remember sometimes it's only necessary to select the past that we never remembered or never experienced and what do I mean by this for example um let's say that you're driving you

(1:35:00) drive over a pothole and it bends the axle on your car and all of a sudden you need \$1,000 dollar to get it fixed but you don't have the money okay so theoretical example so you need to get your car fixed ASAP uh you need \$1,000 you don't know where it's going to come from and uh but you have some sort of wish or inkling or intuition that it's gonna it's going to come like in a magical way and what do you know three days later in the mail you get a check for \$1,100 from some class action

(1:35:25) lawsuit you don't even remember being part of that ends up paying to get your axle repaired but the thing is if you trace back when that letter got mailed it got mailed the prior week so it got mailed before you even drove over the pothole that bent the axle that you need the money for it's very strange and so what some people can conclude therefore is that the past was somehow changed or selected when you needed it when you got the accident and you needed that money the past was somehow influenced to

(1:35:49) create that check that came in the mail three days later okay and and that's a form of retro causality but it's not really retro causality what it might Simply Be is that the past was open there were many different probable passs that could have led to that present moment you know in one pass there was a class action lawsuit another one there wasn't another one it was only \$500 right another one was only \$100 you don't know you don't know anything about these lawsuits so as far as you're

(1:36:14) concerned all of these different probable past timelines I mean they could have all coexisted just like in the double slid experiment where you don't look at it and all of a sudden the two electrons going through the two different paths they interfere with each other because they both exist simultaneously as long as you're not observing as long as you're not remembering as long as you're not interacting with it it's open it's fluid it's Quantum selectable right so there are aspects of our past that are still

(1:36:38) open still Quantum selectable because we never observed them we didn't even know about them so there are these open areas that if right now in the present you needed something selected or change in the past well you know what no big deal because you're selecting past number 155 instead of 15 6 and 155 is the one that leads to you getting that check three days later right so what I'm saying is you know it's not always that you're you're traveling back in time and changing things physically sometimes

(1:37:03) it's simply a matter of selecting what still has not yet been measured or observed even if it happened a year ago a thousand years ago whatever you know it can lead to synchronicities like this or manifesting like this or I think if the process goes wrong you know yeah sure it could lead to something like the Mandela effect where you got these two groups of people each one with a lot of collective Consciousness powers all right but they're tugging on the past in different ways you know maybe one it was

(1:37:28) barenstein Bears another one was burn stain Bears so but now they exist in the same Collective reality and unfortunately they're both still entangled with different pasts and so they have different memories just like what Jack talks about with memory being entanglement with the past but what if it's entanglement with alternate pasts then you're going to get alternate memories I mean I think that's what it comes down to yeah I mean for me it's Fruit of the Loom there was definitely Cornucopia I will fight anybody out

(1:37:51) there to prove that that Cornucopia existed but um now so this is a good segue into the conversation I want to talk about the nature of the UFO phenomenon and I'm going to be very straightforward about this and I'm just going to preface it with that um Joe Rogan and Tucker Carlson were talking about this today and uh Tucker Carlson had this belief that the phenomenon might have a spiritual nature I think that based on what you just said regarding retrocausality various timelines if you want to think of it

(1:38:19) like that these Loops I could absolutely see this connection between that and ghost and extra dimensional beings whatever they want to say uh I think that there's also this idea

that um aliens could be visiting us from far away if we have faster and light kind of commun travel that's possible especially manipulating gravity and gravity waves and then I think the other uh theory that in my mind at least has a lot of prominence is this ultraterrestrial hypothesis uh or Cryptids you know that they come from the water they come from

(1:38:47) underground what is or the other Theory based on what we're talking about retrocausality is that it's future us communica to the past as well and then we are giving ourselves information about how our civilization is going to advance what is your thoughts on those theories is there anyone you like the most you think it's a mixture potentially what do you think's going on with non-human intelligence well the first thing that I need to bring up here is that if we are dealing with time travelers from the future then we would

(1:39:15) be dealing with probable time travelers from probable Futures rather than just one time traveling group from one future and the reason why I bring that up is because uh it's it's it's very easy like let's say that they are Psychopathic manipulators they're Liars they're deceivers then it's easy very easy for them to say that we are your future so essentially you have no free will and you will become us because it has to be that way because we're here right now and according to to the laws of

(1:39:40) Relativity and closed timeline curves you must create the future that we come from and that's why we are here and that's a that's a tricky way of kind of uh sidestep the Free Will issue right if you get people to believe that they have no free will but if you believe in in open open space- like curves then there are probable Futures and then you know then what you're potentially talking about is a Time war between time traveling factions from different Loops from different from different curves uh and in that case

(1:40:10) yeah I mean we then the future is open and that would that would probably explain why within the abduction phenomenon contact e euphology uh even in the disclosure process there seem to be different agendas at work that are opposed to each other that are I mean from what I can tell this is just based on me interacting with tons of experiencers and doing a lot of research right it's uh I know I know like people that are more into the nuts and bolts aspect of it they might find this kind of ludicrous but I'm I'm going based on

(1:40:37) based off of detective work working with very weak signals trying to trace you know filter out signal from noise and so on I do detect that there are different agendas at play uh some of them that are more pro- humanity and some of them that are anti humanity and so the disclosure process it's not just about revealing the truth about UFOs it's also about feeling the truth about what these things actually are uh not only that but also what agendas there might be so what motives because you know it's kind of

(1:41:01) tempting to treat it all as the phenomenon as if it's like a space nebula that we don't fully understand I mean it's not that it's it's actual sentient beings that appear to have intelligence and motives uh and agendas and very very far ranging political uh strategies about how to massage Humanity in the direction that they wanted to go right uh and so we we always

have to look beyond the scientific towards the more um detective way of looking at this you know so-called phenomenon that because

(1:41:34) you know it's not it's not just about it's not just about matter and energy and and how their proportion works it's also about what their motives are and what they ultimately have in store for us and unfortunately um things like the nits incident or MH370 things like that um those only only start to step up to the to the realm of motivation but if you really want to look into actual motivation you do have to go more into the abduction field for example contact D field to look at not only what they

(1:42:03) say but to read between the lines of what they say in case what they say is deception you know so uh now regarding the ultraterrestrial hypothesis I think that's a big part of it because they do have um hyper hyper physics at their disposal spending space time and doing all this crazy crazy Maneuvers and so on and being invisible being able to levitate and an abductee out on a blue beam through a closed window I mean that's been reported hundreds of times so they have these technologies that border on uh what we would call a cult

(1:42:34) now unfortunately some people want to call it a spiritual Factor like I know I think jacqu valet and some others say they talk about the spiritual component to the UFO phenomenon and that's an unfortunate choice of words because spiritual implies almost like religious you know like like more ethically Advanced but that's not always the case so that's why I prefer parapsychical or oul because oul could mean demonic you know it could mean Psychopathic it could mean just pure psychic power without the

(1:43:00) ethics or the Integrity or the spiritual Evolution that that comes with it which is possible I mean because there's Black magicians there's people who engage in psychic vampirism practices you know all within the umbrella of occultism and uh you know interestingly enough some of these reports of interactions with aliens during abductions they also have psychic vampirism component you know sadistic um sadistic experiences that these beings are doing to people as if to feed on their suffering in some weird

(1:43:25) way it's that's like the more uh Fringe aspect of an already Fringe topic but I did want to touch on that so what I'm saying is you know it's a big multi-dimensional phenomenon uh but it's more than just a phenomenon it's possibly a very far- ranging complicated agenda that we have to look into as if we were detectives trying to detect a motive interesting so do you think that it's possible there are aliens visiting us like physical Little Green Men coming from somewhere else do you think yeah I

(1:43:53) mean yeah and and the only way to really get at that is to look at as much anecdotal data as you possibly can now you know anecdotal data it gets a bad rap in science because it's not reliable however however we are not dealing with a with an inert phenomenon that can be put in a controlled setting we're dealing with an intelligent phenomenon that has its own motives and that does not necessarily want to be discovered okay so the the typical scientific method of only looking at you know ground traces and chemical analyses and

(1:44:23) metal anal that's not enough to unravel the the nature of what's going on so therefore you do have to look at anecdotal data in order to discern motives just like a detective does I mean the det a detective relies upon forensics but it also relies upon witness testimony and putting pieces together the timing of things the motives you know uh try trying to build a case to to solve to solve a crime uh and the same thing with this phenomenon as well where it does appear that we do have biological and non physical

(1:44:53) non-biological beings that are non-human that are intelligent that are more intelligent than us and that have uh Super Hyper physical technology at their disposal and you know it's kind of intimidating but when you look at things like the K of blue document for example where whoever wrote that they they believe in that they believe it's worth getting money from Congress to investigate it right so these are these are not just crackpots these are people playing with millions and millions of dollars they believe in it they have the

(1:45:22) expertise so if they if they do then uh I don't see anything wrong with people like us believing that too so then in just a couple sentences which of those hypothesis do you think is the one you lean on the most or do you think it's really just combination of all of them I think that a lot of these possibilities are not mutually exclusive where it's very possible that you can have a biological race of non-human entities that come from another star system um that have extradimensional abilities and that could possibly also

(1:45:58) be here from the future right so a future extradimensional other star system that are here now in this dimension in this time on this planet um now of course when you when you look at the actual abduction cases it's interesting that so many of these beings are humanoid and that some of them seem to be able to be hybridized with humans meaning that they have DNA uh which clearly tells me that whatever they are if they do come from other planets it doesn't mean that they naturally evolve there on their own it's it's it's more

(1:46:25) like either Earth and them were seated separately but by by Common progenitor race or they came from us or vice versa there's some sort of relation there and uh and so if if they want to show up one day and if they want to say that hey you know we've been observing a planet for a century and we discovered Humanity for the first time I call BS on that because if they did they wouldn't be humanoid they wouldn't have two eyes and two noals in a mouth you know they wouldn't have four four limbs uh so whatever they

(1:46:52) say I would say trust it and always look between the lines at the potential ulterior motives you know qu Bono like who whom does it benefit that's what you have to look at with all of it makes sense I think I'm going to go my my new Theory now based on what you just said is I like the future extra dimensional mantids those are going to be my that's my new that I like that's where things are pointing unfortunately um so I think the last question I want to ask you is uh and I appreciate your time here today

(1:47:17) I think this has been an amazing conversation I'd love to talk to again in the future but why do you think the government's covering this up like what is if you had to give your top

reason I know there's probably many reasons but you know I think about it and I think about the idea of all the different um you know ways that there could be non-human intelligence I wonder why would the government cover any of this up what do you think the government or do you think it's not related to that at all what do you why do you think the

(1:47:41) government's you know hiding this information from us well you know just as a preface to that it's interesting that the entities themselves are not interested in disclosing themselves as as much as as we want them to you know so it's it's each of them seems to have their own motive for why they want to keep the majority of humanity in the dark for now you know but at the same time there is a very steady drip feed of disclosure which I I guess it's accelerating lately because I mean I think the Kaa blue document it

(1:48:09) seems like a leak or it seems like a declassification but the timing of it is too weird I think uh I think it was intentional I think it was a long ranging intentional plan to to release information like that in a deniable way because you know according to the information read about it that the Kona Blue program it never got off the ground it was proposed after the end of the ATP program you know so was about to end they're going to lose their funding and now they're proposing to continue it under the Department of Homeland

(1:48:36) Security under kona blue in order to kind of expand their operations and you know set up uh experimental labs and Skinwalker Ranch for example and things that Lou Alando had talked about um so I think I think that document because it didn't actually lead to anything and it was unclassified now it's out there people are discussing it people are realizing that these topics are being taken seriously by actual government military personnel you know um but because it didn't go anywhere that's why

(1:49:02) it could be released see if it had succeeded then we wouldn't even be hearing about it now because it would still be it'll still be fully classified right but yeah so it was only a proposal and uh it didn't reveal too much and some parts of it are redacted so that's fine but what I'm trying to say is I think I think the reason why disclosure has been um managed or prevented or delayed is just because our well okay so there's benevolent and malevolent reasons the malevolent reasons includes just like

(1:49:29) what I mentioned earlier about the military industrial complex U getting rich off of secret technology that they've recovered like hiding free energy yeah hiding hiding it uh you know Advanced Materials that they've reverse engineered and they're using for their own purposes and a lot of times they launder it through uh existing corporations so you know we might hear about oh is this new computer chip technology that's coming out that's going to solve Moors law is going to allow us to get faster and faster chips

(1:49:54) and the company that created it is going to get billions and billions of dollars in Revenue because you know they're at the Leading Edge of it well little do we know that technology actually comes from one of these special access programs that you know handed it off laundered it through someone else and made it appear as if it was just like a like a genuine

human invention when in reality it was siphoned off of these black projects and they make a lot of money that way I think I think uh a lot of Technology a

(1:50:16) lot of people getting rich off stuff is uh probably alien technology that has been reverse engineered and has been laundered through the pl deniable pathway of just you know corporate research or or you know the University of Tel Aviv comes up with some new um artificial telepathy means or something like that right it's it's all laundered through different different areas so I think that's part of it um just you know the vested interest in keeping asymmetric advantage to themselves that's one and then the

(1:50:43) benevolent reason in a way I think is because our society from top to bottom whether we're talking religion social structure social contract you know politics technology University everything so much of it is built on a lie it's built on lies upon lies upon false assumptions you know like you know like like the scaler physics stuff which got ignored if you have disclosure you're going to have scaler physics because that is a component of the technology Beyond you know which these black programs are

(1:51:11) working with so if you disclose aliens if you disclose some of these black projects that technology is going to get out and the ramifications of that under the current state of the world is very difficult to deal with um because free energy alone it can lead to let's say uh tanks with energy weapons that never run out of fuel and never run out of ammo can you imagine the intensity of war that could result as a result of free energy being used just for that or we talk about for example totalitarian police state stuff where you could have

(1:51:39) drones including humanoid drones that are that build themselves and multiply never run out of energy and can be always in the skies 24/7 circling ahead monitoring the population below that's possible with free energy batteries essentially these Energy power units so whether it's totalitarianism World War III the Anni the annihilation of humanity those things are possibility so long as we have a multi-polar world where you know countries are fighting countries over this or that you know ideological reasons or whatever if you

(1:52:12) if you take all that that that that Tinder and you pour the fuel of free energy onto it you could get a massive explosion uh so unfortunately as much as I hate to say it if Humanity wants to have widespread free energy and certain other Technologies I'm not sure if it's possible without a some sort of a hopefully benevolent One World Government as much as I'm against globalism and things like that I don't I don't see another way unfortunately because it all it takes this one Rogue Nation with a free energy overunity bomb

(1:52:43) or you know device that that has more energy output that probably could destroy an entire planet and maybe that's happened in the past you know there are many myths about Sky beings come from another another world that blew itself up or you know that that destroyed itself so well you hit my last question there that was exactly what I was going to ask you was whether or not you think we could destroy our own planet with this I personally think we absolutely could I I look at this technology and you even brought up a few new things that I'm

(1:53:10) going to be thinking about in terms of Terminator situations and Matrix of self-replicating machines that are creating a fascist uh monitored world but so um Tom I I really love a conversation that we had here today man I thank you very much for it um couldn't be more grateful would love to talk with you again in the future uh in the last couple minutes do you want to plug I know you have a few books that are out there do you want to plug any content any books for the people who are watching right now yeah so if you go to

(1:53:37) my website mon talk.net ml NT k.net if you go there if you click on books for example you got links to free books I've got my Fringe knowledge book for beginners okay Fringe knowledge for beginners that's awesome it's like a 125 page introduction to spirituality conspiracy alienology time Wars you know Consciousness Powers so that's free on there you can get that you can get my other book Discerning alien disinformation which is the the most distilled bottom line picture that I can muster about what the alien agenda

(1:54:09) actually is okay so you can get that also for free and then my latest book from 2022 is called nosis and it's about it's essentially what happens if you take quantum physics and euphology and and uh that entire sphere and you look at religion and mythology in ancient history through that lens it when you do that you start realizing that so much of ancient history and ancient religion involves competing alien agendas possible time Wars and the use of Advanced Technologies for example the Ark of the Covenant you know we all know that

(1:54:45) there's something very interesting with that um but I explain in the book how the physics Works behind that and with the ultimate implications are for our time today and especially going into the future so it's it's a mind-blowing book and that one unfortunately I don't have it for free because God it took so much work to put that thing together um but it's on Amazon and you can get it on Kindle as well and uh you know an UB format and so on so yeah check those out if You' like and uh hopefully you enjoy

(1:55:12) some articles on my site and and uh check out my YouTube channel as well I've got lots more videos there yeah and we'll uh make sure I try to put that into the description as well and then Tom's available on Twitter as well at or X I guess it is now at Tom Monto so thank you again once again uh Tom Monto excellent conversation hope everybody enjoyed it have a good evening everyone uh thank you very much

MH370 **Debunk** Update & Scalar Physics Review - YouTube

(00:32) [Music] [Music] Malian 370 contact 120m [Music] night breaking news tonight A

Malaysia Airlines flight with 239 people on board including four Americans has gone missing  
[Music] [Music]

(01:39) [Applause] [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am become deaf the destroyer of [Music] worlds hello everybody good night technology tonight with Ashen Forbes I'm just running with that to see how it sounds uh good to see you guys glad to be here with everybody uh already a lot of people in the comments H already a lot of people watching I want to do a

(02:37) quick shout out to some of the people that are following with the investigation following the case uh everybody in the chat villain wake up everybody Joe cat cans Alex Pamela good to see you dead rabbit Heather birdie nice to see you appreciate you yeah I did like it I do like it I want have some edits to make potentially do it but I really like it a lot Heather awesome thank you very much um Z alpino show goat nice to see you jack trading I haven't seen you in a while welcome Aran Outpost says looking for group yeah

(03:07) let's go Steve **truth** Seeker sham 6 show goat braa Brian Neil wow chip Messiah cat cans His Highness hey hether benator nice to see you delete my dudes Alex good to see you Joe MCD Cham Alexander Chris Dave pnw good to see you man stop triggering the **redditors** he says I can't it's just in my nature it's just in my nature uh Cipher Remos appreciate you man oh Chris D nice to see you **Mick** West the government Opera **[redacted]** maybe a combination of both Goosebumps good to see you UFO nut good to see you lots of

(03:53) people in here early tonight appreciate it John Joshua uh Shan nice to see you Sean appreciate you man recognize a lot of people from the replies uh first right off the bat like I I think a lot of people wonder you know how do you reply or I saw somebody who thought that I was a bot because I like people's posts the reason why I like people's comments and replies because I appreciate the people who follow and comment and reply so if I like your post usually it's because I like you and I like what you said so uh

(04:25) thank you very much for that I try to do my best to reply to as many people as possible but the **truth** is I probably won't be able to keep that up it's already hard enough as it is thank you guys for being here thank you guys for help helping out Evan appreciate you guys appreciate you as well man um so what are we going to be talking about tonight so tonight we are going to be going over some of the most recent updates a little bit of a recap in terms of what's been going on the last day and a half or so and then we are going to

(04:52) take a look at I've got a Thomas Bearden video that some of you have already looked at but I want to go over I took a bunch of notes on it and I want to go over it with some of the people that are newer to the investigation uh about some clips I've got like I don't know quite a few here like 15 Clips or so so uh I don't know how long we're going to go tonight but uh we will see so first biggest thing that came up let me take a look let me uh get my Twitter up here for you guys oh gosh I wish there was a way to

(05:22) like not have messages show up so so easily when you're in your Twitter there's probably a way uh if anyone knows that'd be great I just don't want to reveal DMS as much as I can avoid it um so let's go sh let's get let's get this show on the road chat let's get it on the road also you guys get me hyped up when you uh when I see you guys in the replies here so uh you know let's just make some let's just make some bold claims right off the bat here everybody uh the MH370 videos are real I think

(05:51) that anybody who's denying the authenticity of these videos is uh off their rocker there's never been any videos that have as much evidence as these videos have in them uh it's the case is incredible the case blows me away as the guy who's been going into it and reviewing it because of the magnitude of the amount of evidence that goes into the the videos and everything around them so what's been going on uh this last day so first of all the post from last night holy crap it blew up it got

(06:26) huge so remember this post I made last night with the satellite video 1.8 million views 1.8 million got huge so you know and I'll just read it out here again in order for the MH370 satellite video to be fake one would need to explain how the hoaxer knew the correct location of the plane in the nicobar islands nine days before the raw TMR was publicly available somebody today posted me a random obscure blog post that uh speculate that the plane could have gone within like 100 miles of where the coordinates are and they said

(07:03) that's proof that the hoaxer knew where the plane was what what so the hoaxer found a random blog that no one knows about and was like that's where I'm going to put the plane a 100 miles away from where this person thinks it is like these are the people that are just mentally deficient just mentally deficient this is the logic of the the **debunkers** that we deal with why is it that all the most mentally unstable people out there are all **debunkers** like is it is it all because they have some kind of weird savior

(07:35) complex where they just or like inferiority complex I really don't understand it it's super bizarre and we'll get to the guy from yesterday as well real quick but let's finish this so they would need to explain how the hoaxer knew what low earth orbit imagery satellite looked like before anyone in the public had ever seen it everyone thought satellites look straight down Trump posted the P first Leo satellite picture of USA 224 in 2001 19 5 years after the video is published they have to explain why the hoaxer would add n22

(08:05) which was the first launch of the cber system in 2006 and why they would add coordinates at all any contradictory tracking data or blackboxes would have ended the hoax then they have to explain how and why the program they made the program with accurate satellite coordinates that shift to six decimal places on top of dynamic video then they would have to explain why the video has different frame rate between the mouse of 24 frames per second and the background of six frames per second consistent with the citric session

(08:34) logged into a remote terminal then they would have to explain why the view is cropped on all sides consistent with the screen recording of said terminal then they lastly they would

have to explain why the video is 3D stereoscopic when we were able to convert to full 3d with USA 229 sister satellite in the Mala stet staring out the coordinat at 1840 UTC March 7 good luck so what did they do do you think that they addressed any of it no they did not instead what they did was was they posted fake where is it is the community note

(09:05) gone did they get rid of the community note no wait wait what they were they removed the community note the community note is gone wait what chat chat chat there were two they posted two fake Community notes on my post and they're not there anymore Elon Musk Elon he came through what let's go wow they're gone Elon he removed the community fake Community notes he removed the fake Community get [REDACTED] de bunkers oh my god there was two there was two fake Community notes that they posted on here two of them I never even

(10:02) seen one that got two Community notes they're gone they got removed wow I've never ever seen a community note get removed on a post that has over a million views on it never before have I seen that this must have just happened I was ready to read the community notes to you guys and they're not there anymore there was two of them that the debunkers posted on my content wow wow get effed debunkers get effed because the thing was their debunks didn't address anything that I said in my post nothing in my post was addressed

(10:46) by their claims and the stuff was like this is obviously fake blah BL like what the what kind of comment is that for a community note that's a if you want to post an angry reply post an angry reply if you have your opinion about whether or not you think the videos are fake post it in the replies Community notes are not meant for opinions it's meant to correct factual information what I'm posting here is factual information about the videos that nobody has ever addressed so wow that's wild so one of

(11:21) them was this video is 100% verified to be fake first of all that first line goes and shows right away I have a screenshot of one of them first line shows right away that this is a redditor nut job debunker you cannot possibly know it's verified to be fake unless you have the actual hoaxer with the proof making a recreation is not proof finding a 2d picture is not proof none of those things are proof that the videos are fake if you think they are you need to like go to school again and learn how logic and critical thinking work that's

(11:53) not how proof works the clouds in the video have been found in a old stock photo on the way back machine yes in 2016 that's how far back the stock photo goes in the Wayback machine 2016 the videos from 2014 do you know how math Works do you know how time works to be clear whoever says like who writes something like this like what kind of sicko in your head you have to be to write this to be clear we have the actual stock photos not video photos yes and there can't be stock photos in these videos because it requires a full 3d

(12:27) render and we have accurate 3 3D lighting we have clouds that match in two different perspectives from two different angles which means you're not looking at a picture is it does that go through to people's heads and then they link to Reddit of all places the proof is Reddit which is like you might as well link to Wikipedia as your answer Reddit is like infinitely even

worse than it so honestly guys I'm super hyped right now UND debunked chat UND debunked that's awesome and here I literally posted the proof like right

(13:09) below it as well you know the crazy part too is I knew they were going to do this to my post I knew they were going to do it and I called it out in uh I called it out in my uh Discord actually as well I called it out in my Discord I said that they were going to community note my thing and I almost added another comment on here this image shows volumetric 3D lighting now some people out there may go well I don't see it uh I don't know what 3D lighting really means or whatever so let me just show you guys I

(13:42) I took another screenshot of it where oh here it is okay right here I've been saving some additional debunks for these people out there actually that was I had it already set up for you guys to see there here we go okay okay so here you go this is what 3D lighting is back lit back back lit not lit back lit front lit this is 3D lighting so just for anyone who's super confused that's what 3D lighting looks like that's how it's not a 2d picture you can't do this in a 2d picture you need to have 3D uh environment for that

(14:17) and produce 3D lighting effects so pretty awesome the thing only thing I like Reddit for is if I go to read about like uh anime or video games or something like that that's about the only thing that reddit's good for um when it comes to factual information and news stuff it's terrible okay well now that I'm we see that I'm I'm happy and so here is the other video because they had weaponized Community notes against me here's the video where you can clearly see so some people were also

(14:46) confused by this video Okay the reason why the Drone video is inverted is because the Drone is on the other side of perspective of the satellite video which means in order to get to match up you have to invert or you have to mirror the perspective so that's the only reason why this has been mirrored so that you can see the clouds accurately line up now the first Cloud we see right here that cloud we see right there this Cloud right here is not this Cloud down here the Drone is most likely at a higher altitude or a similar altitude because

(15:15) we we see it on a similar altitude here and so what's happening here is you're actually seeing this cloud back here behind it the angle is going to be something like this at an angle so you may say oh well why am I not seeing this cloud in the Forefront the other thing is we don't know how much higher this plane is than the clouds here because we're seeing it from Super far away at an angle we don't really know so this is the first Cloud right here second cloud is right here so you see the

(15:43) second Cloud the second cloud is this one right here that one's obvious really obvious so this also shows you would have to create a full 3d rendered environment again proves that this isn't a 2d Cloud picture um so posted that decided after they started weaponizing the community notes on me that I was going to go all in on these cuz you know what I didn't want to but then you see these people going all in we found the person I went and looked through this uh genuine marmalade Falcon so everybody gets like

(16:14) a bird name when you're a community notor um and uh guys so and also if I see like can I block people or whatever people like this dude you're uh I guess you can't block people in in Twitter so we have to deal with it um no one's ever moving on so just to be clear though as well no one I'm never moving on the the videos are never going to go away so if if you're out there and you're like hey I don't want to talk about MH370 uh I don't want to talk about the videos make the videos go away that's

(16:44) never going to happen in this life never so get used to it these videos are never going away not ever if at any point in time I feel like people have forgotten about them I'm just going to post them more when people try to **debunk** and attack the videos and weaponize Community notes against me the only thing that's going to happen is I'm going to strike back 100 times as hard and I'm going to talk about the videos even more that's how this is going to play out there's no stopping it from

(17:07) happening there nothing you can say that will change that doesn't matter if you're a **debunker** if you're a ufology type person yes we will move on after it gets solved after it gets figured out after the US government makes a statement about it so if you want the videos to go away the best thing you can do regardless what side you're on is get the US government the dod to make an official statement about the videos that's the only way these videos ever go away in this life so just want to make sure that

(17:34) that's clear for everybody that's out there um because there's too much evidence I'm not letting this go and it's not a matter of me being committed to it's that I have looked at all the evidence personally myself and it is the most evidence has ever admitted ever existed in any criminal case in the history of the world that's how much evidence is I can convince a jury of 12 random people that these videos are real despite the fact that we're looking at some kind of teleportation event that's how powerful

(18:00) the evidence is 239 people disappeared with no answer whatsoever they never found a single piece of the plane the official search didn't find nothing so no we're not going to let this go deserves the **truth** now um so this genuine marmalade Falcon if you guys don't know how Community notes work you get a bird name and you people can look up your bird name now it doesn't link Direct to your name your real name or anything like this so this isn't doxing or anything like that and Wall Street advisor don't mess with Wall Street

(18:36) advisor Wall Street visor like this dude is forensic analysis Master he found the bird Nam person uh Community note thing and so I start looking through it and what do I see with it they are literally weaponizing it against me and against other people as well adding minor volumetric rendering effects to a 2D image is Trivial and has been done since the 90s again these are opinions these are opinions not facts opinions this type of stuff has no place whatsoever in community notes this person should be permanently banned from

(19:14) Community notes their Twitter account that's tied to this should be permanently banned this is a weaponization of disinformation and I start looking at all their other stuff and not only

are they linking me like basically hitting every single one of my posts they start hitting people that I know as well look at this they're on all over my posts they hit my buddy Rufus here as well who he believes in Flat Earth but who cares man people have to believe whatever the hell they want his post just says why

(19:41) would it say this on the computer my dudes with a screenshot image here and he's their Community noting that then they hit my buddy concerned citizen where he's talking about this Antarctic anomaly this is an engagement farming account that regularly lies and posts misinformation that's what the note is how is this user contributor not banned from the platform this is a direct weaponization of community notes there's no ambiguity here this is literally should not be allowed this type of behavior that

(20:14) you're looking at right here should be a permanent ban from the entire platform you should have your main account banned for manipulating the platform like this he does it some more he does it to all the kinds of accounts this is an engagement farming account that regularly lies and post misinformation what is this this is like a **Reddit** mod on steroids he did the same thing to Rufus he literally just copies it this is an engagement farming account this is like some mentally ill mentally unstable **redditor** abusing the community notes

(20:46) program oh this is my other buddy here as well I mean I think so right yeah I mean wow this is crazy man look at these comments of course this is not a UFO of course this is not a UFO who talks like this they even went after Think Tank Think Tank if you're watching buddy the same gu after you as well this is this person needs to be permanently banned from the platform and any other people they see like this on comun notes need to be permanently banned direct weaponization of the system absolutely incredible okay uh so don't mess with

(21:28) Wall Street advisor Wall Street adviser will find you **scam**ming 100% that dude is a beast straight up Beast so then **Mick** West again so **Mick** West he is the most notorious uh serial **debunker** in the entire UFO Community he has even tried to **debunk** the real DOD Navy videos uh and he was actually the person who had **debunked** them before they had been proven to be true and then even after they were proven to be true he still tried to **debunk** them after that as well he didn't admit he was wrong he never admitted he was wrong um and he's

(22:04) claimed I think on at least four or five occasions that there's no point looking at the MH370 vide since they're so fake or whatever but after my post got over a million views he came out of the woodwork again and why did he come out of the woodwork because every time the situation gets too much attention he has to come in there to try to post fake **debunks** about it every single time without a doubt he even ad admitted to it in a skeptical inquire article um I might even pull it up for you guys skeptical the fellows in the skeptical

(22:39) inquire include such people as Neil degrass Tyson and um Bill NY the Science Guy so that's the caliber of people we're dealing with with skeptical inquire um so here is his article I'll post it for share for you guys and let me pull this streamyard thing up over here as well whoops sorry give me a second to correct this out okay this is the **mick** West MH370 teleportation hoax

so again I'm just going to say this guys I I'm going to keep saying this until it sticks in **mcwest** when these videos get proven true

(23:21) I am going to send the families after **mcwest** to sue him for everything that he has I will use the precedent of Sandy Hook as the basis for it I have been documenting everything **Mick West** says and does we have a vast amount of evidence that he has intentionally lied about the videos uh he's been given many many many many many chances to back away from his false claims about the videos that he claims that he knows they're 100% fake it's literally no different than Alex Jones saying that Sandy Hook didn't

(23:49) happen it's exactly the same thing he can't possibly know this the official story is that nobody knows what happened to the plane we have literally two videos showing what happen and he makes false claims that he knows they're fake when he can't possibly know that it's literally the same disinformation that he's pushing it's harmful to the families who are trying to get the **truth** and they deserve to take all of his money at a minimum in my in my personal opinion he should also face criminal

(24:14) conspiracy charges um under there's like a thing that basically says even if you're not the person who committed the conspiracy if you help to cover it up you are part of the conspiracy as well uh if I was in charge of the doj I would charge him with that as well I would throw him in prison for the rest of his life it's one thing to **debunk** random UFO videos that are out there it is a completely another thing to lie about what happened to 239 people just because you don't think it can be possible that's exactly the same type of

(24:42) opinion that people like Alex Jones would say about Sandy Hook and I'm actually of the opinion that that type of speech should be protected but we've Now set the precedent that it's not protected so that's the Pres that will be used against **MC West** in the future everything that he says and does online these videos is being documented and will be used against them in a court of law in the future when these videos are proven to be real now the reason why this is important is down here at the bottom he says why is important why is

(25:12) he doing this again why bother so why bother I didn't at first but if we let things Fester they sometimes grow this hoax wasn't worth addressing back in 2014 when it had just a few thousand views and most people thought it was a hoax but when it started to get millions of views things changed if it's not addressed then many thousands of people who might be prone to things such as qanon or believing the election was stolen will get into sucked into believing this and if they believe the government can carry out and then

(25:42) cover up an event of this magnitude then there's very little else they won't believe getting sucked into this VI this via a harmless seemingly interested interest in UFOs could lead to getting sucked into far more dangerous rabbit holes who the **[redacted]** talks like this who talks like this this is just straight up projection he's not worried about other people he's worried about himself he's worried about what he will F be forced to believe if these videos get real and he's literally admitting his intentions right here when

(26:16) people say who they are listen to them it wasn't worth addressing in 2014 when it only had a few thousand views but when it starts to get millions of views that's when he gets involved on it he's literally saying who he is here and he did the exact same thing once again today when it only had a few thousand views he doesn't jump in when it gets over a million that's when he's got to post his disinformation and misinformation to try to get people to not look at the videos anymore he literally admits it right here in his

(26:47) own words on skeptical inquire where he gets paid to post and write so I'm grateful for all the work people did tracking down the original images and and analyzing the many issues with the videos I wish I'd done a little more for myself but in the fight against disinformation every bit helps I agree **Mick** West in the fight against disinformation every bit helps now let's go look at some disinformation so **Mick** West makes the false claim that there are jittery contrails in this video and he uses another comparison video to prove that

(27:24) it's somehow different so what did people do right away they went showed him those exact same contrails that he says don't Jitter Jitter the moment you change the bit rate you can see the contrails jittering lower bit rate it's a lower bit rate artifact 100% proof that **Mick** West **debunk** is fabricated but there's more it goes on not only that and I want to thank the people that did this is again this is not me so just like what **mcwest** says I want to be grateful to people that did the work tracking down how

(27:56) these uh fake **debunks** were produced and proving it with without any shadow of a doubt its BS came in and said this stabilization software itself can make the contrails Shake as if they are part of the background this is what I did with proad stabilization and you can see the contrails and the bord shaking up and down in the same way it is the stabilization algorithm not composting uh not compositing sorry not comp composting composting compositing okay uh and know Martini tonight guys I got to try to be uh awake tomorrow and

(28:32) and and functional so uh two conclusive **debunks** that absolutely prove **Mick** West's claim to be wrong does he correct his claim no doesn't correct his claim uh he's a guy that claims to be based on facts and logic and reason but when presented with facts and logic and reason he completely ignores it he handwaves it away the exact same way that he claims to me this is why have blocked **Mick** West he will never be unblocked um I'm not going to unblock him I'm done with the **debunkers** that are out there I don't want them to see my

(29:06) content I don't want them to be able to post fake uh um Community notes on my content and uh like they've been doing a weaponized Community notes against my content so I will not be unblocking them I want them to go do anything else with their lives but I will be using this evidence against **Mick** West and giving it to the families in the future cu these videos will be proven to be true I don't know how long it's going to take uh but we'll find out now there's more **Mick** West actually proved all the **debunks**

(29:36) wrong today he finally showed so normally when these guys show the comparisons they only compare a modified version of the Pyromania VFX to the video so on the right you see the

real video here you see I guess this is a modified version of the Pyromania VFX I'm not even sure they never really tell you how they produced this but in this one he finally showed show us what the real one looks like and when you look at the real effect here you can tell that it's not the same as this one at all first of all it's not even the right

(30:06) size you can see here that they're doing some kind of manipulation with this blast around it but even if you look at the blast there's a few aspects that look similar but they don't exactly match like this whole thing on the top right is not here at all this blast on the right here doesn't match over here as well either um so this is conclusively not a match this goes to show that West fabricated a fake **debunk** with his **debunker** followers 100% fabricated it passed it off as a match and they did this on **Reddit** when you see

(30:37) the post on **Reddit** as well you will see that the uh they never show you the original they only show you after they've modified it and they they kind of draw circles and lines to try to distract you from the fact that it doesn't match um so if people like Joe **Rogan** or the other people out there **I want you** to see the lengths of which **debunkers** are willing to go to false five fake **debunks** this is what the real effect looks like this is the zap is that the same are those the same now there's more and I'm going to

(31:09) try to get through this a little faster um where's the other one okay now this is a person that actually worked on the drones literally worked on the drones and tried to correct **mcwest** you guys can go look up his post called detail the world they went back and forth with with 20 posts **Mick** West absolutely refused to listen to somebody who literally worked on the drones that was trying to explain that the shake is normal and natural and that there's nothing unusual about what he claimed with the jittery

(31:42) contrails **Mick** West refused to listen you can go through the whole conversation absolutely refus to listen literally wouldn't listen to a guy that's an expert that's worked on the drones directly this is why I blocked **mcwest** I won't be dealing with **mcwest** anymore the guy has got a screw loose in his head he needs like real help if you are writing crazy [ ] like he wrote in the skeptical inquire you need like some serious help man like this is the most egotistical thing I've ever seen in my

(32:15) life it's a cry for help honestly um and it goes to show why he is posting like fake **debunks** and trying to convince himself um in general scary stuff man now it's not over yet um the last piece as well is I got him to admit that the Pyromania VFX doesn't match got **mcwest** to admit it huh why aren't these in the right order so we had a back and forth you guys can find the back and forth if you want yourself you can see it I only was able to clip some of it here but the Pyromania VFX objectively does not match

(32:51) this is not an opinion this is a fact this is the same thing I said on Danny Jones and I broke Danny Jones's mind in real time the stock effect has never been modified in the way that he falsely argued it was not in any of the major for media that we've already found it used we found it used in The Killing Time video game we found it used in the attack on Titan

advertisement we found it used in Starship Troopers cult classic movie from the 90s and it was even used in Eastbound and Down huge television show

(33:25) produced by HBO none of them modified it **Mick** West is a **scammer** a fraud and worse he is a liar and then his response to that is it somehow impossible to modify stock of art when you use it this is him literally claiming that it doesn't match that's him literally claiming it obviously not it's very clear to anyone with familiarity with Graphics that's the same thing what you just said that you have to modify it that makes it by default not the same thing by definition not the same thing and then he pivots to

(34:03) something about the stock the stock clouds which I've already addressed the stock clouds thing we just looked at the image we just showed that it's 3D accurate lighting he's never addressed that claim at all either of course and so then I say again just to correct everybody out there once again you are making the claim that someone moved all the pixels around change the color and change the number of frames the onus is on you I don't see a list of steps to perfectly recreate your claim his claim

(34:35) is that someone changed it all around to make it only a few frames changed all the frames around and moved all the pixels around individually this is what it would take he did needs to support that claim that the onus burden of proof is on the person making the claim you say that this has been a modified you need to prove it so you need to make a list of steps that will get it to a 100% pixel perfect match if it is as simple as modifying it like he claims with VFX it should be extremely easy to give us a short list of steps that'll make it a

(35:06) 100 pixel perfect match if it's much longer than that it goes to show it's not as easy as he thinks and this is the reason why they won't do it this is the reason why when anyone brings up the Pyromania VFX all you have to do is say how many pixels match because it will show that they've never done a pixel comparison that they've never tried to consider how long it would take to make it into a perfect match and it also shows don't know how so this conclusively **debunks** the Pyromania VFX there is no debate like

(35:35) **Mick** West said there's no debate about it it conclusively does not match **Mick** West is a fraud a **scammer** and a liar he promoted this the corridor crew are also frauds **scammers** and Liars they didn't even find the **debunk** themselves they just stole it from **MC West** and then they passed off to millions of people on the internet and lied to them about it literally lied on their posts claiming that it was a perfect match when it was not that was objectively a lie when they said that and they deceived millions of

(36:02) people regarding this uh these videos I still get people claiming posting the videos of the corridor crew in my replies saying I thought the corridor crew **debunked** this that's how powerful disinformation from the corridor crew and **mcwest** is they factually lied my claim is factual his claim is an uneducated opinion factually this effect does not match and is not in the MH370 drone video your opinion this is to **MC West** is that it was modified in a way that has never been done before that you cannot provide Recreation steps

(36:36) for he didn't prove anything when he claims that this 100% **debunks** the video that's making an objectively false statement so this is what the evidence will be against him in the court of law when these videos are proven real and he tries to claim that he never said it or whatever he said it repeatedly he's doubled down tripled down refuse to address the fact that he's lying um that's how it is now we're going to switch over to scalar physics in just a minute guys sorry I know you guys have

(37:05) been waiting uh I just wanted to get through a quick update so 30 minutes uh probably another five or 10 minutes and then we'll switch over to scalar physics appreciate you guys now the last thing I want to do here because this stuff is just super annoying honestly um and yeah so Ace T Ace TV is also AI a dude you don't want to mess with and he also showed that this floating that you see from the uh and the jerkiness that you see from the contrails or that's really not smoke is due to a down formatting of the video into YouTube as

(37:41) well so if you want to check that out now one last thing I want to point out is the guy from yesterday and the uh software the what was it called here it is this one this this is huge guys 100,000 views this is Big Man so this person yesterday guys uh I'm not going to embarrass him anymore and play the space but if you guys heard it yesterday check it out but this guy claimed that he had some kind of proof the video he knew the software that was used to create the videos which I thought was funny because everybody

(38:13) who's tried to recreate the videos is used after effects and I kept telling them you can't use after effects to recreate these videos and now it looks like the **debunkers** want to switch over my guess is what happened was this guy showed made this claim that um what's it called quick train modeler is the software that was used and my guess is the other **debunkers** went dude shut up that disproves all of our **debunks** and got mad at them because if this is the software that means every Recreation today it's

(38:40) been a fabrication and they are they have been obviously but the better part was that when we went to the website and checked it out the dod in all branches of the military and intelligence Community used this software so this could be the very software the cber system uses to produce the video that we see could be the very software I called this company up uh like eight times they didn't pick up their phone a single time and during normal business hours I called their technical line I called their General

(39:09) inquiry line they didn't pick up at all pretty weird so this guy deactivated his account yesterday uh blocked me and then deactivated his account reactivated the account today and now he's just way off the dpen so um and I can't see his posts but somebody posts did uh a clip of one of them which I'll just show you guys a snapshot because this I I just want like I don't understand why all the mentally ill people are all **debunkers** it seems like a very weird coincidence to me um so here is his post from earlier today

(39:50) he came back online I I don't I haven't really watched any much of his post he clearly hasn't come up with whatever **debunk** uh he thought he was going to do related to these videos

I can't wait to talk to the software people and get official on the record statement from them on whether or not their software is used in the cber system um because if it is to me that's absolute proof the videos are real uh and I'm GNA ask the AO as well um so here he's pinging **Mick** West and whoever Darren Peach is I don't

(40:18) even know who that is uh the MH370 dude is in control of a large number of sock puppet accounts across **Reddit** and Twitter is he talking about me I'm working with a few people to identify the accounts through styom metrics does anyone in the chat even know what stylometric means if you are out there and you know what styom metrics means uh please let me know because I have no idea should be a report soon guys I can't wait for this report uh because as a statement of fact I have one **Reddit** account that I haven't

(40:57) posted on since I posted my last post of the conspiracy sub**reddit** like a month and a half ago and I only have one Twitter account that I've posted anything on ever so I don't know what this guy's imagining in his head or what he thinks I do all day like I have a normal job obviously this guy doesn't have any real job but I have a real job so apparently he only deactivated his account and he reactivated you can't really tell the difference the account didn't exist yesterday we we looked at

(41:30) it while we were online and then it got reactivated um it's pretty weird this is super weird man and the scary part is this guys is that this is not the first time I've had people make these kind of weird claims against me usually when you see the this uh it's projection usually usually when people make these claims it's because that's what they're doing is that they have a bunch of accounts bunch of fake accounts that they do to manipulate stuff uh we saw this in the UFO Community as

(42:00) well where they're doing this as well in that community and they they tried to claim that I was purchasing fake followers the irony is they are literally people that purchase fake followers I've never done any of that stuff guys I've never purchased any fake followers uh I don't have any other accounts that I'm secretly on people will like they on **Reddit** especially like you'll see people say this a lot they'll be like oh hey Ashton when like people will support me they think that

(42:23) everybody that supports me must be like me on an ALT it's super weird and they're not joking like they're not making jokes about it they like actually just think that okay so I think are we good on this guys hey crypto appreciate you man yeah I think all these guys are probably affiliated with the gorilla Skeptics so and if you guys don't know how these guys operate it's starting to become very clear we've s we've learned a lot about how these people operate from watching them uh and watching them try

(42:52) to coordinate attack me attack the case **debunk** the videos they use discords that are they're in together with one another and that's how they coordinate there's also a video about **Reddit** which I don't know if you guys have seen I will I'm going to probably try to download it and post it on Twitter to watch so you guys can watch it its entirety on Twitter it's the craziest

[ ] I've ever seen a 12-year-old 13-year-old Italian kid became the third highest uploaded account on Twitter and he found out that

(43:20) it's all of reddit's just a huge or sorry on on Reddit not on Twitter he found out the whole thing was a huge scam filled with like 16-year-old Indian people gaming the system and 35-year-old perverts uh just gaming Reddit Non-Stop and then you have people like this that are groups malicious groups of people of debunkers who they form little Bubbles and uh anything that's not within their little sphere of influence they attack it they destroy it this is why Reds become total [ ] it's people like this

(43:51) and it's not just them there's other little groups like that as well but this is why red has become an echo chamber of completely like mentally ill people with blue hair and stuff like that which if you have blue hair nothing personal but um the people that have blue hair on Reddit they they are uh yeah questionable uh moral um standing stylometry possesses a significant privacy challenge in his ability to unmask Anonymous authors or link pseudonyms yeah sure they can do whatever they want I'm literally nothing

(44:19) to hide I don't have any other accounts so anything they do like that only will discredit them and only show that they have serious mental issues so I I promote that guy doing all of that this is the guy who supposedly was claiming that he had proof the videos were fake somehow and he just never dropped it yesterday he deactivated his account he said he was going to drop it on June 1st six weeks from now but he gave us one of the strongest pieces of evidence we've ever had that these videos might be real so pretty pretty

(44:47) wild man yeah Kimberly James says I'm a sock puppet account Kimberly James is secretly me guys that's secretly me on my off time okay so I think we're good with I think it's science time chat uh any research on tr3b not really I think if you're interested in tr3b you should check out uh salvator P's patent inertial Mass reduction for a trans medium Craft um truth is guys I'm not really trying to to link any more of their stuff or even broch too far outside the realm of what I've already dug into and

(45:20) it's not because I don't think any of that stuff's interesting uh but what I want more than anything is the answer for the MH370 family and for the case and for the videos so until I get that I'm probably going to be focused on MH370 stuff and science around MH370 stuff if that gets proven whatever I first of all would take a vacation uh probably step away from the internet for like a few weeks and then come back and do who knows I'll look into some crazy stuff after that but I want to have this

(45:50) case not be tainted by anything else or any other claims or any other way where it can be discredited PJ Mike thank you very much man appreciate that be prepared for Greenwalt and Green Street coming after you they're part of the debunker Triad with Mick West science is the key thanks for all you do you're 100% correct they've all they've blocked me already Green Street has blocked me already uh I dunked on Greenwalt like twice already he blocked me I dunked on him he blocked me he unblocked me I dunked on him again

(46:18) and he blocked me again Greenwalt is uh complete stooge and Green Street is a total [ ] guy is a huge idiot uh Green Street was actually retweeting that what was it t Powell guy Green Street was retweeting the guy that thought I was a a foreign spy and that I was uh harming the defenseless defense contractors and I was abusing foyer requests Green Street retweets that guy just to show you how Wackadoo Green Street is like dude man Green Street if you're out there buddy and you are retweeting nut jobs on Reddit um yeah say goodbye to

(47:01) whatever journalistic Integrity you had good luck proving I'm a foreign spy or whatever crazy [ ] you guys are trying to dig into or that I have a bunch of accounts this like Aerospace Chris when Aerospace Chris was like coming at me and him and this other Nut Job Jeremy mwan goes by uh something Osiris on twitter this guy is so psycho that he literally films people every interaction he has with people records it phone calls if they're in his car he was admitted that he was filming people in his in their car recording them in

(47:33) the car he's a psychopath these guys had in their minds because this is what happens with mentally ill people is that they imagine stories in their head uh about other people that they have no connection with and they had imagined that I faked talking to Arrow they had imagined that The Joe Rogan situation was fake they were proven wrong on all these things did they ever apologize or admit they were wrong no they never do they never do um and and and Green Street and Greenwalt are like buddy buddy with these guys because it's just a bunch of

(48:01) nut jobs uh and Green Street is clearly getting fed information from the government um I don't know that for a fact that's just my opinion uh but I've done enough foyer requests now to know that the only way you get information from foas is if you uh the government's feeding you information they want you to leak if they want to hide something they have a million ways to hide it they can give any excuse that they want for it so I wouldn't trust a sing thing that green Walt pushes out there green Street's

(48:29) reporting is just garbage it's just garbage like read anything the guy has posted like it's like he got sexually assaulted by an alien and now he's trying to prove that aliens can't be real to deal with the trauma that's the impression I get with dealing with Green Street like why is he so angry at something he has no reason to be angry about whatsoever his reporting is completely full of bias and completely devoid of factual information okay yeah the debunkers are definitely afraid and here's the thing too like and

(49:04) this was an intentional thing on my part I made them have skin in the game the more they pushed on the videos being fake the more I pushed back because I wanted to get them committed to it now they have skin in the game now if those videos end up getting proven real it will destroy the reputation of half of UFO Twitter it will permanently Scar the reputation of all the debunkers and it will end the careers uh and debunking careers of some of of them some of them may go to prison some of them will absolutely be sued for the statements

(49:30) that they've made the false statements they made about the videos so now they have skin in the game 100% the debunkers do um so they should be afraid actually because if Arrow

confirms these videos are real that's the end it's all over so uh you know I gave them many many many many chances to back away they kept doubling down kept doubling down kept doubling down um so it is what it is okay let's keep going yeah if people have real proof of the buny we will hear about it right away they're not going to play the long game

(50:06) on I'll release it six weeks from now or whatever um so we'll see yeah I'm holding these people's feet to the fire and the more they push back the more I'm going to burn them simple as that uh so anyway everybody's been warned that nobody can say that they weren't warned nobody can say they didn't know I've made my intentions 100% % clear and open and honest upfront um so there we go yeah and this stuff's corroborated right even the UFO stuff is corroborated uh the more stuff that's out there and

(50:38) the science that's out there it gets corroborated and that's what's going to lead us to our next thing here is we are going to do some scalar physics with Thomas Bearden so one of the things I posted I posted the Drone video today I mentioned how uh it's corroborated by scalar physics as promoted by engineer Lieutenant Colonel Thomas Bearden back in the 80s in the 80s before I did I looked in this case I didn't know there was a Thomas beard and I didn't even know what scalar physics even meant I

(51:03) didn't even know it was a thing Sky been talking about it since the 80s and so this is another piece of evidence that shows the strength of the weight of the case is that the science is out there physicists and academics just don't get taught it and they never look into it and they have no idea about it so we're going to take a look at it here now give me a second yeah and I'm not uh I I I say this a lot but I'm not your classic or typical influencer I don't care about PR I don't

(51:42) care about my brand uh I don't care about any of that stuff so if you come at me and you want to like feel like you want to get attention I'll give it to you I'll give you the attention that you want uh if you want to come at me and try to attack me or the claims prep prepare to get slapped right back that's that's all there is to it no no martinis tonight we are uh we're not drinking tonight I got I gotta work actually I gotta try to work tomorrow so even though it's a Friday so I want to be

(52:13) able to wake up at a normal time okay let me find my video file here guys I love this streamyard too by the way I hope you guys like that intro I've got uh Heather birdie she's been making some sweet content for me I greatly great greatly appreciate it because I don't have time to do all this content uh psychotronic which one is it maybe this one ahead and see this is the right one no this is the wrong one wrong one chat wrong one got remove this oh this is the one I think's got super bad quality so the first thing that we're

(53:02) going to look at here is we're going to look at how scalar physics works so his interview is super great um he basically starts off by explaining how you zero a vector out so this is the idea of phase conjugation so if I send a wave at the screen and it produ and it's a mirror it produces a wave straight back we need to have that happen we need to zero out our Vector so we have a wave going this way wave going this way cancel each other out zero Vector but there's not

nothing left what's left is

(53:33) a scalar potential and this is shown by Maxwell's equations going back nearly a hundred years before Heaviside rewrote them and simplified them and we basically forgot our past so the first one's at about I think 530 here we go and we cross it with itself we will produce a zero Vector resultant now I want to stop right there let me say that again rigorously we will produce a zero Vector resultant now the two vectors didn't go anywhere they're still acting upon each other they're still there so very rigorously what we produce

(54:18) is a zero Vector system that is a system of acting vectors which sums to a zero resultant Vector for translation on the bottom we show the same situation in quaternion the Quon is expressed very similar to the vector except it has this little scalar term  $W$  sitting in there with one big difference when I cross for example  $Q$  the Quon with itself I do not get just a zero Vector the vector part still goes to the zero Vector resultant but now I have suddenly the emergence of a scalar part which did not go away and the scalar

(55:00) part it turns out is in fact a function of the vectors that entered into the interaction notice on the bottom line that the cross product now is the square of the amplitude of one of the vectors that's the urgency or the energy of the urgency of one vector on the other stress wise and I've retained the zero vector because now we have to learn to read that exactly which is what Heaviside did not do what this equation says and says very rigorously is is this if these are two electromagnetic vectors or quon we

(55:43) started with suppose they are the  $E$  fields and the two  $e$  fields for example the two  $e$  vectors are identical and we have an operation that's making the cross product suppose that's what's actually going on what the bottom equation rigorously says is electromagnetically you have a zero Vector resultant with the system of two vectors still inside the zero Vector system and still acting producing the action  $a_s$  now  $a_{sq}$  is proportional to the energy of one of the vectors the amplitude interesting so the energy of the

(56:26) Vector it's going to be proportional to the  $a_s$  which is going to be the cross product if I said that correctly so when you can when you have your waves phase each other out cancel each other out that doesn't mean there's nothing there the waves are still there you're still left with your scalar potential so this is the idea that even if you do this even if you cancel the wave out through phase conjugation it's not that there's nothing there that's very important to understand that's the whole basis for

(56:52) how we misunderstood uh electrical engineering and physics itude energy the urgency so to speak energetic urgency of one vector on the other so we've captured a form of stress and now suppose for example we're instead of dealing with static vectors we're dealing with actual sine waves again our  $Q \times Q$  is going to be  $A^2$  plus the zero Vector resultant electromagnetically I've got to say all that because I must not throw the zero Vector away it's a real thing it's a vacuum energy as a matter of fact it is

(57:32) not a zero except electromagnetically but it's doing something else in the vacuum so what he's just saying here is that even though we take away the vectors even if we cancel the vectors out we still have this stress going on think of like a squish ball and you're squishing the ball but of space itself so you think of this squish happening and if we can shoot that squish to a local a far distance and then we can cross it with another squish another beam this is where we're going to be able to recreate the energy at a

(58:04) distance suppose  $Q$  is of the form  $Q$  is equal to  $a \sin \Omega T$  standard kind of wave simple sine wave type entity then  $C \cdot Q \times Q$  will give you  $a^2 \sin^2 \Omega t$  plus this zero Vector how do you read that the way you read that equation rigorously you don't throw throw the zero Vector away it's telling you something it says I have a zero Vector electromagnetic system whose active internal structure is giving me a scalar wave  $a^2 \sin^2 \Omega T$  that's so there it is  $a^2 \sin^2 \Omega T$  that's your scalar wave

(58:49) that's the product even though you cancel the waves out and the person here howler who said reminds me of Soundwave phase cancellation it's almost maybe identical in fact I have it on good authority that sound waves can also produce anti-gravity and that our understanding of sound waves and the spin related to the uh I don't know what you call the sound wave whatever produces if it's still an electron or what have you can also be used to create anti-gravity using sound waves so if you're interested in that there's potential

(59:23) where sound waves can also produce anti-gravity definitely would be worth checking out out uh Greer claims that scalar technology is what most concerns the ETS and they are prepared to help us get their [REDACTED] together that's pretty interesting guys I I just don't know if I really believe in all the ETS but I also don't know how we could have figured out all this science and kept it hidden without some sort of intervention honestly so I don't know I I don't claim to know stuff that I can't

(59:49) possibly know I just know that this is explanation for what they're doing in the videos and it's been out there for 38 years at minimum um he should explain here how this creates gravity as well precisely what that equation says now when you threw away the Quan scalar part you threw away the scalar wave and notice that in the scalar wave the energy which is proportional to the  $a^2 \sin^2$  is rhythmically varying if the energy density of the local vacuum where this action is occurring is rhythmically varying then rigorously that is the

(1:00:33) definition of a local gravitational wave and that what did you just say there that's the definition of a local gravitational wave if that product is rhythmically varying that's the definition what even is a gravitational wave do we even understand what that even means is this the answer to what a gravitational wave even is we know they're real there's no doubt that a gravitational wave is real ligo has seen them when neutron stars have collided they've seen the gravitational waves so the question is what is it and how do we

(1:01:08) produce it it has to be have a definition in physics that's the whole point of science I'm going to replay that I'm going go back 30 seconds and notice that in the scalar wave the energy

which is proportional to the  $a$  is rhythmically varying if the energy density of the local vacuum where this action is occurring is rhythmically varying then rigorously that is the definition of a local gravitational wave and there is your precise definition or derivation of scalar electromagnetics well there you go chat

(1:01:48) you guys now know every all 2,000 people watching this now know how to make gravitational wave there's your answer right then and there uh stress of the vacuum itself is producing the scale uh our gravitational wave it's going to be a product of the  $\sin^2 \Omega t$  I think is what he said it was here I can't even read it times  $a$  and I guess  $a$  is the variable that's the important one here in terms of making it more more powerful or less powerful for your gravitational wave pretty interesting

(1:02:25) um now let's look at let's scroll go ahead a little bit I'm just trying to see if there's any messages oh somebody said about the phones guys the phones are still ringing four days later there there's no logs for that anymore that's too long ago in fact you can't foia private companies and as far as I know foias are only in the United States um yes I'm working a real job although it's been very difficult to work a real job given all this acoustic levitation sound waves yeah guys you can

(1:02:54) definitely look into that as well um very important I think so let's skip ahead to 12 minutes so this part's good here because he talks of well this graph is really important to look at in terms of the electron so the electron can either shoot straight ahead that would be our electric field the magnetic field is going to be our curling field and then what's a gravitational field it's a stress remember magnetic monopoles so what's a magnetic monopole magnetic monopole is where the action either just

(1:03:22) shoots out from all directions or goes in from all directions you can argue that magnetic monopole is gravity manipulation in my opinion this is my real job yeah uh you think satellites exist that shoot waves at uh at plane to create the X absolutely I think this is real John Johnson great comment the more I think about it why would you not have this equipped on a satellite you have two satellites that are outer space they can create a cross Vector anywhere on the planet that you want it makes more sense than have radar

(1:03:54) dishes radar dishes look up you're limited by the curvature of the earth if your satellites are looking down to create this you have way more coverage I would argue that that's what they're afraid of is and in foreign adversaries putting scalar weapons on satellites but at this point imagine what's the next step after you go from your satellites what do you go for after that after that you create localized radar dishes like balls of energy that can produce the scalar potentials and just float around

(1:04:23) freely as well that's why the mh3 70 videos are so crazy because it represents this idea that we've been advancing this technology for decades and we're already at the point where we can produce balls of energy fields that are anti-gravitational that can shoot scalar waves from them locally and create such a strong electromagnetic force that they can actually break the

swinger limit and produce a large gravitational wave that can warp a plane this is the part where I would actually almost begin to agree with the people

(1:04:54) that say it must be aliens because it's hard to imagine that we've been secretly advancing that much over the decades but when you look back at how far back this goes you realize you can go back to the Philadelphia Experiment in 1943 so it actually is possible that we've been hiding this technology for like 80 years and advancing it in secret which again that brings up its whole another set of tough questions like guys when I said this situation is dark it's dark I've been looking into the history looking

(1:05:22) into the science looking into another thing you can do is you can produce a field which will cause the electron to interact with it and swirl around in a little swirl that is technically what we call a magnetic field a  $B$  field there's one other thing you can do suppose you do not move the electron at all but you have a zero Vector electromagnetic system remember now I've got to say some extra words I can't just throw away the zero Vector I've got to go after the gravity that's left when

(1:05:54) it's there if I have a zero Vector electromagnetic system it's a stress system as I show on the bottom diagram it suppose all of those vectors are rhythmically varying like a  $s^2$  or a sine wave I have then a scalar wave and all that it does is squeezes the electron can we not easily imagine taking a rubber ball between the outstretched fingers of both hands and rhythmically squeezing it and relaxing squeezing and relaxing that is a Scala away specifically it does not translate the particle neither does it

(1:06:31) swirl the particle it merely squeezes it so it does not give you an electron wiggle and electron wiggle detectors will not detect it because they detect translation Fields  $E$  fields or swirl Fields  $B$  fields they do not detect squeeze waves as a matter of fact that squeeze  $W$  squeeze wave doesn't do much to the electrons in the shells and orbits around an atom it goes through and is absorbed and interacts with the nucleus as we'll see later so the key here as well related to the videos is that they mapped out uh I

(1:07:12) I'll pull the videos up to just share for some context when when necessary um these videos are fake guys there be no way we would have like even a fraction of this information so these ways one of the first things that **redd**itors did but back when there was a real investigation on **Redd**it and it wasn't just a bunch of [ ] back in August way back in early August is people were looking into every detail here and this is why they had to censor the videos because people were figuring it out they were figuring

(1:07:46) out what we're looking at here is real and there's way too many details this pattern that's spinning around the plane is a sinyal pattern what did we just hear second ago that there's a sinyal wave pattern so sinyal pattern is like a perfect wave function that's out there that's the same pattern that these orbs are doing when they're spinning around if you graph it it's a perfect sydal pattern I've posted this on my Twitter you guys can uh dig back through it and you can find it it's also a zero point

(1:08:14) uh system which is your perfect triangle system I think later on this video Thomas Bearden talks about it um it's like guys if these videos are fake how come they line up with to show you that indeed Max how come they line up with exactly what Thomas Bearden was talking about 38 years ago did Thomas Bearden make these videos before he died he fake these videos I might actually believe that okay uh 1345 oh okay this is The Ether The Ether was a thin material uh thin ethereal material in his model so when he says a

(1:08:51) stress in the medium he means a stress in The Ether and he knew about that and here's a direct quote which you can read from the chart directly from Maxwell himself here is the finish of the quote again directly from James Clerk Maxwell so Maxwell himself realized that he had also captured the local stress of the medium in his full Theory what is really pathetic is they didn't realize that's what gravity was so they just didn't realize that gravity is stress in The Ether stress in the vacuum pretty crazy so here we see

(1:09:37) if we read what he says on the screen here Maxwell's unified theory quantization which I don't know what that exactly means exactly yet stress squeeze waves is the idea of scalar waves that can produce gravity heavy sides excision I guess that's his reduction of the equations and I can't read those last two down here um so again what we need to understand this is two things we need to understand that there's an extra Dimension and that we need to understand that that extra Dimension The Ether

(1:10:06) whatever you want to call it is the underlying framework of our reality and that that can be tapped into and that potentially there might be unlimited energy potential in that ether pretty amazing stuff um yeah Einstein might have literally been controlled opposition people say asht if you look at a non intelligence stuff you might find stuff maybe non- intelligence stuff just doesn't even surprise me man I just assume that there's alien life out there somewhere doesn't bug me uh what I want is to change the world with technology

(1:10:36) that's that's what I want to do and I want to get the answers for these families because this is some [REDACTED] man I can't believe we stole a plane and lied about it for uh over a decade uh because we were trying to hide the technology that we used that's that's messed up man uh would love to hear your thoughts on the high yeah yeah I mean dude I find my post about high frequency gravitational wave generator it's got like a million views um I I'm one of the people that's been promoting Salvadore

(1:11:04) pias more than anyone on this entire planet he's he came out of like nowhere and interviewed with me first and I did two interviews with him and they're pretty huge and I looked at his patents and All His science I posted all of them on Twitter before we did our interviews high frequency gravitational wave generator if you read it like you'll see that he's talking about the videos and these this came out like in 2017 2018 and he talks about the destructive capability as well I mean this is high

(1:11:36) frequency gravitational wave generator is what we're seeing produce the singularity in the videos and it's something that could be scaled up that could destroy the entire planet pretty

easily actually um because the thing that's scary about the videos is the end so this the scariest part about the videos guys is this part right here at the end the reason why this is scary is you have to understand science to understand why this is so scary this is scary because What's Happening Here is the energy is being

(1:12:08) Amplified exponentially anytime you have a curve it increases exponentially that's where the magic starts to happen that's the same thing that happens with super conductivity when you start to look at the the physics equations when you start to like divide by things and then that's a divide by a variable or uh Square variables this is where you start to get situations where things exponentially grow and so in this case we have a uh squared V squared denominator in a dividing uh mathematical equation and

(1:12:40) that's the distance and the distance is shrinking when that number gets smaller and smaller and smaller and closer to zero the electrical force becomes closer and closer to infinity infinity so this is the part where kum's law explains what we see here now you can imagine scaling up so the only situation then is that how much energy are these orbs initially starting with the more energy these orbs start with the higher your total output's going to go and you scale that up now you destroy the planet this is why they hide the

(1:13:11) this is why they hide the videos in my opinion this is why they hide sitting in position and squeezing it sits there and it oscillates the energy density of the local vacuum the gravitational wave is what it is it doesn't go anywhere it doesn't take off at the speed of light it's sitting in place it's all locked together as a single system with a zero Vector translation or get the hell out of there result so Einstein then not knowing any way that you can curve electromagnetic uh curve local SpaceTime

(1:13:47) electromagnetically and by the way all curvature SpaceTime means that's a simple thing imagine that space is filled with little fantastically dense and intense spray all the time called a virtual particle flux the only problem is each little particle doesn't stay around it's instantly born almost instantly dies so it's like a gas that's continually each particle being continually created and annihilated so it's a crazy kind of gas flux that we're looking at that's really the modern view of the vacuum then all

(1:14:16) we're talking about is the intensity of that flux is oscillating that's all we're talking about only we polarize the internal pattern of it we can put patterns in it that's the stress wave of the scalar M wave is we can put patterns in it that sounds like sacred geometry to me wow Einstein then said the only other thing left to curve local SpaceTime is this very weak gravitational force which is some  $10^{-42}$  times weaker down in the grass from where the force the electromagnetic force field the

(1:14:51) electric field is between two electrons now that's very weak  $10^{-42}$  is a very small fraction you can't find that you can't even measure it with normal instruments with except great with great difficulty so he reasoned then that that's so far down in the grass you're never going to be able to measure any kind of local okay so and then so Dalton makes a really great Point

here about nuclear explosion reaction yes a nuclear explosion is also an exponential reaction so this brings the idea up

(1:15:23) that maybe physicists figure this out around the same time as the Manhattan Project maybe Oppenheimer knew about the scalar physics as well maybe they knew they were going to hide it because of the dangerous potential they saw how dangerous just a nuclear weapon would be and they thought well what if we have a cold explosion that could be even scarier potentially now let's skip ahead to conservation loss here about 2145 caror SpaceTime and that's the thing the condition that Oliver Heaviside threw out of James Clerk Maxwell's original

(1:15:59) theory he threw out the baby with a bath waterer but he made it a hell of a lot easier to calculate and understand so people began to understand it began to be able to calculate began to build instruments and make great advances but meanwhile we had a severely crippling assumption made for good reason by Albert Einstein on general relativity and uh maybe I skipped over but basically there's some part there where he says there's no conservation laws if you have curvature locally um we probably skipped over it

(1:16:38) let me just see if I'll go back and see if I missed it um the energy is not necessarily pulled into the middle but it's creating a field around the location of the orbs and I think when the energy reaches the point where it breaks the swing limit that's when the singularity is going to be induced now I don't know that for a fact that's just how I've intuitively from general relativity that they teach in the Western World you can't get such a paper published in the western literature many good physicists have

(1:17:04) tried if you curve local SpaceTime and this is absolutely rigorous Russian work check the leading journals and the leading academicians all I hope you heard that word all conservation laws go out the window there are no irrevocable conservation laws when you have local curvature SpaceTime and that's the thing the cognition that Oliver Heaviside through so that means no conservation of energy no conservation of momentum pretty big pretty big conservation momentum is a big one that so this is the part where the scientists

(1:17:45) were telling us no you can warp an object and it can just sit down you can just be set down somewhere if you want all the scientists told us that um so this this is really ground this part does I think maybe not require new physics but it requires us to relearn the physics as we understand as we currently believe it to be true uh which is pretty wild I believe beyond a shadow of a doubt that this science is accurate and real and it will be proven to be real at some point in the future so if you're somebody out

(1:18:14) there that thinks that you want to figure out what the next thing is this is what you want to look into think he talks a little bit about the atoms there we're going to skip ahead to time reversed waves here so the aide of time reverse wave is very interesting and I got sent a link which I'll probably post on the internet sometime soon here of a video where they take an aquarium or you know a tub full of water and you lift the aquarium up and you can see the

Ripple in the wave and what happens like they they show

(1:18:42) like there's a like let's say a pattern or say like a face my face and it disappears when the waves shake and then what happens the face comes back this reminds you of optical phase conjugation this also is like the definition of a Time reversed wave like that when there's a wave moving forward that creates a pattern there's a wave going back in time as well and that if you can get access to that time reverse wave you can rebuild the thing that you saw before you can imagine how this could be a type

(1:19:14) of teleportation or cloaking or moving one object from one location to the other I think this is the basis for it it's the kind of reality you're looking at okay let's talk about the flow of time because we're going to tamper with that too I told you this part gets a little complicated but I'm going to try to show you before you get out of here how to think about a time reverse wave and how to use it and how to make it work for you and do magic now a photon comes in and interacts with a negative

(1:19:49) charge and that and then the charge goes into excited state going around the so real quick I Tony nailed it here so we are like fish that don't realize we're in the water we don't realize that there's an under that we are in a fishbowl it's not just space that's out there there's a whole another layer that we don't perceive that's what we don't understand and it's like if we were to jump out of the water and realize oh no there's a whole another element going on

(1:20:15) here that we don't quite understand that will bring us to the next level three points um elections reform just watch the videos this is called scaler physics Thomas Bearden psychotronics you can he's got four or five videos out there you can watch my streams you don't need to believe anything I'm saying I'm simply this guy is an engineer that worked with the government uh on special access programs he's seen the stuff experimentally in the lab he died two years ago he's talking about this stuff in

(1:20:44) 1985 I have other people that I've gone on the record uh my buddy Dave Rossy I believe on the Tim pool podcast uh culture wars podcast I brought him with me he says he's seen stuff like this uh on the record um he said he's seen stuff like this in the labs as well so you don't have to believe me the science I think will check out if we were able to conduct an experiment and potentially uh produce a gravitational wave Squeeze In The Ether and then drops back and decays and emits a photon that process of photon absorption

(1:21:15) and emission reemission from the excited state of a negative charge in an atom is what we call the positive flow of time now let's be rigorous here we're saying that the flow of time in this universe occurs bit by bit at a fantastically High Rate One near piece at a time  $\Delta T$  is not always the same size it is discret but it is not the same size so watch your words you got to think very carefully cronon do not exist not as being one simple value it's discret but it's quite variable as we'll find

(1:21:52) later if that same Photon in acts with a positive charge we already know in physics that

if you invert the charge you invert time that may surprise you but it's well known in physics that is not Tom Bearden and so it gives you a little piece of negative time hey wait a minute we got a problem here they use a theorem on particle physics they found out that charge is not conserved broken symmetry parent is not conserved time itself is not conserved but it seems that the three the product of the three all three

(1:22:29) cannot be violated at one time that's the best shot we got at it today in particle physics that's where they're at but you can violate any two or one let me say that again you don't have to conserve charge the contrary argument is but it's a little effect you say yeah baby it's a little white crow but maybe he'll grow if I can have little white crows and I can collect them and grow them I'll have big white crows in the make world so one thing I want to point out here is that the reason why this was

(1:22:59) probably completely misunderstood at the time is that we did not understand time dilation at least I had no idea what the hell time dilation was until I saw the movie Interstellar when you realize that time is not constant then you can begin to understand why  $\Delta T$  there matters because time is also the think of it like a wave where time can go like this super short wavelength or it can be a long wavelength this is why you can have different respective flows of time regarding depending on how much mass you're next to in general and like uh

(1:23:30) some a quick questions were in the chat uh no my parents um also you know they are cordial with me about this but they don't like believe any a lot of this stuff or you know aliens or any of that stuff I think it just goes to show like how far beyond the Paradigm some of this stuff is um and like somebody else said this isn't the kind of stuff where like I can give you the answers I can tell you that there's an extra dimension and I can tell you that there is an ether and then I can tell you that we can produce over

(1:23:59) unity and free energy from that ether based on this physics but I can't make you believe it or understand it that's that's the hard part that's what makes it so easy to hide is that a lot of people just want a Tik Tok video that tells them what's real and what's not but if you really want to understand it and know that it's real you have to look into the science yourself that's the hard **truth** so charge par time if you Inver the thing you might get something different as a matter of fact the

(1:24:29) antiphoton which has been assumed to be the same as a photon that is a false assumption in physics and I'll show you that in just a moment well we've already said we go into the nucleus with scaler waves and we'll have a higher order of reality when we do that why first place we're interacting with a neg a positive charge the yeah so this is a good comment by Anthony William as well time reverse wave isn't a reverse wave back in time it's a mere image of the wave form played End to start

(1:25:01) instead of start to end it's funny because I asked Dave Rossy about this and he actually said no it's actually literally going back in time I don't know I think that's where he and I might differ but that's the part where I'm not sure at the moment um nucleus of an atom is already

time inverted did they forget to tell you that in your electrical class yeah because they didn't know that but it's true and modern physics substantiates it okay I'm going to skip ahead of part of some of this um and you

(1:25:35) guys can watch on your own if you want I'm going to go to 3125 any kind of Z point system oh this part right here can actually adjust the potential we can even put patterns remember we put fingers structure inside this Scala got a structure we can build any kind of zero system different systems and patterns and polarizations inside there in the virtual state of vacuum that we wish to you guys see you catch that so the different types of Zer Point systems the potential we can even put patterns remember we put fingers

(1:26:09) structure inside this scal away it's got a structure we can build any kind of zero system booah there it is that's the ysy moment the scalar wave we can produce any kind of zero point system from the scal Sy it doesn't have to be just like this to cancel out the waves it can be a triangle where do you see the triangle chat where do you see the triangle this is the proof that we need for the people that have been following along this is your proof that the MH370 videos are real this is it for the people that want to see it in the chat I

(1:26:46) don't have access to special access programs with the government I do have access to two videos that got **leaked** to the internet we are seeing exactly what Thomas beard is theoretically uh was theorizing in 1985 there is your zero point system you are staring right at it remember the orbs what did the orbs do watch them spinning around the plane what the hell oh that was just the beginning I was oh crap I was like what just happened there um that was the short one okay sorry here we go so they spin around the plane

(1:27:21) and then watch what they do here they're mapping the plane you can tell they're mapping the plane cuz they're they're spinning around it all ways and we've mapped it out and it's a sphere now watch the orbs change their orientation look at them changed the orientation now they're vertical why are they vertical they're vertical because they're preparing to collapse onto the plane and induce The Singularity right here at this point they're slowing down they're changing their orientation right

(1:27:44) here and then they're going to collapse on the plane and then the plane's going to go poof you actually see them collaps in the plane I think in the frame right before that right here so this is the zero point system this is the scalar uh wave form front whatever you want to call it that's being produced in order to create this pretty wild uh let's switch over different systems and patterns and polarizations inside there in the virtual state of vacuum that we wish to we can go into that nucleus and it's boiling away it's just

(1:28:18) like a cathode yeah who disappeared at make 370 is the easiest answer in the world the people filming it United States government you can tell it's an operation from the Drone video the Drone is super close to the plane they're filming the plane before the orbs appear the government's us government's the one who did it they're zooming in on it like they know what's about to happen they're trying to get the best intelligence of the orbs possible either if you

believe in that aliens are causing the orbs or whatever

(1:28:45) in the MH370 videos then maybe there's a scenario where the government's working with the aliens I don't know all I know is the people that are filming that are implicated in The Disappearance and then we see the plane get disappeared by some crazy ass floaty orbs so to me that's the US government is the ones responsible oh in terms of retiring well the um what happened with the retirement thing I'm not going to go into this too long but the redacted interview was probably the best interview I've ever

(1:29:13) had to date it's had across all the social medias probably close to a half a million views um tons and tons of views tons of positive reception and then this brought the debunkers back out did debunkers come back out and start attacking the videos I'm going to push back super hard again I always said that I wanted to look into the science that's what I want to do but when people start pushing on the videos blah blah blah they're G to get pushed back on it so technically I'm not really investigating

(1:29:40) more but there's been a lot of people that been commenting saying I'm even finding more and more details in the videos so you know what if the debunkers want to keep trying to go ahead and prove that they're fake even though they've already been convinced supposedly then I'll find even more details or we will I mean some will find more details I'll publish them and we'll show people how real these videos really are now what really was impetuous is I figured out how the science worked from

(1:30:02) watching these videos of Thomas Bearden of scalar physics and I realized that what we were dealing with here was a mixed wave interferometry system you've got your three orbs like this and you've got your fourth orb so you've got your three orbs in your triangle you've got your fourth orb over here and this is what's creating our slingshot effect that we see when the The Singularity gets induced and then poof the plane goes over here or other way I guess this way however you want to think of

(1:30:27) it and that's exactly how mixed wave interferometry Works mixed wave interferometry can work with any type of wave including gravity waves okay let's switch ahead I don't want to be up all night 37 minutes do anti-gravity you I think you just said how to do anti-gravity it fits exactly with it spatially but the time Dimension is reversed now the stress of those two waves that they're locked together is totally on time Dimension that's a highly compacted space Dimension and you get one going up one

(1:31:03) coming back so you get a c squ type factor out of this thing that gravitational wave and that's what it is that scalar wave can be up to  $9 \times 10^{16}$  times as strong as the one I've told you about in the past and this is the one you do if you want to do anti-gravity you got your ears open you're listening all you have to do to do any gravity all you want in any University laboratory in this country is make a pumped phase conjugate mirror at 100 to 400 Herz let me say that again and I'm not going to answer any questions on it

(1:31:41) all you have to do if you want to make all the anti-gravity you wish to make and any University laboratory in this country can do it it's simple doesn't take much power is make a pumped phase conjugate mirror between 100 and 400 Herz well there we go there you go there's your secret anti-gravity I asked um some of my people about that and they said that that is one way but there's another way that's similar I think with I think it's higher frequency I can't remember if it's I think it's higher frequency I

(1:32:16) I'll double check for the next time um but and then he may have been being deceptive there because he didn't want to give away the full secrets of like the power anti-gravity but I think he's leading us down the right path there with the pump phase conjugate mirror with 100 to 400 Hertz um so there's your answer on that one pretty crazy he talks about the Philadelphia Experiment this this clip remember when he talks about the Philadelphia Experiment here and then sit on the side life and for the next 2 three hours and how silly

(1:32:44) we all been for years and how easy it is to do it I will tell you real quick um this stream will be available later on YouTube and and on X if you pursue that you can take a flashlight battery and levitate a battleship and I will not discuss that further cuz then you're going to ask me about The Philadelphia Experiment and I'm going to tell you I don't know anything about that once in a while got to lie a little bit every once in a while you got to lie a little bit pretty weird um let's see let's go to block the

(1:33:25) electromagnetic field in the Faraday cage I've got to clip some of this this is 42 gets out as gravitational a penetrates the point but if you could block that arrow on the left and force a lot more of it to go over there into the actual three space that's in our 4D mow space then you get lots more gravity lots more inertial field that's all you got to do to build an inertial field generator but you got to block the em how you going to do that well you do it real simple normally it goes boom out there

(1:33:59) as electromagnetics not much left as gravity a little bitty tiny hiss over on the side to make it Kitty cartoon but impress the point but if you block the Escape as electromagnetics block the big door you'll get a big boom out over there and you get lots of inertia and lots of gravity and you can engineer that on the bench at will the great Cosmic engines of the universe operate inside Vector electromagnetic Vector zeros that's where the gravitation is gravitation so basically he's saying make a door make a faraday cage that

(1:34:30) blocks out all the electromagnetic fields and then you can produce gravity inside that and potentially create you know like an explosion you maybe can control the force of it from that pretty interesting stuff there unfolded electromagnetic forces locked together with a zero e field and B field resultants electromagnetics is the unfolding of the locked in electromagnetic stress of the vacuum it's all it is and by the way that's rigorously in agreement with modern physics except we can have a structure

(1:35:01) to it whereas they normally have it as a random structure they don't use the fact that you can deliberately do it because why heavyside taught him to throw away the zero

electromagnetic Vector resultant because he had thrown away the gravity with that system okay to get distance effects we all know how to put photons through there and hit something out there at the distance or hit it will matter but the best way to do it is to do it with potentials not with force fields and photons and matter that's potentials potentials were

(1:35:38) thought to be mathematical figments until quantum mechanics prove they are the real things and it's the electromagnetics that's a derivative okay guys it's about to get spicy make sure you're listening um so we're now going to start talking about shooting these scalar potential to a distance and then interferometry interferometry is another word you definitely got to understand if you want to understand how this all plays out I will be looking into Al Bic on the Philadelphia Experiment I've already

(1:36:04) listened to one of his interviews for like an hour I he was extremely convincing I I I thought he was really convincing I did talk to Tim rentur about it who talked to Al bik several times uh he and I may have a debate about the Philadelphia Experiment in the future I'd love to talk to Tim brur about it Tim brur also um talked to uh uh Thomas beard in as well and interference is what gives you everything and the potentials that's the magic first you got to make potentials if you make these the zero Vector electromagnetic systems are

(1:36:37) artificial potentials they have an internal structure of stress but they have no gradient they're not flowing out with a translation vector or swell Vector if you interfere two of those at the distance you recreate electromagnetic energy depending on how you bias the beams you create the thing higher than the normal energy so energy flows out of that interference Zone if you Bas it lower it'll create energy lower so it'll suck energy out of there and by the way it come right back down the beams back

(1:37:04) in your transmitter you better dump it somewhere suck energy out of there you know what another word for sucking energy out of a location is endothermic event what would an endothermic event look like chat well like that but let's look at some characteristics now of time reversed waves because here's where the real magic is this is the magic we've been looking for we go ahead it first like the nonlinear Optics boys if you have a piece of plastic that's nonlinear hunk of junk 10cent piece and coming in from

(1:37:41) the left over here is the dotted line way front that I show is E1 it comes in and it strikes this nonlinear medium and it travels on through it and it starts break getting distorted as it goes through the W wave front starts getting distorted because it's a nonlinear distorting medium it comes out the other side and you see it's now all Wiggly and distorted but another magic thing happens which we didn't know we had to discover it from the open Soviet literature and then they had to kick us in the ankles to get our attention to

(1:38:09) make us realize what they'd said then we went to work on it the medium also generates a second wave that's a Time reversed wave E2 that now appears spatially in F everywhere that other wave appears forward backwards everywhere else it's normally a very weak thing we'll find out you can amplify it real easy but it is totally and exactly and precisely in

Phase it has an invisible trace of where this other wave came from and where it's going and it boogies out of there to appear right in that exact same place

(1:38:43) and space but in time it's revers it's a stress in time the two together will form a real good gravitational wave if they're equal spatially they'll produce a gravitational wave if they're equal um you can block an em field with a superconductor that seems to be the answer right the whole point of the superconductors remember the quantum locking this is where we're looking at anti-gravity when we look at the quantum locking when we're looking at flux pinning we're technically looking at we

(1:39:15) might be technically looking at anti-gravity there is that I mean this that is the secret I think I was on it even going back to the beginning of this like I didn't even understand how any of this worked and I had correctly deduced what was going on here so remember again what this is what we're looking at here we're looking at a form of anti-gravity the magnetic waves from the the magnetic field from the magnet is bending around the object instead of going through it it's bending around it now what is

(1:39:48) that doing it's making the electromagnetic the potential locally of the object the magne potential and the electr electric potential go to zero at least the magnetic one this seem this could be the answer here this could be why superconductors are the secret to anti-gravity or a secret to anti-gravity and look at this look at this video man the this the magnets to the right shouldn't this object fall to the ground no it doesn't just stays there stuck in super position Optics because at the wrong frequency

(1:40:26) they never see the gravity aspects they don't have it in Optics this is a quote right out of a standard textbook that says the same thing the diagram said and I won't bother to let you read the thing it's it says exactly the same only very technical okay let's amplify the thing we take our same piece uh plastic material hunk of junk we so and and real quick so somebody asked where's the fourth the or the fourth orb could be anywhere I would do based on watching the videos that the fourth orb is going

(1:40:56) to be perpendicular to the orientation of the three orbs the three orbs are spinning around the plane vertically perfect vertical Lo formation my guess would be that the fourth orb is perpendicular to that which if you actually go backwards based on the coordinates we can see that the plane's going to the east backwards is to the West which would be over by the Maldives that's where the plane was seen a few hours later now he's explaining here mixed wave interferometry the pump waves are going to be the that are creating the zero

(1:41:25) point Vector that's going to be our three orbs that are converging and the reason why is the three orbs at a perfect equilateral triangle that when all three waves hit the sum is zero put in a wave A2 and a wave A1 normal nice Garden variety electromagnetic waves nice little sine wave let's play like but we put them in so they're in the medium at  $180^\circ$  that sounded like that Ram material didn't it only now I'm working at Optics just wanted to point that out and passing and so now in in the medium what

(1:41:54) do we have it is it not a nonlinear medium all you electrical engineers is that not a modulator let's hear it yes it locks the two waves together they don't just mix and run through one another they become one system you got to have a zero Vector locked in modulated system not mixed waves mixing don't do it it's got to be modulated it's got to be a nonlinear medium okay waves A1 and A2 spatially 180 out of phase now do they not locked together and form a zero Vector resultant e field and B field yes

(1:42:29) they do is that not a Scala wave now you can argue a little bit if you want to about what happens to magnetic field if that bothers you so it's going to shift 90° forget it just stay with the E field the point is you can make a scalar wave and it will go now into the nucleus and they call the combination of those two waves the pump wave and what are you pumping the nuclei of the atoms in the material what are you doing to the nuclei the atoms and material you charging them up to a higher or lower potential an excited

(1:43:00) state as the case may be doesn't matter and here you go charging the atoms up and then suppose you come in here with a little weak A4 wave these are the numbers that they use A1 and A2 is a pump A4 is the input this thing operates like a trout so A4 is the input so we have one more wave in ours so in ours we have a triangle formation and then we have our input waves so the triangle formation is our pump waves that's our orbs and then we have one more orb this is why Dave Rossy speculated fourth orb that fourth orb is

(1:43:35) shooting a beam into the interferometry Zone which is being created by our three orbs and what's going to happen we're going to get an exactly time reverse deflection shot back out that's where the plane's going A1 and A2 to pump wave makes the nucleus a cathode A3 go uh A4 goes in on the grid A3 comes out as if it were a signal coming off the plate and you can have all the energy in A3 that you up to what you've got in A1 and A2 and A3 is time reversed which means what it means wherever A4 came from in

(1:44:13) the universe out there from some distant point this thing has a memory and it takes off boogie through space precisely fitting the path that A4 took all the way back to that point be at 6 ft in the laboratory be at 6,000 Mi away or 600,000 mil in the perfect case if that's an over the horizon radar signal A3 Boogie back up to where it bounced off the ionosphere Boogie on back over to where we tracked a rising rocket so he just explained it doesn't matter how far away it is he just explained that you're going to have a

(1:44:55) Time reverse wave it's going to slingshot the object based on where the fourth orb shoots the beam at it's going to slingshot back to the location of the fourth orb he also said the words over the horizon radar in 1985 so if people out there don't think we have over the horizon radar they are completely delusional because this man was talking about 1985 that was 38 years ago 39 years ago um let's go ahead and Skip ahead not be able to go to the Past veral we prefer to say you can't go backwards in time you can't go into the

(1:45:27) past immediately he reveals his ignorance let's reason together I said this wave was time reversed did I say that every single particle of mass in the whole cotton picking Universe

was time reversed and backed up to a previous state of the universe which is what the past would be nobody said any such thing the theory doesn't predict any such thing interested and if he thinks that's what I'm saying he doesn't understand time reversal and he doesn't understand quantum mechanics and he doesn't

(1:45:59) understand physics and he's put a label around his own neck and on his own forehead not me he has done it so that's pretty important yes first of all I'm not suicidal second of all this is the reason why it's not time travel because yes we can create a gravitational wave yes we can create a Time reversed wave locally but that's not going to reverse all of the superposition of every other atom and location outside of that localized zone so imagine that we're reversing the time on this on the the plane itself so the

(1:46:32) plane itself is going to reverse flow back in time but the outside world's time is still static still moving forward this is why time dilation comes into play in my opinion um yeah so superconductors reverse and reflect magnetism this is why that's so important we we've kind of figured that out that's why honestly guys you got to listen to this times to really wrap your brain around it it's just it's so deep and rich in science and terminology oh and let's so now you guys want to see how um phase conjugate

(1:47:04) mirrors work go stand there and look in the mirror and you're quite happy with that let's look at a phase conjugate mirror the light from the source which may be the toe of your shoe scatters across the surface of the mirror from every point on the surface of the mirror it reflects right back to the original Point Bo it crawfishes back so this is super weird normal wave is going to bounce at an angle but in a fa a phase conjugate mirror the wave perfectly bounces back from every single point and this is weird because what

(1:47:37) he's going to say here is if you were to look at a phase conjugate mirror you wouldn't see your toes or whatever at an angle you're just going to see your eyes that's pretty creepy back to the point what could you see if you looked in such a mirror could you see your toe all that light goes back to your toe cuz you see your knee the only thing you could see would be the two black retinas of your eyes nothing else it's of cat this is out of the standard literature by Pepper that's not Tom be this already seems like magic

(1:48:10) this seems like magic to me already the idea that if you were to look into a phase conjugate mirror and you're only going to see the black of your eyes that's it that's bizarre but this also enables the ability for scalar waves because what you're doing here is no matter the angle you're shooting it at you're always going to get back a Time reverse wave that's going to be an exact uh reflection and this is also how you can now begin to see why this is going to be useful in radar because this is how

(1:48:36) radar works you shoot radar something at something and you need it to bounce back to you and this is how you can figure out where an object is that's the whole point of radar this is why radar gets turned into a weapon the very same technology that we use for distance tracking on objects is the exact same technology that can produce a scalar potential which can

then be used with interferometry to create an explosion or an absorption of energy at a distance there you go it's a quite different breed of cat

(1:49:07) from an ordinary EM wave and you must understand that it does not behave the same and I want to quote pepper on something else because I want to point out to you there's a whole new physics here is a whole new world pepper said the real and the major discoveries in Phase conjugation and time reverse waves are yet to be made so have at it young fell there's a 100 Nobel prizes waiting on you anti-gravity free energy violation of all the conservation laws control of it overcoming SpaceTime moving in hyper

(1:49:38) Dimensions materialization dematerialization transmutation of elements reversal of disease reversal of Aging you name it it's there whoa that's a lot free energy cold fusion reversing of age reversing of uh you know um diseases uh the ability to you know warp an object like what what more do you want here he's explaining all the science that we had already independently concluded was possible before we ever watched this this is Thomas Bearden psychotronics 1985 you guys can Google it you can watch it

(1:50:12) yourself absolutely recommend it uh is it possible for the government to edit the videos absolutely I mean if you can teleport an object of course you could edit some videos there's just no point there's no story of the government editing these videos that makes any sense I know there's a lot of people out there that just think that magic like this can't be possible no matter what and people are willing to believe any other answer that anyone were to give them and I I personally believe that the

(1:50:36) government's next move would be to create make a version of these videos which they could do since they have the originals that don't have the orbs and the zap in them and then admit that they track the plane that's the only way they're getting out of this just based on the body of evidence I'm being honest with you guys I'm being honest with the government if they're listening right now the only way they're getting out of this with this information not leaking out and this science not leaking out is

(1:50:59) if they fabricate a fake version of the videos without the orbs without the plane in them or without the the zap in them and then admit that they track the plane and then come up with some story about why they didn't want to tell anybody about how they know where the plane went and then somehow tell us where the plane is exactly because if they tracked it they should know exactly where it crashed where we never found anything because otherwise the only answer is those videos I mean there just is no answer for why those videos would

(1:51:24) be fake uh people say Well they're trying to do Project Blue beam the simpler answer is you don't make the videos at all right guys like just think about it logically if I don't want PE like they've never promoted these videos they've been hiding them for 10 years they're if they were trying to do it to convince people aliens are real they would have **leaked** them in 2014 they wouldn't have put a guy in prison over leaking them they wouldn't be fighting against me and

putting all

(1:51:50) their debunkers and having the media ignore me none of the stuff makes any sense so I am happy for the government to say whatever they want but I've got a body of evidence that's so strong that I'm going to be able to tell if they're lying no matter what claim they make um but at this point people are so unwilling to believe just the reality right in front of them because it's so far beyond the Paradigm that I'd even be happy for the government just to come out and admit that yeah we were tracking

(1:52:15) the plane and make their fake video with no orbs and no zap in it I mean I already know it's real because I've talked to real scientists who've told me it's real and and I'm listening to a guy in 1985 explain it in vast amounts of detail uh but if the world doesn't want to know about it fine whatever I guess I'll just collect all these Nobel prizes and and come over with myself the absolute control of physical reality you can go into the straightener equation you can change the probabilities before

(1:52:40) they even occur and determine whether they shall emerge as physical reality or not I mean Whoa man he just said we can control physical reality and we can change the schinger equ and whether or not it emerges or not he talking about the double slit experiment rebuilding the wave function again these are all things that I had deduced just from watching the videos as a guy that knew nothing about the science back in August this is the reason why the scientists and Engineers wanted to talk to me they realized this guy intuitively

(1:53:14) gets it without even knowing the science and it's almost like they could tell that people were starting to wake up because that there's enough stuff out there where a random guy like me can already look at those videos and go wait a minute these are real these are consistent with science and that's how we wake people up that's how this stuff gets out there that's why I think that the government and the UFO Community a lot of the people in the UFO community that are these Pro disclosure types they are on

(1:53:38) timeline they're trying to raise the collective conscience of people slowly but what happens when you do that some people figure it out quicker than others and some of those people that figure out quicker are the people like me and you guys out there that're going wait a minute [ ] this is real here it is we you got videos proving it like these videos this is what catastrophic disclosure is is that their timeline is thrown out the window because now there's a rogue people going out there going this is real this is how it works

(1:54:03) this is exactly how the science works it's been out there for 20 years here you go you can test it there's papers on it there's patents on it you know that blows all the timelines up this is why the UFO disclosure people hate me in my opinion because they had a plan they had a timeline and those plans are getting thrown right out the window the world is your Apple for God's sakes get in work okay now let's skip ahead finish this thing off only a couple more uh sequences scalar beams and radar and I can do it

(1:54:32) at 3 ft in the laboratory I can do it at 15,000 mil in the field with a radar and it's so hard to build a scalar radar that it just takes a plumbing section and a wave guide and a switch to throw and you get a scalar Beam not a normal beam and if you interfere that to scalar beams and you're responding you create a Time reverse wave in each beam from two Radars in response to some signal either passively received or reflected like from Over the rising radar from a distance Target you can put a 6in or 3in

(1:55:09) ball of light inside that Target at 15,000 mi in the latter part of November a shuttle launch at night was the third shuttle they tested these weapons against there is the strike of such an electromagnetic missile which I published so he basically says that the Challenger was taken down by one of these and he basically says that they can make a 6 inch so basically showing how pinpoint the accuracy would be if you shoot two of these waves that they could have created a 6 inch wide Singularity essentially uh using this

(1:55:40) it's not really a singularity I suppose but I guess maybe it is um and that's what he's saying right there so this also helps explain why they have the orbs is they need to make a singularity big enough to contain the entire plane so that the whole plane gets sucked away otherwise what happens half the plane gets sucked away the other plan is going to rip in shreds in half so there those orbs are absolutely mapping the plane to figure out exactly how big they need to have the singularity get produced now hydrogen cyanide okay so

(1:56:11) this next part is crazy too so he talks about this using this on a plane I think it's a j Japanese Airlines plane that was seen with three eye witnesses the interference would have been interfering with the combustion and one eyewitness that had passed directly over his head said the engines were laboring they did not develop full power everybody knows it was Ice it's been validated that they checked the ice on top of the wind got back in the airplane pulled it out that's false and here's a clincher if the Plastics were on fire

(1:56:44) the Plastics out gas one of the products from those kinds of plastics is hydrogen cyanide and the people in that part of the plane would have had to breathe hydrogen cyanide and die before the airplane sunk to the ground and crashed now here's what the US government and the Canadian government have withheld from you and they withheld from the board doing the investigation which is a legal offense so this is the part chat where I started to realize those people on board that plane were dead uh not just the lithium ion

(1:57:16) batteries but if this if they used a scalar weapon to ignite the batteries at a distance like Radars or lasers from space or whatever or scalar beams from space then they might have also lit up some of the Plastics and the Plastics could have been releasing toxic fumes as well and those masks on board those planes only last like 20 minutes this plane was going to get overcome by toxic smoke quickly so some people might have survived like you stay low and you avoid this fumes above you but I don't think everybody survived this and once you

(1:57:47) have people dying from this now you're talking liability and criminal legal liability that people going to Ison you know that's that's the **truth** of MH370 that's why they can't let it come

out ever potentially now we would never figure it out without these videos no doubt um but there you go now 125 is the last bit uh Ashton can you show the blue video of the orbs swirling the plane and highlight the shape of the black lines yeah I'll show that in a second you can't really see them converge but you

(1:58:17) can see the orbs reorient I have another version of the video that I'm going to post as well tomorrow um so here he talks about how to manipulate energy normal positive energy gravity is the normal kind which means attraction of mass and entropy is a tendency to more and more disorder that's normal physics normal reality but when you use time reversal if you reverse the rule is this if you reverse one of those things you reverse all of them all the rest now you so this is where like I think that you can polarize to either

(1:58:54) create the infolding or unfolding so the thing about the alabar drive chat is that you either expand space in front of you or you contract space so this would be like the infolding would be a Contracting space and the unfolding would be expanding space so it has to do with I think the different polarization of the charge I'm not 100% sure on this but that's my current understanding I'm getting a little bit better with it uh in terms of how you can manipulate one way or another and this is also how you

(1:59:21) can either have your end this event or your exothermic event as well I believe can do an gravity you can do entropy and you can do negative energy if you short out a massive amount of negative energy in the laboratory you get a brilliant flash that'll blind you for a couple of days and the thing will freeze ice around it it doesn't you just hear that you have a massive flash that will blind you for days that's the flash we see in the MH370 video there may have been ice formed around that object that was super

(1:59:52) cold as well it might have Frozen the water in the atmosphere that might be what the hole that we saw in the satellite video was we might have seen ice get shot through the cloud a tiny amount of ice that's why we see this little pin hole show up in the cloud in the satellite video heat cools okay priority lab I want to tell you okay so we're going to end there I'm going to show a couple videos now that we've got some context for the video thank you guys for watching that with me high this was the best interview by far

(2:00:27) with um uh sorry Thomas Bearden so if you want to watch the Thomas Bearden thing highly recommend checking that out I'm GNA show first this video clip here this is the one where somebody changed the color channels on the Drone video and the whole point of changing them was so that you could see the dark lines better otherwise it's the same exact video you can also see the detail on the clouds a little better where you can see clearly These are 3D clouds these are not a 2d picture I can't believe those morons of

(2:01:00) the corridor crew these guys are the dumbest [REDACTED] on the whole planet like how can they pretend to be VFX artists as they can't even tell they're looking at a real video here and they can't even tell they're looking at 3D video they literally went on a Channel with millions of followers and lied to their followers and said that they're looking at 2D static Cloud background

here which they're not they're obviously not you can tell they're not when the Drone Zooms in and proves that they're not as

(2:01:25) if honestly anyone who follows the corridor crew do yourself a favor unfollow them they're some of the dumbest people in the face of the Earth they were objectively wrong about every single thing they said about these videos to me that proves they're not VFX experts at all um complete losers now the part with the drones here though this is where you can see the lines in front of the orbs here in just a second like now you can clearly see the line in front of the orbs very clearly here and keep in mind they're

(2:01:54) spinning in like multiple axes at once here but in certain frames you can see it very clearly right here you can very clearly see the line in front of the orb down here you can see the line in front of the orb and then this one right here you can see the line in front of the orbs here these lines are in front of the orbs they are expanding space in front of them creating a gravity well that's why it's super cold at least that's my best understanding right now I mean look at that holy crap look at that look at

(2:02:23) this look at these lines in front of the orbs see this line in front of the orb here as well they're creating a localized gravity well right in front of them nobody has ever seen anything like this in the history of man before these videos not even any Sci-Fi show saw anything like this there is nothing like this anywhere no reference for this nobody could have even made this up that's the crazy part this this is high frequency gravitational wave generator I think we're looking at that by salvator pi right

(2:02:57) there and then let's look at the last second here as well I just want to see do you can see the line still in front of the orbs like even in this Frame like here you can still see the line in front of the orbs although you can kind of see the line like right down here now poof and then what was the other thing I was going to show um oh yeah the cold event so okay I want to show you guys this as well I think you should be able to see it so let's see if we can see it in the high quality so right right where my

(2:03:38) mouse is right here if you guys can see that near the middle of the screen right here a little hole is going to appear In This Cloud right here after the zap so you can see it looks pretty closed off that that cloud right there and then you see this little hole right here where my mouse is this hole just forms right there like right after the zap you go back there's no hole there right there there's no hole there go back before the plane goes over it there's no hole right here and then you kind of see this hole

(2:04:14) begin to form a little bit right here that might be ice shooting out of the zap so if this zap is super cold here this might actually be creating ice that might be what we see here is ice shooting out from the zap and then it punctures through one of the clouds that might be what it is this zap is Illuminating is what Thomas Bearden just said regarding a negative entropy type of or negative energy type event um happening it's going to create a big zap illumination I mean he just explained the videos so thanks guys let's see uh any

(2:04:48) questions we got going on um so a lot of people think that there's aliens that we could fly to other star systems I mean with this kind of Technology we could to me the bigger issue isn't that we can get to Mars the bigger question is what do you do when you get to Mars you got to have some type of way to live there you got to have some kind of base or something in order to be able to set up camp there when you zap yourself over to Mars because you still need to breathe oxygen um so I think those are the

(2:05:14) bigger limitations here to me as much as this technology seems like magic a lot of people they can't even believe it's real because it's so far beyond the Paradigm to me this is just the starting point to me this technology gets just magnitudes crazier as you miniaturize it as you find ways to optimize it it you know we go from a situation where we have Radars in the ground where we create interferometry from the ground then we go to satellites in the air where we create interferometry from the satellites and then we go to having orbs

(2:05:42) that we can create interferometry locally through gravity manipulation and they can also defy gravity just themselves and then from there you miniaturize it even further down and now you create create like a portable teleportation system or like a Stargate that you can just walk through um and then it only gets crazier from there as well honestly so that's the part where I think is really interesting um any other questions hey money Penny nice to see you um yeah I I don't think that this event is you don't do this to a plane because

(2:06:18) you want some cargo you just steal the cargo if you want to do that you don't zap the plane to me this has to be about intellectual property it's not about secret gold on the plane or microchips or anything else that's on the plane this is about the people that are on the plane that's in my opinion the only reason why you do this no matter what the scenario is that's just my opinion um and yes you can adjust the frequency either construct or destruct so I think this is probably also how you

(2:06:45) could argue whether or not it's an endothermic or exothermic event I think it has to do with the polarization says negative entropy is the default um but yeah so now as as Tammy says now you can understand how this is real and exactly what the science is behind it that makes it real whether or not we fully understand that science right now I've only been looking at this science for like six months six months there's people that spent their whole lives looking into this science and stuff like this and and being physicists and

(2:07:15) engineers and what have you so I think it's pretty incredible that we've come this far in just six months um and I will go ahead and Link that lecture for you guys psychotronics this is the one I think so you guys can also do this man if if you're out there and you're thinking I can't learn this you can if I can learn it you guys can learn it right I mean I'm definitely not the smartest guy in the world I think I'm pretty I'm smart enough but like you know you just keep watching it over and over and

(2:07:51) it'll start to sink in then look up the terms any term you don't understand like I'm looking up cathode later today I mean may seem stupid but sure don't be embarrassed just look

up any terms you don't understand and keep watching the videos until it starts to make sense um the the beauty of these videos is that this is like having the answers to the teachers test about what's possible once you figure out what's possible the question is how do you reverse engineer to figure out how it works that's

(2:08:15) exactly what we've been doing for six months imagine where will be six months from now I might be giving lectures about scalar physics now the other thing I want to say as well is tomorrow I will be CH talking with uh Tom Monto and uh we're going to we're going to delve into a little bit of esoteric conversation but the main thing I want to talk to him about is scalar physics what he knows about scalar physics how he thinks it works Etc because I just want to learn more uh I think that's gonna be really

(2:08:41) awesome he seems like a really smart guy uh and then we'll see let's see what direction do the beams Point not not sure on that one you guys can take a look at that I'm looking through the chat ah man there's way too many yeah I think that what's happening in the in the videos is that they are reorienting their beams at the last second to face towards the middle so that they can create the zero point system on the plane uh right as they begin to converge and I think that's why we see them reorient as well there may

(2:09:14) even be two different they may the thing that's creating the forward faing beam might be a completely separate apparatus to what creates the beam that creates the phase conjugation event as well not really sure pretty cool um thank you guys for watching the stream tonight appreciate it uh yeah they're doing two things at once as well I think that's what I that's what I just said so other people are deducing some of the same stuff uh feel free to go follow me on YouTube watch on YouTube you got my

(2:09:41) subscribe up here top right for YouTube up here for Twitter uh appreciate you guys tonight um tomorrow I'm try I'm going to try to get away from some of the **debunk** stuff just it's kind of boring I've got a bunch of scientific papers to post out there uh I don't really believe in ghosts but it wouldn't surprise me if there's some kind of crossover event Happening Here with like aliens from the future and extradimensional crap and ghosts no idea I'm open to everything chat I'm open to

(2:10:10) everything when you start talking about warping planes you don't have the luxury of uh being somebody who's too judgmental anymore at that point um yeah just teleport some drugs of water to Mars with you sounds like a plan we'll be good enough healing people would be really great there's a lot of uh aspects of this technology that are going to be really good why are we still burning oil great question great question I mean this is why the people that work on this technology have to have staff psychologists on hand because

(2:10:37) they need the staff psychologists on hand let people go crazy yeah imagine being in charge of keeping this imagine the mental pressure on the people that are trying to keep this secret and even if they blab they're risking their lives and nobody's going to believe them anyway they're just G to go prove it to me you're gonna go well I can't it's in my lab it's at locked

Martin I don't I can't do this in at home how crazy is that like this is why it's so crazy difficult um because even

(2:11:08) if they were to talk about it people just wouldn't believe them anyway that's the **truth** of this stuff man that's the reason why it's so hard for people to wrap their brains around this is why it's been so easy to keep it secret this is why I think I haven't been silent I think that if I was talking about this in the 80s I think they would have killed me by now because you wouldn't have the same foric we have right now you be able to kill me and say that it was some suicide thing I think the two

(2:11:33) aspects are a I'm too high-profile people will figure it out I'm not suicidal so people would figure out why they killed me and then the second thing is too I think there's some people that want this information out and I'm kind of unwillingly uh kind of doing what they want me to do without ever having contacted them that's my true opinion on what's going on right now and why this information's coming out and and what have you yeah the community note got removed thank you Elon Musk thank you whoever

(2:12:03) removed that Community note I appreciate that I will probably use that extra money because honestly I think that post alone from this views will probably generate like over \$100 in Revenue uh I will use that to give people Cosmic Summit tickets that's coming up in June there are not not the inperson ones those are like hundreds of doll but there are virtual ones where you can watch all the presentations online uh there's going to be some awesome people Robert shock is going to be there uh Randall Carlson's gonna be there Bob

(2:12:31) Greener Malcolm Bendle are gonna be there so I'm gonna give away some of those I'll probably give away a few on stream I'm gonna give away a bunch to my admins um to try to get as many people to watch as possible I'm probably also going to document I think that's the whole point that George Howard wants me to go there is to help promote it and and document it because I have a huge following which that's totally fine um Tom monok has good reading on his uh on his website Charles migan says

(2:12:56) you're figuring out Ash and thanks for sharing on your journey yeah part of this as well is just the journey man the Journey of this has been a story of itself and I've been documented on YouTube and Twitter the whole way that's why I bought this really expensive camera that isn't even the best but it's pretty good uh so that you guys can see it also I apologize for it only being in 720p I forgot about that I will probably pay to upgrade it to uh 1080 problem is streamyard charges you like double it's

(2:13:24) like 20 or \$30 a month to stream in 1080P but I'm going to do it because **I want you** guys to be able see in 1080P um ghosts are for real fair enough clap those paranormal cheeks um boy how far behind am am I on the comments here okay I think we're pretty much gone location of the fourth orb is most likely somewhere to the west or near the Maldives but we don't know exactly so one thing that I'm pretty consistent about guys is that I don't uh make claims that I can't possibly know and I can't possibly know exactly

(2:13:56) where the plane went what I can say is that a b77 a b 7 fire suppression device washed up in the Maldives and it must have been empty and there was like 20 Witnesses on an island that early in the morning hours saw the plane flying south to Diego Garcia and it had come from the West so that's circumstantial evidence that the plane teleported somewhere or warped somewhere over to the West near the Mal then flew to the South and I think oh can you give us the name name of the theories we should know about so the names of the theories you

(2:14:26) want to know scalar physics scalar interferometry and you should also know the idea of mixed wave interferometry so the mixed wave interferometry is when you create your zero system and then you shoot a beam into that and then you're going to get a beam going back the other way that's the idea of what we see with this scalar physics is the idea of creating that cold explosion that we see um in the videos at a distance and if you want to look up uh kum's law you can look at kum's Law kum's law is

(2:14:57) the idea of the electrical charge Force increasing exponentially as the distance collapses as the orbs converge so hopefully that gives you guys a little bit to work on come out check out the next streams over the next few days check out the Tom mon talk talk I'm not sure if we're going to do it live I'll ask him if so it'll be tomorrow at 7M I will post an intro thing for it um and then there will be of course more science talk after this as well uh the guy's names that was Thomas Bearden Thomas Bearden I did post a link

(2:15:25) in the chat you can go up I'll post it again just for you guys so if you want to check it out yourself you can go down the rabbit hole he's got like at least five interviews that we've seen so I appreciate it yeah 7 P.M eastern time if I'm going to do it live it will be at 7 p.m.

(2:15:42) eastern time otherwise we will uh record it and I will replay it later on so um and then I still haven't posted the Martin Gibson interview I've just you guys have seen all the [REDACTED] that's been going on my computer dying so I will get that updated as well here for you soon so yeah I probably will talk to Tom monok about the monok monster as well because it kind of logically falls into that I hope he does not offend if I do anyway guys I appreciate you guys have a great night thank you m370x uh smash that like button follow

(2:16:10) on Twitter follow on YouTube and we will be in touch peace everybody have a great night 370 contact 120m n good night7 [Music] breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] [Music] [Applause] [Music] I remembered the line from the Hindu scripture the babad Gita Vishnu is trying to persuade the prince

(00:10) [Music] [Music] malan 370 Contact 120m 9 [Music] night breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] [Music]

(01:17) [Applause] [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am become DEA the destroyer of worlds hello chat how are we doing tonight welcome to the stream uh technology tonight with Ashton Forbes here we go again uh we got a big stream tonight uh wow what a day it has been guys I I thought I was done with MH370 and

(02:21) investigation uh but I guess the case wasn't done with me um if you've been following along today and you've been watching the drum unfold on Twitter uh you've seen that we've had some pretty big updates and we are going to go over those updates here today with you so that if you are not caught up you can take a look at them and you can judge for yourself uh we are going to push off the Thomas Bearden uh psychotronics uh review till tomorrow and we're just going to do I don't know how long the stream's going

(02:51) to go but we're going to review all the drama that's been happening um so one thing I want to point out is that there was one of my post today was about Graham Hancock who went on Joe Rogan and did a debate with uh a debunker and there and the funny part was that debunker was obviously a redditor just in every single the way they dress they have a literal Fedora on while they're wearing their headphones behind their hat like why wouldn't you take your hat off um and it reminds me a lot of the

(03:22) redditor debunkers around the MH370 case um and you know it goes to show that like if if these MH370 videos are then there should be no debunkers still working overtime trying to debunk them uh there is a debunker Discord related to the debunker subreddit that has some of the craziest nut jobs on the planet in it there's people who are in there who are telling me I better be strapped because these people are posting just literal psychotic stuff they they talk about me non-stop um and it seems like one of

(03:56) them uh tried to get my attention uh last night and here's the thing about me guys if you don't know me I'm a just a normal guy so if you think you're going to like talk some smack or whatever in my replies and try to call me out or whatever you're going to get the attention that you want you're going to get the attention that you deserve so don't do that unless you're ready for that attention this goes to people as big as Mentor pilot or that weird on disasters guy that we talked

(04:29) about yesterday yesterday this goes to every single **Reddit debunker** that's out there including that t Powell nut job from the other day who went on a completely so Psy Psychopathic rants uh and made no actual arguments against the evidence that we' put forth which we will go over again today um and it goes for the person today that came out and what happened today was that someone came out uh and we're going to go through I'm going to show you guys the the messages as well um they have blocked me but uh people have got some

(04:57) screenshots of the messages I don't have all of them you guys can go look for your you can see the interactions you can judge for yourselves cheers by the way oh no my Martini today is a little too big um Let me let me pull it up real quick so the person today's names was gers so what happened today guys you want a little rundown I had I I was getting ready actually last night to post uh the list of all the strongest evidence for why there's no way satellite MH370 satellite can be fake and if you want to know what

(05:33) we're talking about I'll pull it up right now here we go let's just get right into it chat so this video here and I will go over the evidence with you in a second just want to give you guys a quick rundown for the people who are not familiar what we're talking about this is known as the MH370 satellite video there's a number of details on here which make no sense to be hoaxed by anybody and I was prepared to make a post about it last night didn't get around to it because you guys we had the

(06:08) stream last night that was for it went about three hours last night and uh then I I wake up this morning and I do some work and I posted the evidence of about this video which is currently taken off I don't know how many views it has right now will look in a minute but has a lot um about how there's just no way this can be faked and the requirements in order to fake this particular video not even including the science just the mechanical requirements to fake this video and uh then I see a notification

(06:37) from somebody and I find a old message from last night around 1 in the morning and this message is from this grer person who I could tell within five seconds that they were a **redditor** I knew immediately they're **redditor** you can always tell the **redditors** um just because of their behavior the condescending attitudes that they do the fact that they absolutely hate me with a passion uh sticks out like a sore thumb uh and I'm going to go ahead and post actually you know what we're going to do first I'm going to play so I was just so

(07:07) how this played out was they claimed to have evidence that they knew the videos were fake and were extremely condescending saying they were going to give me a chance uh to I don't know what I mean I don't know what their evidence was maybe they thought in my mind that I'm lying about this or something about these videos being real um actually let let's let's do the comments the messages first where is it okay oh God guys the dripping condescension can only come from a **redditor** only come from a **redditor** okay

(07:41) let me pull it up here okay share screen and then I was in a space with them we're going to go over the space as well I mean the drama is just insane grer says and this was you know uh

by the time I saw this I think it was I don't know I think there was like 10 or 11 hours on the post because I don't see all my comments I'll release a video later today revealing the exact piece of software used to make the two videos well that's a big claim had to verify with a distributor no classification

(08:15) issues what does that mean does that mean that why would there be classification issues related to software that was used weird weird claim right Ashton I really liked your enthusiasm at first but your arrogance is nauseating at this point he says basically you are dis he goes you are disrespecting the families this is what kind of nut job these redditors are like literally mentally ill Psychopaths I mean that absolutely literally Grier is a mentally ill person like the rest of the rers are um and you're going to see that I'm not

(08:45) joking around like this person is literally nuts so I say tell me your real name let's do a live debate of course he's not GNA do a live debate of course he's not going to say his real name he ends up trying to play the victim here after literally calling me out like this um and then they follow up with and this is also in more of their posts here um let's look at this one one last thing ashon the video being fake doesn't mean you haven't done good work man I started watching you as a fan

(09:13) last year you have serious Talent that's optimal way to handle Revelation I just went through the same thing with my ISS live feed so and then he tries to claim that he just has to get off the phone for the night he's not going to tell us any of the the specific evidence related to what was going on here so let's Now flip over let's change gears and let's take a look at my Twitter post from today because I want people to understand the context of what we're dealing with here okay so earlier

(09:47) today I post where is it okay I posted about the interview if you guys haven't watched the redacted interview you absolutely need to watch it super important and I've been blocked by this guy now uh oh did he delete his whole account did he delete his whole account he deleted his whole account now wow he deleted his whole account is that true chat wow he deleted his whole account what a coward oh my God deleted his whole account this is how mentally ill these people are so and by the way guys just for spoiler

(10:35) alert we went through he deleted his account dude deleted his account we went through and I looked at his post history first thing I did is look his post history find that he had talked about exactly what his Reddit account name was so I go find his Reddit account name first thing I find that he's a gambling addict and a drug addict and that he'd been disparaging me on Reddit as well um so knew I mean I already knew he was a redditor but we had absolute proof as well so don't worry I think I got

(11:04) screenshots of that as well um but here's the evidence that any debunker has to face and this is why it was already game over before we even began today with resp regarding this um yeah the redditors are literally power tripping meter cops on the internet and don't worry I we have a recorded space actually he didn't know that it was recorded but people were screen

recording it while I was in there so you're going to be able to hear from this guy firsthand as well um because I did confront him on it

(11:32) after he cowered it out and refused to show his evidence um pretty wild huh yeah the thing is for these redditors this I want this guy to be a lesson for every other redditor that tries to come at me like this do not come at me like this um address the evidence and if you have some kind of claim to make just make it don't attack me don't try to condescend me and say how arrogant I am or whatever you're the Arrogant one when you do like that I'm just chopping you back down where you belong now in order for this MH370

(12:05) satellite video which we just showed earlier to be fake one would need to explain how the hoaxer knew the correct location of the plane in the nicobar islands nine days before the raw Telemetry data was publicly available because we can see the coordinates in the video the coordinates in the video are the real location of the plane when it turned into the South Indian Ocean that data was not available till May 28th 2014 even the experts like Michael exner didn't even know that the satellite data could be accurate until

(12:34) June he's on the record saying that so there's no possible way a hoaxer would have known where to put the plane they would also need to explain how the hoaxer knew a low earth orbit satellite imagery looks like before anyone in the public had ever seen it and everyone thought satellites looked straight down nobody thought satellites look at an angle in fact most people that look at the satellite video and somebody even today did commented they think we're looking up we're actually looking down Trump posted the first low earth

(13:09) orbit image of USA 224 in 2019 five years after the video was published so this was five years later the first low earth orbit imagery from an angle gets posted on the internet they'd also have to explain why the hoaxer added nr22 which was the first launch of the civer system system in 2006 and why they would add coordinates at all any future contradictory tracking data or black boxes would have ended the hoax including radar pings or anything so why would they even add the coordinates of that location in a hoax

(13:45) video what was their goal exactly how' they know we would never find the plane or never have any contradictory Telemetry data how do they know that was the real location of the plane before it was publicly available then they have to explain how they made a program with accurate coordinate shifts to six decimal places and overlaid it on top of a dynamic video guys when we're looking at the coordinate shifts the coordinate shifts are accurate you know how we know that because we graphed it out and this is

(14:14) how we able to determine it wasn't the South Indian Ocean that there wasn't a minus sign that it had to be the nicobar islands this is only possible if the coordinate shifts are actually accurate real and accurate meaning they're not just random numbers flipping around they're real coordinate shifts so someone would had to build a real coordinate program then they have to explain why the video has different frame rate between the mouse at 24 frames per second and the background at six frames per second which is

(14:42) consistent with a citric session logged in to a remote terminal so there's a mouse in this video that comes in the screen off the top right it's going to come in here it comes oh there's the mouse right there in the middle of the screen and the mouse is at 24 frames per second but the background is at six frames per second why would there even be that difference why would that exist that's perfectly consistent with someone logged into a remote terminal access through citric session somebody fake that too

(15:14) then they have to explain why the video is cropped on all sides because the mouse at the beginning comes in from the top right of the screen you can see the mouse right here and it goes off the screen to the bottom left proving that what we're looking at is a cropped field of view here why would you hope that into your hoax video how would you even hoax that into your hoax video it's not even clear what kind of Technology you need to pull that off lastly they would then have to explain why the video is 3D stereoscopic

(15:42) this is not duplicated video on either side the **debunkers** have argued that YouTube had this functionality to do this that's been depreciated and doesn't exist anymore literally doesn't exist anymore but they claim they had this functionality there's no way to differentiate whether or not YouTube created this or it was already 3D stereoscopic I however we converted this to a real 3D video like wear the glasses 3D and USA 229 with a sister satellite next to it was in the Mala Straits staring down at these coordinates at

(16:14) 1840 UTC the same time we think the video's happened the same time there's a live witness scene the plane on March 7th 2014 at the location of the plane really was where it supposedly turned into the South Indian Ocean almost 100 100,000 views already on this how does anyone argue against that evidence and just in case you're not clear here's the Trump picture this is looking at an angle this is USA 224 it's obviously not a video it's a still image but it has very similar infrared capabilities now one other thing I

(16:47) didn't mention is how would the hoaxer even know to make it look like infrared in 2014 no one even knew that our military was primarily using infrared except for people in the military the first videos that showed forward-looking infrared and infrared surveillance nobody's seen satellite video ever the first drone video that used infrared was the Flier Navy drone videos that were Declassified in 2017 2018 when the New York Times did a big piece on them that's three or four years after these videos were

(17:19) published so this already presents the idea that the only way anyone could have faked these videos if the government did it themselves and why would the government fake these I mean are they trying to tell us that they knew where the plane went and how would they know where to fake it before the whole world knew the only way they could know is if they had tracked the plane and didn't mention anything this is the 3D video literally 3D literal three dimension video so this proves that what we're looking at here is 3D stereoscopic now I

(17:49) don't know how you take a 2d Cloud picture and you turn it into a 3D video uh but that's what the **debunkers** Apparently seem to think happened here's USA 229 at the time where the

plane was staring that right down at the coordinates we see here this bubble could be even wider just because the coordinates are here does not mean that's the location of the plane the tracking capabilities of these satellites the scanning capabilities is potentially thousands of kilometers it's huge huge so this is really in my opinion The

(18:21) Smoking Gun we have satellite data with the satellite right next to it which the whole point of having two satellites is to create 3D stereoscopic imagery so you have two angles from slightly different perspectives you transmit that we had deduced that this is not looking through the satellite the satellites move too fast to be looking directly down through the satellite so what does that mean that means there has to be a groundbased computer system so we looked up sentient and cbers and we found out that's

(18:50) exactly how it works they have a groundbased computer system that's pulling data from all the satellites everywhere all the time that way you don't have to go be looking down through a satellite and you can just pull up data anywhere in the world it will give you the best resolution that was available at the time in that location you operationalize your assets so that you have the assets that you need for the type of resolution you need in the area and then you pull it back up whenever you want so you guys are now caught up

(19:20) to anyone who wants to **debunk** the videos start there and first of all no one should be trying to debunk these videos if you're somebody who thinks the videos are fake you should be wanting the government to issue a statement you would want the government to issue a statement and say these videos are fake because that's probably the strongest evidence against the claims that I'm making if the government comes out and says nope that's not us nope we didn't film it no that's not our systems that

(19:43) are filming it so the fact that any **debunkers** are doing anything other than trying to get the government to make a statement is disingenuous at best it might be malicious honestly there's no point litigating this on social media the evidence is there the facts are there it doesn't matter what you think is possible or not possible at this point the everybody on both sides should be trying to get the government to issue a statement on these videos the people that think the videos are real want to get the government to issue a

(20:09) statement to say that they're real the people that they they're fake should want the **debunkers** to say that the videos are fake now let's fast forward a little bit let's listen uh actually so let's go up to this so here was the claim that was made and do I have let me find I have the post I think it's hilarious the whole account is gone huh that is just too funny man oh and he was making statements about me having a cult or what have you and he was going to make a video later today that totally **debunked** it that he

(20:47) gave me a chance and all this like typical **redditor** nonsense and of course now he's just completely deleted his uh entire account um I mean if you look if you don't want the attention then don't come out asking for the attention you know that's kind of my point here so let's switch our screen share okay so here was the big reveal the big reveal was the MH370 videos

were made using quick terrain modeler made by applied imagery good luck with your due diligence okay that's that's a valid

(21:23) claim so what I want people to understand is I don't care what the resolution of this is I want a resolution to the situation with the MH370 videos I absolutely believe they're real because the body of the evidence is overwhelming no matter what the government or anyone claims I have a list of questions because we're gonna be able to prove any lie wrong just due to the magnitude of evidence that we have including what we just went over and all those questions anyone would need to be able to answer but here's a good claim

(21:55) now he also and I don't have the clip screenshots of this and his accounts now gone but there was some kind of post where he argued that somebody used this software to make the video and that they got in trouble for it vague claim didn't say who it was didn't give us any evidence or anything for that so first thing people did was they looked up this company they looked this up and said okay is this is this a real company what is it and I looked it up myself to be sure myself let's go take a look

(22:29) so going back to my post here and this is where it gets kind of wow chat so let's pull this up wow the **Reddit debunker** may have just proved the MH370 satellite video to be real the software they claim was used to make the videos is in use by the dod in all branches of the military and in the intelligence Community this is a direct quote from the website of Applied imagery this may be the real software the cber system uses to relay data from the satellites to the groundbased system to produce the military's Google Earth

(23:12) video playback system if this software was used it also completely invalidates every Recreation attempt to date every Recreation attempt to date has used After Effects they've all argued that after effects was used every single bun that's out there I have proven that they can't use After Effects because they didn't have the capability back in 2012 or 201 uh 14 somebody claim back came back and said they might have had the capability but it wouldn't been realistic to pull off I leave that up

(23:42) for the **debunkers** to try to make their claims on that now we definitely need to get an official response from the US government on these videos even if someone used this software we have direct evidence that this is the software that the dod and the intelligence Community use this is the straight up nail in the coffin this is the end of it like this is absolute proof that that video is either real and it's exactly what they use in the cber system or somebody in the intelligence Community made this video there is no other explanation

(24:14) there's no chance this was a random hoaxer the amount of information they would have to know could only be known by the US military so either the US military made these videos or these videos are real that's what the weight of the evidence says doesn't matter what you think doesn't matter what your opinion is that's what the weight of the evidence shows if you disagree you should go look at the evidence list and then you can come to terms with it on your own now let's read this out I want

(24:42) to read the whole thing out for you guys but before I do that I want to show you the video of cbers from locked Martin's website so that you can realize this isn't a joke this isn't a game this is exactly what how the system works here's locked Martin's website it says realtime persistent Global surveillance look at these things scanning the world all the time this doesn't even have the low earth orbit satellites listed in the imagery here but we found a Wall Street Journal piece where they talk about incorporating low

(25:18) earth and midar orbit satellites into the quote unquote constellation the whole point of this is that you send relay information back if you don't believe me use grock and ask grock the question grock will come back and let you know that they use groundbased systems that these can track planes and this can track boats and other craft as well the whole point of this system is exactly what we we see in the MH370 videos here's the software here's the scanning they have a stare and a scanner so the stare can SC stare at really

(25:52) specific locations and the scanner can scan the whole planet basically they're scanning the whole planet one of the pieces things that we found said they can scan the whole planet every 10 seconds send that data back to groundbased computer system presumably the stair has even better capabilities than that this proves they're SC scanning the entire time and it's spelled SB iirs cbers I want people to get it correct it stands for space based infrared surveillance system now there you go boom we never forget who we're

(26:25) working for so once again the only people that could have produced this is the government themselves or it's real that's really the only way around there's no other acceptable answer it's again not what I believe it's just simply what the evidence shows anybody who tries to make a counter statement I have plenty of evidence to prove them wrong no matter what they claim now let's read here what it says here yeah it's a massive amount of data a massive amount of data and this is why they have

(26:54) giant database Farms one of them is in Utah this like one of the biggest ones ever it's a huge amount of data and this goes to show the amount of surveillance capabilities the US government has they're scanning the whole world every time there is no privacy on this planet period anywhere um let me grab a sip of this and then we'll keep going into it yeah and for the record I have people that are in the **debunker** Discord and they post images uh and semi images of what they're saying these people are

(27:26) losing their minds losing their minds uh to the **debunkers** it's not even about what's true they don't even care these videos are true to them it's about proving me wrong they are so committed because they came out and like you if you read their comments on **Reddit** they hate me they absolutely hate me it's not about what's real or not or the videos being real or not it's about just trying to get back at me which is is pretty scary man but if you guys know **redditors** you know that's how they roll

(27:57) um let's read the whole about image and you guys can see the website list right up there if you want you can go to the website here yourself and you can check it out the applied imagery

was founded in 2004 now cers system started in 2006 H interesting and Silver Springs Maryland a suburb Washington DC to commercialize software developed at John's Hopkins University Applied Physics lab our commercial off-the-shelf cots software the quick train modeler is the world's Premier 3D point cloud and terrain exploitation software package

(28:32) quick terrain modeler is focused on DOD and civilian applications and continues to evolve based on customer feedback of note to government customers applied imagery is designated as a small business and is the sole source for the quick Terrain modeler in the United States Department of Defense since the formation of Applied imagery we have worked with customers across the dod Spectrum our software is in use in all branches of the military and the intelligence Community quick terrain modeler has benefited and continues to

(29:06) benefit from significant feedback from these users if you are part of the defense community and would like to discuss this topic please contact us at blah blah blah there's the information so real quick I have foy every single government agency there is to foyer including the national geospace agency and the nro about USA 229 about the cber system actually not about the cber system specifically did I not sure but about MH370 none of them have come back uh to me in general without any information give me one sec

(29:36) I need to let Lulu in okay doggo okay gotta let the dog in chat yeah so it's pretty weird uh so my first question to him of course was how did you get this how did you even find out about this um because this is weird like I I would have begged to find out about this months ago because we have already I'm on the record six months ago claiming that this is a ground-based computer system that's relaying information back so this is the exact kind of software you would need to relay that information to a groundbased

(30:22) computer system to build the 3D environment this is why you don't see the satellite moving in the video um now what I want to say let me see Okay let's listen to wait where's the other post huh oh here here it is here it is okay here it is I was wondering it was okay so the other comment I made was that **reddit**ors claimed that after effects was used to make the MH370 videos and all Recreation attempts have used it then I proved after effects couldn't have been used due to not having full 3d render

(31:01) capabilities in 2014 unless you found the mythical hoaxter who didn't want \$150,000 you're wasting your time trying to **debunk** these videos you need to have found that hoaxter in this post he claimed I think this is the part where he claimed that somebody was part of that company or something and made the videos and got in trouble for it if somebody made these videos and got in trouble for it they definitely would have needed the \$150,000 so I think it's crazy to think they wouldn't have come forward

(31:27) especially if they had already got caught why would they have come out and been like hey I used applies I used to work for this company and they can confirm it and I made these videos and I want the 150 Grand baseless speculation isn't proof and this is the part where the **debunk**ers every single one of the **debunk**ers arguments is based on speculation and opinion not

based on facts they will claim that the Pyromania VFX is a perfect match it's objectively not they will claim that a satellite 2D satellite picture was used to make this

(31:54) imagery even though we have accurate 3D lighting even though we have an orb moving through the cloud we have clouds evolving we have two perfectly in sync videos with clouds that match in both of them requiring a full 3d rendered environment this rules out after effects so this already rules out all the the after effects Recreations now whether or not people like Joe Rogan or whatever believe it I don't really care it's it's the facts it's the truth the only one who can debunk this video or the MH 37 370

(32:25) videos at this time is the US government when they tell us what happened to the plane they know 100% they have over the horizon radar they have satellite imagery of the entire planet and they have the Sosa system which can detect a tiny submarine pop you can you can hear a plane crashing into the ocean um now so when I look through this guy's Twitter post I only had to go back like three posts and I see him talking to Think Tank and saying that he was Gary gundark on Reddit he said Think Tank I'm Gary gundark blah blah blah can

(32:59) you post my content or some like that I went oh yep I knew he was a redditor so then I decided okay let me just click on his Reddit profile and see what we can find oh and by the way here's the kind of post that I got from this guy dude did you go through a major life crisis or something divorce or lost Lo are you okay man please don't have children these are some of the not least offensive comments this guy posted just to give you guys a mindset of what kind of redditor we're dealing with here now let's take a look and this was

(33:29) actually this is from the other Nut Job T Powell who goes by wear in Texas guys is completely mentally unhinged if you guys go read his post on on Twitter you'll see how completely unstable he is he was calling me a spy and saying that I'm defaming locki Martin and defense contractors like this is Reddit brain patient zero and so he replied to that thread from a few days ago because I look through his posts and I'd pay 100% a \$100 subscription for the live feed let's make this happen I think this was some

(34:00) kind of debate or something edit the dude is absolutely insufferable I don't believe his overarching theory is credible and he is getting more nonsensical with every stream but I can't stop watching the dude's content he is highly entertaining so a he's completely obsessed with me B he's committed to trying to prove me wrong no matter what it takes complete NPC um both these guys are NPCs all these redditors are just complete wacko nut jobs uh and here's the best one so then five days ago on the poker

(34:28) subreddit LOL are you trying to go me I grinded the Golden Nugget Las Vegas \$1 and2 game for 30 hours a week for five years straight well addicted to oxies adderall that's uh Aderall and Boulder Highway Street Walkers I don't even know what that one is that's a lot of drugs and opiates to be addicted to I'm not a knut I'm not an ignorant man either even if the game is straight most games aim to rate 200 Big bets per hour not my idea of a good time so he does definitely plays a lot of Poker for sure

(34:59) since I know a little bit about it um so this is the guy that we're dealing with here this is the person that claims they have some secret Insider information so all I wanted to know chat all I wanted to know was how did he find out about this website and who is the supposed person he thinks made the videos how does this prove the videos to be fake at all I'm looking at the information I'm looking at the website I'm going this proves the videos to be real like this is the real system that was used

(35:30) potentially and I guess I don't know he never presented what his story was I don't know if his story is that the government made these videos or what but this certainly doesn't prove the videos to be fake by any sense of the imagination if anything it proves it to be real and even if this video the satellite video which I think is what he's saying was used here was somehow produced by this software what about the Drone video that's in perfect synchronization with the satellite video was that also used and created using

(36:00) this software where we can literally see the mq1 C Great Eagle pretty weird now let's go ahead and take a look at the space from tonight so I'm sitting there after this so he blocks me after our interaction where I'm asking him he's saying oh I can't post this tonight giving a bunch of excuses says that he'll post it by June 1st his his claim June 1st dude it's April 17th right now that's six weeks away this guy had argued that he was going to lay down the hammer later tonight and then all of a sudden he

(36:36) starts backing away from his claim and then he says well I have to go to sleep well I've got a thing on here saying that he would play poker in Vegas he's obviously an American it was like four in the afternoon he's got to go to sleep what what are these weird excuses he's coming up with so somebody says oh he's in a space right now a UFO space go you want to go in the UFO space so I jump in the UFO space I say okay that sounds like a good plan let's talk because I want to hear what is what his

(37:06) answer is oh no does not support it's a unique codec oh no I can't play it oh man um damn I have the I have the file here someone recorded the it's a move file hold on let me let me convert it real quick chat um convert move to MP4 I think if I just convert this real quick yeah here we go that we can play it let's see convert to MP4 convert because I want you guys to listen um so this is the big Revelation though as well I'm converting it right now but while we convert that let me go back and

(37:54) show the other updates okay looks like it's still running here we go oh here we go oh there we go okay so I said guess we aren't getting that promised debunk explanation I think the redditor realized they destroyed all existing debunks and backed out of giving an explanation for how and why someone would have faked the MH370 satellite video using the very software the military DOD and intellig Community uses so pretty big coincidence if that's the software they used months ago we were able to deduce the cers relay

(38:36) satellite data to a groundbased computer system and produce a global video virtual playback system this information seems to corroborate those findings I've reached out to

applied imagery for a statement on if they provide software for the cber satellite system and if anyone at their company was responsible for producing a fake video of MH370 I left them a message earlier today uh I called a little bit too late they were already closed and then I messaged I'm going to go live and here's me getting blocked by this person

(39:05) apparently now they've deleted their entire account because I'm guessing they had a lot of incriminating stuff if you're GNA call out somebody on social media you probably shouldn't have a lot of posts from just a few days ago talking about how you are addicted to gambling and addicted to oxies and and a bunch of painkillers and Adderalls and all that kind of stuff as well um and for the people that think oh you're doxing them I just want to be clear to everybody the stuff that you post on social media is publicly

(39:33) available information you should be very careful about the stuff that you post on social media that's not private information you have no expectation of privacy for stuff that you post out in the public for the world to see there's a lot of **redditors** out there that don't understand what docin even means um and it's funny because the **redditors** have tried to dox me actually there was someone posting information personal information about me uh that was not publicly available on the sub**redd**it actually in that thread

(40:03) that guy was replying to which I thought was pretty funny uh these guys are the biggest Hypocrites **reddits** are the **redditors** are the biggest Hypocrites on the face of the Earth uh literally everything they argue other people are doing they themselves are doing okay I think I've got this thing ready to go let's run it up thanks a lot so yeah I came in here because I saw Grier in here grer has now blocked me after uh earlier yesterday basically making some defamatory comments about me and weird statements

(40:40) about me uh claimed to have been able to **debunk** the videos the MH370 videos and instead came out and showed us the name of a company that actually produces software for the dod and for the intelligence Community actually all of their software is produced by them and all I want to know is a how did you find that company and then B why do you think this **debunks** the videos in any way shape or form well you claimed you were going to provide the evidence today and then now your comments say that you'll begin to

(41:15) **debunk** it or whatever on June 1st can you give us a statement people want to know okay well here's the thing here's the thing Ashton is that like my like I I did say that I up to the point where your behavior man like you have a real problem with the way that you like conduct yourself the way that you approach people someone call it abusive Behavior but I don't know what world you live in man but I mean I have no obligation to do anything for you and I was I nice by trying to contact you prior to putting anything out and trying

(41:54) to coordinate and like explain to you everything that I had and you just uh you're you're just not a very nice person man and I'm trying I mean you know I'm putting it very lightly and I blocked you because I mean okay well well I mean you act like a dude you're just a very person and no one is obligated to like uh give you information and so just just to recap real quick chat

this is the person that reached out to me that was personally attacking me that was condescending me that I didn't reach

(42:33) out to them at all dudes basically in tears in this he can't even answer the question I literally just want to know how he found the website and what his evidence is that somebody made the videos fake and he just goes directly into personal attacks immediately into personal attacks this is quintessential redditor quintessential redditor and this is every single one of these redditors on the debunker subreddit which is known as alien or what is it airliner Abduction 2014 they're all just like this guy it

(43:08) doesn't even matter the videos are real or not to these guys all they want to do is try to get me they just are personally offended at me you saw his comments earlier on Reddit where he watches me every single day he's obsessed with my content like it's scary dude like that's all that I have to say is that I have no obligation to deal with you man nothing but like dude you're just a just a horrible person to deal with to try to communicate with you know what this reminds me of chat this reminds me of the Julian Dory podcast

(43:43) where we did this space with Julian Dory and Danny afterwards after these guys totally set me up and tried to Ambush me tried to get me to sign uh releases guys first of all if you ever go on a podcast they try to get you ass sign a release the only way that the only reason why they're doing that is because they're afraid of being sued for defamation because they are planning on defaming you that's exactly what those guys were doing this is exactly what reminds me we did an after space with those guys and

(44:08) Julian Dory had a full-on meltdown like a 14-year-old like a 14-year-old girl screaming and this is true you guys can check it out if you go to my YouTube channel from when was that like uh probably November it's called the Danny Jones and uh Julian Dory with TJ Allard Spa uh stream in space and he's he said he's so arrogant he's so arrogant he just keeps screaming it and then he se you chose violence he starts quoting Game of Thrones on me like he's like threatening me about you chose violence this is exactly like that

(44:42) the problem with redditors is if I don't believe exactly what they believe then it's a personal affront to them like Julian Dory like this guy as well if you don't believe exactly what they believe it's a personal affront to them and they think that you're a bad person they don't have any real arguments against the things that you're saying and this is the same case with this guy as well all I wanted to know was how did you find this website where like we never found this software before this is

(45:08) really strong evidence I wish I would have found this earlier and why like why he thinks this debunks the videos I mean it seems like a really basic question he was the one who comes to me saying that if I he's trying to reach out to me to not embarrass me or something like that I'm like just post your evidence bro just post it if you've got some damning evidence proves a video Stakes just post it dude why why are you playing little koi games saying I'll release it later tonight I'll release it in six weeks

(45:36) it's obviously anyway keep going so have you read your comments can you explain your behavior man like what's your can you explain your behavior uh have you looked at a mirror like ever like let's say the comments that you had reaching out to me yeah like specifically like your very first comments yesterday and every single comment you've made today about how you think I'm an only child or honestly I I think you should just go read them yourselves because I think that your statements here are extremely

(46:11) hypocritical nobody asked you your opinion you are the one who came out and presented that you have the evidence nobody tried to work with you you were the one reaching out to me you are the one who is doing all the things that you're talking about right now in this space you're basically just projecting into a mirror so are you gonna tell us the evidence and the information or not that's really I want to get down to here because it's starting to become a clown show with you okay uh is that a no is he crying is

(46:45) he actually crying here Chad like I think this guy might literally be crying it's literal clown Behavior so if you can wait give your evidence right you have real problem with comprehension man like you're you're grasp everybody want to know just not there man like not there at all all right all right um okay if you guys so that was it let me I'm gonna scroll it back to that part again uh is that a no so if you oh there we go like I why can't he just say what his his supposed evidence is what his claim is

(47:25) literally never says it not once post on the Internet won't say it when he's confronted in his space nothing at all it's starting to become a clown sh with you okay uh is that a no so if you can wait I'll give your evidence right you have a real problem with comprehension man like you're G you're grasp everybody wants to know just not there man like not there at all I'm not compr comprehending the comprehension man all right all right I'm not comprehending the comprehension man my God man so guys this is what I'm

(48:07) dealing with man this is what I'm dealing with this is what you deal with on the **redditors** that are out there if you guys want to understand like there's people out there going I thought I thought this was **debunked** it was **debunked** by like people like that if that's the side that you're on is people that can't tell when a how a stock effect works or people that think there's a 2d cloud picture in a 3D video that has two videos from two different perspectives I just want you to realize those are the people that

(48:34) you're on the side of that's the logically minded people those are the people that think the videos are fake that are literally willing to fabricate fake **debunks** and just do anything to try to get back at me whatever like I said it's not even about the videos being real to these guys it's just about trying to get back at me at this point and that's the saddest part in general now here's the thing about it what I want is I want people to look up this software everything about it I I've

(49:02) already reached out to the company for a statement about this because again if this software is actually used in the videos I want to know about it if this software is what the cber system uses that's pretty much absolute proof those videos are real you think that somebody

else just randomly used the software the same software the cber system really uses to produce the videos um and there's been some people in my Discord have been digging into some of this already I'm trying to see if I have a link but there it seems like there's

(49:35) actually scientific papers that talk about I'll share one of them right now how this exact software can be used to produce the types of videos that we see um by by taking like the satellite relayed information so here's one I'll share right now because people seem to think that I'm committed to some answer on these videos now now the videos check out scientifically they're 100% accurate to how you would expect to be able to warp an object using uh scalar interferometry and multi-wave mixing interferometry as

(50:08) I've pointed out before you can see that in my pin tweet it's got 350,000 views at this point um but if somehow these videos been faked then I want to know who knew about the science before the science even existed I mean again I have a list of questions a mile long if the US government wants to come out and say that they F these videos or whatever great great I've got a list of questions a mile long for the US government that I want to ask them about how they fake the videos why they faked the videos and

(50:38) where did the plane go because they obviously know where the plane went I want to know why they're lying about the plane in general I mean that part of this in this investigation is undeniable undeniable we know the US government knows what happened to the plane that's undeniable if you watch my redacted podcast with uh Clayton Morris you will come to the same conclusion is it mind-blowing yeah it's very mind-blowing is it going to break all trust in the government forever yeah probably that too but it's also true so this here you

(51:06) can see data Fusion of RGB and depth data with image enhancement now this goes a little bit beyond my understanding here but it seems to show how they can use satellite imagery or any imagery and they can produce a 3D Battlefield with it there's some cool graphics down here near the bottom where you can see them building this information so if you want to take a look at this feel free goes a little bit beyond my understanding and my scope at this point I think the evidence is so strong that we just we have to get a

(51:38) statement from the US government these videos are never going away um and at this point you know like it's only going to grow and grow and grow and grow grow and it's just going to get more and more awkward it should already be quite telling the US government already hasn't issued a statement if there are videos floating out there that show classified anomalous phenomenon that are being pinned on the US government and we've gotten hundreds of millions of Impressions across all social media hundreds of millions maybe

(52:08) even close to a billion Impressions on this and the US government isn't issuing any statements and the media won't even reach out to talk about it that should be giant red flags because the **truth** is if these videos are real then the US government most likely cannot admit it they cannot admit it and they can't deny it either because if they were to try to deny it it only gets them in more hot water later on uh I just closed that article unfortunately now I think there

was another one that was interesting let me

(52:39) dig this up oh here it is here it is now this one may even give credits to the idea that the the images are um somehow uh produced that the satellite video somehow produced and just to show you that I'm a completely 100% unbiased I'm going to show that here as well this is supposedly let me see what the source of this is this is from the manual uh actually I'm not really sure I think yeah this is from the manual of the quick terrain modeler okay so I want you guys to look through this I'm going

(53:19) to post a link in the chat for you guys uh because I want help on on digging this up like they might have given us like basically absolute proof of how this works um but again if it turns out that this is somehow how the the videos were fake then we want to figure that out as well really doesn't matter to me either way so let's look at this one here now this one here mentions overlaying textures draping a 2D image on top of a 3D model can instantly create a very realistic 3D Scene It can dramatically

(53:53) increase the situational awareness and deliver intuitive understanding of the terrain and other features furthermore after this process is completed all quick terrain modelers visualization navigation and Export tools are available to the user now you know this is interesting for two reasons you could argue that this could be used to take a 2d Cloud picture and convert it to a 3D imagery which can be seen from two ways you could say that that 2D Cloud picture that was supposedly the debunk was used in this software to create this video

(54:24) you could also argue that you can use a single satellite staring down to create a 3D imagery from real 3 2D Cloud picture or 2D satellite data so it can be used either way you could also argue that they might be able to export this data from a real video and then create a 2d Cloud picture from it so you could argue it in both ways so has export functionality as well you can export this from a real video and produce a 2d Cloud picture from that as well now I leave it for you guys to decide what you think the situation is

(54:58) as I've said we've already shown that we have two videos in perfect synchronization we've shown that we have a orb puncturing through the cloud and that we can see the clouds evolving and moving and we have 3D accurate Lighting on our clouds as well to me the only one again who can pull all this off is the US government themselves you need a serious amount of resources in order to do this this is also seems very Hightech um let me see down here and and to be clear none of the bunkers had found this or ever claimed this

(55:33) until we just today today is the day where this all of a sudden showed up out anywhere one other thing I think is interesting is that the moment this case starts to get a lot of traction on social media there's always some kind of debunk the first time it happened was August 19th when the case got so huge on Reddit there was like 10 threads per day about it and then Mick West fake Pyromania VFX debunk got pushed and they used it to ban all discussion of the videos and then in December we were getting I was

(56:06) getting like 8 to 12 million impressions per week more ratings than CNN gets and then all of a sudden the cloud picture appears out of nowhere with very uh sketchy background with no proof that the cloud image goes back before 2016 where everybody involved is a VFX expert one of them is a photo manipulation expert and Cloud manipulation expert uh where they're all just trolling instead of answering real questions where they won't sign an affidavit or take \$10,000 uh saying that the vid the images are real um and uh so then that

(56:40) comes out and now we're getting back to the point again where the Clayton Morris interview drops things are just escalating people are looking at it going holy again and now all of a sudden some another redditor comes out of the woodwork with supposed information about how the videos might be faked and the moment we look into it it we immediately find out that it's connected to the Department of Defense military and to the intelligence community and it's the exact software they use as well so the thing I need to

(57:07) be 100% more clear about here again it doesn't matter this is not going to be litigated on social media it doesn't matter what debunkers think really makes no difference I know debunkers don't think the videos are real their opinions don't matter they're not investigators are not experts on this at all their opinions don't matter anybody who's not trying to get the government this point to issue a statement given the totality of the evidence should be looked at as duplicatus and by that I mean that they

(57:33) are being unscrupulous they're being dishonest with their intentions a lot of these people out there don't want the truth they literally don't want the truth they just want to make this go away those are not people that should be trusted by anybody out there yeah for the person who says Reddit is a deep State tool you are 100% correct it is nothing on Reddit should be believed anyone who posts some random on Reddit you should completely ignore it um they constantly post fake on Reddit to try to make stuff go

(58:05) away it's very scary how much the US government and potential intelligence communities own that website as well as the de bunkers and they ban anyone who's not lock and step with their opinions they ban them I they ban my subreddit within like less than a week um and with no reason given and when I appealed they also gave me no reason and the whole reason why they Banned Me is because they need to control the narrative they only wanted one subreddit to be allowed which is the subreddit that was trying

(58:31) to make this case go away they intentionally filtered everyone to that subreddit and if you didn't post anything related to debunking the videos nobody on that on that site except for punjabi Batman who they also banned nobody else was trying to solve the case nobody was we have it on record you can dig through all the stuff nobody was trying to solve the case whatsoever they were all trying to make it go away it's extremely extremely suspicious um also just for the people that don't know real quick that

(59:01) subreddit they banned me uh they banned me because they were tagging my cont so I made my own subreddit and I stopped going to the debunker subreddit and that's when they

started all trying to troll my subreddit they started trying to uh and I started Banning them and they started flipping out because they couldn't control the message on my subreddit which is why they got my subreddit banned so they banned my any discussion of my content the first thing they did was they didn't allow anyone to post any of my content

(59:29) from Twitter onto that subreddit that was the first thing they did then after that didn't work and people were still talking about my content first they Banned Me from posting on there then they post banned anyone from posting my content then they banned my entire name they put a block on my name on any post anyone that talked about my content was not allowed to and the point of that is information control information Warfare and this is part of the reason why a lot of the debunkers don't know anything

(59:51) about the case because if you go on Reddit you're not going to know anything about my investigation in the case in the evidence that's out there which is why a lot of these people are nut jobs who think that like there's no evidence because they literally have not been privy to it because the Reddit controls the information that gets posted on there um and then they started tagging my content actually they I think they tagged my content before they banned my content they tagged it with potential

(1:00:16) scammer every single thing related to me they tagged with a unique flare that they only used on my content that was called potential scammer which is 100% defamatory there's no other way around it so I sent them a direct message and said if you don't stop using this defamatory tag on my post I will find out who you are through a subpoena and I will personally sue you directly to the moderators three of them one of them is called Frankie Valentino the other one was called the silverhound the silverhound guy made a Twitter account

(1:00:49) and started trolling and being like a complete whack job psychopath and he even said the only way the the reason why he was being a nut job psychopath like saying horrible horrible heinous stuff was because he said he couldn't say that on Reddit otherwise he would have been banned on Reddit so he came to Twitter to do it this is how nutty like the silverhound you guys can look up his username the silverhound on Reddit complete psychopath complete Nut Job Frankie Valentino complete nut job I can't remember the name of the third guy

(1:01:20) they're all there's like three moderators they're all debunkers they're all pretending to be impartial and they're not all of them are just wackadoos and so is everybody else on their little Discord that's been coming at this so you're being awakened to the amount of disinformation that gets pushed on Reddit you're being awakened to how mentally unstable these people are they have a whole Discord where non-stop the only thing they talk about is me non-stop this is not healthy this

(1:01:44) is not normal uh there's no other fake videos that are out there where people do this people are only this committed and have this much skin in the game when there's something to it uh so crazy stuff going on guys um and and again somebody today posted that like the some of the stuff they were seeing and they were scaring them so much that they thought I need to

be strapped which means have a gun um because the reality is some of those people are mentally unhinged and um there's been people that have said that

(1:02:14) literally they would not believe these videos to be real they would they would literally uh commit self harm before they would believe these videos to be real this is the type of stuff and mental uneasiness and un um instabilities that like lead people to harm people and the absolute irony of this guy who deleted this gider guy who deleted his account thinking that he was being harassed I literally have like 10 messages of him defaming me on **Reddit** and then talking about me last night on Twitter these are the people that think

(1:02:41) I'm being that they're being harassed by me they are literally doing the things that they don't want done to them these people couldn't be bigger Hypocrites ever could not be any bigger Hypocrites in the whole world they cry foul the very moment there's anything they they strike out at you as they cry out in pain it's how it works every time with these people so um now I think we've addressed that enough so please go through this manual find any evidence you can find in this manual um because I I'm going to try to

(1:03:20) get a statement from the company tomorrow my guess is they'll say they can't tell me anything about the dod and about uh who they work with and how they work with them I am also going to reach out to Arrow again and I'm going to confront them about this software system and ask them if this is the software system that cers uses if this is the software system cers uses it's it's game over um you know at that point like I mean we already need to have a statement from the government but um to me that's

(1:03:47) that's you know enough in general that something else is going on here okay let me see what else we got um is that all we got here tonight see I think that's all the drama I want to go through here tonight what kind of questions do you guys have chat before we we might shut it down early um I'm probably GNA post tomorrow just because the more these people push back on me the more I'm going to push out the cont content out there so I may post the Drone video tomorrow with the strongest evidence why the Drone video

(1:04:32) is real um we can take a quick look at that as well right now since we have extra moment so we have two videos that are in perfect synchronization to me it blows my mind that people think these videos are fake just given the only reason why people think these videos are fake is because they show stuff that people can't believe to be real I mean if if these videos didn't show what people didn't think could be real like with the zap and the orbs then I don't think anybody would believe these videos are fake

(1:04:58) there's just way too much detail in them so right away here we can see accurate camera Shake here um because this drone people say there's but actually the **debunkers** have said both AR there's not enough turbulence there's too much turbulence um this is a giant drone these drones are as big as a car so they're not going to experience a bunch of turbulence and if you guys go look at drone videos I actually have a drone video out there where even in very high amounts of turbulence uh it doesn't

(1:05:23) shake like a huge amount so these are very stable which makes sense I mean this drone otherwise it's going to fall from the sky um but it goes directly through the Wake this shows that this is an operation that we're seeing here it's very close to the plane um you can see the Drone Shake right there when it goes underneath the wake of the plane when it zooms in you can tell it's manually tracking the plane there's a little bit of a delay between the movements of the camera which indicate a lag just like if

(1:05:48) you were playing video games on the other side of the world because there are you know this thing are is being remote controlled there's not somebody in the Drone um when it zooms in like that like it did right here you can actually see 3D Dynamic Parallax which means that when it zooms in like that you have uh you can see the clouds uh in full three dimensions at that point so this proves that we're not looking at a 2d picture we're not looking at an After Effects uh the corridor crew said that this is a static Cloud picture it's

(1:06:18) not it's obviously not from the zoom in here that Pro that rules that out I don't think those guys have ever said anything that's true about these videos actually not even one thing um so it zooms in again and you can see the 3D Dynamic Parallax when it zooms in the shake increases as well this is not an after effect this is not something they've added on to the videos this is accurate uh camera shake from when you're zoom in on your camera uh and when you zoom in the shake increases further uh and when we see our orbs and

(1:06:54) our heat signatures here and first of all and we it's manually Tracking not first of all but uh we can tell it's manually tracking the plane here uh because the camera doesn't stay on the plane so there's clearly somebody manually tracking and guess this is the lag if there's no lag they would be able to keep this thing directly on the plane the problem is there's a slight delay this is why the C the plane goes off the screen which again if this is a fake video why would you have your plane

(1:07:17) going off the screen doesn't make any sense that's only makes sense if the video is real now there's several aspects of this that nobody could have ever thought to fake there's no reference for them whatsoever when you are faking something uh you need a reference for it now somebody asked in the chat who's controlling the orbs man the answer is uh these are being man either remote controlled or they're pre-programmed so this is where you need an advanced computer system to pull this off there's

(1:07:45) not little people inside these orbs in fact this is mostly a ball of energy there might be something small inside of it uh but we can tell this is an energy field a plasma field around the orbs in general um somebody else asks what was this why not push further and talking to the why would I want to push any further man people already can't believe what I'm already talking about people already can't believe what I'm already talking about the last thing I want to do is push it further I wish there wasn't orbs

(1:08:15) in this video all I wanted at the beginning of this was to prove that's mh37 Z so we could get the **truth** for the families but no there's got to be crazy orbs and it's got to be

scientifically accurate and it's got to be macroscopic phase conjugation and warping the plane I would have preferred that there's no orbs and no zap then I would have preferred that even if there is that the answer was it was some kind of cloaking because people could believe cloaking but that's not the **truth** the **truth** is we

(1:08:40) warped This Plane we're looking at the plane on two videos the US government's the one implicated there's they didn't randomly catch aliens zapping This Plane there was an operation the Drone was already planned to be there they probably operationalized the satellite as well all this stuff can't be done at the drop of a hat um and the thing is a lot of people that want it to be aliens the reason why people generally want this to be aliens is because they think that it just is unexplainable and for people it's like

(1:09:10) it's unexplainable it's aliens like that's how they connect stuff it's not unexplainable this science is accurate the science that is known today in 2024 that's the crazy part that the more I looked into the science the science has been out there for at least 40 years maybe even a hundred years depending on if you want to go back to unification theories or uh Tesla or if you just want to talk about scalar physics and um cold fusion and the idea that we can tap into the underlying energy of the universe

(1:09:41) itself The Ether whatever the hell you want to call it I call it the construct um so this science has been out there that's the crazy part this doesn't require new physics I mean it does require a re understanding of our existing physics but it doesn't require us to like throw everything out it's actually consistent with ER equals epr this idea that wormholes are equivalent to Quantum Mechanics to quantum teleportation and we know we can teleport Quantum objects which is why it shouldn't be wild it shouldn't be that

(1:10:10) crazy to think that we can teleport a maxiz object we can literally teleport tiny object there's there are little records for it there records the Chinese have the official record I have a feeling that we have the unofficial record um and it should surprise people why are the Chinese the ones coming out with these meta materials like lk99 and all these advances why isn't that coming out in America are we just doing no research no we're doing the research it's just being classified in America in

(1:10:37) **China** it's being made publicly available now is this technology alien technology maybe I don't know all I know is what we're looking at here can be explained by locked Martin northr Grumman uh saic Bigalow AOS space all these defense contractors we have patents that show that this type of Technology can be possible salvator passes patents with the Navy these are Pats that are approved and out there guys this isn't like and the problem is that people would rather believe that approved patents that the Navy had to

(1:11:12) step in and get the the patent office to approve they would rather believe those are fake than the obvious **truth** that the patents are real and what you're seeing here is Real This Again shows the problem that we have with our society now the the black lines are in front of these orbs how would anyone come up with the black lines being in front of the orbs you can

see it right here uh you can see it a little bit right here it's kind of hard to see but the black lines are pulling these orbs forward you can

(1:11:38) already see the heat signature in these orbs who would even come up with this the science around the orbs here wasn't even publicly available till an alal University paper that came out later in 2014 that's when Bob Greener first knew about started to learn about topological monopoles so this to me is just like how how could they fake this they Shake again they zoom in again the plane goes off the screen again in this video well it's obviously manually tracking it and this shot here you can see this heat

(1:12:10) signature in the belly which morphs accurately was somebody like changing the pixels around in this heat signature in the belly of the plane like look at the the the thing change here how does anyone think this is fake look at this heat signature of this orb the orb gets distorted when it goes through the smoke Trail in the back of the plane as well these details are way too fine to be fake this is why the the bunker never tried to attack any of these details because they knew there's no way to fake this so instead what they did was they

(1:12:39) attacked the zap and they tried to argue that one frame in the zap is similar to a stock effect and that they changed all the stock effect around the color the size the shape every aspect change the number of frames they try to argue that with no evidence whatsoever they just say that that's what happened that's that bunks the whole videos with one frame being similar the whole thing disappears right there in a fraction of a second the stock effect is like four seconds long maybe two to four seconds I don't know

(1:13:08) that effect there is like a fraction of a second 0.1 seconds so it makes no sense that this is stock effect now for the people that think it's stock effect let's just take a look I guess apparently I have to go over this all the time so here's an overlay this is the only frame that is similar you can see that it doesn't match along the edges it's just a circle you can make any Circle overlay over another Circle it's not that crazy this is how all dispersion effects are similar you can see a ton of little

(1:13:35) things in here that don't match so they found one that was similar the the middle is completely different completely different this Blackness around the edges is the real thing this colored thing in the middle is the stock effect it's completely different this is the only frame that's even similar this is literally what the bunkers use to claim this video is fake this is the only thing they claim to claim this video is fake look at this Frame this Frame the Blackness you see here in the background is the real video

(1:14:07) everything else you see here is the stock effect it's not even close we have now four examples of this stock effect being used where they didn't modify it at all no one has ever modified a stock this specific stock effect like this ever before we have The Killing Time video game which is where this was supposedly found from an obscure video game in the '90s we have an attack on Titan advertisement that was posted on social media that use a stock effect again didn't modify it we have the Starship Troopers movie they

(1:14:40) didn't modify it to make it look like a wormhole or a zap they didn't change the frames or the size the shape or anything like that and then we also have Eastbound and Down which was a huge HBO production none of them made modifications anywhere similar to this whatsoever this literally literally requires moving all the pixels around you see all this zaap around here they to move all the pixels around there's no way to get these things to match I've even challenged the **debunkers** on this particular VFX to say give me a

(1:15:09) list of the steps to make this stock effect into a pixel perfect match to the MH370 videos they refuse to do so why because it's impossible it's impossible if this was in there they would be able to give me a list of steps a recreatable list of steps here's the 10 steps you have to do to make it into a pixel perfect match they can't do that because it's not the same effect if it was the same effect it would be simple to do that you'd be like uh just reshade it and then turn it 45 degrees and then

(1:15:37) it's a pixel perfect match that's all they'd have to do but they know they can't do that because if you follow the steps and they try to do that it's not going to be a match I've also asked them to give me any example ever in any media where this stock effect has been modified like this before can't do that either can't do that either I mean look at this guys like what what what are we looking at here when you look at the full stock effect side by side it's not even similar uh do I have the side of by

(1:16:02) side one yeah uh I guess this isn't oh hold on I had a side by side one okay and I I despise going over the **debunks** over and over and over again but apparently it's required because people are out there with this false impression also I want to show you this other **debunk** that was out there where somebody posted this ear today so this is going to be this is the falsification that the corridor crew did and this is the fake **debunk** that people post out there people literally argue that these are the same so first of all I don't even know what

(1:16:44) they did to modify the thing here but they obviously aren't looking at the official stock effect they're looking at a modified version of it even when you look at the modified version it doesn't match it's not even close to match you and they just draw a bunch of arrows and circles around this is literally like what the corridor crew did as well they just draw a bunch of arrows in circles to make people who are just literally look at it and go yes that's a match when you can just look at

(1:17:09) this you can tell it's not the same even after they falsified it this is if you go look at the quter cruise video you'll see they did the exact same thing as this they show two things where they've modified one of them that don't match and then they draw circles and arrows and just go it's a perfect match cuz they're morons literally morons like this is the I'm dealing with now if that's still not enough for you here's the Eastbound and Down here's the Eastbound and Down zap

(1:17:50) now technically they modified this in the sense that they rotated it like this that's it you you can watch this clip and you'll see that it's the whole stock effect they didn't change the

color they didn't cut off some of it or any of that stuff they just literally made it go like this and that was it that's all so again if this was used in our videos they would not have modified it the way they did there's no reason to now here's the last one I'll show related to this um ACV doeth actually went ahead

(1:18:19) and poed it side by side full stock effect compared to the video side by side here we go you can tell how different it is because look how quickly the zap goes off in this one in this one look at how many frames we have going on here so they would had to change all the frames around it's not even the same number of frames our zap only has like four frames in it this thing's got like 20 frames in it this is why when you watch the the zap in real time it doesn't even make sense how this could even be in our video speed of the

(1:18:56) the asset's not even the same so somebody changed all the frames around the color the size the shape they fabricate the middle stuff all this stuff also this one right here I think is the later version that was updated in like 2015 after the videos came out the original when you look at in The Killing Time video game doesn't even have this many frames in it so it's not even clear the Fidelity of the uh asset in general the bunkers have never like proven like here's asset here's the date this asset

(1:19:26) was available um the one that they continue to download from the internet was posted on there in 2013 and has literally fabricated pictures in it the one that people have been referencing has this picture in it this is uploaded on the internet in January of 2013 whoops I'm gonna go ahead and post it for you guys in the chat I just want to I want to kill the the the fake Pyromania VFX and has this picture on it do you notice anything weird about this picture they added the m 370 zap into this graphic they literally added this

(1:19:58) in here this is not part of the asset this is literally not one of the assets here they literally added the MH370 zap into this right here why would they fabricate this picture like this they do it again down here look at this this is the MH370 zap here you can see the plane thing sticking out right here this is the one they were trying to compare it to why would somebody go ahead and fabricate this collage of images that makes no sense whatsoever they literally this and this is where people are downloading this asset from the one

(1:20:31) that the **debunk**ers are using to compared to they're downloading from a literal fabricated location that has a fake pictures of what's in the asset that literally uses the MH370 videos as one of the references weird man really really really weird okay guys I think we're done with the **debunk**s for tonight it's pretty good to me it looks like they wanted to convince the world those videos weren't fake uh also that asset in general um let me find that one actually there's one more thing I want

(1:21:03) to show you guys uh let me see if I can find it real quick might be this one let me see hm so there's one where **redd**itors early on were watching when that asset came out and they found they dug up the person who produced that asset originally here it is found it **I want you** guys to see this for I want people to see this for themselves with their own eyes just in case you

really think there's a Pyromania because a lot of people do they discovered that the video that **Mick** West was spreading was linked to the dod and Department of

(1:21:53) energy uh where is it do I not have the screenshots on here here it is so here's 100% proof that **Mick** West is the one who found it this is from August 19th 200 uh 24 or 23 he found it in this obscure 3DO Killing Time video game you have to go into this video like an hour in in order to find this asset being used **Mick** West found it the exact same day that a one-day old **Reddit** account posted on **Reddit** that got the videos banned from **Reddit** it is that a coincidence or what this **debunk** was first bound by **Mick** West is not Corridor

(1:22:30) crew it's not Danny Jones It's Not the lore Lodge **Mick** West found it everybody else copied it from **Mick** West nobody else thought for themselves **Mick** West is the one who's the only person on this planet who's claimed to have found this asset he's the very first person The Man Behind the VC NC account was name is Peter Kuran his artist profile from the VFX website still exists on the internet archive so people actually **reddit**ors were on it they went and found who the person was who made the asset the original asset guess what

(1:23:06) here was the asset it was updated look at that January 2023 the same time where we saw the fabricated image that I just showed you guys January of 2023 let's do the about us V vce films is a leader in visual imagery and motion picture production licensing visual effects Motion Picture title sequences and imaging restoration vce Pro provides services to the motion picture industry the Department of Defense the department of energy and producers of television programs and documentaries does that sound legit to

(1:23:44) you guys how do you think anyone found this VFX exactly how do you think they found it they actually dishonestly modified it so that it would be closer the one frame would be closer to a match than it really was so is it weird that everybody's linked to the Department of Defense and the department of energy why is **Mick** West finding assets that are from the Department of Defense and Department of energy to **debunk** real videos so when people ask me why and look at the dates here August 19th 2023 when people ask me why I'm going to

(1:24:22) send the families after **Mick** West you're looking at right there **Mick** West is a **scammer** he's a fraud and he's a liar straight up I have all the evidence I have all the evidence that says **Mick** West wouldn't look at these videos people direct messaged him and he persistently lies about it he persistently goes out on a podcast and Dodges me and lies about the videos he's claimed in replies multiple times he knows 100% of the videos are fake when that's not possible to know he has uh made even wrote in the skeptical inquire

(1:24:50) a defamatory statement or defamatory article about me and about the video videos claiming that people that if they believe this videos are real then they must be queuing on or uh that they would believe that elections can be stolen the guy deserves everything that's coming to him he deserves to have his life ruined he deserves to lose all his money that he has that is out there now there are people there was somebody who was banned from my Discord and they're still in my Discord on an alternate account and they are

(1:25:19) posting uh stuff about it so I'm going to show you this as well um I might need to crop this hold on because I want you guys to see what we're dealing with here on a daily basis man on a daily basis what we're dealing with here um so this person says I think you can split them into four categories talking about the people in my Discord fourchan trolls older Boomer type men and women retired and unemployed middle-age Blue Collar Bible Belt types edgy teens the Boomers and the Gen xers are fully indoctrinated into the cult they they

(1:25:59) literally think that we have a cult these are this nut jobs who have their own Discord talking about us 247 the younger ones are more impressionable and I guess but honestly the young one I know in there is a super cow everyone else seems 40 plus these in the Discord anyway this is what they talk about us 247 Twitter is slightly wider than that but still the same it's really fascinating that they all think we are headed for some sort of comeuppance my favorite is when they think they we're on suicide

(1:26:27) watch well you talk about me 247 Chrisley you're hiding in my Discord trying not to get caught posting images of stuff in my Discord where well there's people in my Discord that in that Discord as well and they post me images of you as well so it's pretty damn weird I'm going to be honest I don't know why people are so committed to this idea that these videos uh are fake that are out there um absolute clowns and this is what we deal with all the just complete low lives um so guys when you see the next debunk come around

(1:27:03) and it will because these people are obsessed you know if you thought videos are fake if you think Bigfoot's fake you're not going around dedicating your whole life to trying to prove Bigfoot fake we saw a guy delete his account today uh after coming at me we have seen people in the disc in their Discord rampaging at us I went through the the debunks as well and how willing they are to go to fifty fake comparisons and how this goes straight up to the top number one debunker that's out there MC West um

(1:27:32) pretty wild man anyway guys uh I appreciate you I think we're going to call it there for tonight um I like I said please look into the software the software once again in case you guys forgot is called what's the software called uh it's from applied imagery it's the quick terrain modeler anything we can find about this that would link it to cbers or the Department of Defense or the intelligence Community find everything you can find about that any update I get from them I will post to the internet and uh watch the redacted

(1:28:14) podcast the redacted podcast was posted on Twitter earlier today was it today or yesterday uh yes yesterday it was posted so watch the redacted podcast if you want to get up to speed on the case that will have everything you need in it and then uh tomorrow we will go over science we won't go over more drama I really don't like doing these drama streams but for some reason these people just keep coming at me and I'm not the guid and guy that's going to back down I'm not some uh celebrity person who's gonna

(1:28:44) worry about my PR my brand or anything like that from the beginning all I've ever wanted to do is prove that the videos are real that's it or prove that whatever happen in this

case is real and that's I think what we've done here so thanks a lot for following along guys share the content uh help with the investigation if you want let's get an answer from the US government everybody out there should be trying to get an answer from the US government regardless of which side of these videos you're on

(1:29:10) and thank you very much for being here I appreciate everyone have a great night I'm gonna play us out peace everybody malan 370 contact 120 good night good night yes breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] [Music] [Applause] [Music] I remembered the line from the Hindu scripture the Bhagavad Gita

(01:16) [Applause] [Music] I remembered the L from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am become death the destroyer of [Music] worlds e [Music] [Music]

(02:31) hello hello everybody Welcome to the stream tonight technology tonight with Ashton forbs can you imagine if that was our stream name that we had going on it's a pretty good one um thank you guys for being here tonight I appreciate everybody who is already in here in the chat we're already going really quickly yo what's up Nicole hey what's going on braa Brian Christian bonsa Evan Z alpino inie craer an Zer raser John Matt good to see you man Blake sham 6 glad to have everybody out here tonight sorry we

(03:08) haven't been online the last couple nights uh as you guys know I had a computer get fried and that was pretty annoying um but I did get it fixed did end up just being a uh power supply issue so it was a pretty simple fix I didn't lose any data yes I will be backing on my data on even one more Source now so we're going to have like three or four redundant locations where all the data is being saved when you're talking about some crazy stuff you've got to make sure that your data is protected

(03:37) everybody um so tonight what are we gonna be talking about tonight well the big thing first of all is the redacted podcast the redacted podcast I did it appearance I finally got around to watching it all uh took some notes I was even impressed with my own appearance on there I thought that was awesome uh I was even getting a little emotional watching it uh listening to Clayton I mean Clayton is is a seasoned anchor that worked on Fox News uh you know he knows and then speaks to Tucker Carlson so I was extremely excited um from with

(04:10) just talking to him about the case I think the way that all the information played out and so for the people that are new or the people that have been here for a while I do want to go uh through a number of different clips from that interview it just got posted to Twitter uh like an hour ago so if you want to watch it on Twitter you can watch it full on Twitter otherwise uh go and watch it on YouTube YouTu or watch it on uh Rumble I I was looking at the total numbers I think it's already got over 300 350,000 views uh so quite a lot

(04:40) of people have watched it and I'm really excited for the positive reception I expected more negative comments um and there wasn't nearly as many as that I thought so we're going to go over that uh before we do that we're probably going to look at the mentor pilot video uh and review some components to that as well so if you've been following on on my Twitter you've seen the mentor pilot showed up finally after a while he made a video I think it was a couple weeks ago and I got pinged on it like I get

(05:08) pinged on every single MH370 thing so I ended up watching it and **truth** be told I was pretty disappointed uh I think that you can tell when people don't do full real investigations and deep dives into the evidence and instead they rely on oh I'm just going to read the official report and then I'm going to write something about it it's like there's so much more than the official report to this case and to do it justice you absolutely must go back through the totality of the evidence all the

(05:39) witnesses all the old press conferences and everything else related to it when you do that you begin to see the real picture of what happened to this plane um not just what the official report that says it's out there now we will go through uh I think we'll start by going through some of that information as well uh regarding the mentor pilot drama back and forth because **I want you** guys to see the type of situation we're dealing with here I think you need to understand if you are following this case if you

(06:08) following me you need to understand that we are dealing with a situation that's so far beyond the Paradigm that I think you could call this catastrophic disclosure uh something that people are just simply not ready to accept and this goes along with all of the uh pilots and experts and officials that have dug into the case the reason why this cases out there that is so uh so so difficult for people to solve is that the answer is not something that's palatable it's not a simple answer this is why it breaks

(06:42) people's minds is because they're looking for something that they can absorb that makes sense to them and the answer is this does not make sense for the vast majority of people that

are out there and that's the reason why what I think what I'm doing is so important is that it is shining a light um on a case and the huge amount of evidence for a case that simply does not have a simple conventional answer it is not as simple as some pilot went rogue for no reason for eight hours and somehow knocked

(07:16) everybody out so um somebody asked is uh does does your computer play crisis I don't think it can play crisis I don't know I haven't played video games in a while um so let's take a look here let's see I love Mentor Pilots videos I agree I don't think a style investigation works for this type of story yeah I think for him his style of Investigation from what I watched works better where you already know what happened and he's going through the mind of the person who knows what occurred um because that's a very

(07:51) conventional type of explanation what happened with that Mage 370 is not a suicidal pilot um there's no chance of that whatsoever there's not even any evidence for it um and I thought as we'll get into it was pretty distasteful the way that he tries to psychoanalyze specifically this uh very mundane communication uh and and essentially uses it as some type of evidence for why the people were in distress which I listen to it there's I I don't I don't hear that at all when I listen to it and

(08:22) the problem I have with that type of thing we'll dig into this here in a second but is that if you're the type of person who is going to adhere to the official narratives then don't be a giant hypocrite and contradict those very same narratives when it doesn't when it doesn't please you or when you're trying to generate clicks for money for people uh that's the thing that I don't like um so before we get into that let's go take a look at the Twitter posts uh so that you guys can see what we're talking

(08:49) about here share my screen you're going to see a picture of myself here as well because I'm also streaming at the same time okay let's change this okay okay so first of all there is the interview with redacted you guys see here go ahead and watch that if you haven't watched the redacted interview you absolutely must watch it it's only about an hour uh and 20 minutes long so it's a very easy watch compared to some of the other uh podcasts and interviews that I've done out there um now if we go take a look at oh also I

(09:32) guess let's let's do a little bit of quick uh messaging of the notes here this kona blue document which is I guess Declassified by the AO who I'm still waiting on a response back from if I do talk to them soon and they are comfortable with me disseminate the information I I get from them I will post it uh but if they do ask me to keep the information quiet then I may not do so but this uh document was very interesting I pulled out a couple notes from it you can find a link down here at the bottom if you guys want to check it

(10:00) out um justification for need remote vision remote communication and dematerialize and rematerialization techniques to observe communicate retrieve data and transfer matter across dimensional and space-time barriers will undoubtedly be of utmost interest if not a top collection priority for adversarial intelligence and Security Services what this is from 28 2018 or

2008 so this is actually a what is that 16year old document so when people read this or you know if people would have read this in 2008 people would have just

(10:43) thought this is wild like this is too far beyond the Paradigm but after we've watched MH370 videos which supposedly took place in 2014 um does absolutely make you wonder what's going on with this type of stuff do we actually have this warp kind of techn technology seems like we've been talking about it for many many years this is almost two decades and then later on near the bottom of the document documents 56 Pages you guys can take a look at it yourself if you find out any other um interesting aspects to it then go ahead

(11:16) and uh let me know shoot them over to me um also people are telling me there's something weird going on with YouTube so I'm just going to take a quick look at it um just want to make sure it's working no it seems like it should be fine okay the second part says applications and Engineering Associated exotic Technologies likely involve extremely sophisticated Concepts within the world of quantum mechanics nuclear science electromagnetic Theory gra gravitics and thermodynamics given that all of these

(11:54) have potential to be used with catastrophic Effects by adversaries an unusually high degree Ree of operational security and readon discretion is required wow that's pretty bizarre um this to me when I read these Concepts right away what's stuck in my mind and remember this is from 2008 2009 quantum mechanics what they're talking about here is quantum mechanics and and gener relativity a unification Theory they're talking about getting Quantum effects at large scales nuclear science they're talking about cold

(12:28) fusion they're talking about low energy nuclear reactions here they're talking about basically free energy electromagnetic Theory they're talking about scalar potentials the idea that our electromagnetic understanding of theory is not complete and then gravitics is uh the idea that we can manipulate gravity obviously the thermodynamics part is interesting I'm not sure what the relationship is there it could be when we look at the orbs and we see that heat signature in the orb that could be something that is we're

(12:57) talking about there not sure so this to me I thought was very interesting there's also some context here around special access programs and how the information is kept secret which is all consistent with everything that we put out there take a look at that now the other thing I wanted to mention you can find some more stuff that I've reposted here about the double slit experiment and super conductivity which I think are very important if you guys want to understand what the requirements are for this type of

(13:24) Technology um there was another big update that came out yesterday so let's start with let's go backwards through the drama the mentor pilot drama okay so woke up and found uh a reply on here and yeah please feel free to make sure if you are following on YouTube please feel free to make sure you like and I guess subscribe appreciate that um and if you're following on Twitter consider following on YouTube as well U I'm not sure it really matters that much but I appreciate you either way I woke up what was this yesterday

(14:02) morning and saw a reply here and says whenever somebody uses teleportation as an actual Theory you should probably look the other way now to me this is a very offensive comment to make especially in a situation where you haven't dug in any research whatsoever you've done no investigation all you did was uh read an official report and make a YouTube video where you got I don't know like two million views where you are potentially making tens of thousands of dollars where you have in your video in the

(14:33) middle of it you have a promotion use Code Pilot for 60% off where you're literally grifting off of what happened to a situation where there's no answer when you're a literal grifter and then you're going to come and you're going to try to put down other people's real investigations and dismiss their actual evidence and theories because oh if somebody uses a teleportation then you should just completely ignore them well here's my counter argument when a pilot doesn't even know that lithium ion

(15:00) batteries are banned in the cargo bay of passenger planes and this plane was stacked with 500 pounds of them and they completely ignore that and say oh that's not dangerous at all then I think you should probably ignore everything that pilot has to say you know what why don't we put mentour pilot on an airplane with 500 pounds of lithium ion batteries in the cargo bay that were put together that day that missed two security screenings and let's see how comfortable he feels flying on a six to eight hour

(15:30) flight so that's my uh that's me being as nice as I can be in that situation where someone's going to dismiss your stuff so my followup was sorry I haven't got around to eviscerating your money grab YouTube video yet I just want to point out to you you a pilot claimed that hundreds and thousands of pounds of lithium ion batteries wasn't dangerous in your cargo bay LMFAO that was the moment I knew you were hilariously wrong then when you leaned on the phony whisper data where the guy who invented it says it can't

(16:01) even be used to track planes and I know you didn't read it unlike me uh who did because you'd immediately see how silly the claims were and we're going to get into those here as well please stop profiting off vilifying an innocent man if you want to discuss the actual facts of MH370 you can reach out to me anytime I'd be happy to do a live debate so people can watch come prepared so if you guys have seen my uh interviews my podcast you know that I'm not afraid of anybody out there I'm not

(16:35) afraid of [REDACTED] YouTubers like Danny Jones and Julian Dory I'm not afraid of uh going up with very intelligent people like Clayton Morris and talking to them as well and I'm certainly not afraid of some YouTuber pilot guy who basically read a few pages of an official report and then put out a whole video where he starts to psychoanalyze the inflections in a mundane Communications not even remotely close to afraid of somebody like that somebody who didn't even look up any of the witnesses so this was a little bit rude

(17:08) but at the same time so is this um so then I did my followup I want to apologize to Mentor pilot for being overly hostile I don't like when people callously dismiss the massive

amount of work that this community and myself have put into uncovering the evidence around what happened to mh37 Zer now this is where it's not just me guys it's all of you guys as well all the people in the Discord who's helped out and everybody who's on social media in the beginning as well who went through the evidence

(17:34) like those types of responses are the problem that we face with uh the bigger World in general is that for many people what happened to this plane is not something that they can wrap their brain around because like the **debunkers** say if this is real then they also have to uh give credit to uh other conspiracy theories that are out there that are uh hard to believe as well because if you can pull off disappearing a plane and convincing the world of a lie and fabricating satellite pings and maybe faking a cloud picture and various other

(18:06) **debunks** out there then yeah it means that there is massive amounts of conspiracy that occurs that the intelligence Community can get away with now investigating isn't about cherry-picking and coming up with a palatable answers that can that people can accept it's about finding the **truth** no matter how hard it is to believe yes I'm claiming that we can warp a 777 from one location on Earth in the blink of an eye through gravitational manipulation via mixed wave interferometry I'm not a scientist I'm

(18:35) just an investigator and the science seems to check out everything from susine and malic's er equals epr which is a unification Theory to Thomas beard in scalar physics based on Tesla's work that shows an underling dimension of unlimited neg entropy exists the exact thing we need to make a wormhole at least to make one that's humanly traversible now I'm not claiming this because it's a fantastic story although it absolutely is I'm claiming it because that's what the totality of the evidence concludes evidence that

(19:07) originated with two perfectly in sync military videos with no discrepancies on a single frame that were published weeks after the plane disappeared in 2014 where there was a \$150,000 Bounty for the hoaxer that no one claimed no hoaxer ever came forward with a single shred of evidence just w your mind around that guys for \$150,000 people go well he was probably dead what was he 70 years old oh well he just didn't care about \$150,000 yeah right you put out these hoax videos that you're trying to hoax the world and you

(19:43) don't want to collect \$150,000 what any investigation into MH370 should begin with the log basic logical questions so this is my uh challenge to anybody else like Mentor pilot or anyone who wants to make a video about MH370 if your investigation and your video doesn't Begin by asking these questions you are going to get eviscerated how could there be no debris field first question answer that how can there be no debris field they found no debris field anywhere how did no country satellite see the plane or the debris field where

(20:32) it crashed do people really think that satellites are real time only that we don't have records of every satellite imagery that's ever happened that we don't think we could we could go back to the satellite database right now and we could pull up satellite imagery from 10 years ago I'm 100% certain how did no country satellites not see the plane or the debris field just wrap

your brain around that how did n of the Over the Horizon Radars which can see for thousands of miles not track the plane including Australia's

(21:08) Jordan system there's a 0% chance the system wouldn't have seen the plane in the South Indian Ocean it probably could attract it from takeoff and that's just the Jordan system there's more like Diego Garcia Pine Gap how did the Sosa system which hurt a tiny sub implode not hear a 777 crash into the ocean there's two other hydrophone systems as well how does a piece of engine cowling which is like a little piece of paper basically of the engine nothing thing actually a piece of engine cowling

(21:45) ripped off a Southwest engine while it was taking off like last week how does a piece of engine cowling drift 3,000 miles to Africa in like 500 Days how does that work especially when the drift analysis or the the um the the ocean uh currents drift to the east the ocean currents drift in a circle based on the location where the plane crash it should have drifted up and washed up into Australia and then lastly Why did no debris wash ashore in Australia despite the currents flowing to the east start by proving the LIE

(22:29) MH370 did not crash into the South Indian Ocean it's really that simple so we start by proving the LIE anybody else who's not out there proving the LIE um they're not doing the investigation justice so some of the back and forth that I had with Mentor pilot was and I'm not going to dig through all the replies in here but we went back and forth quite a bit um he said actually you know what I think we will look a couple of them I think we will look couple here he goes I was very clear about the fact that

(23:01) whisper was a technology that was questioned that's why I presented two scenarios why present it at all there's no evidence that whisper data is correct at all if he had read The Whisper report which we will go through in a minute he would know that there's no chance The Whisper report is accurate my video was made to restart the search and it was cleared beforehand by the families of the victims which family members the ones that say that somebody abducted the plane the ones that say don't believe the Pilot's

(23:29) suicide meth where when is the search going to restart where exactly does Mentor pilot think the plane went down where exactly does Mentor pilot think they should search it's been a month and a half since the 10-y year anniversary and people had said oh the new search is going to happen any minute now everyone knows where the plane is where's the search I'm not afraid of the search the families have never reached out to me I would love to talk to them them maybe Mentor pilot can connect us I have several statements on them on

(24:05) shows such as CNN how is it that how many think how many of the family members think a rogue pilot crashed into the ocean without leaving a debris field where was his response to this none because when people like this are challenged on just basic logic this isn't complex or anything just basic logic they completely shut down when you are a n NPC I think it's very important people understand what the term NPC means because you're going to hear it a lot NPC refers to a non-player character it is the idea that you are one of the

(24:41) uh non-main characters in a video game where when people interact with you all they get is one line of text of script and if you try to ask them to think for themselves they just keep repeating that one line of script Mentor pilot is an NPC a non-player character as well as other people that are out there these are not even real human beings as far as I'm concerned they're people that can't think for themselves where the only thinking they can do is whatever they've been told to think by TV or by their

(25:10) trusted authorities this is the biggest problem we have in the entire world today it's not a matter of corruption or anything else it's a matter of literal NPCs people that just simply cannot think for themselves when challenged with basic questions they completely break down and then they give some excuse well you offended me so I'm not going to respond what how about just use basic reasoning and we would even be in this situation to begin with whether or not people are afraid to lose their jobs and things like that

(25:45) which I see people mentioning here it's irrelevant if you are afraid to speak the **truth** then don't have a YouTube channel don't make a video about the case if you can't answer the basic questions then you have no business doing anything about the case whatsoever you're not helping at all so in the case of Mentor pilot here he thinks he's helping the investigation he didn't help the investigation at all there's no search happening this they're not going to search because they know they're not

(26:14) going to find the plane because you didn't point to anywhere on the map where they should go search they've already searched everywhere they searched above and below water everywhere along the seventh Arc so either the satellite pings are wrong and that plane can be anywhere are those satellite pings are right and you got to show me exactly where they should they should search that they didn't already search this is why they're not searching again this is why making videos about whisper route data

(26:40) and trying to vilify the pilot are don't help the situation at all because we already know that's not possible all you did was present information that is the already been conclusively ruled out what we need are new ideas ideas and people that aren't afraid to think outside the box about what might have happened almost like if we had like two videos that show what really happened to the plane oh wait we do have two videos that show exactly what happened to the plane and we're just going to dismiss them

(27:10) because it's too hard for us to wrap our brain around even though it shows the plane on the real location where the plane supposedly turned into the South Indian Ocean the same place where people say it flew for five or six more hours to the South Indian Ocean where we didn't find anything H I think that people need to go back to using basic common sense and reasoning whether or not you think something is possible is irrelevant the what really matters is what the evidence shows So speaking of the **debunks** real

(27:42) quick before we get into the analysis of Mentor Pilots video um and and I don't think it's going to be too long because we've already talked about quite a bit of it and I'm already coming

down harshly enough on him and I don't want to come down too harshly I do want to use him as an example though for other people think that they're going to make videos about MH370 and go unchallenged you you will be challenged if I I have put together more evidence than anyone on the planet potentially and if you are out there

(28:09) ignoring that evidence you will get challenged just like Ross kohart did when he did his reality check with that uh phony expert Larry Vance or whatever who like wouldn't even address the fire scenario who falsely claimed he knew exactly what happened to the plane like these people are total clowns and I will clown on them in the way that they are accustom too okay so uh somebody found a fourth situation where the Pyromania VX was used so if people are not familiar there are two prominent **debunk**s out there one of them comes from **Mick** West

(28:42) who is a unemployed uh serial **debunker** who doesn't use any common sense or rationality in his approach and it has been promoted uh by frauds the corridor crew uh who are fake VFX experts who apparently don't know how VFX Works uh who sit on a couch and splice cartoons into their reaction videos this is how dumb these guys are while wearing hoodies and Jordi Le Forge glasses I wish I was kidding I am not they are complete and utter morons uh if you follow the corridor crew I suggest you unfollow them and uh get a brain

(29:15) now this Pyromania VFX you can tell just looking at it right here overlaid is not in our video when you use stock effects the whole point of stock effects is that you do not have to manipulate it is that you can take that stock effect and you can put it into your video and now you have something in your video and so eyes to see here found a fourth situation where this stock effect has been used it has been used in The Killing Time video game from the 90s it has been used in a advertisement recently for Attack on

(29:50) Titan in anime it has been used in Starship Troopers the cult classic movie from the 90s as well and it was used in Eastbound and Down here's the segment fine boom there it is so you saw the explosion right there uh I'll go back to it one more time you can see it right here there's the explosion notice they didn't change it to Black they didn't remove the frames they didn't make any other adjustments to it they just changed the angle of it and that was about it so again stock effects you

(30:30) don't change every aspect of them this Frame right here is the only frame that's close it doesn't even match along the border it's not the right color the middle is completely different and it's cut off all over the edges here as well the other frames are not even remotely close not even remotely close this stock effect is objectively as a statement of fact not in the MH370 videos anyone who says it does is a liar I don't how to put it any more simply than that um the whole point of this stock effect and the

(31:05) fact that they only show you one frame they only show you this and they try to compare it goes to show how completely 100% dishonest people like **Mick** Westar the corridor crew are the corridor crew doesn't even compare the actual effect to it they change the effect and then they compare a falsified version of the effect to the video in their video that's how dishonest the

corridor crew are so if if you think the videos are debunked you're wrong not even close guys not even close the sad part is this

(31:34) is what happens with NPC mentality because NPCs and redditors are the type of people that when they are wrong they absolutely will never admit they're wrong and instead they will just continually double down on the most insane illogical and incorrect things there are so um that's a difference and what you'll find as well from the debunkers is that they will uh have they will falsely claim that they know stuff that they can't possibly know and they will falsely claim things are 100% when they are not when they can't possibly

(32:05) know them to be so this is more than just MH370 videos but in general you need to be very skeptical of debunks that are out there I would say a vast majority of debunks in general are completely false um and now I think there was one more thing okay yeah so the other thing here as well is this um and where did this guy go oh and so here's another NPC real quick as well um so another one of these air safety guys this guy's got uh 35,000 followers um on on Twitter 35,000 followers and all he does is gift

(32:43) people online and just repost uh Airline accidents and when I look through his content his content gets less than five likes on most of his stuff that's out there basically no one interacts with any of his content out there how is this person have 35,000 followers but this is the problem with like idiot NPCs that are out there is that they make claims by the way I followed you just so I can report all your content as fake news imagine being this effing stupid and being this guy guys never be like this on disasters person in your whole

(33:23) life never be like this this is just a straight embarrass to the entire human race right here I followed him he actually didn't follow me I'm going to unfollow because I challenged him to a debate I've challenged all these people to debate I challenged Mentor pilot to a debate uh I challenged this uh Whatchamacallit guy here um I'm gonna unfollow this guy because he's not really worth following at all obviously there's no point following people that only read off a script I can get that information from an AI if I

(33:54) want um and none of them of course uh uh came up to the debate these people are all cowards you know the reality is they're all cowards um none of them are willing to debate the facts because they know they're not going to last five minutes is they know they're going to get proven wrong within five minutes they're G to look like idiots and they're going to come off terribly I'm not afraid of debating anybody out there and just for the record Mick West has dodged me four different times on debates where

(34:23) podcasters try to set up a debate with us because he knows he would have got destroyed too he knows I would have shown the the world that he lied about that Pyromania VFX that he's the source he knows that the first question I'm going to ask him is what is his job and how does he make money um and he knows it's not going to be some kind of cushy [ ] interview where everybody else just doesn't ask him any hard questions whatsoever guys is a complete and total clown so is on disasters and sadly so is Mentor

(34:49) pilot so I look forward to debating you on stream let me know when we can set it up you can bring any expert you want with you so here's my challenge in any expert you want you can bring your physicist you can bring Neil deGrass Tyson you can bring Eric Weinstein you can bring uh any pilot you want any official you want any supposed investigative expert you want I will take on them all and I'll take on them all multi versus one you want to line them up in the room and we can all debate together I'll take them on three

(35:20) on one doesn't matter that's how confident I am in my understanding of the plane as well as the evidence that's out there people like this don't think for themselves people like this never step up to a challenge um and it goes to show just how pathetic they are in general okay now the last thing before we get to the videos here and we'll start digging into this tonight I think we're going to go for about two hours now an amazing article came out yesterday guys the videos are real and the case that I've put forth is what

(36:00) really happened to the plane how do I know because I'm on record talking about it since October that was six months ago seven months ago that's since I started doing podcasts I'm the person who's been promoting the fire Theory we found the glowing orange plane and we went through the glowing orange plane that's how we found out of the fire I'm the person that's been saying we have eight Witnesses on a boat that saw the plane flying low right after the turnaround so what came out secondly a new article shows up with

(36:35) an they've done an analysis of the turn the data reveals that the aircraft may have experienced a depressurization after the turn off the flight PL the flight plan track it shows that the aircraft was operated at fl300 or FL 320 or a combination of both notably it appears an emergency descent then occurred supporting the team's theory of a depressurization event having taken place guys when you depressurize a plane if you are flying low it's because you're trying to get the passengers oxygen to breathe you have to fly under

(37:12) 10,000 feet if you are flying high that's where you would asfixiate the passengers this evidence conclusively proves that the pilot suicide narrative is a myth if the pilot was locking somebody out and depressurizing the plane they would increase altitude near to 40,000 ft therefore everyone would succumb from hypoxia within minutes if you're flying low it's because it's an emergency event and you're trying to save the passengers and that's what the pilot was trying to do now what kind of scenario would there

(37:46) be an emergency event where you'd have a depressurized plane how about batteries exploding and the batteries go on fire and potentially damage the plane depressurizing it or you're intentionally pressurizing it because you need to give oxygen to the passenger since the fire extinguishing devices that automatically go off suck oxygen out of the plane this evidence right here pretty much proves the fire scenario it proves that this suicide narrative is a myth so the rest of my context here is maybe our

(38:20) resident pilot expert Mentor pilot can help us out with this new analysis of the Malaysian radar which shows MH370 attempted an emergency descent with a manual turnback

the manual turn back is important as well the moment the plane starts on fire you're taking control of the plane and you're turning back to go to the nearest airport where you can land safely keep in mind you're at 35,000 feet so you're not going to be able to land at an airport that's only a few miles away the way the planes work

(38:45) is you got to go pretty far so panang is the one that makes the most sense so this is my questions the men to reply do you guys think he answered any of the questions before we get there go ahead and put your predictions in the chat why would a pilot de pressu ASE a plane to fly low to knock everyone out you'd fly at high altitude flying low would indicate you're attempting to provide oxygen for the passengers why would you turn and fly to the nearest airport that can accommodate a 777 beine directly at

(39:11) it why would I check a bag on a flight or mail a letter at the post office do they ask me if there's any lithium ion batteries inside why are lithium ion batteries banned in the cargo of passenger planes apparently people don't know this I've had a lot of people fight me about this yes lithium ion batteries are banned in the cargo of passenger planes period there is no safe way to travel a store with them they are banned because a lot of planes burnt up like it was you go look at the situation between 2010 and 2014 it was

(39:49) disaster a number of planes burnt up even after they've outlawed them even afterwards last two years there's been 74 incidents of lithium ion batteries in the passenger area of cargo planes 74 each year that's over a one per week in the United States they are extremely extremely dangerous this lower altitude is also corroborated by eight real fishermen who are on a boat off the coast of Thailand in Malaysia right about where my mouse is right over here that saw the plane flying low at 173 UTC this is 10 minutes

(40:29) after the turn back the same time another 777 pilot not wanting to be named heard the pilots with static on the radio do any other Pilots want to weigh in the reason why Mentor Pilots not going to respond to this is because he knows 100% that the protocol here is for a fire emergency event any pilot that's flown up a commercial airliner knows exactly what happened with this plane the batteries ignited they were on fire this was an emergency event they were descending low in order to get the passengers oxygen it's corroborated by

(41:02) eight real Witnesses 10 minutes later what more do you want the the evidence here it now is supported by both the real people as well as the data in addition to that this rules out any type of pilot suicide narrative so let's see what his response was I thought he responded oh there it is I love that you link an art article that with the exception of their emergency descent goes on to say exactly what I say in the video Yeah well the emergency descent is pretty important Mentor pilot because it completely rules out the scenario that

(41:37) you were trying to push in your video and it proves what I've been saying correct does do you see him uh admitting that there was a fire event here in his post guys I don't see it the emergency descent bit comes from a radar estimation of altitude which couldn't be confirmed well that's okay we have eight witnesses that saw the plane we have eight witnesses that saw

the plane I did a favor of doing a like on there I'm going to unlike it because like I said we've got eight real fishermen on a boat who saw the plane at

(42:08) 1730 What scenario does this indicate did I miss the part in your video where you went over the emergency fire event no I didn't miss it he definitely didn't go over it how can you claim to be an honest person and somebody who's trying to seek the truth when you just ignore every piece of evidence that doesn't fit with your pre-programmed narrative also I want to understand this as well from anybody out there and this is me I don't know the true answer how can a pilot make an entire plane go dark

(42:36) between the last communication and it dropping off the radar which was 64 seconds Captain uh bellany uh suggested whoever was in command of the aircraft would have intentionally disconnected all four electrical generators and Apu that doesn't sound like something that a pilot can do from the car or from the the uh cockpit this is practically impossible for a single person to disconnect all four electrical generators and apus simultaneously and within 64 seconds and then what did people say um Wall Street advisor then says as well

(43:17) it's not possible for a pilot to to disable comms entirely and they definitely can't block the satellite tracking I don't see people emphasizing that he has a communication here and I think he also put a quote in here turning off the radios and AC cars would be more difficult NPR's Jeff brumell spoke with commercial pilots including two of the flown 777s he says the pilots tell him that those systems are pretty hardwired into the modern aircraft they say you'd have to go through big checklists you'd have to possibly pull

(43:46) circuit breakers if you want to deactivate them so to do this you'd have to have some degree of premeditation and a lot of knowledge or here's a better exam scenario they were on fire also we have uh I don't not going to be pull the link up actually you know what I think I have it hold on um maybe I don't there is uh [REDACTED] maybe I don't have it hold on there's also I don't have it up with me right now but there was a post saying that it was not something yeah I don't have right now

(44:29) one of the experts that investigated uh the official uh people basically said that it was they were not under the impression this was something that could have been pulled off by the pilot as well so you have to basically discount the officials common sense or anything to think that the pilot pulled this off now let's switch gears here no I'm just going to be clear you cannot make the plane go dark by yourself nobody has proven this the officials have said that it was not something they think that a pilot could

(45:03) have pulled off we've got sources right there as well saying that multiple Pilots I spoke to is not a situation where you can simply disable everything I think that people are get confused because people give their opinions and they want to believe that the pilot could have pulled this off when there's no evidence for it whatsoever in the one of the earliest press conferences as well um the Malaysian minister of Transportation I believe it was was asked by a New York

Times person can you actually just make a plane go dark

(45:32) is that even a thing that they can do and his responses we don't know we'll look into it if it was the answer that they could the answer would have been yes that's something they can pull off so I think that there's this myth out there that a pilot can supposedly make the plane entirely go dark that is not something that I found any evidence to support whatsoever okay let's keep going now let's go and take a look at and once again for people in the in the comments here I don't know who you

(46:07) are or what your experience is prove it prove it I'm not I'm not interested in listening to opinions of people that that believe whatever they see on social media prove it the official investigators have ruled it out if you're know more than them get in the case let them know okay let's do a okay here it is okay we're gonna briefly go through this not too long let me see I've got some clips on this yeah even a in a total electrical system is still would show up on radar yeah that that's the thing that people

(46:59) don't realize this is not something that feasibly could have been done uh by the pilot okay so uh and I I don't want to get uh struck here so I'm going to skim through some of this the part I want to start with was the dangerous goods so I think it's somewhere around he talks about a car system he does a ton of definitions and everything uh I think it was somewhere around 1840 so we'll start right here notification to Captain and it's normally sent out if the aircraft would be carrying dangerous goods in this case

(47:38) there were actually no dangerous goods on board just okay you guys just hear that there were no dangerous goods on board he just said let's see what he says next I heard that I said there's no dangerous goods on board are you sure about that have you looked had any of the information special load being loaded consisting of several tons of mango which apparently had a tendency to leak juice and water and therefore had to be checked closely the notok message confirmed that the cargo had been checked and that it wasn't leaking but

(48:08) what it didn't say was that there was also nearly 2 and a half tons of lithium ion batteries loaded on board he's claiming there's two and a half tons of lithium ion batteries just for my people out there that's 5,000 pounds of lithium ion batteries he's claiming I'm only claiming there's 487 he's claiming 5,25 tons of lithium ion batteries he just said there was no dangerous cargo on board I you know what we should have Mentor pilot fly around on a plane with 5,000 pounds of lithium ion batteries in

(48:42) the cargo bay I just want to see how long he lasts that is the definition of dangerous we looked into these lithiumion batteries chat we looked into them I clearly Mentor pilot didn't two pallets of them were stacked up in the forward go Bay right next to the the main equipment center which is also known as Electronics Bay um I'm not sure if you looked into that they were put together that day you guys know the most dangerous uh way that lithium ion batteries ignite is because they were assembled uh incorrectly or have defects

(49:13) in them so the fact they were put together that day would mean they're at the highest possible risk it was over 100 degrees Fahrenheit that night uh the batteries that's not necessarily critical for the batteries but in those cargo Bays if they Heat up they only have to get up to like 200° maybe even not even and then they're going to ignite as well um in addition to that uh the way they were put together they were just stacked up on pallets they missed two security screenings as well I think missing two security screenings is

(49:43) pretty damn suspicious for 5,000 pounds or 500 pounds of lithium ion batteries it's called thermal runaway these batteries were individually and the moment that they get ignited that whole thing is never going to stop burning you can put it out but they're going to just come back up again and again and again these are extremely dangerous things this is why they are outlawed outlawed in the passenger in the cargo bay of passenger planes no matter what you cannot ship them as Cargo in passenger planes you cannot

(50:15) have people with them in their checked bags in passenger planes because it's too dangerous there's not people down there looking for the fires you don't see it happen all of a sudden kaboom in such a way that they were not considered dangerous goods and they were stored in such a way that they were not considered dangerous goods I would challenge Mentor pilot or anyone else to go look at the atsb report and look at the pictures in there and you tell me that they look safe they have got them stacked up they look like IEDs and then

(50:49) they just stack them up on a pallet in cardboard boxes is that going to if one of them ignites all of them are lighting up that is not safe whatever not you think that the official reports as they were stacked they were stored safely if they were stored safely they wouldn't be banned in the cargo bay of passenger planes they have therefore been ruled out as a possible cause for what's about to happen they've been ruled out because why because somebody says they were stacked safely that they don't mention

(51:20) they missed two security screenings they don't mention that they're banned in the cargo bay of passenger planes that you claim that five thousand pounds of them this one right here is dangerous enough this is one pound can you imagine having 5,000 pounds of those stacked up I just I want to listen to it one more time because it's actually unbelievable to me that a pilot can make this claim on a video AC cars this is a digital data link system which connects data providers on the ground directly to the aircraft via either VHF or satellite

(51:53) Communications it enables people on the ground to send things like update weather flight plans and even make calls or send messages directly to the aircraft when it's airborne and the part of this system which is going to be most important here far back hold on for notification to Captain and is normally sound out if the aircraft will be carrying dangerous goods in this case there were actually no dangerous goods on board just some special load being loaded no dangerous goods on board just a special load just want to repeat that

(52:24) one more time for you guys so you can hear from mentor Pilots firsthand mouth what he's claiming he said that he's just reading off the atsb report so this is the part where it's

hypocrisy check is we're going to get to another part in a minute where he starts reviewing uh the uh inflection levels of the voice of Munday Communications is that in the official report that he's just reading as well don't be a hypocrite if you're going to take the official report and just do a video about the official

(52:50) report then do that you know what don't just make up a bunch of [REDACTED] consisting of several tons of mango which apparently had a tendency to leak juice and water and therefore had to be checked closely the not talk message confirmed that the cargo had been checked and that it wasn't leaking but what it didn't say was that there was also nearly 2 and a half tons of lithium ion batteries loaded on board but these batteries were individually packaged and stored in such a way that they were not considered dangerous go individually

(53:22) packaged and stored in such a way where they're not considered dangerous just real quick I want to show that c that that wasn't leaking but what it didn't say you feel with here in a second does this look safe to you chat does this look safe if one battery in this package ignites what do you think is going to happen I'm pretty sure the whole thing's going to light up and this isn't even all of them he's just showing the sum I think that there was even more lithium ion batteries than what we even have

(53:53) said with the 500 pounds the ones that we saw were looked like they were stacked together like IEDs and that's from the official report I think it's page 255 and 256 if you guys want to check it out on the atsp report for yourself okay so that's the first claim absolutely ridiculous whether or not you believe we can warp an airplane uh I don't care don't believe it that's fine but to dismiss the fire emergency event which is clearly what happened to this plane which is supported by Mike McKay who sees the

(54:25) plane on fire from his oil at the same time it the plane goes dark the eight fishermen the nine people on the coast that hear loud noises the same time Mike MC sees the fire and then an hour and 20 minutes later Katherine T sees the plane glowing orange flying low smoke coming out of the back of it dark smoke uh consistent with a chemical fire you know this is where if you're ignoring all of these people that are telling you what the situation was the plane not just crashing the plane turning to the panang

(54:54) going to the nearest airport that you would go to to land a plane um to me that's not helping the situation that's not helping the case this is only uh muddying the waters even further when you make statements like this um I think I saw some questions as well Ashton you're ignoring the science anything wrapped in cellophane can't catch fire like what like can we just use logic like basic Common Sense everybody it's it's crazy to me just completely crazy that you know so the reason why

(55:27) yeah hot gases expand uh the reason why they had to ignore this reason why everybody has ignored the fire event is because this plane could not have made it to the South Indian Ocean and a lot of these people that are out there these experts and what have you they are not committed to this plane having crashed in the South Indian Ocean because if it didn't crash

in the South Indian Ocean now what's the prevailing Theory where's the plane why did why didn't we find the plane in straight to Mala or the endam

(55:54) in Sea and the answer is the MH370 videos those are the reasons why we didn't find that plane down there so this is why people can't accept the fire Theory it has nothing to do with the plausibility of the fire Theory they know that the fire theory is plausible they can't accept it because it knows that then they have been pushing a lie that's just the reality of it okay so let me see if there's any other good questions before we move on to the next piece yeah what's funny is after this

(56:26) event there's lithium training and regulations put in place I I agree uh we looked into it and it looks like they literally started to take lithium ion batteries fire seriously right after this which is like guys if you go look at the Timeline especially the faa's website in fact I'll probably pull it up here for you guys real quick because it's actually pretty funny um you just Google fa lithium ion battery fires and the very first link will be lithium ion battery fire incidents here I'll I'm going to

(56:55) change my share screen actually is this going to mess it up and if it does we can we can get it back no big deal here it is oh it doesn't sweet look at this chat look where the data starts 2015 the year after the plane goes missing is when the lithiumion battery incidents begin being recorded here look how many there are look at and this is they've the latest that they've been banned is by 2019 there's some arguments that some people made that they start getting Bann in 2015 it kind of depends on what

(57:36) regulation you look at I dug through them all it's kind of hard to sift through and understand but the latest was 20 by 2019 they were completely banned in the cargo bay of passenger planes and you can tell why look how many incidents there were look how many there were just in 2022 and 2023 74 and 76 actually is two more than I thought last year they must have added a couple more Retros retroactively and you can tell most of our battery packs ecigarette devices cellular phones laptops and other electronic devices

(58:04) anyone who says these aren't dangerous has no idea what they're talking about okay now let's go to now to me that was the most egregious issue in the mentor pilot video most egregious Video issue um let's switch this over oops ion batteries loow now now the next part I want to go to is the passengers um hold on okay yeah I took some notes here so should be good after the push back the aircraft received its taxi clearance and then started taxiing out toward watch Runway 32 right through the dark

(58:52) Malaysian night and for anyone watching the aircraft everything looked completely normal but this was going to be the last time anyone saw this aircraft with their own eyes so what about the passengers then well there were 227 passengers on board coming from 14 different nations 153 were from China making those the largest group guys 153 were from China now this like this doesn't really add much but it's useful but if you're presenting a scenario of Espionage between United States and China China doesn't have any reason to

(59:26) take down this plane it's all their people on board followed by 50 from Malaysia and seven from Indonesia two of those passengers were later found to have been flying on Stolen passports and they were identified as Iranians who were most likely looking for Refugee status and were not considered a threat okay did you guys just hear what I just heard two Iranian passengers are is there any wars going on right now oh Iran is basically shooting missiles at Israel right now two Iranian passengers with stolen passports who changed their

(1:00:01) identity to look like the passports not considered to be a threat excuse me how can I take that seriously we have a plane that went dark where we have no idea what happened to it where even this video is presenting that someone took control of the aircraft and disabled it and there's no evidence that the pilot did it everybody has ruled the pilot out including his wife the officials his co-workers Etc no issues mental healthwise no red flags we got two fake passengers on board with stolen passports that's not considered to be a

(1:00:35) threat not suspicious oh well let's find out what their cover story is guys do you know what their cover story is they were Iranian refugees trying to get to Amsterdam in Europe what in Malaysia in qual Lampur guys if we look have you guys looked at a globe recently if you need to go to Amsterdam there's a direct flag from qualm to Amsterdam to the Northwest you just go up Northwest and you're paying tens of thousands of dollars for stolen passports I don't think money is a problem why are you flying to

(1:01:12) Beijing why are you going to a communist Chinese country where you could potentially get caught if you were then going to fly from Beijing to Amsterdam using stolen passports every single leg that you do every single checkpoint you have to go past is another risk I think it's insane anyone who's presenting a hijack scenario or a scenario where someone took control of the plane you absolutely must think that the two Iranian passengers on Stolen passports are extremely extremely suspicious they were also traveling together also traveling

(1:01:48) together two Iranian passengers who are not related both using stolen passports both changing their appearance to look like the people in the passports two of the only white people on board the plane and that's not weird to you at all it's weird to me so this is the part two where I'm I'm getting really suspicious of the analysis that's being done in this video um because it's not using basic common sense and basic rationality unfortunately especially with what's going to come next as

(1:02:24) well um let's see none of the other passengers raised any type of Suspicion and this means that in total there were 200 none of the other passengers raised any kind of Suspicion how about the 20 freescale semiconductors scientists and Engineers on board the plane has anybody ever worked for a large company before one where you have intellectual property that you're too afraid to lose usually they have uh rules that you can only have two to three people from the same company on board the same plane just in case the

(1:03:02) plane were to crash so the company doesn't lose everything that it needs to operate the passengers were sitting next to each other did Mentor pilot find that out no Arwin from MH

370x did she looked up every passenger one by one found out that all of them essentially were sitting next to each other some of them had their whole families with them that doesn't seem suspicious that doesn't raise any red flags especially in a situation where we have a mysterious plane going completely dark and just never showing up anywhere never finding

(1:03:29) a debris field for it I think you probably want to start with the two people running on fake passports and then you probably want to take a look at the 20 fre scale semiconductor scientist Engineers oh and the 20 frees scale semiconductor scientists and Engineers are connected to us Aerospace and defense through serving RF power needs people have argued that they were working on Advanced cloaking people have argued that they had connections to radar they broke away from Motorola in 2004 the freescale Semiconductor Company did

(1:03:58) because their technology was so Paradigm shifting and not in uh alignment with Motorola company was sold off the next year in 2015 um they were also connected by a 2005 National Security Agency report on the commercial emergence of superconductive microchips if you're making a YouTube video and you're claiming to investigate the case investigate the case you know I've already done all the work for you all you literally have to do is read my evidence list and then just Google the things and confirm every single thing

(1:04:27) that I've been saying obviously people that make these videos don't even do that much work um which you know what I'm going to go ahead and say that I am just I'm officially in at least the top three for MH370 investigators at this point so if you're not at least doing the bare minimum don't bother I've done the work for you I've made it publicly available I don't have behind any pay walls I'm not charging you any money for it just read the evidence it's all you have to

(1:04:53) do at a minimum 139 passengers and crew on board when the giant Bo Tri 7 lined up on Runway 32 Right and started spooling up its engine and I'll tell you all about what happened next right after this talking about leaving traces did you know that there's a whole industry out there known as data brokers who live of selling your digital traces off to the highest bidder what they do is they Snoop up things is he really doing an advertisement 10 minutes into his video he's doing a inrun in video advertisement selling out time to a

(1:05:32) sponsor in the middle of his video use Co pilot for 60% off are you kidding me Mentor pilot are you kidding me right now you're selling me this [REDACTED] that you're posting and now you're going to run and how much money did you make from this enroll advertisement how much money do you think that this guy made from this video in general in fact I'm going to go ahead and look right now cuz a lot of people get at me for being a grifter or whatever no this is real grifting right now this is what real grifting is

(1:06:07) chat if you see me doing a video and then you see a mid roll a video about the case 100% about the plane going missing it's like if I was on Clayton's redacted podcast in the middle of it I'm going and now you should go ahead and uh go to McDonald's and get a cheeseburger it's on sale blah blah blah what 1.

(1:06:32) 87 million subscribers how many follow how many people watch the MH370 video that he has 3.7 million views from one month ago 3.7 million views he probably made \$50,000 off of this video I'm just guessing I'm extrapolating I don't know that to be a fact uh but I've done my numbers just to give you guys an idea I've had only roughly 50,000 views or something like that per month and the amount of money a generates in revenues like \$250 something like that \$300 maybe extrapolate that up this is about 200 times that amount times \$200

(1:07:16) \$300 you're looking at tens of thousands of dollars minimum that doesn't even include how much he was paid to uh do this enroll advertisement as well and everybody's allowed to make money but if you are doing a [redacted] ass job of doing no investigative research whatsoever and you ignore all the evidence and you just muddy the waters and then you claim that you're taking the moral High Ground because you reached out to the families and you're trying to restart the search that simply never happened uh to me that's the

(1:07:45) absolute Pinnacle in height of hypocrisy it is the definition of grifting okay now um the next thing I want to do is I'm gonna I might have to search for this a little bit here okay so there's this anomalous call so the next thing is about 20 minutes in you have to go through this whole thing this whole commercial oh here we go he starts doing psychoanalysis of he finds there was a communication before the good night MH370 and he starts doing psychoanalysis as being a trainer and says I noticed that there was some inflection in his

(1:08:25) voice and therefore or he's basically trying to sell this idea that the pilot or the co-pilot was nervous because they were about to steal the plane he doesn't say that directly but that's the implication that he gives here and he goes on this for several minutes as well of his voice that he was relaxed when he made this call from the way that his intonation kind of dropped towards the [Applause] end and it's from here okay you guys just heard that there was nothing suspicious whatsoever about that in fact

(1:08:59) the officials have ruled out that there's nothing suspicious about that Mentor pilot is not a psychiatrist he's not a mental health professional whatsoever he has no basis to be doing this type of analysis at all on that I have a feeling that we can see the first indication of something being slightly out of order do you guys just hear what he just did right there he's literally trying to vilify the pilot over this over something that is completely mundane we have the first idea that this something might be slightly out of order

(1:09:32) what the hell are you talking about man this is the guy that thinks that teleportation is too hard to believe because you've got to believe peer-reviewed studies show me the peer review on the psychoanalysis of your uh radio communication that you're doing right here Mentor pilot now I want to make it absolutely clear that nothing in the final report has highlighted that whatever happened started as early as here here but I personally reacted to something that was just so he literally says that there is

(1:10:02) nothing in the official report that would indicate what he's about to say right now this is the guy that claims to me that he was just reading off the official report but now he's going

rogue now he's going completely Rogue and now he's going to go ahead and just go ahead and grift for some more content and and make up some completely false claims not supported by anything that's out there briefly mentioned in the report you see about 7 minutes after the captain called in that they were level at flight of a

(1:10:30) 350 he called up again and reported the very same thing main l in the rep okay did you hear anything suspicious in that chat sounded like a completely mundane conversation to me let's go back five seconds reported the very same thing 8370 maintaining level 350 in the report sounds completely normal to me there's clearly no stress in that person's voice but not for Mentor pilot this was highlighted as anomalous but the experts didn't think that it was worth paying any attention to but I disagree you see we Pilots tend to make

(1:11:12) these extra calls for two different reasons the first is that we have just simply forgotten about it and therefore call again just to be on the safe side but like I said earlier this was not a mandatory call to make the other reason we do it is because we've been away from the frequency for a while maybe because we have been fiddling with the radios or turned down the volume or something else and we just want to make sure that ATC hasn't tried to call us while we were gone okay you see if we make that call

(1:11:41) again and ATC justly tried to send so with that in mind there were 7 Minutes between the first call and the second call which means that something might take the away from the radio between those calls the other thing that I reacted to was the tone of voice of the captain when he made that second call Main L the tone of voice what is he talking about complete madeup nonsense not supported by anything again the experts in the report said that no evidence that there was any stress or anxiety I thought he was just

(1:12:26) reading off the report this is what Mentor pilot told me when I challenged him on the fire scenario and the batteries now he's going completely Rogue off the report completely rejecting the report just making up completely unsubstantiated claims that he's not even credential to make they couldn't detect any stress in the voice from the recordings but what I'm hearing is a clear difference in Pitch between the first and the second call in the first the captain sounds relaxed with a clear drop intonation towards the end

(1:12:57) and in the second he just sounds busy like he's working on something at the same time that he's making that call 3 main 37 Main Lev 3 should we listen to it again chat I when I was listening to this I couldn't believe what I was hearing from this guy like this is you're calling me a conspiracy theory and you're sitting here like trying to read body language where you can't even see the person's body it's just it's ridiculous okay let's let's pull it back a little bit making that

(1:13:39) [Applause] call Main Lev this the sound of workload is something that I often hear in the simil now look at this [redacted] video thing that he does here where he tries to go look at this increased pitch like this is just arbitrary [redacted] that they just made up the pitch is increased dude people can just say words in different ways it doesn't necessarily mean that they're going to take over a plane or whatever [redacted] you're trying to imply here like this is extremely

disrespectful to the pilots uh and the families as well

(1:14:18) as well as when I'm doing training in the aircraft and that's why I here's a video of me doing training in the cockpit so I can know whether or not somebody's voice inflection is nefarious or not yeah where did he get his PhD in piology uh oh yeah he didn't he didn't get one and by the way just to be 100% clear he's going rogue from the official narrative here now as well from the official report that he claims that he's following making that call Main L 38 370 maining level 3 so there you go guys we've played it

(1:14:58) three different times I listened to it I didn't hear anything anomalous in either of those Communications whatsoever certainly no one panicking certainly no one having any extra stress going on um to me that's the worst part about this whole video um just he spends like 15 minutes vilifying these guys over this uh this communication now I'm not going to dig too much into the technical aspects because that's the part where Mentor pilot certainly has on me uh the technical aspects but I will again

(1:15:29) repeat that the minister of defense was asked by the New York Times like the next day can someone even make a plane go dark is that even a thing that someone can do and they wouldn't answer the question because presumably the answer is no the only simulation that got close included a manually flown turn meaning that the autopilot must have been disconnected so this is part where I agree so when the plane went dark the autopilot got disconnected totally agree with that actually the new report that just came out says the same thing as

(1:16:02) well the reason why they able to determine this is because the turn autopilot turn doesn't make that sharp of a turn simple logic no problem there why would you make a sharp turn like that if you are a suicidal pilot you're just going to dive down the plane boom story's over when you're making an turn like that that's an emergency turn which would indicate what an emergency event and where do they go chat where does the plane go it goes directly to panang makes a beline towards the closest airport that can accommodate a

(1:16:40) 777 and my dog is going hard on that water right now um okay so let me go ahead and show it here you go so here is our turn I'm going to fast forward it to our turn up here here's our turn planes turning around doing emergency turn maneuver and where does it go panang International Airport direct beline to the closest airport that you can accommodate 777 lowers the altitude so that it can have enough oxygen for the passengers to breathe what does this indicate this indicates an emergency event this is 100% contrary

(1:17:18) to any type of pilot suicide narrative You could argue it's a hijacking scenario but if you're a hijacker why are you going to the closest airport to accommodate a 777 important stuff uh one thing I do want to mention is this guys I hear a lot of stuff from my community and other people about people being assets and people being on the pay roll that's not the case Joe Rogan's not a CIA asset Mentor Pilot's not a CIA asset um that's not even how it works anyway they're more covert than that the

(1:17:51) way that they work is they manipulate people to do things so that it's seems like it's their choice um so you know you'd have a better argument with me of saying that like uh Jeremy Corbell is being manipulated and that's why he told Joe Rogan that the videos are fake that that's something that the CIA might do they're doing it more covertly though they're not just sitting on making somebody an asset the way that you guys would imagine the situation with Mentor pilot my personal opinion of him is that

(1:18:20) he's somebody who's a logical rational guy like I am like a lot of us are and he can't believe in something that is too far beyond the Paradigm too far the idea of warping a plane is too far beyond the Paradigm the idea that the United States government would steal an airliner too far beyond the Paradigm for L people and that's the truth of the challenge that we face when we go over this type of evidence you know um yes it's difficult to believe but again we don't do anybody any disservice or any

(1:18:50) um positive service by ignoring the facts and ignoring the evidence no matter where it leads we need to look at it and this is where I would challenge the people like them and anybody else wants to do investigations at h370 and this is why I told Ross kohart as well even if you don't think the MH370 videos are real you must give credit to the fire scenario you must look at the fire scenario it's supported by far more evidence than the crash in the South Indian Ocean scenario is and the moment they do that they will begin to realize

(1:19:21) that the MH370 videos are what happened to this plane okay so the next part um so the turnback actually makes sense I agree with there he misses the fact that Mike MC's the plane on fire he doesn't ever address that in his video he never addresses uh Katherine T he actually never addresses any of the witnesses none of them at all even though you have 19 witnesses that corroborate a fire emergency event that are all lined up on the the agreed upon flight path of the plane Catherine T is right at the location where the plane

(1:19:52) turns into the South Indian Ocean it's literally impossible for her to have not seen the plane and yet everybody just ignores her like she never existed her sighting is extremely credible she came out and reported the sighting right after she landed in puket the moment she got off the boat she reported it uh she was sure that she saw the plane because she did and she if she was lying then she was committed to the lie eight years later eight years later she was still talking about why the families gone silent the silence is Sinister that was

(1:20:22) her last post on Twitter the silence is Sinister that's not somebody who made up a story about a playing guys that's somebody who saw some crazy stuff and is trying to reconcile what happened to get Truth for the families um okay so there is one part in here as well why that you might ask well the autopilot will only allow certain Bank angles pretty much says what I just mentioned there um now the thing he says coming up here is a little bit speculative at 1725 now now here he basically says that whoever turned was

(1:20:59) trying to avoid radar now this is highly speculative just because there's an invisible boundary here where who controls the radar Zone does not mean that The Radars are limited to

that range I think that there's no chance that the Taiwanese government did not track MH370 just like we know the Malaysian government tracked them um heck Jordan's radar system the Over the Horizon gindy operational network uh radar Network probably could have seen the plane from start to finish so this is where the Over the Horizon radar that sees for

(1:21:34) thousands of miles if he was doing due diligence here he would have looked into the Over the Horizon radar networks uh he would have looked into the Coco Islands uh base that was in the southern Indian Ocean he would have looked into the pine Gap base that probably has over Horizon radar as well as Diego Garcia both of them almost certainly have over the horizon Radars and can see like most of way uh for thousands of miles at least so the idea that anybody's avoiding radar nonsensical that's just not how it works there's no way to avoid

(1:22:02) radar you don't avoid radar by uh uh avoiding imaginary zones that aren't accurate to the radar range entering into that zone and follow it up unless it was properly identified had a working transponder and followed a filed Flight Plan by carefully avoiding that zone whoever was now in control would also avoid any direct scrutiny from the Thai military and given the direction is now turning it's likely that anyone looking at the primary radar would assume that the aircraft was just diverting still

(1:22:32) under mation control this turn would also position the aircraft between that Thai ADI said and Airway Mike 765 which would avoid any opposite traffic so okay a couple comments on this I think there is a possible logical argument where you can make that whoever was in charge of this plane or remote controlling this plane or whatever the situ situation was that they were trying to avoid the official radar zones to stay for lack of a better term fly under the radar to be to not be really get caught right away they want to make sure that they

(1:23:08) know they're going to get seen anyway but they wanted to make it seem as normal as possible you could make that argument that's not what a suicidal pilot does suicidal pilot doesn't give a [REDACTED] how many Radars sees they playing if you're suicidal you're going to crash the plane anywhere anytime you have no reason or motiv to hide the plane either doesn't even make sense so there is that side of it but the other side of it is this you can't hide radar like this at all you can't hide from radar it's just

(1:23:35) not how it works um okay so then let's go forward a little bit I don't know where this in that log and because none of that happened the most likely reason for this satcom loss was a power failure to the system itself now this system can be powered from several different electrical buses and from most of the aircraft so the electrical buses and I don't know enough about all of the electrical buses and turning it off I am not under the impression that a single person from the cockpit can make the whole plane go dark

(1:24:15) and I think that's the important aspect here um but you know I think there's enough uh evidence already that shows that there's no way the pilot did this anyway um and the fire event seems to make a lot more sense I mean you can definitely make a plane go dark if you have an explosion near the electronics Bay and you take out some of the main equipment the

part that I wanted to go into here was when they fly over panang okay so he goes into this for a while oh okay here we go would be quite tiring and that's

(1:24:51) likely why the radar images were showing this small adding variations anyway at this stage the so yeah so he was manually flying the plane and this is why you see the plane squiggle just a little bit because somebody manually flying it you you know just like you're in your car you're not on a perfect line now this is where it gets to pan where right now how is he not wondering how anyone could say this is an Espionage this is the closest airport to land a 777 aircraft continued to be tracked by both civilian and Military Radar as

(1:25:24) it continued its way around the south of also there's a base here called Buttersworth a military base and there's no chance they wouldn't have tracked the plane so it's already getting really weird in terms of why people are claiming they have no idea what happened to this plane when you have all these radar military bases everything supposedly following it n where it started turning right through the Mala straight okay so he missed something else does he mentioned this there were temporary lapses in the radar coverage

(1:25:52) but all in all it painted a fairly okay well I don't know if he mentions it there I'm not going to try to dig through it but he missed the fact that the Pilot's cell phone pings a cell tower why is this important in order to Ping a cell tower from your cell phone on board an airplane the plane has to be under 7,000 feet the plane has to be extremely low why is this important because it may indicate there was Communications that were lost it may indicate that the pilot or the co-pilot had the plane taken from control from

(1:26:20) them and they were trying to communicate it could indicate that their Communications were jammed and it would indicate they were flying low enough a to give enough oxygen for the passengers to be able to breathe again consistent with the fire event um as well as flying low enough to get emergency communication because they knew that the cell phones would not ring above 10,000 feet so to me that's a pretty big whiff on the evidence there because this is the type of stuff where if you're trying to actually solve the

(1:26:46) mystery and solve the case you can't just pick and choose what evidence you like the thing about MH370 investigation reason why our investigation and I say R because there's many people who are in the chat some of my admins right now are some major contributors is that we looked at all the evidence we did not rule any evidence out that we didn't like unless we found that there was no way that the evidence made any sense and that led to a scenario where we found out that yeah the official story out there is [REDACTED] it Cherry

(1:27:19) picks evidence and throws away tons of evidence that they just don't like because they can't figure out how they can't figure out how it was a fire event um and that's just you know that's doing a disservice to the families it's doing disservice to pretty much everybody out there anyone who's trying to find the truth okay um and yeah again the satcom loss is most likely due to a power loss and this is the part where it's going to be indicative of a fire event now the satcom supposedly turns back

(1:27:52) on at 17 or 1825 the problem with this is Katherine T sees the plane at 1840 and it's dark which would indicate there was no power there's no navigation lights so if they spoofed the radar the satellite they may have started spoofing at at 1825 UTC the time where the plane was uh reported as going dark and going missing and being lost communication by subang air traffic control you guys can look up on March 8th 2014 the official reports that very next day said the plane lost contact at 1840 UTC why is this important because this

(1:28:33) is the location and time that Katherine T saw the plane and we think she saw the plane within minutes of the plane disappearing in the videos to me that's pretty incredible evidence okay um now the last thing uh I'm not going to show all the rest of this I'm just going to talk about the whisper data but for like the last 15 minutes he goes into the whisper data link to some incredible investigative work made by Captain Patrick blei and John Lucas Patrick belli he's Patrick blei is exactly that's how you say his name blei Patrick

(1:29:09) blei is the one who literally just came out yesterday and they said that this shows that the plane did emergency descent so hopefully we'll have a update by Mentor pilot here he can get a you know another paycheck and maybe this time he'll present the fire scenario accurately CH in the description of this video which prove without further physical aircraft let see okay here's the whisper I want to be absolutely clear here and say that Taylor himself never designed whisper to be used for the tracking of aircraft

(1:29:44) neither did he actually think that it was possible but back in 2021 an avionic system engineer called Richard Godfrey started exploring the possibility of using the whisper database together with algorithms to look for anomalies in several different simultaneous Transmissions as a kind of poor man's primary radar theoretically if you know the exact location of the transmitter and the receiver together with the time of day and about a million other factors there might be a possibility to use tiny concurring anomalies in several of these

(1:30:16) signals to track something like an aircraft and the really cool thing is that this technology samples thousands of signals every two minutes which could potentially give us much more information than we previously had Godfrey understood this and from 2021 until today he and his colleagues Dr hannes quet and Professor Simon maskell have been trying to analyze this database to try and find traces of MH370 and in a report released on the 31st of August 2023 they claim that they have actually done just that again this video

(1:30:53) is not about whether this technology actually can be used this way or not but what I find fascinating here is that it's based on verifiable stored data so just like with DNA that couldn't be used much during the early years but has since been accur maybe actually I've seen enough okay so situation with the whisper data why is the whisper data [REDACTED] I'm probably one of the only people on the planet that read all 70 Pages or sorry it was 300 pages of the whisper report U was one of the first things I did way back in September I

(1:31:25) stayed up all night reading it actually and uh there's no chance that this stuff works um first of all the guy that wrote it like he just said said it can't be used to track planes he's on the

record saying that doesn't work that way um the idea of whisper data is like you just said with all these pings everywhere what they're try to do is they try to say they try to match first of all with the satellite pings they use the satellite pings they use the capabilities of a 777 how fast it can go

(1:31:52) altitude Etc and they try to estimate then based on that looking at various pings that they find what the track of the plane was the problem with this is this is the analogy I've I given going all the way back to September is that whisper data is like being in a crowd of people and you're trying to find the person who's with you that has a white shirt on and they get lost in the crowd and everybody in the crowd has a white shirt on how many how are you going to find the person with the white shirt on that

(1:32:21) is your person versus all the other people that are out there there's nothing differentiated in these pings and so what the whisper analysis did incorrectly was they used a confirmation bias is that a they assumed that the satellite pings were correct where there's almost no chance that they are after 1840 UTC and then they tried to find pings that made sense and and draw a route it's like if you're playing connected dots but you've got way too many dots so you just pick the dots you like to draw the route that you want now

(1:32:53) you may say Okay Ash and that's that's being kind of unfair um but it's really not in fact that could be way more unfair I mean if you watch any of the in-person interviews with Richard Godfrey it's clear this guy is not an expert in anything he's somebody who's probably passionate about solving the case which I appreciate I am too but he's somebody who is very stuck in his own bias about this whisper route analysis must be the answer and it just simply doesn't lead there so the biggest

(1:33:18) issues with the whisper route in terms of the whisper report which again I read first problem is that once you get past panang it already stops making sense first of all I think that he has in the altitude that they assume a high altitude but as we've seen from the cell phone pinging and the emergency descent and the people who were on the boat This Plane wasn't flying high it was flying low um after it gets past panang he has this plane going in a slightly different route where it hugs the coast of Indonesia first problem is that if it

(1:33:47) went the route that he says it would have crossed over with UAE 343 which is United Emirates uh Airlines flight 343 would have crossed directly over its path which means that UAE 343 would have seen MH370 now they went and did interviews with the pilots of UAE 343 and they did not see the plane it's practically impossible they wouldn't have seen a rogue 777 maybe if the navigation lights were off but this is already implausible number one thing that happened I remember trying to figure out maybe that

(1:34:19) they had been covered up or something like that but it was until later on when I realized the whisper out at it was just Incorrect and the route that he had it going didn't make any sense so then he has the plan go to Indonesia and hug along the coast of Indonesia and the argument here is that they were avoiding radar again this is not how you avoid radar planes don't fly along the coast like a human being would run along the coast on the beach that's not

how planes operate a suicidal Pilot's going to fly directly over the

(1:34:47) route of the of the peninsula and anybody else who's going somewhere else is not doing it to avoid Radar Radar extends beyond the coast so this was the second mistake that was made with respect to the analysis in the whisper report now the third mistake that was made was when the plane goes to our point where it turns then turns into the South Indian Ocean around Indonesia The Whisper report has it doing a cutback and it's fine that you have the plane doing a cutback the weird part is when you read the top of the

(1:35:17) whisper report in the top of the whisper report it says the plane does a cut back as if someone to see if anyone was following the plane this is the part where hey wait didn't you just say you were just looking at ham radio signals there's no way that you can infer information about checking to see if someone's behind the plane this is the part where you are now creating a a n Tel Nolla in your head and you're adding Your Own Story to the to the incident that there's no evidence that supports so this is the part where I

(1:35:47) started getting really suspicious and when I first saw that I went whoa this was a spy thing someone was tracking the plane he was was checking it out and then when you find out whisper thata doesn't work that way at all you realize oh he was just making up complete nonsense and the real killer is the part where it's obvious that Richard Godfrey could not find any pings to keep the route going so what did he do he built in a 22 minute long holding pattern yes in the in the Indian Ocean just randomly oh I'm just going to go

(1:36:20) into a holding pattern for 22 minutes and fly around in circle now why did he do that because there were no pings that had a continuous flight path for what he was trying to accommodate um and that's the killer to the whisper route data that shows conclusively the whisper route data is nonsense nobody who's either hijacking the plane or a suicidal pilot is going to be uh you know flying around in circles there was also a lot of the pings showed the plane doing direct routes directly at various airports and

(1:36:50) early on I thought oh well this is because it's the person's panic and they're trying to land the plane but you would have landed the plane at any one of the other airports if that was the situation the rationale here was he was just using faly ham pings that weren't really the plane and he was tying them to the plane when they have no indication of being tied to the plane so um that that's the the real rub regarding the whis oh and I guess the final thing is that Richard Godfrey claims that his whisper analysis knows

(1:37:17) exactly where the plane crashed and it didn't crash there they already checked there's nothing there uh so these are probably the the the the whole things yeah just for the for the judgmental lizard here yeah he literally made up a holding pattern where the plane just flies around in a circle for 22 minutes because he couldn't find any pings that kept it going um you guys can go look for yourself you don't believe me again I read the whole thing uh whisper analysis is complete nonsense um and you know this is the reason why the

(1:37:47) officials have not taken Richard Godfrey's analysis and and done a new search despite the fact that he says he knows EX where the plane crashed because they know it's nonsense as well they know that they're not going to find the plane there and so just to close that part out before we go to my video on redacted I am 100% in support of an additional search I think if they don't search given how many people claim to know exactly where the plane crashed or that the plane really just sank perfectly intact between these two

(1:38:15) crevices and this one spot where we somehow didn't check underneath the water uh based on all these supposed experts that all claim to know where the plane is and the guy that also says that he pulled up part of the wing on his tiny little boat and that he knows exactly where thing is if they're not searching after all this what does that tell you tells you they know they're not going to find the plane it tells you they know the plane didn't crash down there and they know it's a waste of

(1:38:39) money and waste of resources they already spent nearly 200 million or more dollars searching for the plane and the Malaysian government would have been in the know from the beginning they would have been told by N's government what really happened and why they're never going to find it there and the whole search was just a big show so uh again I hope they search because if they do search they won't find the plane and the more times they search and find nothing the more people will realize the satellite pings going to the South

(1:39:06) Indian Ocean are nonsense they're obviously nonsense but um it's going to take some people longer than others to figure that out now let's take a look at some clips from the redacted podcast so now I just want to compare I want you guys at home to compare the whisper report that I just talked about uh Mentor Pilots um video and how he presents information which it doesn't do the worst job presenting it but watch how I present the information on the redacted podcast because when I present information I am trying to get out as

(1:39:46) much evidence as possible and I think about how much time I have and I just try to present the evidence because I know that you guys time is valuable and I know the people that are out there they don't want to hear stories they don't want to hear unsubstantiated information they want to hear the hard evidence so they can come up with their own determination of what they think happened and that's why I think that this interview I did with Clayton uh Clayton Morris on redacted was so good uh I watched it all myself earlier today

(1:40:13) and even I was impressed with uh the amount of information and the how much I was able to condense into only an hour and 20 minutes what really happened to Malaysian Airlines flight MH370 you should definitely check it out I'm not going to watch the whole thing here I don't want to do the whole thing here tonight with us uh I do want to sleep but I do have some specific parts that we're going to go into we're going to start with the pilot suicide myth and actually I think I saw a good question there real

(1:40:46) quick is there something like a md5 check sum on the video uh people have asked

about that you know what it's been a long time since people ask about that I don't think so but I'm not sure maybe Maybee took and it doesn't um it's just somewhat similar as it goes over the Andaman SE okay so uh so there's some uh pieces of the plane in Africa and uh this narrative after he posted it out there got legs people started running with it this suicide but I don't think people realize that everybody has ruled that out the

(1:41:22) officials have ruled that out the wife supported him the co-workers supported him people think that there was this simulator data that was found FBI has ruled that out uh experts that actually I don't even agree with in general have ruled out the simulator data it turns out that that was just mh150 from qualm po to Jetta and he was actually scheduled to fly that route the next day and they've gone ahead and tried to you know the narratives out there have tried to say that this somehow matches the route that the plane took and it doesn't

(1:41:49) um it's just somewhat similar as it goes over the Andaman SE uh so so there's a lot of misinformation out there that people have absorbed and and kind of now built into this Narrative of this pilot suicide but if you look at the flight path there's no indication of suicide whatsoever like if you are suicidal you just crash the plane you don't turn the plane around when it goes dark you don't fly to the nearest airport that you could go to to land a 777 you don't try to avoid radar flying around Indonesia

(1:42:20) if you're suicidal you don't care about any of these things um it's pretty clearly an emergency event situation just given the flight path alone maybe we oh there we go right there um I mean that that pretty much just puts the nail in the coffin of the suicidal pilot there the simulator data is not a pre-planned route it was ruled out by the the FBI um it's not even a match to the route that's the funniest part um it's it's basically the equivalent of the people that said the Pyromania VFX

(1:42:52) matches when it just doesn't match like there's only one part of the route that's somewhat similar and people like well that's good enough that's all we needed uh when you're vilifying a pilot when you're trying to come up with evidence for it um you know you need to come up with more than that and the biggest thing is that we never found the plane in South Indian Ocean right so if those pings were correct and where's the plane um Now High science is the next clip that we're going to get to here

(1:43:18) around 13 minutes in traveling together do you have you piece that or is it still speculation at this point yeah I think the narrative that makes the most sense given the totality of the evidence at this point is as I mentioned one of Espionage um that and I think that we couldn't have figured this out without the videos um because what we see Happening Here is potentially that we have people defecting to **China** with intellectual property from the American company perhaps **China** had some leverage over the eight freescale semiconductor employees

(1:43:52) that were Chinese Nationals if you look into free uh to semiconductors in general uh you will find that the stocks of semiconductors have skyrocketed especially over the last few years I mean just look at Nvidia over the last six months um so one big aspect of the MH370

videos is the idea of super conductivity room temperature super conductivity in my mind this is the uh fundamental requirement in order for us to achieve anti-gravity and additional advanced technology that we would consider as high science I think we've

(1:44:23) had it figured out for potentially decades and this company like free scale semiconductors I think you could call free scale superconductors and if if if they had some component like those microchips that was just mentioned that could allow for Magical technology that is essentially a uh super weapon capability type of technology that allows you for absolute military supremacy of the planet then the narrative here that makes the most sense is the United States government is preventing **China** from getting access to

(1:44:50) this technology because whoever controls this controls the world and the idea is that these individuals were working for an American company that Were Somehow defecting bringing this information to **China** that's I think the as hard as it is to believe that makes the most sense and if you go back to what we talked about right away in terms of the weird obis that happened right away about yeah so anyone who's ignoring the 23 scale semiconductor scien to some board this playing really odd I mean if you need a

(1:45:17) hijacking scenario this is not a loan pilot that would have pulled this off this requires much more coordination it's a very sophisticated hijacking if so and then immediately these 23 scale semiconductor scientists stick out like a sore thumb um what happened with this plane and why it seems like a cover story was being developed at that point and one of the strongest scares was this idea of a hijacking scenario but you're old enough and maybe a lot of the audience are old enough to remember 911 in terms of this idea that they had a

(1:45:48) very low Tech uh hijack where uh people stole those planes and CR them uh what have you this seemed much more complicated uh in terms of the flight path it was there was they didn't crash into any buildings that we could find um it was very it's very difficult to make a plane disappear and go dark but if it's a state actor pulling it off then it actually it becomes much more plausible even though it seems more like something out of a movie um but I think that the United States government **China** and potentially even **Russia** might have

(1:46:19) this type of um uh uh might be able to have this type of cap cap abilities okay so um yeah anyone thinks you can avoid radar you can't um there's nothing a foyer related to passengers I fyed everybody around MH370 I've gotten essentially nothing back I foed every single Department pretty much uh around it and what was the other things have the Iranians been profiled not really that's the thing this interview here is the redacted podcast you can find many links to it uh on my Twitter profile or

(1:46:52) you can go to redacted on their YouTube Channel please check it out um you know we've got Mentor Pilots videos 3.7 million views this one only has somewhere between 350,000 we need to get that bad boy up to over a million so that people can begin to learn real **truth** as you can tell I'm presenting factual information and I'm weaving in my opinions as necessary so that people can understand the story but the point on this interview is to get as much

information in the hour and 20 minutes as possible

(1:47:21) for people now the Espionage event starts here around 1800 I think you guys will find this pretty compelling in the forward cargo bay right next to the electronics Bay uh and it then for whatever reason it doesn't land there it turns and goes into the Straits of Malacca now it deviates its direction a little bit heads towards the Nicobar Islands now the official or the news reports the next day or the same morning when the plane disappeared said that this plane lost contact with Subang air traffic control at 1840 UTC they later

(1:47:51) changed this to say that the milit was tracking it until about 8:15 or 1815 or 1822 UTC um not quite at the location where they then later argued that the plane turned in the South Indian Ocean now interestingly enough at 1840 UTC this is the time in the Nicobar Islands where they claimed this plane made a sharp turn in the South Indian Ocean and then just flew for like five hours straight until it supposedly crashed down there somewhere this is also the location of Nicobar Islands around 1840 UTC that we've pinpointed the location

(1:48:24) of the MH370 videos happening and there's even a witness there named Katherine T who saw a glowing orange plane at low altitude descending with smoke coming out of the back of it and we were able to determine from this that the glowing orange uh plane was because of uh bromine which is a halogen gas from a chemical reaction of the 1301 fire extinguishing devices that would have been permeating throughout the plane putting out the fire in the cargo bag for a little bit over an hour this is also so yeah the Katherine T

(1:48:59) sighting is I can't believe people ignore that like so important and it happens the same time the videos happen and in the same coordinates generally where the videos are happening uh blows my mind that people just completely ignored her and ignored her sighting that was out there uh let's skip ahead to 20 oh yeah here we go actually coord in the MH370 satellite video in the bottom left you can see that it says nr22 which is the first national reconnaissance office launch of them in 2006 the coordinates change when the

(1:49:37) perspective of the video changes and this tells us a couple things it tells us that we're not looking directly through a satellite because if we're looking through a satellite and the satellite's moving those coordinates would be moving in real time as well but they only move when the person moves the video screen around now this is going to be consistent with if you were using like some type of Google Maps Google Earth type situation we were able to map that out and graph it out and I initially had assumed that maybe there

(1:50:00) was a minus sign in front of it in which case it would have put it in the South Indian Ocean but when we graphed it out we found that if it was in the South Indian Ocean the plane would have been going north into the East and that was impossible because in both videos the plane is turning left and if you're going north into the East you'd be turning right so we were able to determine that this coordinates the plane must be moving flying south into the east in the videos and the location must be the Nicobar Islands of the same

(1:50:24) location where Cath and T saw the plane I mean I mean Kaboom chat Kaboom I'm going to make another post later tonight because the satellite information and the coordinates and then lining up with the relocation of the video it's undeniable it's so much evidence that it's ridicul like somebody what they decided to add coordinates in their fake video before the raw Telemetry data was even made available the raw Telemetry data wasn't available till May 28th but the video was published on May

(1:50:59) 19th so they just guessed at a random location that ended up being the real location where the plane turned into the South Indian Ocean even why would they even add that the moment that that was that information was wrong the whole videos would been proven to be fake it makes no sense and the coordinates are accurate to six decimal places when I say they're accurate to six decimal places I mean when the perspective moves it's accurate to somebody moving the location on a a coordinate map on a 2d coordinate map they didn't just put

(1:51:30) random numbers in there it's like actually a real overlay of a real coordinate system so they what built in a they built another software computer program coordinate system and then they perfectly overlaid it with the shifts in their fake hoax video and what this was a random board some somebody boor who was trolling on the internet if these videos are fake they are faked by a state sponsored actor they're far far too sophisticated and faked by some bored Bitcoin billionaires like Tim P would say so I

(1:52:06) the part of this is like **debunk**ers can't even address this I think I the most recent **debunk** attempt of this I've seen is that they think that they just guessed at the location based on the last radar location which was three or 400 miles away what come on man this is where people is got to get real um so now if we have that location where we last saw the plane do we have any debris that was recovered that's been authenticated that this may have crashed near the nicobar islands yeah so there is the best debris that would argue for

(1:52:43) the nicobar islands location is actually a b777 fire suppression device that washes up in the malds that has looks like a little bomb but if you look at it and compare it to the fire suppression devices in a b777 it's exactly the same it's a circular metal device with tubes coming out of it and the only way it could have washed up in the m to use was if it was empty guys first of all Clayton's producer did an amazing job adding the videos I don't know if you guys realize this but I was not looking at the videos

(1:53:14) when we did this interview I was actually doing that all from memory when we're talk about the videos and I talk about them several times on here he superimposed the video into the interview afterwards I sent him all the information he superimposed the b77 fire suppression device all that stuff got superimposed into the videos afterwards he did a great great job it gives you such good visual cue for it how is the b777 fire suppression device not a just a complete Smoking Gun of course it was a fire event it's corroborated by 90

(1:53:47) Witnesses a b777 fire suppression device washes up in the malds like a week and a half later they literally reported on it as a bomb they reported on it as a bomb even though it's a

b777 fire suppression device why because they couldn't admit the **truth** obviously that's from the plane there's a serial number on it what the hell it could only have washed up because it was empty was it from some other b777 come on guys it's crazy if it was full it would have sank uh and this was reported on as a bomb

(1:54:25) and the Malaysian Minister of Defense went ahead and just ignored it we're going to skip ahead I don't want to be up all night Royce engine showed up in South Africa here we go the debris they did some modeling which if you have lived through Co you know that modeling is complete nonsense um and the first model they did of the debris drift analysis didn't put the debris anywhere near Africa and so then they did a new one and then they said oh okay yeah now this can explain how the flap around could get there but nothing

(1:54:56) can describe explain how a piece of engine cowling from a Rolls-Royce engine showed up in South Africa um this debris should have washed up in Australia they have the plane supposedly based on these satellite pings that they've used most of the experts believe these satellite pings are accurate and that we know where the plane uh crashed but we searched everywhere above and below water along the seventh Arc and found nothing not one piece of debris if that location was correct there should have been debris washing up in Australia and

(1:55:25) it can't possibly explain how this supposed debris washed up in Africa so uh and real quick because I I like to address people in the chat here we've got blue wave that says a French reporter walked into Airbus 77 okay so first of all you have the wrong craft Airbus is not the same as Boeing they're two different companies and yes that is a 100% perfect match to a b777 fire suppression device I'm not going to argue the point I've done multiple posts on it on my Twitter you can see for yourself it is a 100% perfect match

(1:56:00) that's a b77 fire suppression device b777 fire suppression device the fact that you even mentioned Airbus tells me you don't have any idea what you're talking about Airbus and Boeing are two completely different companies so again please stop believing fake stuff that you see on French news or TV or whatever um believe what your eyes show you believe reality that's my response to that person then I think we can clearly say we have no evidence that it crashed is that safe to say I think that you could

(1:56:36) argue that there's not enough debris to prove that the plane crashed and we also found another plane that was purchased by GA tesis in October of 2013 this is essentially an exact replica of the plane okay so here's a good question too so people ask so and this is kind of goes on with just Clayton just asked so we have no evidence that the plane crashed I wouldn't say that I think that the debris that was found was from MH370 and just because a plane gets warped somewhere doesn't mean it went to

(1:57:04) another dimension it doesn't mean it went to another galaxy it doesn't mean it went to the moon the plane can simply go somewhere else on Earth this is one thing that I I don't know why people struggle with this idea so much they think that if the plane got warped somewhere it's gone permanently or that it went somewhere else super far away if there's a

fourth orb and you have to warp this fourth orb somewhere for warp This Plane somewhere then this fourth orb has to be somewhere as well that you

(1:57:34) can send it can we send an orb all the way off to the Andromeda galaxy can we send it to the fourth dimension or Fifth Dimension can we send it to the moon theoretically the simpler answer is they just warped it somewhere else on Earth if you warp it somewhere else on Earth as well you don't have a big time dilate effect the time dilation effect is going to be based on how far the object travels so it's very possible this object did not travel that far and the debris that they find is much more consistent with a crash somewhere around

(1:58:06) the Maldives or Diego Garcia or as I proposed that the plane landed in Diego Garcia but with the fire events the plane might have had some structural Integrity issues there might have been holes in the plane the plane might have been depressurized because of an explosion due to the fire but didn't just didn't blow up and in that scenario you can have debris that fell off the plane hell guys look at the Southwest plane had its engine rip off the engine coling ripped off a Southwest Jet last week while it was T Excuse me while it

(1:58:39) was taking off and it wasn't on fire or anything we had a door fly off a b a boing plane just like two or three weeks ago door flew off in the middle of its flight on takeoff so to me the tiny amounts of debris are 100% consistent with the fire event alone and I think that there is some possibility that crashed if so it just it didn't crash in the South Indian Ocean crashed somewhere completely differently my opinion though is that it landed somewhere because if you're going to warp a plane why are you

(1:59:09) warping it just to have it crash anyway doesn't make any sense but I can't claim to know stuff that I don't know for sure and this is the difference between me and some of these other experts that you'll see is that a lot of the experts out there say I know exact what happened to the plane I could tell because I looked at one flapper on and I was able to deduce that the the flaps were down and therefore this was a pilot suicide who tried to perfectly land the plane blah blah blah like these people don't

(1:59:34) know that they're just making that up I'm not going to tell you stuff that I don't know I'm going to tell you what the evidence says and I'm going to give you my opinion on what that evidence means but that's a good question that was scrapped 10 years or more too early and that the FLA was actually not connected with unique serial number the unique serial plate was actually missing off of the flaperon so instead they broke apart the flaperon and looked for part numbers and they found a partial part serial number match

(2:00:04) now I would argue that if you've got replicas of the plane out there also purchased from Malaysian Airlines then those part numbers could be from another plane however the scenario that we've presented with this high technology and MH370 videos is the idea that this plane had some type of super luminal event happen Star Trek warp drive if you want to think of it as that so that this plane moves from the nicobar islands somewhere over near the malds and then at that point flies South towards Diego Garcia and this would actually from the

(2:00:32) drift analysis models uh be a better more accurate representation of where this debris got into the water and then to wash up over there uh yeah so uh and just to try to go through this a little bit faster I don't think we have any witnesses that say they saw debris coming off of it but there may be two additional witnesses that were on the east coast of Malaysia that I haven't Incorporated yet into this our our number of witnesses may go up to like 21 the problem with some of the other Witnesses is that the direction of

(2:01:01) travel seems a little bit unreliable in terms of where they think the the the plane went but they they probably saw it it's hard to say um so that's the debris again I'm not going to go back and forth the b777 fire suppression device literally just Google the images of the b777 fire suppression device you can see there's a serial number on the one that they found and you can see that that's an exact match to what b777 fire suppression device looks like um it's no coincidence that this thing washed up in

(2:01:30) the Mal Dives uh just a week and a half later okay uh 26 minutes the **debunks** so I addressed the **debunks** here close to matching even a single frame from the Drone video that we see and what a stock effect for yeah what is a stock effect for our audience stock effects are when you are doing visual effects and you want to save yourself some time from having to produce something from scratch you use a stock effect and you insert it into your uh video creation for example this was done in The Killing Time video game which where the stock effect was

(2:02:03) put in exactly as it is uh this was used in an attack on Titan anime commercial and it was also used in the movie Starship Troopers and in none of those did they manipulate the stock effect in any way and also it was also found in Eastbound and Down like yesterday as well so we have four incidents where the Pyromania VFX was used in major Productions um and not in a single one of them did they modify it in any way similar to what is being claimed by **debunkers** in the MH370 videos not one instance in fact I've challenged the

(2:02:39) **debunkers** to bring up even a single instance where the Pyromania VFX was had all its pixels moved around and changed color and change shape and everything that they've claimed and they've produced no none at all uh regarding the person asked if the can the fire suppression device be link to MH370 it probably could have been there's a visible serial number on it they used a part number to match a flapper on to the plane uh you would think that they'd be able to use the visible serial number on the b777 fire

(2:03:11) suppression device to match it to MH370 for some reason they didn't do that and they dismissed it out of hand um let me see if I can find it real quick I mean I could just scroll back but think I can find it here quickly oh I don't have the image oh yeah here it is here it okay so here we go let me share this and again you guys can Google this stuff for yourself you don't have to believe anything I'm saying but this is obviously a b777 fire suppression device there's no question that's what this device is you're

(2:03:57) looking at it that's it right there that's your b777 fire suppression device this Mal div's

finest is a good uh website you can see look you can see the serial number wait is that not sharing hold on here we go there you go you can literally see the F the the serial number on the top of this bottle right here you can literally just see it right there they could have used this to match it to the plane they instead reported on it as a bomb it's obviously not a bomb so anyway stop screen um and in supposedly in these

(2:04:43) videos the people the dunkers have claimed that they have manipulated the color reshaped it resized it adjusted various contrasts Etc and uh that to me doesn't make any sense regarding how visual effects works so there you go you saw the two different um Clips so just to show that again real quick example this was done in The Killing Time video game which where the stock effect was put in exactly as it is uh this was used in an attack on Titan anime commercial and it was also used in the movie Starship Troopers and in none

(2:05:21) of those did they manipulate the stock effect in any way you know what I'm just going to show it on my computer instead of showing it on the thing here it's easier I just have it I mean I sent them all these uh anyway so here is the comparison okay so this is a perfect overlay of the asset to the video so the what you see here with the color on it is the actual asset what you see in black is the actual video so you can see in the middle here it doesn't match at all all this black on the background

(2:05:55) is where it doesn't match you can even see the part where the plane is sticking out that doesn't match the internal part here and then on the edge I agree they were able to resize and find a blast circular blast zone that is somewhat similar but it doesn't actually match it doesn't perfectly line up there's actually a number of these dots that aren't in our zap at all so you would have to airbrush all these out you would have to clean up the edges completely change the middle and this is the only

(2:06:20) frame that's even similar the rest of the frames on this asset as you see here are not even close the black that you see in the background is the actual zap what you see here in the foreground with all this zap coming out of it the asset that they claim was used this asset was conclusively definitively factually not used in the MH370 videos there's no evidence that it was whatsoever this is not the same thing that's in our videos I'm going to show it one more time uh because a lot lot of people for some reason are stuck on this

(2:06:53) idea that they think there's video game effects in here that is not in our video so um and again that comes from a guy named **Mick** West he deserves all the scorn for pushing that fake **debunk** he's the one who found it he's the one that took credit for it on the same exact day that an anonymous one-day old account claims to have found it on **Reddit** Corridor crew did not come up with that that was not their idea Corridor crew found that from **mcwest** on metabunk the corridor crew are not original thinkers

(2:07:23) they're probably not even VFX artists they're just literal frauds who steal other people's content and pretend like it's their own that's exactly what they did on the Danny Jones podcast that's exactly what they did when they made their **debunk** video I'm saying that as a

factual statement they didn't take that information or come up with on their own they literally took **Mick** West's and played it off like it was their own that's called being a fraud especially when you're wrong as well like they were

(2:07:51) and the funny part is on on the Danny Jones podcast I knew everything they were saying was factually incorrect and even after I showed that it was factually incorrect and even after I said that that effect is factually not in our videos Danny Jones looked me in the eye and said but they're experts you have to believe them Danny Jones is a [ ] [ ] hear me I'm gon say it again Danny Jones is a [ ] [ ] makes me wonder if he has to have help his shoes together in the morning it's just it's embarrassing that someone

(2:08:26) would say yes they were wrong about everything but you should believe them they're VFX experts they play one on TV they're idiots Nico and the Jordy lege guy they're morons and I really hope that people aren't getting their factual information from dumb asses that sit on a couch that have no idea what they're talking about that are factually incorrect about everything they say that splice in cartoons into their reaction videos it's not how adults act okay now that we've addressed that

(2:09:02) and for the people that are like Ashton why are you being harsh on Danny Jones and on the Coro crew well they deserve it for one and no I'm never going to stop letting up on them not till the end of the Earth okay so if you are a podcaster and you try to have somebody on and you try to **debunk** them and attack them you deserve to be ridiculed for the rest of your career and I'm going to ridicule them for the rest of both of their careers and when the videos are proven to be true I'm GNA ridicule them even

(2:09:33) harder get ready okay next thing uh 32 minutes in video explanation and then supposedly in these oh and this is the best part right here where was that right there so people have argued that this Cloud picture uh has the clouds in it that MCH the satellite video and that this proves that it must be fake in general now the problem with this is that even before that cloud picture showed up we already proved that the clouds were moving and evolving each frame of reference in the sil video is only a few seconds long so

(2:10:05) the clouds aren't moving significantly but they're moving a little bit they kind of evolve you can see the edges kind of grow or or shorten we can see the first orb puncture a hole through one of the clouds but the most important aspect that rules out a cloud picture is that when the zap happens in the satellite video it actually accurately illuminates the clouds in three dimensions in the foreground and the background for this type of accurate illumination you would have to build a full 3d rendered environment you cannot

(2:10:32) use a 2d visual effect for that so whether or not I there you go guys so whether or not you think there's a satellite picture or a 2d uh Cloud picture in here doesn't really matter because you can't use you can't make accurate 3D lighting using a 2d picture as you saw in that clip right there the clouds match in two different videos from two different perspectives which proves that you would need a full 3d rendered environment to get that to happen nobody who's

come even remotely close the people have tried to recreate

(2:11:00) the videos nobody's tried to recreate a 3D model environment from two different two different shots because they know they can't recreate these videos so people anyone who's claiming they've recreated the videos is lying to you they have not both Recreations that I've seen have been terrible um the cloud picture one literally copied every aspect that it could from the video and it's still is you can tell that it's fake within 5 seconds because the plane doesn't even match and that's because the uh asset

(2:11:31) that they claim they found for the b777 S doesn't match our videos because when you look at a real video it's not a stock effect it's not stock assets that are being used it's an actual real video in real life it's like trying to claim use a stickman for me and going well that video can't be fake the stickman stock effect I used for Ashton doesn't match yeah it's because I'm a real person not a stock effect um and then the best part too and I didn't even mention the fact that there

(2:11:55) was um some of the the debris that was found had burn marks on them so if you don't if you don't believe me does again it doesn't matter if you believe me because I have the hard evidence so there is your burn mark that has clear heat damage on it it's got Scorch marks all over this thing so some of the debris and this has the honeycomb pattern of a Boeing airplane as well even though we have serial number to matches to the plane so they actually even found debris that actually has burn marks on

(2:12:29) it like the amount of evidence that people had to ignore in order to think that these videos are fake is crazy and if you don't think that somebody would fabricate fake evidence to dismiss this case you are not been paying attention I've had many **scammers** and hoaxers try to fabricate fake evidence to **debunk** the videos that's how mentally unwell people are in in this world in general is that people will literally fabricate fake evidence in order to try to convince people that they they have no reason to

(2:13:01) try to **debunk** these videos they literally just need to have their minds be at ease this picture here proves that we're not looking at a 2d Cloud picture in in the satellite video you can see accurate 3D lighting here this requires a full 3d rendered environment to get the the light Point correction uh correct here otherwise we would not see correct Lighting on this Cloud here on the left on these clouds near at the bottom you see how they're even darker down here this is accurate three-dimensional lighting you can't do

(2:13:30) this in a 2d picture nobody randomly went to all this effort to make this stuff there's no hoaxer of these videos okay guys I haven't done MH370 streams like this in a while um the only reason why I'm doing this by the way is people wonder well hey Ashton haven't you uh reti from the case technically but now the moment I retired everybody wants to talk about it again I've got people making videos I've got huge podcasters like Clayton Morris or redacted wanting to talk to me I've got another big

(2:14:03) appearance coming up next week as well um that I haven't really talked too much about I don't not gonna be announcing my big appearances uh beforehand it's not Joe Rogan or anything that huge but it's a big a big uh big platform um so and then we new articles of as well like the new article that we saw just yesterday regarding the emergency descent came up yes of course I'm going to talk about that kind of stuff so anytime anyone comes at me anytime anyone makes these videos about the case or about me I am

(2:14:33) going to discuss them and that's what we're doing here although we haven't done any new hardcore investigation related to this I'm mostly just focused on the science and understanding the science of macroscopic phase conjugation and how we can warp a plane which apparently we can do because we're seeing it two videos uh let's see here okay so now we've dealt with the fire suppression device bottle let's go back to the video real quick just presenting the evidence for people that can come up with their own

(2:15:01) opinions on it and and later as well I'll present the strongest evidence for Why the videos are got a few more things to do okay want people video explanation they got the wrong picture here is a software setting in the rathon cameras that is available and this may be the default settings as opposed to the black and white that we've seen from the dod Navy videos that were Declassified in 2017 now we're watching a Boeing 777-200 that's an exact overlay of Malaysian Airlines flight 370 which indicates that we are actually looking

(2:15:32) at Malaysian airlines in the video and we see it making a hard left turn we see it descending in the videos we can tell that we are looking at cumulus clouds uh these cumulus clouds only form at low altitudes we checked the weather pattern for that day and within 15 minutes of when we think these videos happened the weather actually had low altitude chos clouds in the nicobar islands I mean chat there's our low altitud cumulus clouds at our coordinates within 15 minutes of videos happen um one quick point I want to bring up this is a good

(2:16:05) question that was brought up in the chat can the teleportation Tech move children from one place to another this technology absolutely seems like magic it does but I think that still the technology that we're looking at these videos is the most rudimentary form of teleportation or warp drive if you want to call it that I'm going to call it warp um which means I think there's still limitations I think that having a large object like they they had is probably easier than trying to teleport an individual person that's on the

(2:16:36) ground I think that the object might have to be in the air uh I think that in the future if this technology advances then you could get to a point where you could actually have like a like a warp gate where you just walk through and then you're somewhere else but I think that that techn technology is the crazy part about this is just because you understand warp technology or you discovered warp technology does not mean that you have unlimited access there's still much further to go in terms of advancing that technology which is why I

(2:17:03) think that people shouldn't think of this as technology that is impossible they should

think of this is the starting point for the technology and it's just going to get crazier from there but to that point there are some pretty dark aspects if you watch the end of this interview you'll hear those aspects that we talk about the plane is actually maxing out 777 200 wall and descent wall turning at roughly 150 to 250 mil per hour this would be very difficult to uh fake in fact there was somebody who posted on social media

(2:17:34) claiming to be a VFX artist from the movie Top Gun Maverick that said that scaling down planes like this and getting it to be accurate to the capabilities of the plane is some of the hardest things to pull off now what we see both videos actually are in perfect synchronization we have a satellite video looking from one angle and then we have a drone video looking horizontally from a completely different angle from the opposite side you can see the clouds match in the Drone video we can see these orbs begin to circle around the

(2:18:00) plane in the satellite video we see these orbs coming in at roughly 2,000 miles per hour Mach 2 Mach 3 speeds we've estimated based on comparing pixels in them and in both videos these orbs are Defying Gravity as we know it okay I'm not going to go through the whole thing here you guys have probably watched me talk about the videos a million times you can watch the whole thing for yourself as well I want to go to the sketchy data at 40 minutes they did a good job sket that the acar system was turned off at 1707

(2:18:32) UTC which is 13 minutes before the plane went dark but then we have full data from 1707 all the way up to 1840 UTC and then at 1840 UTC which the next ping is 1941 UTC through 2313 UTC again about 5 hours we just have 10 of data and there's a pattern in that data and they try to argue that something changed but I can't figure out what that might be in terms of why there would be this difference here in my mind if the system was turned off at 1707 the discrepancy should begin at 1707 they shouldn't

(2:19:08) begin at 1840 UTC we looked into the satcoms all the sacom systems that exist out there all have zero day vulnerabilities and exploits they're all easily hackable in in fact you probably only have to change one value in these systems in order to get people to believe that a plane went in a different direction than it actually did for example to convince people that it went South instead of going to the west but the strongest evidence why those pings are not true is that we found nothing in the location where those pings

(2:19:39) supposedly say that the plane went into the South Indian Ocean we didn't find one piece of debris so here guys when you're looking at the screen here this is your evidence for these pings just don't make any sense the pings are great now look at the times here on the left you'll notice it says 1840 after 1840 1941 2041 21 all of a sudden all the data is gone all of a sudden just every hour there's a ping and you look at look at this there's a pattern 104 104 104 104 104 the the satellite changes right here

(2:20:12) the the channel or whatever this is here just changes at the same time as well what is this why is there this huge discrepancy this is the time where they claim the plane is flying in the South Indian Ocean everything up here 1840 UTC is the time where we think the plane got

warped how does anyone look at this and not see this giant discrepancy and go that's weird especially because they say the acar system was turned off at 1707 okay so why is the data up until 1840 all solid and good none of it makes any

(2:20:45) sense so the Ping data is weird um if you want to know how and why you can either rewatch The video or you can look at my frequently asked questions posts that I made uh do I fear for my safety no I don't fear for my safety I don't care if anything happens to me it was worth it also if anything were to happen to me it would only add more credit to the case the case would blow up if I was like mysteriously died um people would be asking serious questions and you guys would like take it to the next level in

(2:21:11) addition to all my conspir I mean guys I had my my power supply blew out and I had like 50,000 views on my post about my power supply blowing out which was pretty damn weird I'm not going to lie the sound it made was very loud but I think it was probably just a normal thing they should have taken my computer out a long time ago if they were going to take it out um yeah and again so if you want to know about the why this plane Etc watch the whole interview you can come to your own terms about why you know and also for

(2:21:39) the people out there that want to think it's aliens or whatever that's fine I don't care I understand I mean this technology in my mind is hundreds of years Beyond where we're at so either the military is hiding technology is 100 years Beyond where we're at or this is UFOs but the thing is when you look at the videos they're tracking This Plane they're staring at and zooming in they're flying super close to it right before this this event happens you either just got the one in a million

(2:22:06) random perfect shot of these orbs from Aliens or you know this is R Tech and it was an operation the whole way this is why I'm pretty sure it's it's our technology to me the question is how did we get this technology I don't think that we randomly got teleportation warp speed Tech uh I think that we figured something out and that you know we've probably dug something up or we found some object that was like something that looked like it would defy the laws of physics and then we were able to deduce

(2:22:37) it from there and it turns out it's consistent with science as we know it um it's just beyond technologically what we are currently think we're capable of okay now let's go to so there's just sketchy data and then I talk about the phones ringing which I'm going to skip past right now just for the sake of time CU I'm getting tired uh the real location coordinates here is pretty big so we have a time frame of between 4 days and 72 days now the interesting part is remember those coordinates I

(2:23:08) just mentioned those coordinates are indicated by those iMat pings as being potentially the real location of where the plane actually was in the nicobar islands now the problem here is that the raw Telemetry data was not made publicly available until May 28th 2014 in a 47-page report before that there was just a graph even Mike exner of the independent group didn't know that the satellite information could even be real until June of 2014 so how did

a supposed hoaxer know exactly where to put the plane with the real locations of the of

(2:23:42) the of the plane and the coordinates over a week before the raw Telemetry data was even made publicly available for people that that's on the screen and can see that on the screen yes in the bottom left of the satellite video you can see it in the High definition version um so we also even went ahead and we looked at the uh we looked at all the satellites we actually found there's a low earth orbit satellite pair uh nro or um USA 229 a naval ocean surveillance satellite pair that was in the right location in the uh Straits of

(2:24:15) Mala that could have been staring right down at this location around 1840 UTC what more do you guys want chat what more do you want we have coordinates showing the real location of the plane that weren't publicly available till a week after the video was published uploaded and published and we found spy satellite with a sister satellite next to it capable of taking 3D stereoscopic imagery consistent with the Reger sideon upload the very first upload staring down at the same coordinates at the same time where the witness was there seeing

(2:24:50) the plane and people are like oh well the clouds don't move enough well dude do you really think that we're looking through satellites first of all if somebody was making a fake satellite video in 2014 it would have been looking straight down because that's what all the movies showed satellites is working we didn't even know they have satellites in low earth orbit that can take imagery like this until 2019 When Donald Trump **leaked** the satellite imagery of USA 224 that's when we learned about low

(2:25:19) earth orbit satellites and for red because that's the exact type of image that Donald Trump posted so how in the hell was somebody in 2014 able to come up with this idea of having an angled satellite makes no sense there's way too much that just these videos have to be real because there's too much corroborating evidence we literally looked up every single satellite and found the satellite in the right location staring right down at our coordinates with the exact right payload that you would need to take the video or

(2:25:52) to like and again it's not just like taking video it's like not me sitting with my camera taking video it's sending infrared data sensor data in real time back to a ground basis in the same way where when we send a satellite to Pluto the satellite going to Pluto is moving at like 30,000 miles an hour or something like that but we get back crystal clear picture of Pluto why because you take the data and you send it to your groundbased computer systems and they build the imagery same thing happened in

(2:26:23) here this could have been in the constellation of the cber system um in fact the Regis side and onversion is a stereoscopic version it's two different video side or two yeah two different okay well I already talked about that let's go to the 47 45 okay and they don't do too much about the letter to Ash and Forbes but man that is creepy ass letter if somebody did fake these in my mind it could only be some type of state sponsored event it requires far too much intricate detail stuff that was not publicly available like the Heat

(2:26:50) signatures and the orbs uh and the monopoly stuff was not even publicly available till an alto University paper after this plane went missing uh far too many details in this for us to be just some kind of Rogue person that created them so a couple of things so good question there are they are The Satellites locki Martin I'm not sure I don't think they would have to be they add the satellites into the constellation is what they call it and then the constellation is what's constantly sending the data to the

(2:27:18) groundbased systems to build while we presume is they must have some just log into the Google video Earth military and then you can just okay I'm going to go look at this point okay was there probably depending on what type of coverage they had for the area you're going to have different resolution and I imagine there'll be like a screen that comes up on the side of the screen that says like okay here are The Satellites that we had in range this is the resolution we have and then boom now you're watching a video of certain area

(2:27:43) or place at a specific time I don't know that for a fact I'm not I don't have access to that information we've just been able to deduce this pretty wild huh uh but yeah I am sure there's no privacy on this planet by the way so guys when you go outside make sure you wave to the satellites just you know brighten their day up a little bit guys brighten their day they're spying on us it's a busy work to spy on us all the time um 53 minutes we talk about the citric session this is another thing too

(2:28:10) where it's like actly what I think happened when we are looking at that satellite video we can tell that they are doing a screen recording it's not somebody who's got a camera who's filming the screen like like I would be doing here that's one of the earliest details that I noticed and so when the slie on social media found out that this was a citric session logged into a database because of the mouse the mouse is at 24 frames per second that we see in the satellite video and it comes off the top right of

(2:28:41) the screen and goes off to the bottom left of the screen indicating they're looking at a much larger field of view but they're cropped it down removing the Drone so that we wouldn't see that removing information from it that's when I went holy crap this is a US military personnel who was recording this on a screen recording they knew they were going to get caught they have logs for citric sessions logging into databases like this and they **leaked** this to the world potentially because they knew the

(2:29:07) United States would never find it and I was sitting there one day in October and I was going wait a minute I've got like a psychological profile for the person who would have **leaked** this it would had to be a US military personnel they would be a patriot most likely that wants to tell the world they remove the HUD data and all this other sensitive information they **leaked** the first video thinking that maybe the world will pick up on that first video and they don't even need to leak the second one and then

(2:29:29) when we ignore that they dro the second video as in perfect synchronization now you've got absolute proof we've got coordinates we've got two different videos so I started

Googling looking up people took me about two weeks because it's really hard to find some of this information that goes back especially seven or eight years or more and then I run across Lieutenant Commander Edward C Linn I am 99.

(2:29:52) 99 9% sure this is the guy right away every single thing my I've got my spider senses just going off signals intelligence all over his every single news article about him the Strange Case of Lieutenant Commander Edward C Lyn completely redacted information charged with Espionage but there's no evidence he exchange any information with anyone from China and that was unusual to me because if you think about the person that would have leaked this the United States government would have assumed that they're trying to help China out especially if it's an

(2:30:20) Espionage event but then if they find out that there's no evidence of that because it was just somebody who was trying to tell the world the truth now it gets really awkward he was actually a Taiwanese uh natur National who had been naturalized into the United States a guy that we trusted with our military or uh nuclear weapons so this was a guy that by all accounts was a patriot but the circumstantial evidence is extremely damning he was assigned to the vpu2 Wizards a secret spy plane uh program in February of 2014 14 right before the

(2:30:51) plane disappeared his lawyer is on the record saying that the investigation into him began April 2nd 2014 the next month after the plane disappeared that's when I went oh boy like this is a very narrow window of time but there's more it was actually the lawyer defense lawyer argued that the classified information in question is available on the internet yatsi I mean guys classified information is available on the internet this is why it doesn't matter we're not trying this case in the court of public opinion I don't give a

(2:31:21) [ ] what debunkers and ufologists or VFX phony artists think none of that matters we've got a guy who went to prison who was assigned a month before this plane went missing and investigated a month after who had two pieces of classified information that were available on the internet you tell me what evidence is available on the internet that they tried to throw this guy into prison for life over that's the inclusion of this story when you show me that evidence and it's either the MH370 videos or not that's how this story ends

(2:31:57) the only way this story ever ends is the US government comes out and admits they were filming ma370 and they tell us exactly what happened to that plane because we know they know what happened to the plane doesn't matter how many fake debunkers and scammers come out there to fabricate [ ] how many people with their YouTube followers say that they don't believe it can be real I don't give a crap we have way too much evidence way too much evidence that pinpoints the United States government being implicated in the

(2:32:25) situation um and yes for the person who asked I do think this is the plane that was warped somewhere over to the maldives and flown to Diego Garcia I don't believe the satellite pings are accurate um they could be misinterpreted but I don't think that they are accurate which if it's not these videos why were they trying to get him in life in prison for Espionage and

later on ended up forcing him to a plea deal and in the plea just for disseminating classified information he got a 9 year sentence which is excuse

(2:32:55) me huge compared to what other people for similar offenses have gotten most people with that kind of offense they get like a slap on the wrist or like a year they actually had to have people testify as to what he did why it was so damaging um he was also caught with flight manifests that include search and rescue code names which to me this evidence piled together says this must be the guy so I foed the f bi and NCIS FBI wouldn't give me anything they said it's privacy related NCIS rejected my foyer in total I had the head of legal

(2:33:29) for Foya respond back and sign the document saying it's to be kept secret in the interest of National Defense or foreign policy now to me I think yeah Clayton's reaction pretty much says it all there chat wow I Foya the NCIS and their head of legal comes back and says nope it's got to be kept secret in the interest of national defense and foreign policy what I thought it was in a spy case I thought the internet was that information was available on the internet they won't give me anything about the case they have to have people

(2:34:02) testify as to why what Edward C Lyn was so damaging because they're they actually had to force him into a plea deal because they were afraid that if the case went to court that the evidence would become made public and then people would find out that it's the videos I'm just sitting they're like what do people think that Edward SE went to prison for why is the why were they so desperate to get him to sign a plead deal so that they wouldn't have to show the evidence because the moment they

(2:34:33) show the evidence they go oh we stole MH370 we can warp a plane people would be having meltdowns they can't explain those videos they would have to have hire me to explain to the humanity how that what we see in those videos can be real because even with all this evidence people still don't think they can be real the government comes out hell I probably wouldn't even believe the government if the government came out and said Edward C Linn leaked these videos I'd probably be like nah that's

(2:35:00) fake they fake those videos the only reason why I believe it is because they're not saying that and then I'm the one pushing the information out there so pretty wild yeah the semiconductor scientists they probably either killed them or Incorporated them back into uh you know made made them live out their days of Diego Garcia I don't know force them into witness protection never talk to their families again the answer is there's no all the answers to what they did with the passengers are extremely

(2:35:29) dark in fact the whole story is dark because if we can do this if Obama is implicated in this people people think that Obama's the greatest president ever I I I thought he was one of the greatest presidents in in my lifetime and now I'm like damn Obama's into some dark [ ] this is super dark if we're pulling moves like this off and lines of the world like this no one's going to ever trust the government ever again ever I'm never going to trust them ever again um so yeah pretty wild stuff let's

(2:35:58) go back and do a couple we a couple more Clips we're almost done it is so to me a lot of people have heroes in the UFO disclosure realm David grush Commander fraver L alzano Etc to me Edward cin is the hero because being a hero it requires sacrifice and that's he did is he broke his NDA he broke his oath to get that information out to the world and he paid the price he went to prison he ended up getting six total years after they shaved off three years from his sentence for working with the FBI and NCIS I think they convinced him

(2:36:33) that hey man this wasn't UFOs this was our secret technology you just showed China you just showed Russia if we could figure this out from a social media account then China and Russia's intelligence apparatus I I hope they figured it out if they haven't figured it out then they have no chance against us wow you're blowing my mind you're blowing my mind so that part two right there people came at me like why do you hope China and Russia figure this out do you not realize I'm being sarcastic

(2:37:00) right there if China and Russia didn't figure out what we figured out just some random dude on social media then they have no chance against us no chance we have warping plane technology um so a couple questions here someone says with this much evidence if they didn't warp the plane away at the end of those videos I think there' be so many more people interested absolutely I wish it wasn't orbs and zapping in that plane in in that video because then we'd be able to prove that the plane was

(2:37:26) on fire because people would believe people have no problem with the fire scenario but the problem is that the fire scenario proves that we warp the plane away that's the reason why no one could look at the fire scenario it's crazy the mental block people have they can't see observable reality they don't believe their eyes they literally won't believe their eyes this is the part that's scary to me in general but absolutely you're correct I think there's and this is where people

(2:37:51) are like Ashton why don't you you know um why don't you think this can be aliens or why don't you dig into 911 and all this stuff and all or like add more layers to it why don't you go to remote viewing and I'm like guys we already have more than what people are able to comprehend with their minds way more I don't even like to talk about the idea that aliens might exist I don't think we're looking at aliens in these videos but if people want to think that that's fine but I don't even like to talk about

(2:38:18) that because that's already like we're so far beyond the Paradigm would just be able to warp a plane you know like then being like Oh yeah which kind of which species of aliens is your favorite do you prefer the mantids or the reptilians guys like we're not even close to that conversation if there are mans I I'm on Team mantids by the way I just think they're cool looking I hope that they exist um what if aliens created the Edward sein in the broadcast yeah I mean we're thinking we're a little too deep in

(2:38:46) there guys too and scops exist but not everything in the world is a sop app as well like you've got to realize that people don't do things just for the sake of confusing people like usually

there's a plan like if you want to confuse people the scop in this case is the suicidal pilot narrative and the idea that this plane crashed in the South Indian Ocean that's the SOP why is it a scop because it makes you not use your own brain anyone who uses their own brain knows that planes don't crash

(2:39:14) without leaving debris fields they know that if we know the plane we if we have a ping that says this is where the plane ended its route then we should find debris there we should find a plane there we should find black boxes there we should have radar signals that are within range and see that that's what a scop is a scop says ignore the your eyes and your ears and don't think for yourself and believe whatever we tell you that's what a scop is so the South Indian Ocean are is a scop the suicidal

(2:39:45) pilot narrative is a scop it's not supported by any actual real evidence it's just a psychological operation to get you to not think for yourself let's see what else we got okay so then um oh the hide in the tech part this there's only two more clips left I want to do this part's really good though it I bring up Dave Rossy again in this part I talked about Joseph General **Dunford** definitely recommend you guys watch the whole thing it's honestly an incredible interview it's my favorite

(2:40:13) one I've ever done it's on hand so that people don't drive themselves nuts okay a little too far is essentially Magic on a whole other level yeah there's two different asps by the way I I love Clayton Clayton's like my favorite podcaster he went like so far up the list so fast I'm gonna watch everything this guy ever does I was so impressed when I spoke with Clayton and especially afterwards where I'm like how much did you know about the case cuz he clearly was very well informed but he

(2:40:48) also played it like he was like you know asking questions the audience would want to ask he's like yeah I knew about 80% of it but I didn't know anything about the Edward C Linn thing that's what he told me offline afterwards and that's why when he said his mind was blown he was being 100% honest um super just super impressive podcaster and interviewer and it goes to show why he used to be like a Fox News anchor dude's a just consummate professional like I I learned a lot from watching him where I'm like damn I want

(2:41:15) to improve my own podcast with this guy so that I want to hit on here is that uh again I've spoken to Dave Rossy who is a DOD contractor and engineer as well and uh I went on Tim pool with him as well um I've interviewed him twice once with Salvatore Pas and I think that he and I see eyed eye in terms of how is this information kept secret the answer is really really easily and you've got Engineers that are going into Labs special access programs signing ndas when they go in having their phones taken away so they can't be used DAC

(2:41:47) technology is essentially Magic and then they have to go out and get in their car their gas powered car see the pollution see all the the poverty everything around them and go how do you how do you reconcile these two things in their head you have to have staff psychologists on hand so that people don't drive themselves nuts and then they may say well I want to do the

right thing and get the information out there people like Eric Weinstein would say well how can they hide this people would come out and they would say something no they

(2:42:13) wouldn't no they absolutely would not not only are they have fear for their life they have no benefit uh at what happens to the people that try to disclose anything like this look at Bob Lazar in general the media will vilify them the bunkers will crucify them and find any weakness in their past any skeleton in their closet and use it to discredit the things that they're saying out there um and that's what I found is that it's not actually even hard to hide the information it's easy to hide the

(2:42:40) information it's too easy in fact and that's why the people like Salvador Pas like my friend Dave Rossy want to get the information out there because we've reached a point now almost in a post-**truth** world where no one can believe anything to be real out there and then the question is how do you get this out there at all ever in the future and this is where I think that it goes back to those Waring factions in the government yeah so that's the part it's so easy to keep it hidden the stuff about the staff

(2:43:07) psychologist guys just **I want you** guys to wrap your brain around that is that they have to have psychologist on staff because they go to these special access programs and they see anti-gravity they know it's real and then they go on to the real world they get in their gas powered cars they know over Unity is possible cold fusion they get in their gas powered cars drive home they gotta lie to their families because their children are going no all that stuff can't even be real blah BL blah blah I watched my favorite YouTuber and they

(2:43:39) were poo pooing on the ideas that's the disconnect that we are living in right now we could have over unity and free energy warping objects from one location to another and then we've got **debunk**er type people out here that think that we are at the Pinnacle of human civilization right now that nothing new can ever be discovered we we've figured it all out and it's actually easy for these people the people that are I don't think they're like all being paid to lie but the people that are cast doubt the

(2:44:15) standard of evidence are not equal standard of evidence of proving it reals up here St Evans to **debunk** something his way down here and what this leads is to what we call the post**truth** world where now we can't know anything to be true anymore no matter what and it's only going to get worse the reason why these videos are so important is because they were proven to date back to 2014 and at this point going forward Ai and deep fake Technologies got so crazy good that you're like never going to be able to prove any video to be real ever

(2:44:45) after this because it'll always be able to claim that was just AI in fact you could make the argument that again like the only people that could have faked the mh37 videos is a government our government or foreign government using AI that predates commercial AI in my opinion to create that that's my personal opinion um let me see here and and again like uh yeah so I'm not trying to connect any more stuff on the outside to this like it's already we we've got a lot and the scalar physics stuff and what have you I'm going to do

(2:45:18) a couple more and then we'll talk quickly about what we're going to do tomorrow and then we're going to close it out for tonight I got to get some sleep um I've been struggling last few days where's the oops sorry guys I'm getting used to streamyard here okay so then I talked brief about overunity extra Dimension an underlying construct to our reality that we don't perceive and if we can tap into that we can tap into the negative entropy of the universe itself and then you also need

(2:45:47) to understand that space is not empty and if space is is not empty and you can create overunity devices you can sheet the laws of thermodynamics by opening your system up and you can borrow energy from the vacuum with a zero point energy to produce a system that puts more energy out than is put into it this allows for free energy we can also use super conductivity and super powerful magnetic fields to create fusion power now the problem like I said though is that you can then like we saw in those videos when the orbs are

(2:46:15) converging to amplify the energy as salvator P's high frequency Gravitational wave generator Patton says amplify energy to such a degree where you can destroy a planetoid or asteroid scale that up and now you can destroy a planet scale it up further and you can destroy a sun we might even be able to create a big bang with this type of Technology okay so um and I asked Clayton after this about his conversation with Tucker Carlson which I think was really good um just for the record and this is going to sound a

(2:46:45) little bit rude here but I don't care what other people want me to do I get a lot of people telling me their opinions on how I should do my business and what have you I don't listen to anybody that ever does that kind of stuff I think it's rude to even tell me how I should do my stuff I don't only I'm only reviewing this particular interview because I think it was the best one I've done so far and I just think it's really good in general um the last clip I want to do is show the the thing about Hope

(2:47:12) here we've had seen all these cases of drones they're incurring over our military bases I would argue that that might be and China with this type of technology and um I think as my friend who I've met now Jake Chanley people know him as the shaman on January 6 um he's a very introspective guy and he would say that you know we might as well get this out there because the worst people in the world already have access to it it can't get any worse on that from that perspective from the ufology

(2:47:37) people that I've spoken to very prominent people in general they would say that Our Fate is up to us whether or not we destroy ourselves with or not with this technology that's up to us as humans to figure that out I look at at this technology and I see the Hope in it in terms of ending poverty uh ending homelessness ending hunger around the planet with this type of Technology um and that's the reason why I am on the side of the information coming out in general but I think that we do have to put safeguards in place because the

(2:48:06) problem with this technology figuring out a unification theory of the forces is that it's a Pandora's box once you open that Pandora's Box up you get everything that comes along with it

even Eric Weinstein mentioned this on Jesse Michaels podcast with Hal POF is that you can't just pick and choose what things you want if you want the medical healing aspects well you also get the weapons that come along with it so this is I think the the dichotomy the issue that we face as a civilization this is

(2:48:31) what my goal is in revealing in talking about this with you and other people as well as I want to move the conversation forward everybody I see in ufology is talking about the different types of species and uh you know what they want to do with the species and what these crash retrievals mean Etc I want to talk about what does the technology mean what does it mean for our future and how do we avoid obliterating yourself and Oblivion in general okay so that was the interview uh couldn't be more grateful to uh

(2:49:04) Clayton Morris for going over it uh I do see people in the chat mentioning the X-37B I think there are possibilities where there were spy reconnaissance craft but I think that um and it's possible that that satellite video is actually some type of spy reconnaissance craft uh but the reason why I don't think that is that the person who **leaked** it intentionally put in nr22 that was a very specific thing that they entered into that video uh they could have just had the coordinates I'm guessing that that was an overlay that

(2:49:33) was built into the software that they were able to put in there for intelligence purposes when they're showing like the president and stuff like that um so that's the part of the reason why I I don't think this is some kind of plane although i' I've thought about that a lot in terms of like maybe it's not really a satellite maybe it's something else going on um so anyway uh let's see I think that's it guys I appreciate you guys watching tonight so tomorrow what I want to do is I actually have a list of

(2:50:02) segments that I want to go over with the Thomas Bearden so we went over Thomas beard and psychotronics if you guys want to Google that you can watch the video ahead of time we went over this a few weeks ago or like yeah maybe a week or two ago and it's I think the best Thomas beard in video period but we didn't have the new nice layout going on and we didn't have the streaming on X going on so I want to go over it again and I want to show the clips uh that I think are important related to the technology

(2:50:30) because there's a lot of people out there that think that oh Ashton's just making this up he's just using magical buzzword but no this is actually science that goes back to Tesla that has been proven by people like the Aaron Hoff bom effect Maxwell's equations many many many other scientists as well it really is a situation where it's potentially just being hidden from us so I want to play through a lot of those clips tomorrow in a similar context to show you guys you know how exactly we can

(2:50:57) explain what we see here regarding macroscopic phase conjugation and interferometry and how this works so that people understand that I'm not a scientist I'm not an expert an engineer or anything like that but I have been trying to teach myself and um you know then you can come to your own conclusions as well you know if you think it's nonsense after you

watch it and you see the historical references and the scientists that have been involved that's fine um and if not then hopefully we can move into Star Trek

(2:51:24) world because what I want is if this technology is real like I've say this a lot but if this is fake if these videos are fake what have you well I guess we'll find the plane somewhere and I'll look like an idiot in which case you guys can all make fun of me uh it was a good shot anyway uh or the videos are real and if the videos are real then this pushes the Paradigm this might Advance our civilization hundreds of years hundreds of years overnight if we can prove to the world these videos are real it will

(2:51:52) advance our civilization that far so for me it's worth the risk you know for me I'm either going to look like some kind of hero psychic that pushed our civilization forward a 100 years just by promoting videos that I didn't leak that I didn't prove the science all I did was show that the science was already out there or I'm going to become a huge joke in history for having tried and believed some fake videos that some secret Bitcoin billion that didn't want to collect \$150,000 made because they were

(2:52:22) bored or whatever the story is but either way I'm all in on it and thank you guys for being here with me tonight I hope you have a wonderful night m370x this has been awesome uh hope you appreciated the show let's meet up again tomorrow night peace everybody thanks um let me do my play out thing I'm going to play this one again the other one's too long 370 1 120 9 [Music] night breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music]

(2:53:17) [Music] [Applause] [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am become deaf the destroyer of [Music] worlds oh

WAR & MH370 Secret Weapons - YouTube

Transcript:

(00:05) [Music] [Music] Malayan 370 contact 12 [Music] 9 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] [Music]

(01:12) [Applause] [Music] I remembered the line from the Hindu scripture the Bhagavad Gita V shu is trying to persuade the prince that he should do his duty and to impress him takes on his

multi-armed form and says now I am become death the destroyer of [Music] worlds hello and good night every buddy who is out here good morning everybody who is somewhere on the other side of the world welcome to the stream tonight MH370 X fall in how are we doing everybody guys uh it is partially a celebration tonight but it is obviously

(02:17) very somber at the same time the reason being we are at War we have war going on uh right now between Israel and Iran United States government is getting directly involved as well um so this is It's a pretty dark time in general now on a different front uh if you guys have been following my Twitter today you will have seen that there's some pretty big Revelations sorry I'm trying to get this set up correctly here uh regarding the MH370 case uh I have been able to show conclusively exactly how they warped the

(02:58) plane scientifically so we are going to talk about that we are going to look at some uh war videos as well we're going to talk about war tonight and we'll see how it goes and I'll show you guys some of the insights to the science that we dug into that will prove that the MH370 videos are 100% real um including the zap including the orbs that we do have Star Trek level technology that is at our hands that will reshape the entire planet as we see fit okay guys um so thank you very much uh for being here

(03:36) tonight um let me just thank a few people I see in the chat honestly guys you guys are there's a lot of people already um canc con's true Seeker sham 6 hey toally hey Jim hey Maddie hey bad Sama hey Pamela hey Heather good to see you Aaron Zack memory hole 370 Mike per pery Sandy good to see you skinny Bob a lot of people that have been following for a very long time and things are obviously starting to escalate so uh let's just start with go um oh yeah Matt Von Phil oh wow a lot more people Chris hey everybody JG JK

(04:13) Philly fan good to see you guys Lang I can never say your name correctly welcome Dan Clark awesome good to see you guys okay so where do we start tonight um let's start with the fact that the redacted podcast dropped if you guys have not checked out the redacted podcast please go to redacted on YouTube you can find the link in my Twitter profile or not yeah in my Twitter posts and you will see that redacted uh interview went live it was done roughly two weeks ago so the reason why uh you're not going to see the science

(04:49) mentioned in that video because I didn't figure it out then so it's uh I haven't actually watched it myself yet I will watch it later tonight apparently it's pretty good I'm not surprised cuz I had a great time talking to Clayton um asking him uh as well I don't know if that it made the cut but I did ask him about the Tucker Carlson interaction in terms of what disclosure means for him and and for Tucker in general um and I tried to go through the the strongest evidence all the evidence

(05:15) out there that really showed that those videos were accurate including potentially finding the leaker as well uh Edward C Lyn so I just wanted to start with that make sure you check out that podcast uh make that thing blow up make it huge that that podcast will show the **truth** of what happened to the plane to everybody out there also cheers everyone tonight

cheers so let's dig right into the MH370 stuff and then we will take a look at the war in Iran uh or sorry in Israel with between Iran and Israel and what

(05:54) the implications of that are so firstly the MH370 um just to give you guys a quick background uh and I may hold on I may have to close this give me one second everybody I'll be right [Music] back okay apologies had a window open and it's very loud so okay we're back uh so when this started um I started digging into the videos and I did not know much about the science I'm not an electrical engineer or anything like that uh but I did know a little bit about physics double slit experiment um and some other scientific Concepts I had

(06:51) learned recently about superc conductivity and this is where I had speculated that we needed to understand superconductivity we needed understand the double slit experiments in order to understand the MH370 videos to be real I'm going to go ahead and pull up the videos on the screen real quick so that we can look at this together and so you guys can understand where I'm coming from in terms of my rationale now I also want to just put some disclaimers out there I'm not an agent of any foreign government or anything like that I've

(07:19) seen um some of these nut jobs out there claim that I'm some kind of agent and some kind of like I don't know there's a lot of defamatory stuff that people say all of it is categorically false I'm just normal guy that decided that we would not let these videos um disappear um because you can I mean my opinion you can just tell obviously they're real but for a lot of people these videos are too much for their minds to accept and that's why they struggle with it and that's why in their minds they have to

(07:47) conclude that I'm some somehow being deceptive but I but I not these videos simply show what really happened to MH370 consistent with all the evidence consistent with the fact that we never found the plane etc etc the videos emerged in 2014 they're not from Recently nobody sent me these videos everybody had equal access to them any one of you could have been me if you had just dug into them the way that I've dug into them and when I first looked at these videos I I realized three things right away and I realized these things

(08:18) intuitively it's not that I have any special talent related to this so first thing I realized was that when we watch these orbs coming in they're Defying Gravity right away this shows some type of anti-gravitational effect here coming in way too quickly as we see here and the way that they go around the plane um seem to be consistent with some type of AI mechanism uh or some kind of uh pre-programming you can tell right away the way that they connect around the plane this first orb can't quite find

(08:48) the plane and then immediately begins into a triangle formation when the second orb gets there like right now you can tell they're already in a triangle formation without the third orb even being there yet this is pretty telling this is a really weird detail which goes to show that these orbs are being controlled by AI the other thing I realized is that you needed super conductivity because when you guys look at the videos of Ik99 that came out of Korea and China you're going to see uh a rock floating suspended in air so I

(09:14) shall just show that real quick and then we'll come right back to this video uh because I want you guys to understand how I figured this out so when you look at this for example you can just see a rock free floating this is a rock room temperature rock floating over a magnet to the side of the magnet completely ignoring gravity and I said wow this must be related to anti-gravity I mean thing is just ignoring this is called flux pinning it's called the Meissner effect and it's and I didn't know exactly what the interaction was at the

(09:45) time uh now we have a much better idea of how what the interaction between superconductivity and the videos is but these were already two of the three requirements so we needed to understand Double Slit we need to understand super conductivity we need to understand AI and Advanced uh computers and back 10 years ago nobody would have realized that AI was going to be as advanced as it is now and 10 years ago they already had this technology so the third thing that we needed to understand was the double slit experiment so we've got

(10:16) our orbs spinning around here early on I had no idea what the what the significance of the pattern was we just we had mapped it we knew it was a signal pattern a wave pattern um but now we can figure out that what they're trying to do is we're trying to figure out exactly how big the zap has to be to zap the plane and to create the exact right energy densities around the plane in order to induce the uh event that we see right here now you're going to see the orbs slow down right there that's where

(10:43) they are orienting themselves and then within the blink of an eye the plane Gets Zapped there this is not video game effects any of the debunkers that are trying to tell you this is video game effects are wrong they're just wrong I don't think they're necessarily lying but they are wrong divos wow wow huge donation man thank you very much for that greatly appreciated big fire DeVos thank you very much huge donation wow I appreciate it I don't want you guys going crazy with donations tonight but

(11:12) thank you very much that's super nice of you um so they're mapping the plan now this double slit experiment the reason why I had figured out that the double slit experiment was important is because in the double slit experiment we see the wave function breaking down so when you look at the double slit experiment we measure which uh hole the electron or the photon goes through we the wave function breaks down the pattern breaks down I had correctly deduced from the beginning that this is the opposite of

(11:43) that is that this is the rebuilding of the wave function now I didn't know how that was happening but that's I could just tell because when you think about the wave function breaking down you go from a probabilistic point the wave function to a deterministic one and this also leads us to the idea of non-locality and quantum teleportation which when you look at these videos if you've deduced teleportation that's what what's happening here then it makes sense that this must be the same thing

(12:10) happening on a large scale so now that we've seen that um then scientists started

reaching out to me Salvatore Pas and I'll play the second video while I'm talking through this Salvatore Pas uh Roy D Herbert physicist I ended up getting connected through to Dave Rossy who's a DOD contractor um via the alien scientist podcast I I watched him the story of Dave Rossy is incredible because I listened to Dave Rossy talking about some scientific Concepts on that panel and I said I need to talk to that guy he

(12:46) clearly knows what he's talking about and he was probably the the best connection I could have made because he was willing to speak freely about what he knew he was the one who had led me on to the idea of macroscopic phase conjugation but being honest with you guys he didn't like explain everything to me he just said like macroscopic phase conjugation like look into it and I started pinging ideas off of him and it took probably six months so at that point what did I decide after I started my podcast I

(13:15) started interviewing scientists and I'll go ahead and play the the slow-mo as well oh I also realized that these are uh balls of plasma that we're seeing this is an energy field around the orbs here and this is stuff before I even knew how the worked um and then I said I'm going to learn electrical engineering I'm going to teach myself electrical engineering to the point where hopefully I can figure this out myself so that I can explain it logically intuitively and if you guys have been watching along for the last couple weeks

(13:45) we've been watching Thomas Bearden he's Lieutenant Colonel who passed away a couple years ago that was also an engineer uh with the government potentially a third- party contractor engineer as well and uh he has got multiple videos out there showing scalar physics and right away when I started looking at scalar physics I realized this must be connected to what's happened into the plane there's also direct connection between scalar physics and macroscopic phase conjugation um and so I started looking

(14:19) into that as well now over the last couple weeks you guys have probably watched me look into this idea of scalar interferometry crossing the streams and this is what's led to in the last few days and the last week um looking into a lot of science around interferometry wave mixing interferometry um scalar physics uh and and the implications of what scalar physics can accomplish now finally today what was the real kicker Missing Link I was using grock actually to help me understand the difference between Optical phase

(14:55) conjugation which we showed last night on stream where we saw an image rebuild itself while it was being covered by a shot glass and macroscopic phase conjugation and what that led to was a Twitter post and I saw on a Twitter post where it basically put all the pieces together for me and so I immediately was like whoa this is this is explaining it like it was basically the equivalent of Dave who told me about macroscopic phase conjugation telling me all the different aspects and questions that I had about how it was going to work together

(15:29) also thank you everybody everyone else who's been jumping in who's watching right now if you on YouTube uh please hit the like button or whatever feel free to subscribe I appreciate it if you're on X consider coming over to YouTube and checking it out or you can

watch on X as well thank you for being here um so now I'm going to go through the post so let me go ahead and share and I'll look I'll show you guys some of the science of how I got there so you can verify 100% that what I'm

(15:56) telling you is verifiable information it is not me coming up with this it is not pseudo science it's actual science supported by actual scientific papers um this is potentially one of the greatest discoveries You could argue in the history of man um I just happen to think it's probably one of the greatest discoveries um you know in the last hundred years or so and this is not um it's not that I've discovered this science it's been out there it's a matter of having these videos available

(16:25) to us where the videos uh tell us the true story of what happened to the plane we would never have probably been able to prove this without these videos and without them being 100% scientifically accurate and of course it's not just about the videos but it's also about the fact that the evidence around the case adds up to the videos being real and that's just really what happened to the plane it adds up to an Espionage scenario so what we're going to do here right now is I'm going to read through

(16:52) the macroscopic phase conjugation I will read through the Espionage scenario and I will give my updates based on what we disc discovered in the last few days and um feel free to share this information talk about this information that's the only way it gets out there I will answer questions in the chat after I've read out the stuff and then we're going to take a look at uh the war in Israel and ir and Iran in terms of what's going on there and what the implications are in general okay so macroscopic phase conjugation how we

(17:23) warped MH370 okay I can now scientifically explain what the United States did to MH370 as seen in two videos captured by US military assets and **leaked** to the public by the way Edward C Lynn is the guy that **leaked** these videos there's no doubt these videos are scientifically accurate and show publicly unknown weapons capabilities these weapons capabilities no one had any idea existed before this it took me less than six months to understand at a rudimentary level so from the scientific standpoint uh I started learning this probably in

(18:03) November when I started to dig into the electrical engineering side and so I could probably do this and as I got more time after I kind of retired from the case I've had a lot more time to look into it and you guys are on The Cutting Edge like I literally wrote this up today where I was like holy [ ] I can explain it radar systems are not just detection mechanisms they can also produce scalar potentials at a distance via phase conjugation which is creating a perfect mirror image of the wave so this is the trick if you have a

(18:35) phase conjugate mirror actually when you point a wave at a mirror it will bounce back at an angle on a phase conjugate mirror it will bounce back directly in the direction of travel of the wave this is what allows for phase conjugation it cancels out the waves as Dave Rosy would say the waves make love and they cancel out conventional physics would tell you that this means

there's nothing left but that's not true that's because Oliver heavy side rewrote the Maxwell equations and he got rid of the excess scalar

(19:06) potential that was left over the Old Maxwell equations take away the vectors cancel out the vectors but they leave the scalar potential left something that conventionally we're unable to measure but could you can be argued is essentially the stress in SpaceTime itself which is what can produce gravitational effects older systems split the beams but newer ones create a complex wavefront by manipulating the phase relationship with a pulse and amplitude modification so what does this mean and if you watch the

(19:42) older or actually really most of the scientific papers talk about splitting the beams and all this bouncing of the the the lasers that they do well newer systems can do this just through like a single device potentially something consistent with the uh coherent matter wave beinged from loed Martin it probably uses another component as well but the idea is you don't have to have a complex laboratory set up to do this you can do this in a single device to create these types of beams so we've been able

(20:11) to miniaturize it we've gotten a lot better at creating these scalar uh effects through uh tiny small Radars potentially something that can fit inside the size of our orbs that we have phase conjugation can work with any wave through any medium this is huge because this means you can do this with sound waves electromagnetic waves or in this case you can do this with gravitational waves why is this important because we need to move a macrosized object a 777 we need a gravitational wave that's what we need to be able to produce

(20:48) scalar potential can uh create a gravitational wave so what we're talking about here is the ability to manipulate gravity time reverse first effects of phase conjugation do not go back in time now I want to make a disclaimer here I've actually been talking to the scientists including Dave rosi and they would argue that there may be a way where you can actually go back in time related to this I'm skeptical still I think it's still a debatable aspect uh but from what I read time reverse doesn't necessarily mean you're

(21:23) going back in time um but I guess from that localized perspective you could you could argue that it is a reversal of time itself there is some science out there that says like that electrons are moving forward in time and positrons are moving backwards in time more to come on that part but instead what it's really doing is creating a wave front that is reversed back to its origin a wave front that's reversing back to its origin location so you can already start to get an idea of where we're coming from with

(21:51) this and where this is going to lead to this is why there's a fourth orb not seen in the videos because it's going to be shooting a wave at our our plane and then there's going to be a reversal wave that's going directly back to location of the fourth orb that's the location where the plane is going to go macroscopic phase conjugation is fundamentally equivalent to rebuilding the wave function in the double slit experiment because time and space are intermingled now this is where it gets kind of confusing because the

(22:21) plane is not necessarily shrinking down or anything like that it's creating like essentially equivalent of a bubble a wormhole a gravitational wave and it's riding that wave like a surfboard so fast and potentially through what you would consider an extra Dimension so that we cannot see it but it's still happening the energy is being sucked out of one location and reappearing in another location and when it reappears it's going to reappear fully formed it's not going to have people stuck in the walls or anything

(22:53) like that is just going to reappear fully formed the orbs in the MH370 video are a type of hypersonic weapon encased in a plasma field that are creating a 0 Point equilateral triangle mixed wave interferometry system focused on the plane so what does this mean so Hypersonic in the sense that these are moving at Hypersonic speeds we can see the orbs in the MH370 video the satellite one specifically moving at roughly 2,000 or more miles hour Hypersonic in case in the plasma field as we can see right down here these are

(23:31) you can even see the Heat Signature inside the orb this is not a metal ball that we're seeing maybe underneath but there's a plasma field around it displacing it potentially directly from SpaceTime which is what allows it to float the zero point system is important because when we get to scalar interferometry you create Crossing beams but you're not limited to just two when you have your pump beams you need them to be at exactly in Phase with one another so you need the product of the wave functions to be zero you are not

(24:01) limited to just being two you can have three if you have three then they need to be in a perfect 120 degree equilateral triangle formation so that when the waves focus in on the single point in the middle the product of all three vectors is zero Thomas Bearden showed this on a video that we looked at last night he said they can be like this or they can be like this and theoretically they can even be in more shapes but three is the minimum number you would need for a 3D object in two dimensional or 2D object in three dimensional space a triangle to be

(24:36) formed a doorway if you want to think of it like that the orbs act as the pump waves so that's your perfectly in sync zero point system producing energy levels specific enough to only warp the area around the plane this is why they're mapping the plane in a circle around the plane before they get into their ring formation is that they are mapping it to figure out exactly how big that zap has to be that you saw here at the end because they don't want to make it too big they want it to be just enough to

(25:07) get the plane and the area directly around the plane again this is going to require very Advanced Computing systems to pull this off when they are converging they are amplifying their energy levels to such a large degree that they're breaking something that's called the swinger limit which causes electromagnetic fields to become nonlinear so for my Layman out there consider consider this as breaking through the fabric of space now this is consistent with something called kum's law and again I had to look all this stuff up so if

(25:37) you're going out there going how do you figure this out is he a genius no I just Googled it all every time I found a term I didn't understand I looked what that term meant kum's law if you

look at the equation for Coulomb's law the electrical force between multiple forces that are interacting is going to increase exponentially as the distance converges this is exactly why these orbs are converging in at the end it is increasing the electrical force exponentially so at that point trying to

(26:06) get to whatever their limit is it's like 10 to the 33 or something like that uh Jewels or it's an energy density formula whatever it takes to get to that as long as your starting orb energy densities are high enough then increasing them exponentially is going to get you to the place that you need to be able to go that's why this is important now when this happens this is producing our gravitational wave now they're converging they are increasing energy densities they're

(26:32) creating this nonlinear electromagnetic field this is what's producing the electro the gravitational wave and then the question is where do you send the wave how do you direct the wave the fourth orb is the answer when you look at scalar interferometry of multi-wave mixing and we'll look at some images here in just a second what you'll see is when you have your zero point system these are your pumps these are things that are pumping in to create the energy densities you need then you can send a beam at it from any direction anywhere

(27:02) you want and it will send a reverse beam directly at the source so this is why your fourth orb is shooting a beam into this system that we see right here and then it's going to reverse send the plane exactly wherever that fourth orbit is now people say can it be anywhere I'd say yes it can be anywhere however if I had to speculate I think that it's most likely going backwards and the reason for that is that in the final frame right when the zap first begins it looks like the plane has gone backwards a slight bit

(27:35) right here you can see the tail of the plane sticking out here it's a little bit further back than it was in the frame right before this so I'm expecting that the orb is pulling it backwards the last orb is somewhere to the West based on the coordinates that we see in the satellite video This Is How We warp MH370 this is how we teleported this plane for the lack of a better term now I think we should be scientific and specific about the terminology we use so I'm not going to use the word teleport anymore I'm

(28:02) going use the word warp because in my mind it's it's consistent with warping and space time and um rebuilding the wave function and having this uh create go to a super luminal speed relativistically from our perspective on the outside looking at it people ask me how fast would this go this can actually go faster than the speed of light why can it go faster than the speed of light the speed of light is not actually constant the speed of light is only constant and perceives to be constant because we are always seeing it through

(28:32) the same medium space the vacuum of space if you point a laser beam through a glass of water you will see a refraction that same refraction is happening in our normal SpaceTime as well that's why it looks like the speed of light is constant to us the same reason why even though we're all the same reason why time seems like it's flowing uh consistently for us is

because we're all on the planet Earth therefore we're all experiencing uh time flow at a similar rate but if you were to strip away this if I was to go to a

(29:02) black hole I'm going to experience time at a different rate than you guys are going to experience time here same concept with light if we were to strip away the fabric of reality and break through the swinge limit to the underlying uh ether or uh construct of our reality the speed of light will go faster Tesla said that he could get speed of light going 50 times faster uh Thomas Bearden said that he experimentally had the speed of light going eight times faster this is where you can get faster than light travel

(29:31) faster than light communication is through these same exact effects so we're now actually deducing properties about our natural reality now let me go ahead and show you some examples here now let me see if this is a good one this one's not one of the best ones to explain it but it does show you the setup for your phase conjugate mirror and you can see the wave function here as well so when you are um phase control is similar to recording interference patterns interference patterns are phase relationships in a

(30:07) complex wave so this is where the link between the double slit experiment exists is that holography and uh this interferometry that we see here is essentially the equivalent of rebuilding the wave function that's what this screenshot right here shows um the intuitive explanation right here so this is probably the last one I'll zoom it in a little bit for you guys uh did that just go to some yeah it did okay so you see your pump beams notice the pump beams are 180 degrees out of phase here so this is where you're creating

(30:43) your zero point Vector from this now you can do this with three beams as long as they're in a perfect triangle formation you would have the same thing happening and then this is your phase conjugate beam the probe beam so the probe beam is where our fourth orb is sending the beam towards the inter pattern and then you're going to get a reverse phase conjugate beam going directly at the source of the probe beam this is our fourth orb so we have three orbs here and then we have our fourth orb shooting

(31:10) the beam and then it's going back doesn't necessarily have to be an orb it could also be some other object but orb is the most likely thing because you need this plane to show up in the air somewhere so most likely now I would also say This Plane showed up in the air you have your fourth orb somewhere in the air and now this this plane is going to teleport to where that fourth orb is in the air probably somewhere near the Maldives based on the sightings that happened over there um we also have and I'm going to

(31:37) post all this on my Twitter over the next few days but there's this whole page talking about the physics of scalar waves as well as scalar wave interferometry the best one here is this image in the bottom right where you can see the interference zones that gets created now it's something slightly different in terms of what we're doing with the plane is we're having a perfect 100 instead of like you see are not perfectly in Phase so this is creating the interference Zone RS are going to be exactly in Phase with one

(32:04) another when they're imperfectly in Phase um now this is the point where you create the perfect scalar waves now theoretically these emitters here are could potentially already be doing that um and so could our orbs for example our orbs could be sending the scalar wave uh they could all three of them could be sending scalar waves and then uh interfering them just like this okay now let me see what else do I have um also this this paper here Broadband coherent Wave Control through photonic collisions and time

(32:38) interfaces um this also this is pretty hard to read it's pretty deep on the language but it basically says all the same things as well and it even talks about the time aspect of the time reversed uh waves so there's a bunch of scientific papers out there I know nobody really likes the scientific papers they get really tough to follow um but there's a lot out there okay are you guys still hearing me just fine it looks like you are okay let's keep going yeah this stuff is crazy so as some people have pointed out we're

(33:09) talking about science uh and videos that were out there in 2014 it's 2024 right now so this is nuts like we've had this technology for at least a decade maybe even longer than that so now people want to know what happened to the plane and again if you guys watch the redacted podcast you're probably going to get uh a lot of this um in that redacted podcast there uh real quick what's my take on mh17 I don't have any reason to believe that mh17 was connected to this the one thing I want you guys to realize

(33:44) is the way they keep this stuff hidden in secret is they throw other weird conspiracies out there to get people to latch on to them also the whole idea that there were patent holders on board the plane and that it converted to the Roth child group that's also a big lie none of those people are actually on the plane that's a that's a statement of fact we checked so you need to be careful about the fake conspiracy theories that they throw out there they do that to get people to not pay attention to the real

(34:09) ones so I don't know I mean I guess theoretically there's a world where somehow mh17 could be linked to this but I don't think I have no reason to believe that it is at this point in time A lot of people do ask that it's it's a fine question to ask um but it's very important here when we are disseminating this type of information that we do so in a logical and rational way uh otherwise people just say oh you're a crazy conspiracy theorist that believes the Earth is flat people always say that

(34:33) to me a lot okay um so I'm just going to look at some of the questions in the chat real quick before I before I read this as well um they said MH370 video is the only one we've seen with this technology have you discussed whether or not this is the first time it has been used PR is we have no idea we would never have been able to figure this out without two videos honestly I think we needed two both videos from different perspectives both leaked by US military uh US military personnel of US military assets

(35:03) one of which we didn't even know was a system that existed the cber system and the satellite system and how it works we had to deduce how that system in video is even possible so

just to give you idea of how difficult it was to figure this out we had to have a literal mountain of evidence and even now even with all this evidence you have a ton of people out there that absolutely under no circumstances can believe that it's real and just so I want I want people to understand how and I'll do I'll do some

(35:31) questions and we'll go back to that in a second um there are people out there that literally said that they will harm themselves before they will believe this is real I just want you guys to understand that we are so far ahead of the game and so far ahead of the Paradigm that people will harm themselves before they'll be ready to admit that this is real so yes these videos absolutely 100% literally break the minds of people and believe that they cannot be possible and the reason for that is that it's so far

(36:06) beyond the Paradigm of where public science is right now even though all these papers that we're going through are publicly available papers nothing I've disseminated has been classified information at least that I know of it's all out there in the public purview every single thing so you can look at all this yourself despite all that this goes to show how far behind mainstream Academia is all the science influence ERS that you guys out there that think you think they know stuff they're all idiots every single one of them that

(36:34) doesn't mean they're not smart people but when it comes to what we're what we're actually capable of they're complete idiots because they have access to all these papers that I do too there's no reason they couldn't figure it out themselves so the one of the first things I want you guys to take away from this is that any science influencer that you see on TV or whatever tell you about what's possible what's not they have no idea what they're talking about I challenge any of

(36:59) them out there right now to prove me wrong any of them anyone you want pick your favorite tell them about these videos tell them about this stream tell them about me tell them to look at my work do their best to try to prove that this isn't possible the reason why I say that is this science is 100% accurate 100% confirmed by scientific papers and by scientists and Engineers who've written patents as well as ones that are actively working on as contractors for the Department of Defense and private contractors just like Thomas beard

(37:35) did and Thomas Bearden was talking about it back in the 80 uh the 80s bong hits for Ashton please take an extra one for me so part of the reason why I don't do drugs is because I have a security clearance so I still have it somehow uh the other reason is because I wouldn't want anyone to be able to discredit me by consider saying that I'm on drugs I am categorically not on any drugs whatsoever um and I think that's very important although I do hope that one day that if I go on Joe Rogan and talk about this I

(38:03) will absolutely smoke marijuanas inject those into my veins with Joe Rogan because I think that would be awesome um okay let's see do what other questions you guys have real quick oh yes so also I want to point out about this science now this science opens the door to a lot of magical stuff I would say that warping an object macroscopically from one location to the

other is pretty goddamn magical but I would also say that causing stuff like earthquakes is theoretically possible I don't know if it can like produce an

(38:36) earthquake on demand but it can certainly amplify one or cause one that's about to occur this is definitely directed energy weapons I mean that's directed energy weapons are like old technology compared to this like we've probably based on what I've looked into we've probably had directed energy weapons since the 80s um and I'm talking about shooting and the thing is this doesn't even require a laser beam it it's a beam that you're not even going to see that's going to create an

(39:01) explosion at a distance and this is where you can either create energy at a distance and explosion you're not creating out of nothing you are sending it from one location to another just like what Eric Hecker mentioned with Antarctica the idea that radar dishes are actually weapons this is what everybody needs to understand a radar dish is a weapon it doesn't just detect information you can actually send energy to a point and if you cross the stream so to speak you can cause an explosion at a distance this is actually what I

(39:28) think happened to MH370 I think we ignited those batteries on the plane we made sure that the lithium ion batteries would be on the plane then we hit them with a directed energy weapon we caused the batteries to ignite we caused the plane to divert we maybe even remote controlled it at that point to the location here where we warped it out I think everybody on board that plane was dead I think that they probably succumb to the toxic smoke or xixia from running out of oxygen because the oxygen Mass didn't last long enough there's some

(39:58) some of them survived like if there was people on board and it was some kind of operation and they gave them gas masks maybe maybe the freescale semiconductor scientist survived but that's just my opinion it's looking pretty damn Grim so even though this stuff is possible guys I don't want everybody going off the deep end out there saying that every single thing that happens out there is due to this technology that's I mean it might be but we just have to be very careful so even though there are rabbit

(40:23) holes out there even though we can technically warp an object that doesn't mean every every single thing out there is the the fault or cause of a government our government or a foreign government but it is possible okay so uh also thank you guys really quick for being here I appreciate it um yeah **Mick** West didn't kill himself I don't know **Mick** West is not looking really good right now is what I'll say so um I'm also gonna say something here as well that's not going to come off very friendly but I do want

(40:54) people to know this especially now that we figured out the science 100 % and it will check out 100% um there are **debunkers** out there this guy listed down here as one of them and these people have been lying about these videos for months and months and months and they've been claiming that they have 100% certainty that these videos are fake and they could not have possibly known that that is what is called a lie that's a lie when you don't know something and you pretend like you do that is the definition of a lie so to

(41:24) be clear assuming these videos are real which I think at this point we can say with near 100% certainty that they are I mean the science checks out every aspect of them checks out it would take a really weird story for someone who have faked these given all the information given the fact that I just figured the science out and as far as I know there's nobody else on Earth talking about this um there's essentially no way they can be fake so if you are lying about these videos and you have been lying about

(41:48) these videos like this person down here um I would stop lying about the videos now I would also say you should probably start apologizing about lying about the videos because again and I've said this multiple times with AO they are the all domain anomaly resolution office has the ability to verify these videos if they're real they have the clearances I've talked to them I am going to confirm that I'm talking to a real person I don't have any reason to believe that I was not uh they gave me

(42:17) their rank they gave me their name Etc I am going to confirm that if they come out and confirm these videos then I am going to send the family members after every single person who's been lying about these videos every single person that's been making YouTube videos lying about these videos I am going to send the family members after you I'm going to help them sue you for everything that you have I have saved all your videos I have been saving people's uh statements that they've been making the false lies

(42:41) that they've been making about the videos when they could not possibly known the videos were fake I've been saving all of them I will send the family members of the victims after you I will use the Alex Jones precedent The Alex Jones Sandy Hook case as presedent for why you should be sued for every single di that you have all of your money that you have should go to the family members of the victims because you helped cover up what happened to them and lied about the fate of their family members do not lie about these videos

(43:10) when you do not know that they are fake that is the last warning don't pretend like you had not been warned I know this message will get back to every single one of you **debunkers** okay now that we've gone through that little bit of um not not fun stuff to talk about let's dig back into this and once again find your favorite scientist you want to get Neil degrass Tyson I will rip Neil degrass Tyson to shreds when it comes to the science pick your favorite science influencer that you want and have them going you guys

(43:42) should look up when Bill NY went on Larry King and got absolutely eviscerated that is what I will do to your favorite science influencer on National Television um okay now let's go look at the story and then uh let me see if there's any other questions you guys have before I do that real quick no and I'm not going to be doing I **Mick** West and the **debunkers** have dodged every single uh debate with me **Mick** West has dodged four four debates with me podcasters tried to set it up he cowed it out of every single one because he

(44:16) knew I would destroy him um that local 5.56 guy that is being talked about here he was supposed to do one with uh Skyfire news where he was going to bring his scientists and I was

going to bring mine he cowed it out as as well every single one of these debunkers are cowards and they are liars do not believe anything they say nothing you read on Reddit related to these videos is accurate has no credibility whatsoever if you don't hear it from me there is no credibility I am the literal expert on these videos

(44:46) okay oh thank you very much JJ for that donation appreciate you guys I appreciate the overwhelming support that I've been getting as well um so a lot of people out there who have been supporting me and supporting this case and you know keeping me going on it there's been several times where I wanted to stop um just because of how crazy everything's been uh if you guys don't know Joe Rogan reached out to me at one point but he was convinced by some of these debunkers that it wasn't real he's wrong the videos are 100% real

(45:15) and Joe Rogan out of all people should not have fallen for it because CNN literally made it made him look like he's a sick person on national television changed the color of his face and then they even had the AP posted debunk saying CNN didn't change it when they did and his own subreddit hates him so I mean he should have been the last person to fall for this but if Joe Rogan doesn't want to talk about that's on him man um okay let me see I'm looking through the questions right now okay what is this question uh were

(45:49) the orbs within that Cross Beam and was the beam following the plane no the the orbs themselves are shooting the beams in this case so we don't actually have radar dishes on the ground now you can probably use radar dishes on the ground which is why the one in Antarctica is so scary the one in Antarctica is 5,160 Doms each one can do 2,000 volts and they most likely have a capacitor there where they can charge up just like if you playing like the old Command and Conquer games was like like that literally like that the

(46:20) orbs are something even more advanced than that where you have it in a localized ball of energy that can produce these now this is why the coherent matter wave beam patent coherent matter wave beam patent by locking Martin is so important go look it up it's 10 microns in length the size of a bacteria this is what's called a transducer it can convert energy from one type into another this is a very important aspect of how we can create this type of Technology within some floaty orbs as we're going to call

(46:52) them uh Over the Horizon radar this is another great Point Over the Horizon Radar Now gets very scary because now over the horizon radar is not just a detection mechanism it's also potentially a weapon so we can actually bounce the beams off the ionosphere further out than we want it to go so we're not limited by a line of sight either now granted if you have some orbs that can do this even better and what we'll look at here after I did after I read this next piece is we will go look at some of the shoot Downs that have

(47:22) been happening in Israel it is very possible that some type of scal weapon is being used to shoot down missiles in Israel and this is where we want to be looking at the war because where does this technology come out it comes out in Wars this is where you potentially don't want to use your super weapon but you use like the stuff that's not quite the best as your

super weapon but still shows advanced technology and scalar weapons directed energy weapons will be getting used they have been getting used

(47:48) absolutely we just don't know what we're looking for yet okay I'm looking uh this point about I mean 17 guys I don't know about this decomposed body stuff guys I would not run with any of that and I won't be just a heads up okay uh why did they take the plane if not for the people I think they they probably did take it for the people but there is some there's there's a chance where I'm going to read this here next and we'll talk about it but there's a chance here where they either

(48:19) accidentally killed the people when they didn't want to or they killed the people but they also wanted to disappear the planes so that there was no evidence again I can't claim to know stuff that's unknowable that's the difference between me and the debunkers the debunkers will say that they know for sure stuff is is is not real or whatever when they can't possibly know it I will tell you what I can know and what the evidence shows uh just like the fact that the science checks out 100% but I'm not going to

(48:45) tell you unknowable information I'm not going to pretend to know stuff uh that I don't know that's out there I will give you my opinions okay um just looking to see if there's anything else in here uh the people on the plane must have been important yes the 20 free scale semiconductor scientists and Engineers I go into depth on this on the redacted podcast so check out the redacted podcast if you want to know more about the motives and the people on board the plane the 20 free scale semiconductor uh

(49:13) employees and I had already deduced these guys must be related to technology oh boy are they they actually are both related to radar technology and microchips and that's what's needed to miniaturize this technology most likely this is how we were able to miniaturize it to the point where we went from radar dishes to now where we just have floaty orbs that can pull it off so they are definitely uh involved AO has not responded yet but I did send them another email and I told them I can prove the science 100% so I'm looking

(49:43) forward to talking them there's no way they can Gaslight me it's not possible I know this is our technology I know we've got it I know this is secret technology if they want to talk to me and have me stop talking about it they need to come negotiate with me otherwise I am going to continue to expose this and I just don't care I have no reason to stop exposing it unless they come and talk to me and tell me that hey that's our technology could you please stop talking about it and then they can give me that

(50:07) scario clone okay let me see what else we got here yeah and if you guys know anyone like uh Alex Jones or Joe Rogan Tucker Carlson heck even Bill Maher anyone Roseanne who wants to talk to me about this send them my way I have all this information memorized at this point except for the science in which obviously I'm still trying to catch up on um but uh all the evidence somebody asked like am I reading off a teleprompter on the uh the Clayton Morris interview no I'm not reading off teleprompter you guys I've

(50:49) done 70 or 80 podcasts I've got this stuff memorized all the evidence memorized it's a ton of evidence oh yes this just reminded me something else as well okay I want to do some shout outs real quick to some people first of all rest in peace Amy ESD Amy we could not have got here without you I know you're up there somewhere listening to us watching us right now as we prove that anti-gravity is real thank you very much thank you for your sacrifice and everything you did to get to the point where we are at right now your spirit is

(51:20) with us 100% I mean that absolutely and sincerely secondly Thomas Bearden Thomas Bearden is also not with us he also died two years ago Thomas Bearden without you we would never be where we are at right now Thomas Bearden is also an American hero that's been talking about this or was talking about this 38 years ago about the the implications of this technology without those videos of him from 38 years ago and from the 90s and even early 2000s that we've been watching in the last couple weeks we would never

(51:55) have figured this out these these people that came before us we owe everything to them thank you Thomas Bearden for be for being there I know you're watching over us I know you're our Guardian Angel right now thank you the other person I want to thank is Lieutenant Commander Edward C Linn without Lieutenant Commander Edward C Lyn there is absolutely no chance whatsoever we could ever be in the position that we are in right now not even close no one could ever be the believe these videos were real unless we

(52:25) had two videos both from military Assets in super high definition with classified systems that have previously unknown surveillance capabilities with the coordinates in them with the nr22 cons consider uh consistent with the cers system without all this information there would be no way we could have ever figured this out there'd be no way anyone could have ever believed anything like this was possible I would never have believed anything like this is possible without two videos both of them **leaked** by lieutenant

(52:56) Commander Edward C Linn he's the guy there's nobody else that fits the bill everything is consistent with him being the leaker a will be able to confirm the videos are real they will be able to confirm Lieutenant Commander Edward C Linn is the leaker whether or not they lie about it or go quiet or try to Gaslight me I don't know I can't say but there's no way that there any gaslighting is going to work at this point we have too much evidence we know exactly how the science works it's

(53:21) essentially the equivalent of Checkmate so I want to thank those people um I also want to quickly thank the scientists and Engineers who helped me and tutored me and told me pushed me down the right path I want to start with Roy D Herbert he was the first scientist to reach out to me on Twitter you guys can find Roy D Herbert on Twitter I suggest you follow him very intelligent man uh time dilation dilation theory is a theory that he's proposed with Martin Gibson my interview with Martin Gibson will be coming out the next few days

(53:50) it's just been delayed because of all the craziness that's been going on um but it has been recorded next scientist I want to thank is Dr Salvatore pz thank you very much sir you are a

effing hero Salvatore pz after I emailed him reached out to me wanted to do a podcast he took great personal risk in talking to me he talked to me he talked to me so openly that I think he might even got in trouble I don't know that for a fact um but he went quiet so uh very quickly after my second interview with him um but without him

(54:21) without his patents and understanding he gave me so much understanding and so many Avenues to go down scientifically from an electrical engineering point to learn about how the science Works um I know he's seen stuff like these orbs that's how he figured out those patents that's the only possible way he might have seen UFOs like alien UFOs I I don't know and again I don't care about aliens I mean cool if they're real cool if they're not it's not really my thing um I just care about the

(54:48) technology but what those Pats that he has out there are real absolutely you guys need to look into salvator P's patents thank you very much sir and to his daughter Salvador Pi has been attacked and tried people tried to discredit him science or history will look back at Dr Salvador pz as a hero and a Pioneer in an age where nobody else was pushing information like that out there and I want his daughter to know that he is also a hero as well um because of that because apparently she would see a lot of the negative comments

(55:20) that were out there the next person I want to thank is uh Bob Greener who is the Martin fleshman Memorial project you guys can f find him on Twitter find him on YouTube he's been looking into low energy nuclear reactions he has been looking into cold fusion we do have the capability to produce overunity the power of a stun and the palm of our hands it's real you guys can look into Malcolm bandle's thunderstorm generator it's real um and this same technology is uh similar to that as well it's not the

(55:50) exact same thing but it's somewhat similar there's there's certain connections to it free energy is possible it can be produced several different ways uh cold fusion is one of those ways so without Bob Greener explaining the science to us and and reviewing the videos before I ever met him we also would not be here now there's other people I want to thank too but the last one is potentially the most important one uh my good friend and potentially best friend on the planet Dave Rossy I can't believe that I met Dave

(56:18) Rossy in this life uh I feel like I have a spiritual connection to him you can find him at podcast Zed on Twitter I strongly suggest you take a look at his Twitter account and his profile he's got some pretty amazing things in there he's the one that came up with the fourth orb he is the one that's that uh told us about the terminology of macroscopic phase conjugation before I even knew what it meant and that's how we got to the point we are now where we can explain the science 100% he is a DOD

(56:48) contractor uh if anything were to happen to Dave or myself then you would know that everything I'm saying here is real um neither of us are suicidal I know I've talked to him as recently as as of today um so thank you Dave Rossy for everything that you've done to help out MH370 thank you brother Dave thank you brother Bob uh thank you brother S as well

appreciate you guys okay now that we've done the awkward uh cringey stuff let's keep going um now the real story of MH370 Espionage and real quick cheers

(57:19) everybody I'm gonna lose my voice after tonight I feel like yeah also some other scientific Concepts if you're just interested in high science look up super cavitation look up hypersonics look up plasma sheaths look up Sono luminescence star in a jar incredible stuff that there's is out there that's real okay real story of MH370 Espionage I have no special talent I am only passionately curious by Albert Einstein why do I have this quote there because Albert Einstein was not even a PhD he was just a guy that was searching for

(57:56) the **truth** and that's the only thing that I am as well I'm not comparing myself to Albert Einstein I am not in his level um but I am somebody like you guys **I want you** guys to realize that you can all do the same thing I'm doing about any topic that you are passionate about you can be anything that you want in this world that's what I want people to know I am ashon Forbes and I have been a citizen journalist investigating the MH or Malaysian Airlines flight 370 disappearance for seven months the group

(58:22) I started m370x has dug up every piece of evidence press conferences and interviews going back 10 years I've spoken to the original investigators in addition to scientists and Engineers some of which work for the military or as contractors for the Department of Defense I would measure my knowledge of the case against anyone and what I mean here is you can find literally any expert about MH370 you want on this Earth and I will be able to stack up with them I might even know more than they know that's how much we have found

(58:53) out about this over the last seven or eight months that's how de dedicated I have been to finding the the answers to this case I would even argue that some of the people in m370x stack up with some of the best experts out there the official story of MH370 is that no one knows what happened to the plane I want to repeat that the official story of MH370 is that no one knows what happened to the plane there's a lot of theories out there the official report though is that it just went missing make sure you understand that but planes do

(59:23) not disappear in 2014 to find the **truth** we had to take a fresh look at all of the evidence and only reject the satellite pings after 1840 UTC this is the location where the videos happen this is only logical because we did not find anything in the location of the pings indicated in the South Indian Ocean and the debris that washed up in Africa is not consistent with a crash in the South Indian Ocean I'm going to repeat that for the people out there the debris that washed up in Africa 3,000 miles away is not consistent with a

(59:59) crash in the South Indian Ocean that's how easy it's been to lie to the world people didn't even do basic common sense and reasoning when that debris washed up in 2015 a year after the plane went missing everyone wait a minute what I thought you said that it crashed in in Australia you can actually look up the uh the tides or no the um the currents sorry in the South Indian Ocean you will find that the currents go east that the debris should have washed up in Australia and none not one piece washed

(1:00:31) up in Australia that is impossible if the plane crashed along the seventh Arc where they says it did every single expert about MH370 that thinks that this was a suicidal pilot that crashed a plane in the South Indian Ocean is objectively wrong I'm gonna say that again every single supposed expert every single YouTube video and every single person that claims that they are an expert that knows what happened MH Z they are all wrong sorry that the facts the following story is supported by more evidence than any other story to

(1:01:08) date again the following story is supported by more evidence than any story to date sum by magnitudes and I say this is from a letter to Ashton Forbes if you guys want to listen to that you can Google it I talked about it on I think the Clayton Morris uh redacted podcast today I write write this because I want the world to know that most of the trouble on Earth are created for political reasons now this is important because this Theory we're putting forth is an Espionage story between United States of America and and

(1:01:41) **China** an early theory was hijacking people used to think that early on this was a hijacking scenario but no one took credit for the missing plane and the scenario of hijacking was too sophisticated for a simple hijack in a post 911 World 911 the story is that some guys with box cutters killed the pilots and crashed the planes into the the towers within like 15 minutes this is one where they like took it on a rogue route where nobody saw it for like over eight hours instead it was state sponsored Espionage this explains how a

(1:02:10) cover story was developed Espionage Narrows down the possibilities to three major players **Russia** **China** and the United States **Russia** doesn't have the capability and now I'm going to backtrack here a little bit they might they might I think the fall of the Soviet Union most likely what happened is the United States Leap Frog them especially when quantum computers came out I think that um the United States became much more advanced on scalar technology than **Russia** did **China** I think has been catching up but they're getting

(1:02:41) close as well 10 years ago it was a different story um **Russia** also would have been exposed by Western governments like they would not have been able to keep this secret if **Russia** did something in the plane United States of America would have said **Russia** shot it down they would have convinced the world that **Russia** was at fault **China** had no motive because most of the people on board were Chinese uh you could argue they were trying to do something to those freescale semiconductor employees but the thing that rules **China** out is that they hacked

(1:03:06) the Malaysian government the next day on March 9th and they tried to find answers to what happened including stealing the crisis medium minute notes as well as classified information about MH370 which there shouldn't have been classified information **China** was trying to figure out what happened to the plane they knew the plane didn't crash they knew something weird was going on they also ended up releasing satellite pictures later on but we're going to get to get to that it was the United States that took the plane

(1:03:31) there's no chance they wouldn't have been tracking a rogue 77 in a post 911 world we

found out about the cbers and sosus surveillance system space based infrared system sosus is the acoustic system that was able to hear the Titan sub pop uh the bases Diego Garcia and pine Gap have the most sophisticated radar systems in the world the Over the Horizon radar I can see for thousands of miles both of those bases would have been able to track Malaysian Airlines from takeoff to supposed crashing we know beyond any doubt that the United

(1:04:01) States government knows what happened to this plane was tracking the plane it's impossible for them not to have been simple as that uh the United States government has the capability and means to cover it up while selling a phony story to the entire world's media this is why they had fake experts going on CNN claiming that phones can still ring when they're off or there submerge at the bottom of the ocean this is why they had CNN if you there's this clip out there where a CN CN guy gets super angry and claims

(1:04:29) there's no chance the playing could have ended at Diego Garcia but doesn't give any reason for why at all he's like and he's like viscerally angry when he talks about it like somebody who's like lying and is super defensive it's very bizarre I posted on my Twitter a while ago I may try to retweet it tomorrow so the United States government is the only one that could do this the implications of this are that the United States government controls all our media they control all the Western media uh which is very scary

(1:04:55) because they can convince the world of a suicidal pilot of all kinds of nonsense you should not believe a single thing that you see on TV Thomas Bearden was talking about this on the on the stream we watched last night who's your daddy this operation was a message to **China** so why do they do it they were sending a message you could argue it's also a message to **Russia** saying look at what we can do we can zap a plane out of the sky you want to mess with us we will send some orbs after you we will zap your world leaders into dust we will

(1:05:26) send them to the Center of the Earth we will send them to the the sky somewhere and just drop them I mean this technology is uh really no limits an operation like this would have required planning it could not have been pulled off in just an hour or two so early on I thought maybe they just reacted to the plane being on fire and then they're trying to save the plane there's not enough time for that the government doesn't work that fast this would have had to have a planned operation with very specific intent the satcom only

(1:05:57) pinged one satellite despite being in the range of two mh3 71 is the the return route from Beijing to to qual lur and it actually pinged both satellites even when the plane was on the ground in qual and po it was pinging both satellites and then suddenly it stopped and from that point on until takeoff until the plane went missing until the plane supposedly went into the South Indian Ocean it only pinged one satellite why it was set up to do that they hacked it because that made it impossible for people to figure out

(1:06:29) where the plane went this is why they were able to manipulate the satellite data so easily because if they had two Satellite pings they would have been able to triangulate the location there have been no doubt where the plane was this was Espionage from the get-go two

fake passengers with stolen passports changed their appearance with an implausible story of flying to Beijing to get to Amsterdam flying to be Jing to get to Amsterdam from qual lur there's a direct flight to Amsterdam why if you're on stolen passports when you

(1:06:56) risk going through extra countries and I want to point out now some people as well are talking about uh some of the mainstream media including the 60 Minutes Australia stuff it's all garbage all garbage all of them are wrong all this [ ] about some guy pulling up a wing uh the [ ] about like Richard Godfrey and his whisper that it's all horeshit conclusively fake horeshit that's none of that's what happened to the uh the plane this is what act actually happened deal with it I don't give a

(1:07:29) crap anyway the plane went dark at a weak point between Radars this also indicates that this was the exact time where they set the batteries on fire all these factors point to espionage now if they use a directed energy weapon to set the batteries on fire it may have also started firing some of the Plastics on the plane there would have been toxic smoke spewing throughout this plane this is the part where right away if people don't get their gas masks on they're going to succumb to the toxic smoke this

(1:07:55) is part of the reason why I think the people are probably dead also when the pilot is battling the fire they have to lower their altitude this is consistent with the witnesses lower the altitude and depressurize the plane because the fire extinguishing gas sucks the oxygen out of the plane so you have to fly low so that people can have enough oxygen to be able to breathe but you can't fly too low because you don't want to crash into the mountains there are mountain ranges in uh Malaysia we look some of them up they

(1:08:22) go up to 7,000 ft so you've got to stay between 7,000 and 10,000 ft that may seem like a lot but at the middle of the night where you can't see anything that's pretty damn scary lithium ion batteries are dangerous and there was 487 pounds of them which managed to miss two security screenings that day and two unsafe pallets which were placed in the forward cargo bay near the electronics Bay this was no accident the United States used the fire event to divert the plane from the South China Sea to the Rend VI point

(1:08:53) they were most likely in my opinion moving it away from China's uh satellites to make it harder for China to track the plane South China Sea is much closer uh the plane can be seen zigzagging on flight radar before it goes dark indicating that the pilot panicked due to the fire you can actually see it on flight radar moving like this and so you can tell that the pilot did take manual control of the plane it wasn't they took it off manual control you can see them moving it and then they decide they're going to turn around

(1:09:26) going to go to panang Mike McKay sees the plane on fire for a few seconds from an oil rig before the automatic fire suppression devices deploy and temporarily put it out fishermen in a boat see the plane flying low 10 minutes later consistent with what the pilot would do to provide oxygen for the passengers in a fire scenario K T saw the plane within minutes of the MH370 videos flying low descending and glowing orange with dark smoke coming out of the

back of it near the nicobar islands that's the location

(1:09:54) we see the coordinat in satellite video there's also the MayDay communication I'm going to talk about here in a second MH370 did not lose Communications because 777 pilot hears them 10 minutes after they went dark the Malaysian Minister of Defense they knew admitted they knew the plane wasn't hostile which is only possible with communication there's no other way **China** times reported an intercepted Mayday at 2:43 a.m.

(1:10:25) that in Malaysian time that gets converted to 8 1843 UTC within 3 minutes of the target time we think the videos happen of the plane disintegrating and attempting an emergency landing guys that's three corroborating sources real person witness Chinese reported interception of a communication from the plane and two videos that show smoke coming out of the back of the plane I mean that should have been smoking gun enough but we also have coordinates that are on the satellite video that the satellite video was released 9 days before the raw

(1:10:56) Telemetry data was even out there I don't know how anyone can even deny this it gets just absolutely absurd the Malaysian government hid the communications and from the families and the public there's also a record of this as well they actually sued to try to get them to release classified information about the plane and they wouldn't do it um when they released the supposed Communications they only released partial Communications that's the only logical conclusion the defectors I'm gonna have another drink

(1:11:24) here we're going hard here I hope you guys are having a great night someone say sam tripol yeah also if anyone wants to talk to me um about the case about the videos or about the science uh feel free to ping me on Twitter I follow basically every big podcaster that's out there or you can reply to any of my recent posts tag me in it and I will follow you we can DM whatever many had correctly speculated that the 20 freescale semiconductor Engineers as being the motive actually Joseph P frell was the very first one I

(1:12:02) think and he had actually figured out that it was a message as well he just did not realize the exact technology that was used the company was tied to us Aerospace and defense they were actually tied to serving RF power needs which is presumably for radar they were named nine times in a National Security Agency report from 2005 on Commercial emergence of room temperature superconductive microchips microchips like this are used in quantum computers and other advanced technology this is the direct connection to the employees to the plane whoever

(1:12:32) controls his technology controls the world this we're either preventing them from going to **China** um or you know actually that at this point that's what I think it has to be eight of the free scale semiconductor employees were Chinese Nationals and defecting with the intellectual property related to the technology on board the plane whoever controls its technology has military Supremacy the entire planet 20 employees were sitting next to each other and some even had their entire families with them that is very weird

(1:13:04) for a one-way trip across the country or across the world the company had put out a statement saying these were very important people and this many people on one plane should have triggered a company policy especially if they're sitting next to each other it means they didn't buy their flights independently it means that they were booked together China watched the plane get phased out with their own satellites and showed the world on March 13th they released three images which look like orbs around an object this was not

(1:13:30) debris and you can see the cumulus clouds in the images the satellite images were a message to the United States you win they looked in the South Indian or South China Sea where it was reported that this was debris there was nothing there you guys can find those articles yourself collateral damage it's unlikely that all the passengers survived the fire depressurization and macroscopic F conjugation events the goal would have been to retain the intellectual property from the engineers the rest of the survivors would have had to be silenced

(1:14:04) through coercion or Force I think they probably didn't even make it to the plane landing a lot of them probably already had died and at that point you're in a really precarious situation now if you really want to press me I'd say that anybody who lived probably went into witness protection in the United States their old lives are over the French father who lost his wife and two children uh Guan Watros knows that the plane did not crash he was told by an intelligence Source called Mr B you guys can Google that too that the Americans

(1:14:32) know exactly what happened to the plane and that two AWACS spy radar planes were in the area Lieutenant Commander Edward C Lyn could have been on one of these PL one of these planes the nephew of the pilot was told I am very sorry for your uncle they are collateral damage what the nephew of the pilot was told I'm very sorry for your uncle they are collateral damage that's 100% consistent with with an Espionage event this statement only makes sense if it's an Espionage event the White House was calling

(1:15:02) Malaysia every day not because they cared about Philip Wood the only adult American passenger board the plane but because they needed to do set a narrative to do damage control this is why Malaysia's response seemed ignorant when it actually in reality was deceptive this is also why the Malaysian Min defense is like sweating his balls off while he's doing an interview he won't answer any basic questions because he's terrified he's gonna get caught in a lie he's a terrible liar you guys can watch

(1:15:28) that interview with the Malaysian Minister of Defense we watched it several times it's you could just put it straight on Saturday Night Live with no edits and people would be laughing their asses off Diego Garcia where did the plane go the plane likely ended up in Diego Garcia which is one of the only places to hide a plane of this size a B777 fire suppression device washed up in the Maldives Weeks Later which meant that it had to be empty these devices aren't going to float unless it's empty 20 Islanders on Kudat saw the

(1:15:59) plane flying low and headed towards Diego Garcia military base to the south 20 Islanders the M the Maldives device and Witnesses were discredited and intentionally excluded from the

search ask yourself why would you intentionally exclude some islands that are in the Indian Ocean when you're saying that the plane went into the Indian Ocean because you don't want people looking in the right spot you need people go looking in the wrong spot in the South Indian Ocean not over to the West by Diego Garcia that's the last place you want people

(1:16:27) looking that's how bad the coverup was you could argue this cover up was really good you could argue it was really bad and I want to be clear at this point this is not a conspiracy theory this is a conspiracy this is what actually happened in the plane there's never been a conspiracy theory out there ever that had this much evidence going along with it I wish there's been other ones but this is like too much evidence lastly a message and a black and white picture by Philip wood the American passenger

(1:16:55) appeared on forchan a week after the plane went missing claiming he was being held prisoner and the claimed that he was drugged the exf data had coordinates indicating Diego Garcia that's pretty damn weird so this is where there's some hope that maybe somebody survived whoa Shelly thank you very much for this donation Shelly cheers for you not giving up this is huge you hammered the last nail in the coffin for all the **debunkers** seriously this news changes history you're work ethic is an example for all of us engaged in huge research

(1:17:28) projects much respect Shelly thank you very much Shelly I appreciate you I appreciate everybody who's been supporting it and yes um I'm not going to hammer on the **debunkers** anymore they've they've been given notice we put them on notice don't lie about these videos don't pretend like you know these videos are fake when they're not um you've been told I've refuted every single **debunk** that's out there if you think I haven't you need to go back through my work do not lie um I've told you what will happen

(1:17:55) and if I if I see people publicly lying about the videos I am going to send the families after you 100% the hero now this is the uh okay we're almost to the last part United States assets were in the area because the Cobra gold and cop tiger exercises were going on between Thailand Singapore and the United States cop Tiger's theme that year was search and rescue so of course they had the assets in the area I actually foyer the Navy and I asked for a list of the assets that were part of that exercise I didn't I didn't ask for

(1:18:26) the exact number I went back and forth with them so I'm hope I get some information back so far all my foyos have been uh rejected essentially or you know given technical rejections that it's going to take forever Lieutenant Commander Edward C Lin was recently assigned to the vpu2 Wizard's secret spy plane Squadron February of 2014 that's just weeks before the plane went missing and began being investigated on April 2nd 2014 that's just weeks after the plane disappeared based on a quote from

(1:18:55) his lawyer he was likely on one of those awaks his job would have been to relay information upper command he was Lieutenant Commander this is only a navy and Coast Guard rank he was part of the Navy they may have also been remote controlling the plane there's been a lot of evidence that they can remote control planes as well if you can teleport a plane you

better believe you can remote control a plane United States government and sorry warp a plane United States government charged Lynn with Espionage a potential life sentence but later later

(1:19:25) on had to admit there was no evidence he exchanged any information with anyone from **China** this charge is consistent with the United States having conducted an Espionage Mission Against **China** and fearing that Lynn was a spy who **leaked** the videos to them if **China** did this and then Lynn **leaked** these videos he's not going to get Espionage they're GNA be like oh yes you **leaked** what **China** did you were trying to show the world proof of that **China** did it the only reason you would come down this hard on Lynn is because we the ones

(1:19:55) who took the plane and he's revealing to the world that we took the plane instead he just wanted the world to know the **truth** which is why he removed sensitive information while leaving the coordinates that would prove the conspiracy the the the military videos had a lot of the sensitive information removed from them it would had been a military personnel who did that somebody was knowledgeable about the systems he probably didn't even know that this was some crazy advanced technology because that's how far beyond

(1:20:22) the Paradigm it is he probably just thought it was UFOs or aliens and he thought it wasn't doing any harm the Telemetry data was not publically available when the videos were published on YouTube this is a statement of fact the Telemetry data was not published till May 28th 2014 the SAT the video was published at the latest May 19th 2014 was the mythical hoaxter that didn't want to collect \$150,000 also psychic the story makes no sense for these videos to be faked where's the hoaxter there isn't one Lynn's lawyers argued

(1:20:59) that the classified information in question was available on the internet how many smoking guns do you need guys they're charging a guy for life in prison over information that's available on the internet what do you guys think could be that serious it has to be the videos would have to be a super weapon that he's leaking to the world it's completely inconsistent with how they've gone after other people even for espionage he was also caught with flight manifest that includes search and rescue code

(1:21:30) names what caught with flight manifest that include search rescue codoms one of the actual articles about him has a picture of a p8 Poseidon spy plane searching for MH370 what why his appeal as penal codes consistent with classified information potentially being video evidence we looked at the appeals penal codes are one of the possible things for the penal codes is video evidence even after he took the plea bargain his sentence was still overtly harsh getting n years for dissemination of classified information military members had to

(1:22:07) testify as to why what Lynn did was so damaging to the United States the government was actually afraid that they uh the if they went to court with this they would have to reveal what the classified information was why because it's those videos and people go wait those videos that are on the internet those are real how can those be be real that's the reason why the government didn't want to go to court with this Lynn may have **leaked** mh37 videos to his Taiwanese contacts which then allowed them to reach the internet at which

(1:22:35) point they could no longer be hidden there was no getting them off the internet once they're on the internet the internet's forever the letter to me used broken English consistent with a non-native speaker from Asia and Taiwan is an ally of the United States so if somebody was out there sending that letter to me telling me to keep looking it probably was somebody from Taiwan that knew the answer one of our allies against China we have met the enemy and he is us we're almost done here guys to summarize

(1:23:02) the United States planned an operation as a message to China who was attempting to steal intellectual property related to Advanced Technology they set the batteries to burn a specific point and divert the plane to a location where they would phase it out using the very technology China was hoping to gain the plane was warped I'm going to say to an unknown location probably near the Maldives based on the sightings and then flown to Diego Garcia the US rigged the sacom and falsified fake evidence to convince the world the

(1:23:29) plane flew to the South Indian Ocean where we never found anything the only reason this plan was exposed because of Edward C Lyn who made the sacrifice to show the world absolute proof and went to prison for it the world is not black and white it is Shades of Gray the United States has technology that would change our entire civilization a covert Elite that are covering it up for their own own reasons I would argue that it's for socioeconomic reasons as well as fear that we will destroy ourselves with this

(1:24:02) technology and of course military Supremacy over the entire planet if you want to expose the truth talk about the MH370 videos and don't stop talking that comes directly from the letter to Ashton Forbes that's the answer guys thank you for listening to my TED talk about MH370 um okay let's I'm going to just drink a little bit of water here I'm going to look at some questions if you guys have any questions break them out here um and then we're going to look at some of the stuff about the war effort that's

(1:24:28) been going on and then we'll wrap it up after that and my Twitter's blowing up and so is my phone things are going crazy right now chat I want to thank everybody out there as well I want to make give a big thanks to MH370 X at the moment um I couldn't have done this without all of you guys you guys know who you are that's out there um people have done a crazy amount of research um and and that's the only way we've been able to dig up all this stuff out there so I hope that if anything this serves as an

(1:25:07) inspiration to other people who want to find the truth and I I want to quickly before we dig into the war stuff I want to talk to the UFO Community First of all cheers again um the UFO Community has basically treated me abysmally on both sides from the Believers and from the Skeptics alike the UFO Community um in general is a complete [redacted] show it's no surprise whatsoever that disclosure has never happened that nobody's ever been able to find out anti-gravity or find out anything about aliens or anything like

(1:25:38) that the amount of people that are actually doing investigations like this in the UFO Community can be counted probably on one hand or less it's almost none um most people out

there in the UFO Community just want to [ ] at each other and talk about what might happen and repackage old content that's out there and sell it to people that's the truth about the UFO Community that's out there um and the reason why these people have attacked me because I came in and did something that none of them were

(1:26:05) able to do uh in their entire lives now there it doesn't mean there's not good people out there there are some good people and honest people in the UFO community and those guys and people know who they are and I thank you in general but you guys who have been doing the opposite you know who you are as well um and it's on both sides again the Skeptics uh the Skeptics of fallen so far away from what they used to be in terms of trying to be a rational logical people that they've actually become essentially equivalent of um like

(1:26:34) cultist Believers it's kind of like horseshoe Theory where the two sides meet at the top same thing in politics same thing happens in the UFO community in general uh and I have given them months ago this information on silver platter I begged every single UFO disclosure Advocate to look into this none of them thought the videos were real this goes to show how little credibility these people have uh I'm not going to name names I might but I'm not I don't think but you guys know who the big you know UFO

(1:27:02) celebrity type people are these people do not even understand the implications of the very thing that they're trying to disclose we are talking about free energy we are talking about anti-gravitational technology and we are talking about super weapons that make nuclear weapons look like little child's toys this is what people in the UFO Community need to wrap their brains around and start coming to terms with really quickly because that's what this is all about folks that's what real disclosure

(1:27:29) actually is it's not about Little Green Men it's not about hovering little crafts that are out there it's about what that technology means to the elite people who are in charge so if you are one of these people out there who's making documentaries or on Cosmic time and putting videos out there or doing MH370 documentaries where you don't come and talk to me your credibility zero if you're one of these people that's been saying these videos are fake and you know who you are your credibility is

(1:28:03) zero my message to you guys would be that you should come out and apologize and say huh maybe you were wrong about this Ashton guy maybe we should listen to him and talk to him because I've been a normal guy this whole time willing to talk to anybody the fact that none of these people are willing to talk to me says that you are the one with the major bias and it makes me question whether or not you are actually trying to get disclosure at all cuz there's only two possibilities from the believer side

(1:28:27) either you're really not trying to get disclosure and you're pretending like you are or you have your own biases about what disclosure means and it has to be aliens or whatever and neither of those makes you look really good I'm a rational logical person where I had no biases about what these videos meant and this is where simple conclusion of deduction and logic led

us okay let's see if there's any questions out there guys yeah and also if you're one of the people that is talking last thing I don't care which side

(1:28:57) you're on the believer or the skeptic side if you're one of the people that was trying to talk to podcasters saying that either the videos weren't real or you shouldn't talk to me shame on you you're a terrible human being if you were somebody out there tried to reach out to podcast or tell them not talk to me I had a lot of people do this guys a lot they would tell me some people went out there lied that I stole information from them what I'm the guy talking about this I'm the guy doing the research with m370x unless

(1:29:27) you're an m370x it's impossible for me to stole information from you these people are the scum of the earth never be somebody that's going out there trying to gatekeep other people trying to tell somebody not to talk to somebody on podcast the good podcasters that I talked to said yes I wouldn't listen to those people anyway and if people said that to me that I wanted to talk to you more and a lot of them did so ridiculous guys so again if you're in the UFO Community **I want you** to look at all these celebrity UFO

(1:29:56) people out there with a huge grain of salt especially the ones that have tried to gatekeep **[redacted]** block uh or deny the evidence in front of them none of these people ever looked at the evidence none not even one of the UFO celebrities ever reached out to me think about that not even one I'm showing literally anti-gravitational technology and macroscopic phase conjugation can explain how an alien being could come from another planet and get here faster than the speed of light and not a single one of these people that believe they

(1:30:29) are aliens here or whatever not a single one of them reached out to me H pretty damn weird guys and now we've proven it scientifically so okay let's keep going oh wait there's a question here uh if the US knew that the people wouldn't survive then why warp the plane I don't think that they necessarily knew uh it's possible that the people succumb from the fire event and it might have been accidental they weren't trying to kill them it's hard to say I also really just do not know if people can survive a

(1:30:58) macroscopic phase conjugation event uh there are papers out there excuse me that you guys can find that show that uh Wormhole technology is humanly traversible that you could survive the g-forces of going through a wormhole so when I look at those videos I think it's theoretically possible someone could survive that event it's more of the the fire and the fact that the the pilot would have to depressurize the plane to get people enough oxygen to breathe those are the things that I think would be uh really the limiting factors in

(1:31:27) people surviving so also I do not know or care if aliens exist out there I presume there must be life somewhere whether or not they're visiting us I really don't give a crap uh it doesn't change my life at all but being able to teleport or or warp objects absolutely changes my life and so does free energy so that's what I care about I'm not hating on anybody believes that stuff that's totally fine everyone's free to believe whatever the heck they want I it's just not my thing

(1:31:52) everybody else there's people out there you believe the NASKA mummies are real whatever you use this as inspiration man you can you can convince the world too uh also a lot of people have talked about teleportation being real including Daniel shean um what's the other guy's name uh Ben The Forbidden Knowledge guy I forget his name um Steph Greer a lot of people and I think some of these people actually know for a fact that it's possible they just didn't know it's called macroscopic phase conjugation

(1:32:22) exactly how it works the way that we were to figure it out so okay another question sorry let's see here uh thanks for all you've uncovered in this investigating what are your thoughts on the passengers phones connecting yeah so this is part of the reason why you can imagine even if that people were dead they would have collected the phones and then that's why the phones were still ringing because the phones weren't at the bottom of the ocean phones don't ring at the bottom of the ocean phones don't ring when they're

(1:32:46) off phones die within 15 minutes of being submerged in saltwater this was the craziest part where I couldn't believe people Prov the phones were ringing 19 family members signed a joint statement saying the phones were ringing for up to 4 days begging people to look into it they wouldn't look into it CNN got a fake expert completely fake expert to go on CNN and lie to the world and say that phones can ring when they're off and everybody just believed it 19 family members this is how much the media lies to people and how people just

(1:33:19) believe it at face value without even thinking about it logically this is why I use the term CNN brain cuz people that think that CNN is telling them real information are just non-player characters NPCs people that can only read off a script can only believe what they're told can't even use basic common sense to come to their own conclusions about things it's embarrassing okay let's see if there's anything else okay okay let's Oh Billy Carson yeah Billy Carson I think Billy Carson knows

(1:33:51) some of the stuff but some of these people as well like they they claim it unknowable information this is where you got to be skeptical the difference between me and all these other people is that I'll tell you what I know which is knowable information I will speculate as to the rest and I will let you know that a lot of people out there are like I know how the orbs work and there are a defense mechanism that's protecting the planet it's like what you can't know that you're not in any kind of position

(1:34:13) to know that uh so that's the part where like you really have to separate and this is where people discredit themselves they should just focus on what they actually know and then say when they're speculating but of course that doesn't sell books that doesn't uh get people on your side um you know plain old hardle investigations are not exciting um although in this case it's super damn exciting uh the pictures sorry I'm trying to figure out what this I'm GNA do a few more questions here because we

(1:34:41) got a lot of questions what about those pictures of minimal debris found so I already mentioned that debris could literally not have washed up in Africa from Australia and no debris

wash from Australia I think the debris most likely scenario playing I in Diego Garcia they dismantle the plane and they throw some of the parts in the water alternatively the plane was on fire some of the parts could have literally fell off the plane from the fire I mean guys look at how much the planes are literally falling apart in the sky right now the Boeing

(1:35:07) planes falling apart in the sky including like a part of an engine that ripped off from a Southwest flight last week planes are falling apart left and right so very possible the debris just fell off the plane um but I think the most likely scenar is they threw it in the water in Diego Garcia and that's how it got to the to Africa I I think that it is part of it what's been your favorite podcast um God there was a lot of good ones Clayton Morris was really good the recent ones have all been awesome vetted was great

(1:35:36) uh talking to Professor s uh Professor Simon Holland was great uh so vetted Professor Simon Holland Alpha Warrior Alex Jones uh the redacted podcast that I just did was awesome Sonia pan was great um Higher Side chats was fine but he kind of asked me some weird questions that were like trying to figure out if I was some kind of spy it was pretty bizarre um investigate Earth guys are awesome the confessionals was the best inperson podcast um Tony merkel's a great guy his platform's been growing and he deserves it

(1:36:11) absolutely um so a lot of great ones that are out there guys that you guys can check out also Zack Payne that had me on several times oh and Matt Kim Matt Kim guys if you don't know who Matt Kim is follow him he's one of my favorite people out there I plan on doing another followup with Matt Kim um so there are going to be a few more podcasts coming out and and now there's a lot more people now that I've been talking about the science and then and people you know understand that it's real they want to

(1:36:33) talk to me about that as well so I've got a lot more research to do so that I can really get um as knowledgeable about the science as I am about the case of the plane um let's see what else we got yeah cell phones also only ring if they're in range of a cell phone tower and there's no cell phone towers in the middle of the ocean so that's awkward yeah there's also a serial number unique serial plate was missing off the flapper on so it's theoretically possible that the fla Ron was from a

(1:37:04) different plane but I I actually just think it was from MH370 I'm one of the only people that thinks that the the debris is actually from MH370 that has a theory that's not this pilot suicide nonsense okay let's see oh a diamond diamond from Oppenheimer Ranch that was awesome talking to him several times leak project was really good as well I mean there's a lot of good ones actually now that I think about it guys let me see if I can find the list want to make sure I'm not missing any big

(1:37:32) ones um let's see yeah those were great I'm just looking to see what else there was I mean there's some other good ones as well but I think that's that's pretty um Coast to Coast AM was really fun I always talking Coast to Coast AM uh yeah Elijah Schaefer was good um so was uh Clint from the LI libert uh Liberty lock lockdown uh Tim P was actually still pretty good even

though he was extremely skeptical about the videos um but that was that was really fun just go on Tim P I never would have

(1:38:09) thought that i' I'd be on a show like that before um shout out to Chris Leto as well he got a lot of feedback for talking to me he talked to me twice um and I know he came on board where he he thought those videos were real as well um people were actually people were actually blaming me for Chris Leto going on his uh his sabbatical let's call it um which is that's pretty dark to do man don't do that either that's pretty messed up oh I actually do think Obama is directly implicated in this just for

(1:38:36) the record I think this goes all the way up to the top up there um yeah I think that Obama this the president has to sign off on a plan like this but that doesn't mean that Trump is Without Blame either I actually think that the uh classified information that the FBI went after Trump would for that they said it was momento I have a feeling that one of them might have been about MH370 it actually kind of tracks I don't have any proof but it tracks uh let's see uh did the Malaysian Airlines actually confirm more than one un

(1:39:10) identified object I'm not sure what that means in general there was actually a guy that was coming back around with some of the evidence of the plane and he ended up like dying in mysterious circumstances as well there was also one of the people from iMat randomly died as well had a heart attack might have got hit by a heart attack gun hard to say but there's been a lot of sketchy [REDACTED] around some of these people okay um is the plane still intact no they they probably dismantled the plane and this is part of the reason why they're

(1:39:38) never going to find this plane this in the bottom of the ocean at this point it's too late to even crash it down there there would be too much evidence that it had been planted the black boxes would tell the LIE this is why they're never going to find the plane they're probably never going to search again because they know they weren't going to find anything the Malaysian government knows that they're never going to find the plane um so this is just again how easy it's been to lie to people out

(1:39:58) there it's just it's really sad oh the judge the judge situation as well so Kenji Brown Jackson Supreme Court Justice of the United States she was the one before she was a Supreme Court Justice that ruled against the civil case in the United States said it was like corventis non something or other which basically means that it's not appropriate to be tried in the United States which is a really weird judgment because boen is an American company and one of the plaintiffs was Philip wood uh Philip Wood's Brothers uh Thomas and

(1:40:31) jameswood I looked up that case as well um so it's very bizarre that she just threw that out I think that there's a very strong argument for why it should been tried in the United States it was the difference between the family members getting millions of dollars and getting \$30,000 each \$30,000 this is part of the reason why I'm going to have the family members Sue all the debunkers in addition to the United States government because they deserve way more money and all the people that have been lying

(1:40:55) about these videos and claiming they know that they're fake those people deserve to have everything taken from them every single penny they deserve to have their lives ruined like the family members had their lives ruined um so do not be one of these debunkers that is making false statements about the videos and absolutely don't come and make false statements about me okay that's your warning okay guys uh you know what we might just okay I want to show a couple guys this is what we're gonna do we're

(1:41:19) going to show a couple of videos from the war effort that's been going on we'll talk briefly about that then I'll do a few more questions okay and then we're going to close it out for tonight so let's go okay actually so first video I want to show is this one that I posted earlier uh this one how do how do I do this let's do like this okay so this video I first incorrectly thought this was a Hypersonic weapon I don't think that any of Iran's weapons are Hypersonic hypersonic weapons move extremely fast

(1:41:56) the videos that I've seen out there look like conventional Rockets so I don't think that hyan is using hypersonics this was actually shot down in high Earth or or in like uh at super high altitude this might have been shot down by a satellite and this is really weird you could also argue there's no laser beam or anything like this as well that we see here this thing just blows up in in high altitude I think somebody said might be as high as like 100 miles in the sky which seems really high but how

(1:42:27) long is 100 miles 50,000 ft no that's possible um no 500,000 feet that's pretty damn High I don't think it's that high I'll have to double check some of that information but two things about this one the pattern this proves that all blast patterns look like MH370 people tried to argue that the VFX is a match and they moved all this stuff around those people are full of [ ] it's not how any of that works all blast patterns look like this you could literally match this and say it's

(1:42:57) a perfect match because all blast patterns look like this um but the other part of this as well is that we've got some crazy Advanced scalar Weaponry technology this is why we should be looking at the war effort because during the war effort is when this technology starts to get deployed now I don't think they're breaking out the orbs because you can't have you can't show people anti-gravitational orbs they're going to see it on TV and they're going to figure it out so this is where you break out

(1:43:22) the Weaponry where it's like it's pretty awesome but there's no physical evidence that you're going to be able to prove it but this is the type of thing where a scalar weapon an invisible scalar beam could hit this cause an exothermic reaction using scalar interferometry and Destroy completely annihilate a weapon this is why we're not afraid of nukes so people wonder like there's also this other thing and not just in ufology but everywhere out there where people think that we should be afraid of nuclear weapons guys

(1:43:50) nuclear weapons are 80y old technology we are not afraid of nuclear weapons nuclear weapons might be a liability our cers system can see a missile launch within a fraction of a

second and we can shoot a scalar weapon at it and destroy it immediately it's going to blow up wherever it gets launched from nuclear weapons are in my opinion are not only obsolete but I think that they are um a liability so that's how scary some of this technology is out here and we might even have satellites imagine you have uh

(1:44:24) radar dishes on satellites that can create the interferometry from outer space to create force energy at a distance that is better than something on the ground because you have way higher field of view from outer space than you do on the ground but we also have over the horizon radar which can bounce off the ionosphere so this is what you guys should be keeping in mind I don't think it's any coincidence that we're seeing like blue and green laser beams coming from outer space and going into outer space I think this is not

(1:44:49) necessarily the exact same directed energy weapon technology the scary part about the directed energy weapon technology is you're not going to see a laser beam it's going to be literally invisible and then you're just going to see the point the interference zone is where you're going to see the explosion going off it's just going to look like an explosion appears out of nowhere this might be exactly what this is by the way this is not VFX this is not CGI this is a real video it's a real

(1:45:13) video from Israel you can see the the this is the AP I think this is Washington Post not sure um so there you go on that one pretty crazy and again now this is the last thing I'll say on this we'll go on to the next video is that I don't know for a fact now we've been seeing a lot of weird videos and there's a lot of UFO videos that come out and I don't post a lot of them and the reason is because we're spoiled we've been seeing we saw two of the best videos in human existence that prove

(1:45:42) anti-gravitational technology and warping capability that no one even knew was possible so when you show me a little light moving around in the sky I don't give a crap that's nothing compared to the stuff that I know is possible so it's nothing against some of these videos out there there's a lot of really interesting videos but it's like when you sleep with a really hot woman and then you got to go back to normal girls I'm just kidding just joking guys everybody out there but you get the

(1:46:05) point let's just say let's put it in a better scenario better context it's like if you go out to a fine restaurant and you have a really good meal and then you go to McDonald's and you're like yeah I don't really want McDonald's you know so this isn't quite McDonald's this is like um this like going to Chili's okay I'll go to Chili's it's not bad it's pretty cool but it doesn't uh you know it's not like getting that that T-Bone steak at uh at Morton's or at Ruth's Chris or

(1:46:33) whatever okay now I'm gonna have to search for the other video what was the other one uh we're gonna look for Chuck now the other video I've seen and there's been there's been quite a few that are out there also guys follow Chuck Castello I don't or cesto I don't I don't know why I keep calling him Castello he doesn't really need my promotion he's got 700,000 followers and I feel like he's gained like 200,000 since I first ran into and met him super super

cool guy DMS me from

(1:47:02) time to time shows me cool videos that he thinks I'm interested in oh here's the other one 5.4 million views my God see I could have posted this for the clout if I had posted this it might have got like a million views but I didn't post it because it's just it's nothing compared to the stuff that we now this this video they claim that there's a thing I literally have no idea when I look at this somebody where was the where's the triangle thing does anyone see it SEC yeah I don't know I don't see any

(1:47:45) triangle oh there there it is right there right there okay so they were saying that this thing down here there's three lights here that are just stationary in the Sky people are arguing that this is shooting stuff down I I don't know I would argue that um what's happening is that the scalar weapons are potentially intercepting these and and shooting them out of the sky the one the thing the clip that I think looks cool when I first saw this and I almost posted it was this part right here you see that flash like what

(1:48:16) is that but then I looked at it again I just thought oh it's just like the missiles going off and you can see the smoke Trail so even if it's even if it was something big like it you know they are shooting them down or whatever this is not high enough definition compared to the MH370 videos which is why those videos are so incredible we're looking at the most advanced cameras from military assets the highest quality footage we can possibly see in the MH370 videos these videos are they're interesting we have some idea of what it

(1:48:48) is it's probably like people think it's a laser but it's not really a laser actually they're using SC interferometry and the difference is we don't see the laser if you actually saw a laser hitting it then I would say it's Laser Technology and both of them can be directed energy weapons with the the reason why the scalar infometer works so well is that you can have no loss of energy at a distance they can be 98% efficient so no matter how far you're shooting it it can still have a huge

(1:49:15) amount of energy get produced at a very large distance this is why that's what you would use from a satellite because those satellites even the low earth orbit satellites are 1100 kilometers above the sky so those are the closest ones 1100 kilometers away um the further ones out the ones that are at geost orbit are 40,000 kmers away those are definitely not shooting they're too far away to shoot a laser they're probably too far away to even shoot a scalar weapon but I can't say for sure okay okay what is the other one now I

(1:49:50) want to look at one other video does show the one of the oh what's going on here falling missiles massive implications if concerned yeah so missiles are getting shot out of the sky what is the let me see um hold on a sec let's switch over uh I'm just going to Google Israel missile there was one other video where it was just cool I mean it's not cool it's it's War oh here it is of missiles just falling down from the sky here okay so this one there's no like there's you guys can't hear this look at this you can

(1:50:31) actually see some of the missiles striking and these could be drones it could be missiles I mean they could be kamakazi drones we don't really know exactly but you can see some of them get shot down I think this one over here gets shot down yeah this one over here on the right gets shot down but some of the some of them are hitting and so you can tell we can learn a lot about what the mechanism of War here is where what they're trying to do is just bombard them with so many targets that they can't shoot them all

(1:50:58) down so even with scaler Weaponry you can't you're going to be limited to how many targets you can track and how many you can take down at once so that's what Iran's strategy is here hit them with so many targets that they can't stop them this actually tells us a lot about the capabilities because even with magical technology it's not invincibility it is supremacy the planet but it doesn't mean that you can take down every single missile that's out there but with like a nuclear weapon

(1:51:31) getting a nuclear weapon blown up on you is too much of a risk so this actually gives us some framework for what we think the next level of war is going to be now this is Iran is like nothing compared to even **Russia** or **China** so you can imagine if United States or **Russia** or **China** were to do something like this it's going to be like movie show fall out and the video games fall out the whole cities are GNA be getting wiped out like the drop just like like that fact like a scaler weapon like this poti more damage than a n i don't really know

(1:52:06) exactly but I imagine that we've got some extremely scary stuff out there okay so real quick I want to talk about war as well for a second um I don't see oh is there any other videos here I think that's all the major ones that have come out today there's a couple others that oh this one's also interesting let's look at this one so this one as well you can just see the missile striking this is crazy look they're shooting you can see them hitting them out of the sky this is scary because it goes to show you like

(1:52:43) they're not able to Target them all're hitting as many as they can as fast as they can but some of them are just straight up striking this is this is real here everybody This Is War in 2024 very scary stuff okay um now I know tensions are high if you guys have been following me today as well you will know that there was a some kind of lawyer or whatever I'm not going to name names because I don't feel like they need to escalate it like that uh but the people between the support Palestine and the people that

(1:53:24) support Israel hate one another with a passion and they both think that the other side are terrorists there are no winners and losers in war I'm not on anybody's side I'm categorically against War I think that it can only lead to our Annihilation I think that with the type of technology that we've been talking about it will absolutely lead to our Annihilation um what I think that people should do is they should look at each other as humans the clip that I want to reference is one that I saw on Joe **Rogan** where

(1:53:55) somebody that was an adamant supporter of Israel said yeah well we've killed thousand tens of thousands of civilians but it's because the the hamus people were hiding

behind them it's the only way that's one of the most disgusting takes I've ever heard in my whole life and they said oh well when the United States attacked Iraq and Syria did they they did the same thing yeah and it was terrible then too we shouldn't have been wiping out people C just like broadscale because they're hiding within

(1:54:25) civilians that's monstrous so there is no excuse period if you are out there killing civilians and you're just justifying it because people are hiding amongst them and oh well there's no other way to me that's just you're just justifying being a monster simple as that killing innocent people and justifying it no matter how you do so it's messed up you're not the good guys in that scenario I don't care who you are I don't care what side on um but yes there's no winners in War

(1:54:58) I think that if you guys want to know about war and we have two options this is what I want to say is that either we can go to Star Trek world with this type of technology or we can go to Fallout world with this technology if you haven't seen the new show Fallout I recommend it it's kind of campy but the reality is that could be our future in 2077 it's only 30 40 years away from now or we can go to Star Trek where we have have some peace and we learn not to destroy ourselves and we become little

(1:55:28) uh uh I don't have a better way to say this but just [REDACTED] I guess is the right way to say it you know [REDACTED] warmongers total Destruction of our planet maybe we become civilization that goes amongst the stars that is what we have in our future that's what our capabilities are um for going forward okay and I hope we're not going to fall out but you know what I might post a poll later tonight and ask people if we want to go to the Fallout world with this technology or if we are going to end up in Star Trek world with

(1:55:58) this technology to me those are the two paradigms that we have out there okay let's do some more questions everybody shoot me whatever questions you want about the weapons about the technology or about MH370 um again please uh watch the redacted podcast make that podcast get huge so that people cannot ignore these videos any longer talk about the science macroscopic phase conjugation check it out for yourselves make sure you're following me as well for more information you've got my uh is this one

(1:56:34) my YouTube yeah and then my you've got my Twitter account up here at j x Aston on both of them um also follow the scientists that I talked about as well as some of the podcasters that have been um kind to us and let's not try to attack other people out there as well we know the science is real we know the videos are real at this point we don't doesn't really matter what the detractors think to come after us so let's see what kind of questions we've got out there and I'm gonna have a quick drink

(1:57:03) while we while I look at this so any and all questions you guys have this is the the party and the determination of our future stream that we're in right now cheers also real quick I want to go back through the people who donated just make sure I got everybody DeVos thank you very much Flint fancy thank you very much JJ thank you and Shelly thank you very much for

those uh I think they're called super chats thank you very much for that um I've never asked anybody for money related to this it's not been the

(1:57:37) goal for any of this um although who knows maybe I will write a book considering how crazy this whole thing is uh one point in the future but that's not in the cards for right now uh where is your investigating investigation leading and what's in store I think that the investigation is pretty much run its course I think that we figured out the science a lot quicker than I would have thought but at this point now I need to learn the science to a degree where it's just back of my hand I want to know everything about it I'm

(1:58:02) probably going to look into directed energy weapons and everything that locki Martin has publicly that's out there uh I'm going to post all the scientific papers that are out there as well around any of this stuff I want to show and prove to the world not only is the science real but it exists and it's been out there in scientific papers for um maybe even over a hundred years that's how far back this goes from the question of uh disclosure how do we achieve disclosure this is the question that I

(1:58:29) ask if you are somebody who does podcasts and you interview UFO people the question I want you to ask them is what does disclosure mean to you and how do you achieve it because to Me Disclosure isn't about aliens it's not about flying saucers it's about the technology how do we achieve disclosure then we prove the technology is real we show people to the technology is real with scientific papers funny enough the scientific papers get the least amount of Engagement out of any of the stuff that I post out there because it goes

(1:59:01) over most people's heads most people just want to be told what it means but you have to prove it with the science as well um and I've been digging through the past science the historical science and all the scientists that came before and that's how I know this stuff is real out there is that it's been supported by people like Aaron Hof bone Maxwell's equations um Eli Prine um even Victor lochau talking about uh high temperature super conductivity um and a tons more Jonathan archal wheeler

(1:59:32) all of these people have proven this type of Sciences out there uh plank in terms of the plank scale uh quantum mechanics and I'm just going to keep learning it to the point where nobody can deny it let's see what else we got I have application of the videos uh sorry I I don't see that what does this one say um when you're settling down with scarjo clone my man hit up the dating sites of that new profile picture yeah that new profile picture is is fire I saw that Skyfire news posted and I hit

(2:00:05) up uh Heather birdie and I said hey can you give me that picture so I can make my new profile picture it's pretty sweet uh Rebel Alliance yeah I guess you could argue that we might be able to Star Trek what do I think of Bob Lazar good question I think here's the thing too guys I don't think a lot of these people are disinformation agents I think that they are telling the truth and I think that if you weave together the parts of their stories that are factual versus their opinions you begin to realize that

(2:00:29) free energy is the answer to everything free energy is the answer to everything it's the answer to why the government's covering it up it's the answer to how you can achieve the types of technological advancements as well as the effects that we see not just from anti-gravity but from macroscopic phase conjugation it does require a huge amount of energy you have to tap into The Ether the extra Dimension that's there give you free energy capability of sucking energy from the environment and so I think Bob Lazar was telling the

(2:00:59) **truth** I don't know if he was fed sumon misinformation or disinformation I think it's possible that element 115 is real and it could be a fuel source but we don't even need it we have an unlimited fuel source it's called The Ether um and that's how a lot of this is possible that's how overunity is possible um and and this is the part where this I would probably diverge from the Bob lazars of the world the answer that I that I'm given is even better is simpler it's more elegant solution and it's one with

(2:01:29) far more implications free energy uh if you just imagine having unlimited energy you can create weapons that could even create a big bang that's what we're talking about so when you think about why people cover it up it seems very obvious I'll say the same thing that I said yesterday is that um one side potentially thinks we would destroy ourselves and they're probably right and that's probably why they want hidden the other side says well you know if we do destroy ourselves it's on us we haven't

(2:01:56) destroyed ourselves with nuclear weapons yet therefore this information should come out and be public I know there's Waring factions within the government some that want it out and some that don't want it out some of these disclosure Advocates might be on the side of people that want it out but they want it to come out in a controlled fashion the other aspect of this is it's like Pandora's Box so you can't just pick and choose which aspects of this technology you get you get all of it the

(2:02:21) moment we ify Quantum uh mechanics and general relativity you get everything you get the scaler weapons you get the free energy you get the directed energy weapons you get the macroscopic phase conjugation there's actually healing applications to this you might be able to reverse cellular Decay at the cellular level might be able to reverse uh viruses and diseases from the human body that's how weird and crazy this technology gets but the problem is once it one of it comes out all of it comes out at once that's just how it works so

(2:02:57) again this is the reason why it's being held up even though you could argue that you're they're they're keeping you know medical healing answers from people um were the orbs controlled on their own or are they being controlled um they're most likely not conscious I don't think in this case I don't think we're looking at conscious alien orbs although the idea of conscious plasma is a very interesting one uh this was a operation start to finish you can tell from the Drone the way the Drone is flying how

(2:03:24) close it is to the plane the way it zooms in uh which would indicate these orbs were controlled they either remote controlled or they're pre-programmed both of these in my

opinion require quantum computers that's just how advanced what we're seeing is but maybe they could just use supercomputers on it um have you heard of anything from the Malaysian Airlines other than employees or radar operators nope nothing at all I think that they've all been silenced I heard some rumors about some stuff but nothing that was ACC

(2:03:55) uh let's see Dr Judy wood I'm not digging into 911 stuff not doing it um guys there's plenty of people that dug into 911 stuff here's what I would say too about the 911 stuff because I've been thinking about a lot it's probably the biggest question I get about hey do 911 do 911 talk about 911 let's say that 911 was an inside job um as the theorists propose so what then what the government is never they would never admit that they took down their own Towers never in a million years will

(2:04:26) they ever admit that under any circumstances no matter what so what what's the goal what are we trying to accomplish we know our governments lie we already know that we already know that they lie we need verifiable evidence and verifiable proof to do something which uh rri uh brought to my attention which is prove the LIE prove that they're lying that's what we did with m370 we Prov that they have detection systems and it's impossible for them to not know where the plane is we don't have that with the 911

(2:04:55) situation so as much as we want to harp on as much as we're sure that there might have been something that went on there related to 911 that was not consistent with the narrative we've been told we have there's nowhere to go forward with that that's just the sad **truth** of the situation and I'm not want to dissuade anybody from that uh I hope that this information can help people on their own theories but that's not going to be what I dig into unfortunately so uh I do appreciate the people though

(2:05:21) that that you know are looking for answers and I I hope you are inspired to to get the answers for your guys own pack causes same thing with like the nasam mammals there's already people who are looking at nasam mammals I wish you guys the best if you guys prove actionable information or stuff that I find is compelling I'll probably retweet it for you help you out a little bit but it's not going to be my thing um let's see northr Grumman completed their uh Manta Race So they have some kind of underwater submersible I do

(2:05:48) think this is very interesting by Artis and Tony Artis and Tony's been following a lot as well cool guy um make sure you guys follow him and his Channel people I find interesting podcast uh the manta ray is you know makes me wonder if we don't have submersible um drone or plasma technology like this as well so I think the Uso stuff is is is potentially legit um let's see what else we got where do scaler energy weapons get the source of their energy so you can argue like Eric Hecker said that the ones that are based off of like

(2:06:23) Antarctica they can use capacitors to charge the energy up but he says that the power requirements there were not enough to for the um The Radars that exist so that he thought there must be an exotic form of energy the answer is for almost any of this you need free energy cold fusion and or the ability to create energy from the vacuum from The Ether from the underl

framework and actually Dimension and even for macroscopic phase conjugation to work on a 777 we pretty much need that anyway so that's how this stuff lines up together

(2:07:00) we're going to get over Unity we're going to get warp technology everything's going to come out at once we're going to learn that there is an extra Dimension that uh goes all the way back to Tesla Tesla had already speculated this was required as well as Kusa who came out with one of the early um unification theories in 1921 that there's an extra Dimension the extra Dimension is what's called negative entropy think of it as just the canvas which what we would paint on top of and then when you rip into that there's

(2:07:26) essentially unlimited energy an unlimited oil well of energy that can come out of that unlimited energy free energy if it sounds incredible well welcome to Star Trek uh you got Clayton to really open up at the end there and handle yourself like a pro outstanding work yeah I asked him guys about the tuer Carlson Thing feel free to go ahead and clip that from the interview CU I wanted to know what he thought was so dark he thought the abduction stuff was darken but it is dark imagine somebody like a mercenary group that has this type of

(2:08:02) Technology they could do the stuff that Timothy abrino talked to me about where they could potentially abduct people with weird anti-gravitational suits and things like that that is scary man that is dark but you know what's even darker than that destroying the whole planet destroying the whole planet is super dark and that's what I wanted uh Clayton to think that's why I want Tucker Carlson to think about everybody else out there is why are they hiding this technology because they're afraid we're

(2:08:29) going to destroy ourselves and in fact I agree we probably are I actually literally think we probably are going to destroy ourselves with this technology that's very dark especially you don't want to talk to your children about that because they're going to go oh I don't want the planet to get destroyed this is so far beyond nuclear weapons and people already freak out about nuclear weapons if we have a weapon that you can't stop at all that can destroy an entire City in just a with a beam from outer space

(2:08:55) from a satellite pretty damn scary um let's see yeah hit that thumbs up you degenerates thank you very much appreciate it good morning Ash all the way from Scotland UK yeah thank you very much man appreciate you guys happy you haven't given up yes we we never gave up on MH370 the the plan was to move to the science the science just came at me much faster than I would have thought um which even even surprised me uh what do you think the attraction to Flat Earth is why are critically thinking people falling for it guys what I would say is

(2:09:31) I'm I'm definitely not a flat earther in fact I would argue you have to have curvature for like any of this stuff to even make sense but I'm gonna still keep open-minded to everything like maybe the thing about Flat Earth is that people argue that oh you're dumb because you think the Earth is flat but like maybe it's a matter of thinking about the way that they're conceptualizing it so even in the Flat Earth situation I'm going to still be a little bit open-minded

to it I'm not going to and also I'm not going

(2:09:57) to put people down because I don't care what people believe if people want to believe the Earth Flats so what go for it that's fine I don't care um there's people who arguing me that gravity is not real literally arguing me that gravity is not real I'm like well I mean I think it's real right like uh I'm trying to look for something I can drop safely let's let's test yeah I guess gravity is still real stuff still falls to the ground what you want to call it gravity or how you describe it that's a

(2:10:24) different thing but that's what this all comes down to as well uh good question oh have I looked into Terence Howard this is a good one yes I looked and I watched a video about Terence Howard the actor Terence Howard and he's been talking about the Flower of Life here's the thing about sacred geometry is a lot of these people they're looking for meaning of everything they want to connect every single thing together I would agree that geometry does play a crucial role especially in Phase conjugation remember zero point system

(2:10:53) there's many different shapes that can produce a zero point system and the whole point is you need to negate the magnetic and electric potentials um but this does not mean every single thing in the world is connected and this is where you have to draw the line now maybe they are but when you do that it's just too easy to to dismiss your theories but obviously Consciousness being is also something that is a singularity it's hard to describe and so people are looking for answer for linking Consciousness to

(2:11:20) sacred geometry and to technology you can do that if you want my argument would be you want to build a foundation and work your way up one step at a time otherwise you try to convince everybody of all this stuff and they're just going to look at you like you're a cook that's just the reality of it but I do think Terence Howard has probably had a revelation where he saw some stuff and he's like no there's something going on here freeish energy yeah freeish energy let's see what else are the orbs

(2:11:47) shooting a beam at the plane or at each other so I think at first what's happening is they're using their beams to fly forward and then right before the zap you can actually see the orbs slow down let me see if I have that that video out there looks like my dog just came in came over here as well um okay yeah I think I have it see oh no uh crap hold on guys uh I'm not sure if I have it or not let's see oh yeah okay I think I can show this one okay so I have to find the second one but this one this one's probably fine enough okay

(2:12:38) so the orbs actually you can see what happens is the orbs here in this video are you can see their dark lines in front of them right here it might be hard to see from your guys video but you can actually see the orb orientation change the moment the words come on the screen look at the Heat Signature disappear and then all of a sudden the Heat Signature comes back very briefly right after so heat signature is gone right here you can see the Heat Signature disappear the orbs are reorienting to converge uh their

(2:13:05) beams which this is a detail where there's no no way anybody faked this and now the orb could they come back out and now you can see the heat signatures again and they already begin to converge here and then poof so good question uh they're they're doing both as the answer and then in the satellite video which I don't know where I have it somewhere I have so many videos they're just not well organized uh what's this one oh yeah so the satellite video here actually the orbs slow down right uh

(2:13:39) this isn't really a great version of it but right when these orbs get to where this cloud is the orbs actually start to slow down this coincides with the orbs reorienting as well so pretty pretty crazy detail in my opinion um we'll see what else we got here any last questions oh yeah okay so where did the technology come from so this is a great question actually uh this is one of the big things that I've been asking is did we come upon this ourselves I think this could go as far back as the Philadelphia

(2:14:09) Project in um experiment sorry uh project rainbow in 1943 two years before we dropped the bomb um I think that we accidentally figured this technology out then when we were trying to cloak a battleship because when you look at Phase conjugation it's very similar to the idea of cloaking from radar so it makes sense that this technology could go that far back um but you could also argue that we found crashed that UFOs crashed and that's how we figured it out you could argue we dug them up and we figured it out that way

(2:14:46) as well the answer is I don't know I really don't know that's one of the big things that I want to know so even if this this is disclosure of anti-gravitational technology and warp technology UFO stuff doesn't go away at all there's still the big question of our aliens Out There Our aliens visiting us where do we get this technology and that's what I think is great about this is it's actually not full disclosure this does not prove aliens exist we could have actually figured this out by

(2:15:11) ourselves or we could have uh had help I am of the opinion that we reverse engineered this that somebody saw this and I don't know how but that then that's how we figured it out it just seems far too advanced even now this is in 2024 this is so far beyond the Paradigm if you were to tell people we would be able to figure out warp drive they would say that we're like a thousand years away from that that's how far beyond the Paradigm this is but it's not we're gonna have it soon um let's see what else we got Bob

(2:15:43) Lazar is a brilliant chemist I think Bob Lazar is a very smart guy I think he's an actual scientist that's intelligent does ether equal dark matter I don't think so I think that dark matter is complexity I think that everything around us has a gravity uh and and it builds up um but the answer is I don't I don't entirely know but Roy D Herbert would say as complexity increases you get more and more stickiness AKA gravity and that that can theoretically account for the extra missing Dark Energy the

(2:16:15) extra missing matter that we don't see that's my opinion um if you believe in El Universe then I think that people would say that magnetism and electricity can account for the

extra stickiness that we don't see that's out there I'm personally not of the opinion that dark matter is an actual thing that you can measure or like an actual thing you can hold in your hand oh shy Keenan's here I just want to big big shout out to Shai Keenan she was one of the first VFX experts that would listen to me on spaces and

(2:16:43) explain the difficulty of potentially uh making these videos um and she's a real VFX expert so thank you very much shyan everyone follow her on Twitter for the next hard TRS interested any Schmucks lined up um yeah so uh Martin Gibson is somebody that has a unification theory that I've interviewed that I've I feel bad I've been waiting for weeks because I've been doing so much other stuff and so busy but I am going to try to get that pushed out tomorrow I'm going to edit it's not very

(2:17:10) long only about an hour he also is H friends with Roy Herbert the physicist that I mentioned as well they they really bounce off one another in terms of their theories and ideas um and we had really good talk about um the idea of a soul and and even like some economic stuff in terms of how that plays into some of these physics theories so uh look for that hard TRS I'm also planning on talking to um Tom mon talk who is the person who I very the first YouTube video I found out about scalar physics he's the one who

(2:17:40) explained it and then I find him on Twitter he comes into my Twitter replies and he was answering questions for people uh he's a really cool guy really smart guy um he definitely broaches on the esoteric when might talk about some of the more esoteric Concepts because I'm not afraid to to dig into that um but I am more of a hard science kind of guy but you know I like talking people about everything but I am going to talk to him about scalar physics 100% okay let me see what else we got um 5G healing yeah so there is this idea

(2:18:10) the funny thing is this whole like remember this 5G covid conspiracy the crazy part about scalar physics is Tom Bearden argues that you can actually like spread a virus from one cell to another using this technology ology but you can also cure it using the same stuff um I'm not going down that this is not MediCal anything that I'm doing right now related to that but it's kind of interesting thought reverse aging yes I do think reverse aging is possible I still think to Dave Rossy must be reverse aged because it's hard for me to

(2:18:39) believe he's so young and knows so much information so if Dave is out there listening to this he's probably laughing because that's my conspiracy theories I think Dave's been reverse aged maybe he's Tom Bearden and he faked his death and he versed his age or something like that uh that would be pretty funny but yeah I do think that and this is my opinion I I do think that reverse aging or extended aging I think it's possible personally and it wouldn't surprise me if some people that are very

(2:19:04) old right now that have been hanging on have been using it I think I know for a fact Elites know about um stuff like overunity and they've been profiting off of it and utilizing it while the rest of the world just been in the dark pretty [REDACTED] huh that's our Real World um yeah this this is all pretty nuts guys uh the medbed stuff it might be real I might end up talking to Matt re

as well but I got to be very careful about going into medical stuff because I'm in the medical field medical industry at least

(2:19:33) as of now and uh you guys know how people are with medical misinformation disinformation so I gotta be very careful what I talk about related to that even if it's just theoretical oh yeah Bob Lazar also talked about he's a very interesting case because he asked Joe Rogan asked him about would you do it again he said no and you know the reason why he said no because he got to work with magical technology every day and then when he when he whistle BW on it he never got to talk about it ever again never got to

(2:20:02) work on it ever again this is why it's so easy to hide it if you know about magical technology you don't give a [ ] about what idiots on Reddit think about it right you get to work with if they want to be in the dark and be morons and think that none of this is possible so what let them they're just basically like second class citizens at that point that's I think it's kind of [ ] that's why I'm like okay well I'm just going to tell the world about it I don't give a crap at least until the

(2:20:27) government comes and talks to me which hopefully they will so I I don't really enjoy revealing all of our super advanced technology to the world but they never stopped me I think the truth is I think the government underestimated me I think the government thought I would never figure it out I think they would be able to discredit me um that they would be able to get the videos to go away by putting some Cloud picture out there that they probably fabricated and in part part they were correct but they underestimated that I would be able

(2:20:53) to figure out the science they underestimated you guys as well in terms of following along and staying followed along and spreading this information um and now I think they're in big trouble because there's no hide in this anymore there's no way a o can Gaslight me into thinking this is not real um so we'll see Shane good to see UFO Shane out there appreciate you I'm not going to tell a big long story Shane and I used to hate each other but now we're cool again Shane would say that this was full

(2:21:22) disclosure Shane I don't think it's full disclosure I think that we still don't know about aliens even if this stuff is real that's out there um but I would say that this pushes disclosure like decades potentially I don't think they were going to tell us about this anytime soon um let's see if electricity can cause cells to go back into the stem cells say shouldn't we be able to do some amazing healing Yes again amazing healing Shane again I'm opening space's full alien exposition you're just here

(2:21:51) chilling yeah well I'm I'm we're going to shut this down here in like five or 10 minutes but when you have 4,100 people listening you kind of got to keep going a little bit we will do some more streams in the future guys as well so make sure you're following me on Twitter following me on my YouTube channel we will be talking more about the science and the implications in the future we will be having some pretty awesome uh streams and uh hard TRS podcasts with people and if there are people out there

(2:22:15) there are people I would like to talk to I'd like to talk to Tim bersett I would like to talk to Eric burles the congressman because I wanted them to understand the true implications of disclosure they're still sitting out there thinking that we're going to find out about alien bodies and we're gonna find about UFO crafts no we need to figure about locked Martin and rathon and why Radars can produce directed energy weapons and how the world has no idea and has no idea about scaler interferometry like these are the things

(2:22:43) that people need to know about stuff that nobody has any idea about this stuff is like extremely important to people know about um yep stay in my Lane sorry I'm probably really behind on on messages here I'm going to try to skip ahead some of these and actually I wish you guys the best of luck with 911 conspiracies and um all the other conspiracies that are out there guys I'm not against any of that I've got the most open mind of anybody when you're talking about objects being a to be warped away you

(2:23:15) don't really have the luxury of being able to uh tell other people that their stuff is silly you want to believe Bigfoot real I'm not even going to hate on that uh DARPA I don't know about a lot of this DARPA stuff but a lot of those DARPA projects are really interesting I think that if we can warp objects there are several there's a lot of DARPA stuff that talked about this as well people just ignored it about the idea that you could warp an object then SpaceTime and it looks like it's actually real so I would say we should

(2:23:40) probably look at those darpet things with a little bit more seriousness even the remote viewing stuff remote viewing is another one that I'm not going to dig into but if this stuff is real and there is an extra Dimension it opens the door up to remote viewing for sure okay let's see yes I did a podcast with redacted go check it out there's a link on one of my most recent Twitter posts or go check redacted page it went live actually it went live the exact same time I dropped the uh thing about the science and I

(2:24:08) didn't know Clayton didn't even message me people in my Discord were like hey your redacted thing just went live and I was like oh crap so make sure you guys watch the redacted thing take clips of it if you want to spread it around get the word out um okay we're going to go for like five more minutes here guys thank you very much donut Earth isn't flat great interview on redacted thank you very much appreciate it yeah we can also destroy our own sun with this so I don't know pretty honestly I'm not scared of

(2:24:38) nuclear war I'm not scared of meteoroids or asteroids hitting us because we can just wipe them out and holographic principle is absolutely the answer and this is why this is what connects to Flat Earth is a lot of people think that the holographic principle can prove Flat Earth B I don't know man I really don't know I'm not going to tell you guys what I what I don't know I'm just going to tell you guys what I do know and even though this is a lot of information doesn't mean I know everything so a lot

(2:25:00) of people want to send me something like what do you think about this you must know about this not really I I know about ma370 that's about it what do you think about what's

this one um yeah even like stuff like this is I don't know man I don't know about the blue light stuff um other crafts out there but if we have stuff like this we have stuff like I think most of the UFOs people see are either us **China** or **Russia China** and **Russia** figured this out if I figured this science out in six months **Russia** and **China** probably figured out

(2:25:29) decades ago the real question is how far Advanced have the orbs become you know we've been able to put the radar scal interferometry into orbs that's pretty damn Advanced having an anti-gravitational orb itself is pretty Advanced that's where it's like how far does this actually go uh CERN I think is int being sabotaged so that they don't discover anything CERN I think actually proved a lot of the science that we've been talking about including the extra Dimension uh I talked about that AI L

(2:26:02) made a statement about that um I think this proves the science real and I think they're suppressing it because the discoveries from CERN will prove it to be real and the problem is once people figure that out and figure out there's an extra Dimension they're going to figure out the Tesla was right and then all everything the whole Pandora box opens up so this is why I think they have to be very careful about the information that gets out scientifically thank you very much Jeff appreciate you yeah we talked about the triangle

(2:26:31) thing you can go back and watch where I talked about that um I'm going to try to skip through these as fast as I can any other questions yeah you are brainwashed to choose a side the other thing I want to mention about this as well is that I think a lot of the social issues we face and a lot of the stuff that's out there to divide us is literally just to prevent us from thinking about the science the more we're at each other's throats the more we're talking about which bathroom people use and how many genders

(2:26:58) there are and what your pronouns are the less we're talking about science that could change the world the less people are looking in to the science that could change the world I think that's really a manufactured distraction and the thing is that stuff is compelling it's it's drama and people love drama that's the stuff that people are drawn to people aren't drawn to the science and that's why it's so easy to distract us from the stuff that really matters what bathroom or who people have

(2:27:24) **sex** with I don't give a [ ] about that have **sex** with whoever the hell you want what I care about is technology it'll change the whole world yes Tesla warned us about the Philadelphia Experiment absolutely I think that Tesla was right I think this goes all the way back to Tesla I think that he knew way way far in advance about what was possible and I think he even got discredited because it was just so far beyond the Paradigm even in 2024 it's so far beyond the paradigm uh light triangle in the sky I don't

(2:27:53) think there's a light triangle in the sky somebody actually speculated today that the uh the cold zap might actually cause ice literal ice to form from the um from the uh condensation in the atmosphere and remember that little hole that shows up in the satellite video that might be ice shooting through a hole in the cloud interesting that's a new little theory that we just figured

out today okay um Dan Winters I think Dan Winters on the science side is good but he's one of those people that's trying to connect

(2:28:29) every single thing and it's just too much I think that if Dan Winters took it piece by piece he would have uh he would get more progress moving forward I'm more of just the hard Sciences I don't need to connect all of Consciousness and everything else together um yeah Tom Monto looks like he may be revers his aging as well he looks like he's in his 20s I think he's like 40 something so we can we can ask him about that we'll ask if mon uh Tom monok reversed age himself um what do you think about what

(2:29:03) do you think creates gravity I think that quantum gravity is probably the most likely explanation regarding gravity at this point but I think there's some interesting theories out there about it just being like pressure between the The Ether and uh reality if you want to think of it like that I don't really know exactly but I do we can manipulate gravity and I know we can create gravitons I just don't know if gravitons is like a real thing or it's more something like dark matter where it's a property that we just give a name

(2:29:30) to uh the pyramid stuff is interesting I think that we could absolutely have had past civilizations I think we could have destroyed ourselves several times over I think we could have come from Mars and destroyed ourselves so there's still a lot of really big amazing questions even if these videos are real even if we go into Star Trek um you know there's still amazing questions left to be discovered what are your thoughts on being canceled on the Joe Rogan show I think Joe Rogan is going to regret canceling me more

(2:29:54) than any other guest he's ever had in his whole life because these videos are real the science is real he's never talked to anybody that could talk to him about the science in the way that I would be able to talk to him about the science um and I don't think he's ever had anybody that's come to him with a conspiracy that has as much evidence behind it as this one does so my opinion is that one day I think I probably will talk to Joe Rogan if anybody out there knows him you should probably have him

(2:30:19) watch this you should probably also have him watch my interview with redacted um because this is not [REDACTED] this is the true story of what happened to the plane I will take on any expert any expert from the MH370 investigation any official from the investigation I will take on any official from the government and I will also take on any scientist out there at all no matter what their credentials are physicist engineer any of them that you want that's how confident I am in the science checking out I also think that Joe Rogan's an amazing

(2:30:52) guy I do think he's the best podcaster out there I don't think he's disinformation I think guys there's a lot of people out there that think people are controlled opposition disinformation I think there's a lot less of that than we think that's out there but I do think that people get told what to think and bu people who have um uh in um minations or um bad intentions or uh uh ulterior motives I guess is the way to put it so again I be very skeptical about um a lot of the people in the UFO Community as well in terms of

(2:31:26) what their goals are and what they're trying to accomplish uh my opinion on like let's say Jeremy Corbell for example is that I think that Jeremy Corbell from everything I've seen from him um I like to think he has good intentions but I think he's too committed to the idea that it has to be aliens out there that everything is explained by aliens and so when someone doesn't present something that's not aliens related he thinks it must be [REDACTED] because he thinks that technology can't happen unless it's

(2:31:49) aliens and I've proven here today that we can this technology exists and it's scientifically accurate to what humans have figured out um and the other evidence for why I think he thinks this is because he went on and he's on the record saying that Commander Fraver was told that the Tic Tac was Lockheed Martin technology and he thought that was [REDACTED] because he thought there was no way that Lockheed Martin could have figured out this technology there is they have coherent microwave beam they've figured it

(2:32:15) out over 10 years ago that patent from 2013 um and they probably had figured out way before that patent anyway so that's where I think that the point is that people have their own biases and they can't get past those biases that's the big issue with the UFO Community um probably need a one world government I am not a WF supporter or the One World Government stuff in general I don't think that would solve the problem either way look at like Isis and terrorist organizations the problem with free energy is it just takes one

(2:32:45) person to blow up the whole planet that's the problem now it's not even like a government that you have to create nuclear technology Jake Chanley I think had the best answer big shout out to America shaman on Twitter Jake Chanley also known as the Q Shaman from January 6 he's actually a super nice guy uh he's actually not at all what the media portrayed him to be he said that we would put in laws and um safety nets in place where people would not be able to produce this type of Technology

(2:33:12) without us finding it and we can actually do that we can create gravitational wave detectors that can detect if people are messing around gravity waves in a garage and creating this type of Doomsday technology and that's probably what we have to do I know it sounds invasive into people's privacy but it's better than us destroying the whole planet let's see what else we got Star Trek strange new worlds there's a very interesting theory about manipulation of warp technology H when you don't know

(2:33:40) it's entirely it's just a weapon yeah yeah I mean that's the thing the stuff is a weapon for sure uh trying to get to a lot more oh do you think most of the advanced technology was taken from World War II Germany I I think there's a very good possibility that actually the Nazis really had a good idea about anti-gravitational technology and that's why we and the Russians the Russians took a lot of their scientists as well and I think the Russians potentially got further ahead of us um during the Cold

(2:34:11) War and that we only caught up after the fall of the Soviet Union and then we leapfrogged them especially when quantum computers and Advanced Computers came out I

think that's where it just I think that's just when it pushed it to magical technology because as I said to to move those orbs around I think you need a quantum computer some kind of very Advanced uh supercomputer uh the plasma string thing I think it's probably nothing but it's pretty weird that there's been like several videos of that blue stringy

(2:34:39) thing going into the water or whatever pretty bizarre answer your questions on how warp teleportation and the physics so this yeah I already did answer that early on you can watch the beginning of it I explained it it's pinned to my profile right now uh it's macroscopic phase conjugation it's very similar to Optical phase conjugation but phase conjugation can use any type of wave and in this case we're using a gravity wave and when you use a gravity wave creates scalar interferometry zero point Zone

(2:35:10) you have a fourth orb shooting a beam at the zone and then the plane will go back to where the fourth orb is located pretty incredible stuff I didn't know it existed but it does um but yeah you can again watch the beginning of the stream I go over that right at the beginning also this is not a distraction from anything in ufology this never was if anything it was giving them everything on a silver platter it's kind of sad that they just ignored it honestly um yeah I do think that some of the science came from Tesla absolutely

(2:35:41) and I think that people probably forgot it sarfa is such a Chad yeah I got to edit that podcast and put it on my podcast list for you guys and make it available on audio as well so I'm going to be very busy over the next few days going through a lot of this stuff um yeah my pronouns are also [REDACTED] intolerant whoops uh I don't know if there's converging timelines or if we are in a deterministic one uh I think that the big question still is what is time and can we send information into the past or

(2:36:09) can future information affect the present is probably a better way to put it I would say that you should look at the show dark and you should look at the movie tenant the idea that you move in Reverse but time is flowing forward that's what I think is the best explanation for how this is possible from a physics perspective um let's see and I'm sorry if I can't get to all the questions guys we've got almost 4,300 people in here so I'm doing um my best I don't know if you guys are talking to each other in the chat and

(2:36:47) some of these questions someone says they're working on Rogan awesome um oh CERN sir yeah I mean CERN is the particle accelerators guys they're shooting prot or shooting um are they shooting protons at each other I think they're shooting protons U and then they're they're having the particles scatter this is how we found the higs field which to me proves that there is an extra Dimension um but you know to each your own but in order for any of this to to make sense you really need a extra dimension

(2:37:20) I need the investigation on that plane was what redactor blew my mind yeah thanks for looking into Tripoli uh I don't think Corbell is Cia I just think that he's just biased guys it is kind of weird that Joe Rogan hinges all of his UFO stuff on Jeremy Corbell a guy that didn't even know what a superconductor was he wanted to show his said super capacitors capacitor is a

completely different thing than a conductor uh it's pretty important especially when you're talking about how a UFO can float um

(2:38:02) anyway is the podcat redacted yeah the podc redacted one go to my Twitter profile guys that one up there that one and it's like the second one down on my on my profile you guys can find the the link to the redacted you can also just go to their YouTube page and search redacted it's the most recent one it's probably got several tens of thousands of views right now uh what if time is fractal I mean there's a possibility that there are different timelines as well it's possible the Mandela effect is real I

(2:38:33) don't really know the told nature of time this is where I've been still I'm not gonna say argue but let's say debating this is why I talked to Jack sarfati about retrocausality this is why I've been talking to Dave Rossi and in private messages about can we really manipulate the past or not I'm not 100% convinced all that I don't think it's necessary for this type of science um and it's like how would you even know and my argument on the time thing is if I could manipulate the past then I would

(2:39:00) argue that I will have figured out how to create a timeline a time um time travel device in the future and I would have manipulated my past to make myself super rich but maybe I realized that I never did that and therefore I never do that in the future I don't know that's the thing it's like kind of a paradox you can never really figure out the answer was there a fourth or the there's no fourth orb I don't think in the MH370 videos I know there's some weird thing that kind of shoots up that somebody

(2:39:28) found when they did a very detailed analysis but I don't think that's the fourth orb no I think that they are teleporting this or this plane much further away than somewhere very close by I think it's got to be going at least hundreds of miles away um what proof do we have that there was a fire aboard the plane we have uh eyewitness testimony seeing smoke we have eyewitness testimony seeing the plane start fire we have a plane glowing orange uh we have a Mayday call uh of the plane disintegrating and then we

(2:39:56) have two videos showing smoke coming out of the back of the plane which cannot be contrails because the plane is at too low of an altitude so in my opinion there's a lot of uh almost irrefutable amount of evidence that there was a fire um as much as I appreciate this guys there's so many people that want to send me stuff somebody wants me to go meet up with them because they claim to have secret information and like another state I'm not doing any of that just for the record guys I'm not meeting up with

(2:40:24) random people that I don't know um can you you can understand why I wouldn't do that at this point right I'm way too paranoid to do that I don't even want to get on an airplane um I'm definitely not meeting up with random strangers on the internet so if you have information to tell me you can post it in the public there's nothing that you're going to say that is so secretive that it can't be posted on the internet in fact that's a safer way to get the information out there to protect yourself so just post

(2:40:49) it on the internet tag me in it if you want me to see it uh it's just not to be rude but i' I've got as you can tell a lot of stuff going on and a real full-time job still um Kurt metzer is actually pretty awesome guys I didn't even know who he was but he went to bat for us on the MH370 videos seems like a really nice guy would like to meet him at some point as well um pretty cool yeah uh yeah Jeremy Corbell might as well have said flux capacitor on the onest Joe Rogan appearance like that's

(2:41:22) the part where it's like how is nobody looking into the science I would challenge the UFO Comm if you want to prove there's UFOs and aliens you the first thing you should do is prove that the science is possible a lot of these people have this idea well if it's alien technology is just unknowable the aliens if they exist live in the same reality we live in they still have to apply by the same laws of physics that's like there should be your first thing is that if aliens exist they must have figured

(2:41:47) out this is why Thomas Town said Brown was so smart smart he supposedly saw UFOs and went I'm going to figure out how that works smart guy that's how the UFO Community should operate oh boy where are we gonna all be by 2030 I have no idea I can't see the future guys I hope that we figure this out I hope we get disclosure uh I hope this information becomes public um but apus is supposed to come and hit us in like 2029 2029 yeah and people are like oh it's only a 2% chance and NASA ruled it out guys if you believe NASA is

(2:42:22) telling you the truth yikes don't trust the single thing NASA says now I'm not afraid of aus because we can just hit it with some orbs and especially by 2029 we will definitely be able to hit it with our directed energy weapons so I'm not afraid of that but I don't know where we're going to be in 2020 2030 uh okay oh I I think that the time dilation effect that the plane appeared like right away I don't think this plane went to the 10 years in the future we're not dealing with a manifest situation it's

(2:42:55) not going to appear later on we had witnesses that saw it that that next morning in the malds and they saw MH370 so this did not if it went to the Future it only went at most a few hours into the future it didn't go like 10 years in the future or anything like that um yeah I'm not too worried about glowes guys and also just for the record if anything were to happen to me it I just want you to know I have no regrets this was all worth it the people that I've met have changed my life and all for the better and the people and

(2:43:29) the family that I've made in m370x are some of the nicest most awesome people that I've ever run into um and the reason why I'm disseminating all this information and have made this whole investigation public from the very beginning is because if anything did happen to me then somebody else can just pick up the reins people think that oh you're so smart anybody can do this guys anybody can just dedicate yourself to it um I just did it because it's going to be hard to silence me I you can't really

(2:43:55) manipulate me with uh threats or anything like that uh if you came after my dog I would just go full John Wick on everybody out there um but other than that like there's not

much to threaten me with so I was just in the good position to be the person that would try to get this information out there but if they were to do anything to me like 10 people would rise up and everybody would know this stuff's real because there's no reason to silence me if any of this is fake so that's just the reality that

(2:44:19) stuff but I I appreciate the people that are worried for me I do appreciate you uh and I'm I don't live in fear at all um I mean I don't want to get on an airplane but that has more to do with lithium ion batteries and planes falling apart uh every single day it seems like than it does being orb'd they'd have to take out a whole Plane full of people now I'm not going to get on a private jet there's there's no way I'm getting on a private jet but when you go on a commercial plane they got to take out a

(2:44:41) whole Plane full of people I mean they'll do it but it'll be very obvious if they do yeah Randall Carlson I believe the thunderstorm gen generator is legit I have inside information as to why I think that is as well you can follow uh alchile science um Jordan on Twitter or on YouTube and he goes over the thunderstorm generator a lot I mean this is basically proving cold fusion is possible so this is actually just as big as the stuff that I've been talking about honestly the whole world's going

(2:45:10) to change we're gonna have free energy we're gonna have uh the power of the sun and the palm of your hand um the future we have the most incredible future ahead of us we have the most incredible future that's a quote from Bob Greener okay uh actually I haven't had any weird dreams recently although I've been dreaming about poker a lot for some reason I'm not really sure I think all the passengers are probably dead except for maybe a few and that kind of explains why the family's moved on why

(2:45:40) the the uh the nephew was told that his his uncle was collateral damage uh that's the one people that I haven't thanked yet so or apologized to or AB um whether or not people see this now or in the future I want the families of the victims to know I am sorry for what happened to your family the reason why this was covered up is because they couldn't tell the **truth** it was too big it might have implications of the entire planet being destroyed that's how big it is that's the reason why they had to let

(2:46:07) you believe a lie even though you all knew it was a lie you knew somebody took this plane you knew it wasn't a suicidal pilot you knew the plane didn't crash in the South Indian Ocean because these people were looking at the evidence just like I've been looking at the evidence not people just listening to the media but looking at the evidence themselves they knew they were being lied to and I'm sorry we did that to you I don't know if the government will ever tell you that uh but I'm sorry and when you

(2:46:29) find out that this is the **truth** even though it's almost impossible to believe the people that you should go after number one is the United States government they're definitely the ones who are involved in line probably the UK government the Australian government Malaysian government uh all the five eyes that are out there and then the other people you should go

after are all the **debunkers** you should go after the corridor crew you should take every single dime that the corridor crew has they have six million followers on

(2:46:53) YouTube you should take every single penny they have um you and I will help you take it um because they've been lying about the videos uh as well as potentially a lot of the bunkers that are linked to them you should go after **Jonas D** who pushed a fake **debunk** video on YouTube after one hour after receiving an anonymous email trying to make people think the videos are fake even though I tried to tell him about the evidence for why there can't be a 2d Cloud picture in the videos he didn't listen to me you should take everything

(2:47:20) **Jonas** to has uh you should take every single thing **Mick West** has and everybody affiliated with **Mick West** and the Skeptics you should also sue the skeptical Inquirer uh and take every single penny that all of these people have they deserve to have their lives ruined and to have every single penny taken from them and it should go to the families of the victims um so those are the people you guys should go after if you're the family members and I will help you in any of those court cases uh I have a mountain of evidence I've saved

(2:47:45) all the stuff that those people have done and all the lives that they posted about the videos and I warned them a long time ago there's no excuses I told them months and months and months and months ago do not lie about these videos 239 people disappeared this is not like **debunking** a UFO video you're **debunking** a true conspiracy of what happened to 239 people so again to the **debunkers** that are out there and I'm sure there people are having full meltdowns right now even while they're listening to this if you

(2:48:13) are somebody who's been trying to lie about these videos and lie about me you are a terrible human being and not only should you stop you should also apologize and retract your false statements because you've been lying and hurting the families the very thing that you claim that I was doing you were doing the whole time gotta be tough to hear that okay um the Antarctica podcast that one I think is only available on Twitter with uh the investigate Earth that was a pretty good one we talked with Dave that one had a

(2:48:41) lot of viewers as well uh you can probably find it on investigate Earth's um Twitter profile or mine but I don't think that one got converted to audio I'm not 100% sure uh thank you alt Protestant appreciate you guys and okay so I think we talked oh yeah and also you should go after Boeing as well go after Boeing take everything Boeing has as well um you can probably also Sue locki Martin and Ron as well it's a little bit harder to prove for them but the United government for sure United States government has unlimited

(2:49:13) pocketbook as well so they're probably the first people you should go after okay let me see what else we got yeah after hearing the recent news we're so doomed I mean maybe guys again we have either Star Trek in our future or we have Fallout in our future it's up to us to decide it's up to us to decide End of the World Star Trek it's up to human it's up to humans to decide you know that's the smartest UFO people I've talked to that's what they say they say that it's up to us to decide what the

(2:49:48) fate of is for us if any of the passengers were alive I think they were probably put into witness protection and could never talk to the people that they knew before scary huh uh I think that they most likely died from toxic fumes related to the Plastics being on Fire or the lithiumion batteries being on fire uh or they would have died from the depressurization of the plan of the pilot trying to get the fire out while trying to keep people alive pretty dark and then they also could have possibly died from macroscopic phase conjugation event no

(2:50:21) matter how you look at it it's pretty messed up man um I think that even if the family's uh case was thrown out this new evidence will allow it to come back I'm pretty sure but even from a civil standpoint they can sue a lot of these other people anyway I mean that's that's the way of America anyways Sue all the people that wrongo right okay um I think that's it looking for any last questions here before we close down uh defecting at **China** I think that's the most likely scenario yeah probably defecting **China** there's

(2:51:00) also a slight argument I mean you could maybe like 1% chance say that **China** was causing this with their orbs or **Russia** but based on the circumstantial evidence and the fact that we were filming it and the way the Drone was following the plane this this was us this was us yeah oh rolls rice as well Sue Rolls-Royce as well there's a lot of people to sue out there man Rolls-Royce definitely knew that this was falsified um because they have the Telemetry data related to their engines they never released to the public and they knew

(2:51:30) that this plane dco to the South Indian Ocean they just they got covered up by the government this goes to show how easy it is to cover stuff up government United States government controlled like five different countries and like three or four more different private or companies as well including imrat which faked the satellite pings like it's crazy it's crazy honestly like the one thing about the **debunkers** is they're like if you believe this kind of conspiracy is possible then you're going to believe a

(2:51:54) lot of other conspiracies yeah correct they the United States government will lie on a global scale and control a lot of people and make them lie too Welcome to the Real World man it's not all it's not all peaches and rainbows out there okay let me see if there's any other questions out there well what will happen next I'm not I can't see the future guys and I don't know I think that we will continue to talk about it and everybody who's here knows the **truth** and uh I probably will

(2:52:29) end up doing more podcasts people probably want to talk to me a lot of people want to talk to me about the science now as well uh and we'll keep talking about that and uh I think that's probably how we'll uh end for tonight so if you guys have any thoughts about how we force the government to admit this any other avenues that we can follow let me know follow me on my Twitter give me thoughts on my Twitter as well uh I appreciate again everybody who's been here oh also Lex fredman uh I would love

(2:52:55) to talk to Lex fredman for sure I was I was kind of doing a meme where I was pretending to be in love with him I think he's a really introspective guy uh yeah and Annie

Jacobson talked about the cber system as well it's funny when people talk about the cber system I'm like dude I probably know more about the cber system than anybody uh anybody that's not in the military at least um because of how much we were able to deduce just from these videos uh and yeah the the academic science Community is probably just as bad as the

(2:53:22) UFO Community they have this encrusted belief that they can only believe like a lot of these people are just science influencers they're not even real scientists that's the funny part they get their phds and then they make everybody bow down to them and they don't do any other experiments a lot of them don't even read scientific papers that's the funny part and they just believe whatever they get told on TV and then they go out and they expose it and pretend like they're super smart and

(2:53:44) that everybody should listen to them I mean like Eric Weinstein didn't even understand the implications of room temperature superconductivity he thought it was just magic I'm like well obviously he hasn't read any of the papers about it or looked at any of the videos otherwise he would realize it's not magic so it's kind of embarrassing for Eric Weinstein to be honest with you if Eric Weinstein wants to debate me anytime you want buddy anytime you want I will be prepared hopefully you will be

(2:54:10) as well um I mean I'm just calling out everybody man all the scientists all the **debunkers** all the UFO Community everyone uh I did talk to Danny shean you know what a weird story about Danny shean he's on record talking about somebody teleport porting a coke bottle from one room to the other room and I had a private conversation with him for like 15 minutes over the phone someone put me in touch with them and I told him they teleported the plane and he seemed like kind of dismissive or incredulous about

(2:54:39) it how can somebody who's literally heard a story about teleporting a Coke can not be interested in two videos showing us macroscopic phase conjugation warping the plane again guys be careful who you trust and who you believe out there a lot of these people are just they either have their own mindset for what the phenomenon means or they are just not open-minded enough to see reality and a lot and almost none of them understand the science almost none of them do like 0.

(2:55:11) 1% of the disclosure Advocates out there have any idea about the science and how the science works and they have no interest in understanding either they just want to be told they just want to be told how it works um which is pretty sad yeah I think that a lot of these people they the podcasters too like they just they do what other people tell them and that's the sad part this is how they get manipulated like Joe **Rogan** was talking Alex Freeman about CIA people manipulating them yeah they're being manipulated they're being manipulated

(2:55:39) they don't even realize it they got manipulated when they thought that the videos were fake same with Shawn Ryan I'm 99.9% sure that Joe Joe **Rogan** Lex Freeman and and Shan Ryan all think that those can't be real and they're all wrong and the irony is that they were manipulated into thinking the videos were fake not the other way around so when those people

wonder how they get manipulated by the government CIA they already did I'm a real dude who can actually explain how the science Works

(2:56:06) to them real science not just oh I've got this story to tell you nope I can actually explain how macroscopic phase conjugation Works we've got two videos showing it happened to the plane consistent with 14 pages of evidence that presents story that nobody else before us had presented how does it get better than that okay I think that's probably we're going to set any other last questions oh Ashley Bennett I'm this this lady is pretty interesting she posted these videos like a year ago I don't know if she has any inside info

(2:56:41) she also made a Netflix trailer that included some of my work I like you Ashley I like than you I don't know what you're all about okay I think that's pretty good guys okay so I'm going to play us out guys first of all I want to thank everybody else out here for tonight or last of all uh we have 4,500 people in this stream that's by far more than I've ever had uh pretty incredible so again check out my YouTube and Twitter handles up here follow me on Twitter follow me on YouTube let's make this thing go

(2:57:13) viral let's make people accept the **truth** macroscopic phase conjugation is real governments do lie to us and we know what they did to MH370 um thank you guys for being here with me tonight I'm going to play you out with this video that I made uh called Dark Arya if you don't like the music well too bad this is for the families the last sliver of Hope vanished in an instant Malaysia's prime minister announced today that flight 370 went down in the Indian Ocean and all 239 people on board are dead most of the circumstantial

(2:57:47) evidence I believe points towards an Abduction of this plane I I don't know why and I don't know by who but I'm I'm convinced that that plane was taken

Scalar Physics and Superweapons - Tom Bearden General George Keegan - YouTube

(00:00) e [Music] [Music] Malian 370 contact 120 decimal 9 night good [Music] breaking news tonight A Malaysia

(01:06) Airlines flight with 239 people on board including four Americans has gone missing [Music] [Music] [Applause] [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and says now I am become death the destroyer of

(02:11) [Music] worlds hey everybody welcome to the new and improved live stream hopefully

everybody can hear me here uh's double check guys if you're in the chat you can just let me know if you can hear me correctly not sure how I can tell one sec let me just make sure yeah it looks like it should be working okay sweet okay everybody thanks for being here tonight uh so this is my new first stream on streamyard we're streaming on X we are streaming on YouTube at the same time if you guys want to head over the YouTube channel if you want to watch

(02:55) from X all good either way uh welcome tonight everybody uh welcome big poo I see you in the chat Sandy skinny Bob sham mstic Wonderland good to see you guys um gon to be working through how to figure out some how some of this stuff works um if you have any good comments I will post those up as well I'm just going to try out um gonna try a couple things right now oh yeah nice okay sweet four orbs yes we are here okay awesome guys it's good to have everybody here tonight um sweet okay what are we doing tonight

(03:34) so we are going to dig into more scaler physics tonight I've got a couple videos lined up for you we're probably going to do about an hour long stream nothing too late happy Friday everyone as well I hope you've had a good week uh we've had some pretty awesome Revelations if you are interested in the uh scaler physics aspect today is your day I have not yet posted the four-wave mixing interferometry explanation I will do that on Twitter tomorrow so for my science Buffs out there want to understand how our MH370 videos are

(04:03) working we will be checking that out um that will be coming tomorrow but we will talk about it today so you're getting the inside uh sneak peek on this I hope you guys like my new overlay I'm going to make a couple adjustments but we've got it going on okay without further Ado let's take a look at what we're going to start with here tonight so the first thing that we're going to dig into tonight is I've got three videos to go through um the first one is Major General George Keegan so if you've been

(04:32) following along from home the last few nights you've been seeing that we've been going over Tom Bearden scaler physics videos we've been talking about the applications of them the fact that the Soviets may have had them in the 80s this video with Major General George Keegan tonight is going to go over the idea that the Soviets have potentially been developing these weapons in the late 70s which coincides with what uh Tom Bearden had been talking about and then the after that um we're going to go over Tom Bearden on how to

(05:02) make a scaler wave and how to detect them and then we're going to look at a Tom Bearden interview with uh Stephen uh uh Dr Steven Greer's um production company as well so we W hopefully we won't get copyright stried we will see and yep can't believe we had Eric Hecker in the chat the other day that's true I'm working on setting something up with him where we might do a formal interview um very in guy I think he has a very similar background to me in terms of just being like a normal person

(05:35) having come into this and started to figure out that there's actually technology out there the world has no idea exists um thank you very much for that donation 90 foot wave I don't know if that's real or not guys uh if anyone can confirm the Julian Zulo thing I saw that um just

as a little quick housekeeping there was this weird anomaly everybody was posting everybody except for me was posting about it weird anomaly supposedly from Antarctica and people are posting about it what it was but I didn't see any materialization of giant

(06:04) waves or anything like that stuff should have been hitting Shores doesn't mean it didn't happen just means that there wasn't any verifiable information about it um and I just decided not to kind of dig into all that at the moment people may wonder like hey Ashton I thought you're interested in a lot of this stuff I mean you posted this um plasma weird blue thing in the sky yeah I'm interested in some stuff that I think is really weird but you've seen uh the MH370 videos and you've dug into the

(06:33) scalar physics and Technology on that side the rest of the stuff just doesn't quite doesn't quite have the same gravity I guess as no pun intended to it where you know you already know that a lot of this stuff can be possible and you know that we can't verify most of it so when you see crazy videos out there it's like yeah that could be real it could be anti-gravity could be UFO whatever but unless I've got like military videos at it it just doesn't excite me the way the other stuff does

(07:02) so people said that it's a sensor anomaly um with respect to the weird blue thing in the sky if we have uh or sorry the Antarctica one the blue thing in the sky people are saying it's a kite or a drone with lights on it I don't know if anyone can find any verifiable evidence on either of those things let me know I will report on them if we can get verifiable evidence okay um let's start with going through I think what we're going to do is we're going to go through these two videos we're going to

(07:31) watch them and then we I will talk about how I think the scalar physics works with respect to MH370 because think people want to know that and then we're going to go into the long form interview with Tom Bearden and we'll see how far we get through that so let's start with this one and bear with me while I get this set up correctly I think this should work I was playing around with it earlier so if I share this okay yeah I think if I listen it'll work as well okay so we're going to do it like this

(08:01) I've also got a custom one let me see here there we go okay look at this chat look at this and I can watch over here awesome okay so this says Major General George Keegan Jr former head of the US Air Force intelligence this week super weapons the particle beam and the nuclear arms race that's what this one's going to be about uh also guys cheers for your Friday let me uh hold on how do I switch this back cheers everybody and don't worry I'm still rocking the big headphones we're still doing it okay let's watch this one's

(08:47) only about six minutes long oh this looks really good okay uh damn you guys really don't have sound on [Music] that let me see if I can fix this real quick um okay let me try sharing that one more time see if I can make this work uh maybe I oh maybe I just share with a video file guys hold on I I think I got an idea let's try this sweet I'm learning a lot about this chat holy crap chat are you guys listening this is 1977 also my man's glasses wow these glasses guys we need to

get the corridor crew in here and teach them what some

(09:46) style looks like this is real glasses right here says you can wipe them out from thousands of miles away thousands of miles away he's talking about scal or physics he just doesn't even potentially even know what he's the science he's talking about eliminate a missile does this remind you of Bob Greener hard TRS podcast number two quick plug go listen to it Bob Greener argues this type of Weaponry is a perfect defense mechanism you can eliminate a missile from far away potentially just annihilated a nuke

(10:17) he's talking about directed energy weapons in here in the 70s when the 70s people had no idea what he's talking about this thing he's just talking about Star Trek or magic he was talking about Star Trek but it's not magic it's real when they talked about the mirror the Soviets using the mirror they're potentially talking about a phase conjugate mirror because the phase conjugate mirror will create a scalar Wave by canceling out the wave that they're sending out creating a perfect

(10:41) counteract to it which then creates your scalar potential this is how you can annihilate something thousands of miles away also this reminds me of space fence remember space fence guys we thought it was just kind of a joke I wonder if we actually have something like this we can just shoot it up there and just beam anything down we want it's probably a lot more sophisticated than that at this point it's the wood pecker yes this is equivalent to the Woodpecker the idea of the Woodpecker is scalar interferometry

(11:05) uh directed energy weapons that's essentially what the idea of the Woodpecker was it was the Soviets uh scalar Weaponry system that they were using uh the way this works with interferometry guys is crossing the streams like Ghostbusters so you have a scalar wave that goes out there where it seems like there's nothing going out there but it's shooting a pure potential beam out there and then when you cross two of those you can recreate the energy at a distance that's how this works Works whether not

(11:30) you believe it that's uh I wouldn't have believed it about a year ago until I saw it on two perfectly insync videos where we have our endothermic event happening consistent with this technology the interesting thing he said here as well is what could this be disinformation now where have I heard that before um oh the Salvador pz patents Salvador pz patents he just has patents out there that their UFO pads talking about high frequency gravitational wave generator uh inertial Mass reduction device for Trans medium

(12:01) craft as well as piso electric induced high temperature superconductor people go oh well it could just be disinformation no it's not disinformation it's literally real technology and this is what he's talking about here where it's so hard also these sideburns Guys these sideburns uh he's you know what he says there is no he doesn't think there's any chance it could be disinformation like he's this is the guy that would have been involved in in a position to know kind of how like Salvador Pas was with the Navy like

(12:34) he's in a position to know this type of information as an engineer these are the people that would know it but it seems so magical to us that we immediately assume can it be fake guys things that's things aren't that complicated if we instead of passing disinformation we just wouldn't put it out there that's the simpler solution so anyway let's keep going me for a colossal piece now that part too what that is so similar like is this disin to get Congress to spend more money on weapons that's what

(13:03) the whole whatever narrative around Project Blue beam is right is that there is no UFOs out there it's just to scare people scare people to think we need more money and more weapons no we actually like might need it now my opinion on this is that the Soviets were ahead of us most likely and I'll switch back that hopefully this doesn't mess it up okay I think we're fine the Soviets were probably ahead of us back in the 80s and and then the fall of the Soviet Union economics destroyed them United

(13:33) States decides oh this is not just a joke these are real this is real technology and then we catch up and we surpass them and we've probably surpassed them many years ago I would now say **China** is probably catching up to us they've got a billion people like four times as many people as we have so they're probably realizing it's real as well and they're spending a bunch of money in it catching up um um I forgot my buddy's name that I was just talking to but uh I apologize if he's out there

(14:00) um here let me let me find it real quick but uh there's been people that are talking about this exact thing and I posted a clip of it regarding the Salvador Pi patents uh Brandon white shirt hopefully I'm pronouncing his last name correctly he had the clip where he's an Air Force contractor he's convinced we have weaponry and Technology out there that would seem like it's magical but that the United States government is taking it seriously **Russia's** taking it seriously and **China** is taking it seriously everybody out

(14:26) there is listening we have like a thousand people listening right now thank you first of all for being here and second of all what I want people to know is that I'm just a normal dude who ran across two of the craziest videos ever and thought if that's real we can prove it not only did we prove it with the evidence but then we started to dig into the science and the science is real too and it's been out there for decades I would implore people out there to not just dismiss this out of hand I know it

(14:54) seems difficult to believe but if you really dig into it like we have find out about Thomas beard and look into Antarctica Eric Hecker when he's been talking about directed energy weapons you will find that it's been out there this whole time people have been talking about it openly we've just been ignoring it let's go back to the video now let's think about the context so and and Thomas Bearden talked about this as well and I think that these people are very smart they're very in the no but it doesn't mean they're

(15:22) correct about everything so I think the thing where they were potentially wrong was that they thought that it would be the end of the world everybody was afraid of nuclear weapons we

still are afraid of nuclear weapons and we were afraid of another Pearl Harbor happening uh of being attacked from that perspective and they were looking at this going whoever gets this technology controls the world and it's probably true whoever does get this technology controls the world we might be in a stalemate right now or it might be that

(15:47) the United States um in my investigation I think this is where I'm gonna you know this is my version of the story of how this has been playing out is I think quantum computers elevated this technology to the next stage they took it from something that was very powerful where we could shoot it with just uh beams that we have from groundbased Radars to the point now where we can literally create I guess you would call them the UFOs floaty orbs if you want to call them that for the Layman who can you create this

(16:16) technology because the microchips have gotten so small that if you look up the coherent matter wave being patent by locked Martin which is a transducer which means it can convert energy from one type to another that that transducer is 10 microns in length this is the size of a bacteria that's how small these chips are at this point this is the reason why they took MH370 the freescale semiconductor employees on board that plane they had just produced a microchip that was smaller than a dimple in a golf ball

(16:51) whichever country controls the escalation of this technology by microchips they are going to have the ultimate power so look at like this everybody who's listening right now is that let's say that this is uh let's go to this side this side right here we're over here this is nuclear weapons in terms of technological advancement we figure out a unification theory of quantum and macro which allows pretty much magical type effects that moves us up over here now we can do scalar interferometry we can cause directed

(17:23) energy weapons using our very large radar dishes that are probably stuck in one location and then then we figure out how to use that to create anti-gravity and now the drones start to come into play and we start to build drones and now we're over here the drones start to get operationalized with this technology we've seen laser directed energy weapons coming off of drones there's pictures of them the UK just today was talking about the new Laser Technology as well now take that one step further we start to

(17:51) advance that even further where now we have drones that are basically the C equivalent of ball lightning where we have some small mechanical device in there but it's creating a field a plasma field around the object and can transmit a high frequency gravitational wave out of it and potentially a scalar potential out of it now we're moving from over here to like over here so this is the part that I want people to realize is that this technology just gets crazier and crazier to the point where you get where we had the MH370 videos 10 years

(18:25) ago 10 years ago in 2014 where we could warp an entire object and we're going to talk about how that's done here in just a second I want to do another video so next video is going to be Thomas Bearden on how scalar physics and how to create a scalar wave Thomas Bearden was talking about this 38 years ago 38 years ago everybody just to give you a perspective

because in order to understand this there's several aspects that you need to be able to wrap your brain around one of them is that have magical technology that's out

(19:00) there and it's the year 2024 right now the other thing is you need to understand the history this goes back much further than I would have initially anticipated I think it goes back all the way to the 40s and the technology started to be realized in the 60s operationally and then in the 2000s when super Advanced Computers started coming out super computers quantum computers this is where it just took off where we were reached basically Star Trek levels from the military industrial complex and they've been hiding this ever since and

(19:33) I think they would do basically anything to hide it because it's a it's a big thing of gamesmanship it's like if some one team developed nuclear weapons and nobody else has nuclear weapons I don't know if you guys play the game civilization but in the game civilization you can get your technology so far Advanced where like you just own all the other civilizations that's what I think is essentially going on at this point is that if you can annihilate everybody's nukes you can warp nukes

(19:55) back onto people uh you are the one who has a complete control you can't let anybody else know about it because they're going to try to steal that technology from you to try to catch up and if this is from Aliens or whatever I know a lot of people want to think that it is then we need to be doing that to the aliens and trying to catch up to them the superpower of of human beings is that we have ultimate adaptability and evolution we have been advancing so fast because we have the ability to look at something and figure out how it works

(20:23) that's what I've been doing with respect to this and that's what everybody with m370x has been doing okay Thomas Bearden video break here in just a second that this is an important broadcast I think it's a very important broadcast and if you have a tape recorder handy I would like for you to get your tape recorders rolling and if you have a friend I think guys when they tell you to get your tape recorders rolling might be a good video here we go you should call them and have them listen listen in because you're

(20:52) going to hear something tonight that will Astound you and we're rolling tapes here Tom but go right ahead okay okay to start with I'm going to have to give you just a little preparation so that you understand in in the way what's being done and how it can be done so let me start out with a the very basic thing of what a scalar wave is if you take two ordinary waves and you put them together  $180^\circ$  out from each other what you can result from that what you can have when you get through with that you can have a wave or a pulse in

(21:28) SpaceTime itself what you do is you squeeze SpaceTime just like you'd squeeze a sponge rhythmically but you do not create the normal kind of electric field and magnetic field in the wave that we normally have in our textbooks if you do it correctly you don't have to add just two waves you could add 10 the thing is as long as the vectors sum to zero uh very precisely you have created a zero Vector wave and that makes it a scalar wave Vector simple purposes uh for simple purposes just look at it as if you were rhythmically

(22:09) squeezing a sponge and UNS squeezing it and what you're doing that too is spacetime itself with this kind of wave that's what it does now that is really the original way that Tesla discovered uh back uh shortly before the turn of the century in his Colorado experiments mhm now this kind of a wave can be easily made in the laboratory and it can be proven to exist and you can use it but I want to tell you a couple of things you can do with it if I take uh something like a pencil beam radar something that transmits a

(22:47) very narrow beam uh and if I cross two of these beams that is uh two of these scalar beams not the normal beam that you make from a normal radar but this particular kind of being in the little area where they cross the interference produces ordinary energy ordinary electromagnetic waves you can stick something in there and you can certainly detect that it looks like the normal stuff the difference in this interference pattern is that we are now putting in the zeros and creating the nonzeros in the middle the way we look

(23:24) at it with normal wave interference is we put in the energy and the out of phase interference can create the destructive zones or the zeros we do it just backwards here we put in the zeros and in the middle in this interference Zone we create the ordinary energy so what we're saying is with this kind of a wave which a normal detector will not detect you can stick an antenna right up in the middle of it if you've got a good one and you will not see a detection on your oscilloscope but in the interference

(23:57) pattern which may be 1,000 miles away or even 10,000 mil away and that narrow area where they Cross or you can so a th000 miles away or 10,000 miles away what did the general just say could be 600 miles away or 6,000 miles away this is why it's so important is the distance normal type of beam weapons not GNA be able to go that kind of distance but this one can at least I don't think it can oh sorry here we go make wider beams and have a wider area you will produce ordinary energy ordinary electromagnetic

(24:28) interference zones now that really is the secret of Tesla's Wireless transmission of energy at a distance because everything you put in on the other end comes out in that interference Zone you don't lose a single bit of it there is no Square loss involved in this process now no transmission cost whatsoever uh no no loss in the transmission at all you get all of it out on the other end that you put in on this end if you put 2 Kow in this end in the interference zone out there you have 2 Kow of energy but the power companies

(25:05) don't like that Tom they like to sell transmission of energy well that's true and we've just told you how to do it without uh without the losses that occur in the lines okay so there we go um that's Thomas beer and that's a quick recap on this technology so now I am going to explain how this works with respect to the mh37 zero video so we have some context for it how we were able to figure out that this is real is people say well go prove it if this is real and they probably said that to Thomas beard

(25:38) he had no way to prove it he's seeing it in the lab seeing in the special access programs he's a literal engineer with the government but he can't prove it to anybody nobody will believe

it we did the opposite we saw some videos and said well let's figure out if that's scientifically accurate and then we find out yes it is scientifically accurate we've got the videos that prove Thomas bearden's theories from the 1980s and this is why people were reaching out to me I didn't understand

(26:05) you would think if the videos were fake obviously fake then no scientists and Engineers would be reaching out to you nobody would put themselves on the line I had lots of people almost lining up to talk to me people making videos about them like Bob Greener before I even knew he was because he's looking at it and going that's scientifically accurate that's consistent with uh archal wheeler John archal Wheeler consistent with feeman uh consistent with Aon Hoff bom effect all these things that I didn't even know

(26:33) what they were I wasn't a scientist before all of this and I've been learning it so now let's look at let's look at the videos real quick let's look at that m270 videos real quick uh and you're going to begin to realize why these videos are the most important videos in the history of the world um oh wait let me I forgot I gotta actually I think I can share there's no sound on this one so I think I can just share it the normal way move from Studio present I think I can do it this way

(27:05) this will be easier because then I can move around on the screen okay sweet okay so why is this video so big so and we're just going to skip to the orb part because that's the key here is remember when Thomas be was just talking to create a scalar wave we need to create phase conjugation so we need have the waves cancel each other out so the simplest way to have the waves cancel each other out is 180 de out of phase this is a zero point system because in the Z in the middle here there's it's actually zero wavelength

(27:43) they're perfectly canceling each other out but you're not you're not limited to just two vectors like this you can have three vectors and what is three vectors an equilateral triangle that's the reason why we see the equilateral triangle I can almost explain every aspect of these videos scientifically now look at this equilateral triangle they're mapping the plane that is actually what they're doing here they have created some type of resonance around the plane and they've locked into it both attracting

(28:13) and uh separating so that they stay in exactly 120 degree angle and orientation here now what do they do right there you notice there that they now look at their orientation their orientation is now perfectly vertical why is their orientation perfectly vertical because they need to create the perfect 120 degree orientation and they need it to be vertical so that when they collapse on one another it creates perfect uh scalar um potential or perfect zero point system if they're at any other degree angle then they've got to converge that

(28:49) direction I imagine that the reason why they've done it in this exact kind of a vertical orientation is because they're going to pull the plane backwards to the other the last orb what we're going to look at after we look at these videos is I'm going to show you multiphase or multi-wave mixing phase conjugation it's almost like magic in this case it is and they call it something a Time reversed wave so now the plane's just gone so what's Happening Here In This

Moment is that we we'll see from the

(29:18) second video is that the orbs are converging you can see right here at this point they actually begin to slow down because they're reorienting to prepare for this zap they're getting the perfect alignment perfect location and then they're reoriented and what happens at the last second when they converge is they take advantage of kum's law people ask well how much energy would it take in order to make this happen it would take a lot well if that that may be true and if that is true though we have the

(29:45) perfect amount of energy needed in order to pull it off so in this video here this is the end of it the orbs are reorienting right here when they go blurry they go blurry they're reorienting same exact spot and they converge and according to kums law when you take charged forces and you converge them on one another the electrical force increases exponentially the fact it increases exponentially is is very important because that's what allows us to get to energy densities are high enough presuming that the original charge is

(30:19) strong enough to have the ultimate final product break was called the swinger limit when it breaks the swinger limit it becomes nonlinear and this is the part where it's essentially equivalent to ripping through the fabric of SpaceTime itself from the Layman's perspective now the reason why Dave Rossi in the Tim pool and before this when we talked to him said that there's probably a fourth orb is because he understood multi-wave uh mixing so I'm going to go ahead and switch this and I want to show you phase

(30:52) conjugation you guys can Google this phase conjugation yourself and understand what I'm talking about and for the people that have not familiar with those videos um go to my pinned tweet on Twitter on X you can see the story and in the replies you can see all the evidence one of those videos is a satellite video I use air quotes uh because satellite video is a bit of misnomer we were able to deduce that they don't just look through satellites anymore instead what they do oops I just canceled that that crap instead of

(31:29) looking through the satellite they send the data from the satellites to a centralized computer which just builds a Google video Earth playback potentially of the whole planet all the time in fact just I I'll do a quick recap just so people aren't 100% confused in terms of what I'm talking about I will share this video and we don't need the sound for this one but I I'll tell you what it's saying it says Global persistent infrared surveillance and when you watch this video we found this on locky Martin's

(31:59) website everything we found is publicly available we haven't had to find any of this you know had to steal this or anything from the government they're scanning the Earth the whole time all the time these satellites and the satellites that are also in low earth orbit have been integrated into the system as well and these are the midar orbit satellites the low earth orbit satellites don't even show up on this you can see they're scanning and they're staring so they have big wide scans and

(32:24) then they also have specific stairs as well on these satellites so they're actually able to scan the whole earth all the time and then send this information relay it to groundbased computer systems which can then just pull back any surveillance they want and if anyone gets mad at me for revealing this well F off I don't give a United States government shouldn't have lied about what they did to MH370 maybe we wouldn't have found out about all this stuff but they did lie about it and so then we had to go find out how all

(32:51) the satellite capabilities work so here you go now the whole world gets to know yeah we've got full persistent Global coverage in the entire planet look at this so that that sat that satellite video is presumably this computer system that they're logged into this is why it doesn't look like the satellites moving this is why the clouds don't look like they're moving very much because these satellites are super far away they're not like right there like on a on an airplane looking down it's like a

(33:16) thousand kilometers away at best maybe if it's one of these uh these are geostationary SS these are 40,000 kilometers away clouds aren't even going to look like they move over a 5-second period so this explains why we see that and of course my favorite part locky and Martin we never forget who we're look who we're working for okay the other video is a drone video I will replay the beginning of it just right away so people understand this is a drone this is an mq1 C Great Eagle you're looking

(33:41) at you can just see the Drone you can just see it if somebody was faking this and they were just a random person not affiliated with the military or the government they would never make it look like this the the camera they would use is the one that's underneath the nose this is a special load out where they've got these optional replaceable things under the wings and you could put cameras under there we know because you can Google the mq1 C you can find a picture with it's got cameras under the wings like this

(34:05) normally they have missiles under the wings this one had his camera under the wings it could be an mq9 they look identical actually but based on the time this was operational the mq1 C's have been in in flight for decades and mq 9's are are much newer so there you guys go if you want to know the information about the videos this is them I mean this is a and if you think this is not mh37 Zer the dates of the videos coming out these videos have been proven to go back to 2014 Just weeks after the video

(34:34) after the plane disappeared you can look at my profile look at my in my profile look at my banner you're going to see right here in a second I took that people took an overlay of this when they zoom in it's a perfect overlay of MH370 like perfect this is MH370 this is why we never found anything in the South Indian Ocean you're staring at it because we got three orbs with gravity engines on them spinning around the plane in a perfect 120 degree sinial pattern consistent with scalar physics and what Thomas Bearden

(35:04) was talking about in the 80s and there's the person's manually tracking the plane as well they're trying to keep in touch with it there's a lag like if you're playing video games you got a

lag there's a lag going on with the Drone as well I mean the fact that people think these are fake blows my mind way too realistic this is a perfect overlay of MH370 here as well people say well what about the colors turns out this color palette the rainbow color palette might even be the default one when we see in black and white

(35:31) that's potentially where they've changed it so that when they release it to the public we don't see what they're really capable of it's just a software setting on the rathon cameras and then poof there goes our plane plane's gone in an instant there it goes so believe it or don't believe it doesn't matter to me point of this video here is um that I want to show you guys how the physics and the science works so uh yeah and this this physics and Science and and this investigation

(36:00) has revealed so much information that the world had no idea about I had no idea how the science worked before this I've been investigating this along with you guys for the last eight months nine months um and it's honestly changed every aspect of my life learning about what is possible and how much we've been lied to or not necessarily lied but let's see what's been emitted from us uh has blown my mind the fact that the science is out there and has been out there was completely mind-blowing to me

(36:29) um so yeah okay everybody should want to learn this because this is incredible and it's very important to know remember when Eric Hecker went on the Shawn Ryan Show and he said that people need to get directed energy weapons into their vocabulary what you see on your screen right now is what he was talking about he was talking about phase conjugation because that's how we produce directed energy weapons that's how scalar physics works so as we saw in the video where Thomas was explaining it you can create

(36:59) a scalar beam if you put an electromagnetic measurement in there detector a normal one you're going to detect nothing it's going to look like it's invisible but it's actually sending a potential you cross two of those and now you can recreate the energy at a distance and I'm going to say this incorrectly but I think if it's you polarize it or if you change the charge I can't remember which way it is that you can either send energy to a distance or you can absorb energy at a distance

(37:26) he calls it a cold EXP explosion that's what we're seeing in the MH370 videos that's the reason why the Drone video is dark when we see the Drone video white this is also why there's a zap we listen to Tom beard and talk about the fact that you would see a zap the reason why it's white in the satellite video is because it's inverted heat white is cold hot is black black is hot we found other infrared cameras that also have the inverted black white like that as well uh where black is hot and now in the

(37:54) Drone video the thermal the classic thermal we can tell that black is cold based on the engines which are red hot so so what's happening there's an absorption of energy you can use something called phase conjugation now if you guys are skeptical of this uh in fact maybe I'll pull it up so that I can show you guys um because I think it might be helpful to First Look at Optical

phase conjugation because I want you guys to see magic with your own eyes when you see magic with your own eyes it will change everything you

(38:23) believe to be true Optical phase conjugation very similar Concept Optical phase conjugation is how we create Holograms it's funny because my Optical phase conjugation post only has 13,000 views when I think it's probably one of the most important videos that anyone should watch and it's because this science goes over the heads of so many people but it's real it's real uh so let's take a look at we're going to look at the optical phase conjugation real quick and then we'll look at this clip

(38:55) here um so actually let's look at this first so phase conjugation mirror so remember when we were just listening to earlier video at the beginning of this they were talking about the Soviets using a mirror to direct the beam that's not a normal mirror so when you send a wave at a mirror like if I'm going to shoot it at the screen right here it will bounce directly back if I do it at an angle it's going to bounce back at an angle so if I do it at a 45 degree angle it's going to bounce at an angle

(39:25) out phase conjugate mirrors eliminate that no matter what angle you shoot the beam at the mirror it bounces directly back to the source that's incredible so I want you to imagine it like this if you are shoot looking with your eyes at a mirror you can see your feet because you can see the light bouncing off the mirror at an angle where you can see your feet or you can see your chest or whatever if you're looking at a phase conjugate mirror what do you see when you look into the phase conjugate mirror

(39:58) you just see your eyes because no matter what angle you look at all you see back is your eyes the light bounces directly back at your eyes that's how I want you to imagine how weird a phase conjugate mirror is and when you use a phase conjugate mirror this is how we can completely cancel out the wave function where you can create the scalar potential the scalar wave that we're trying to create I think they also call it like an electrogravitic wave now now that's what you see here so let's look at the

(40:30) examples regular mirror bounce it directly it's going to bounce back if it goes straight if you bounce it at an angle it's going to bounce off the mirror at an angle in a phase conjugate mirror if you bounce it if you go straight at it it'll bounce straight back if you go at an angle it also goes straight back that's weird really weird and this is where Optics starts to get very bizarre now watch this next one so now that we've looked at that let's see if I can get this to work correctly okay let's put this up here

(41:09) does that work okay yeah perfect okay oh let's do this okay so again what are we looking at here in this video let me see if I can full screen it or whatever um hold on this this going to work yeah okay so now you're seeing the exact same thing regular mirror distorts and scatters the beam reflected reflects it scattered so you can see it bouncing off the mirror and scattering now what happens with the phase conjugate mirror no matter where it goes it bounces directly back so we have our scatter here now imagine this scatterer is an

(41:46) airplane so it's going to bounce off this airplane it's going to scatter in all directions but it's going to be phase conjugated so that it bounces all directly back this is why you need your zero point system and I hope I'm saying this correctly if I if I'm saying anything incorrectly uh please just bear with me because I've only been studying this for like less than six months and I've only been looking at this for like three months so I am a noob at this but I'm catching up

(42:12) quickly and **I want you** guys to catch up quickly with me so look at these bottom two this really explains it the same way I said it bounces directly back so it completely cancels out that wave function also thank you guys who have been Dona in the chat I appreciate it it's hard for me to ract the donations in the chat but very very thank you a lot and we can do this with any anything that can create a zero point system so two lines can create a Zer point system a triangle can create a zero point system anything where the product the

(42:39) cross product of all the vectors equals zero okay so let's watch this guys so this is going to be Optical phase conjugation not macroscopic phase conjugation so you're taking a self pump continuous wave phase conjugator using internal reflection continuous wave and this may go over your head it's going to go over mine I'm going to read it anyway continuous wave phase conjugation of an image bearing beam is demonstrated using a single domain Crystal so they have this very specific Crystal which is your

(43:07) phase conjugate mirror and nothing else the device operates by four-wave mixing this is exactly what is being used on the plane four-wave mixing imagine you have your three orbs triangle around the plane and then you have another orb somewhere over here you're mixing the four waves and what happens then is you pump the beam from the fourth wave in and you get a perfect reflection back out and what does that do teleports the plane you pump the energy out of there and now that energy is going to go somewhere else consistent with uh schro

(43:39) dinger's law the double slit experiment you're going to rebuild that wave function you're going to have a Time reversed wave the plane's going to go back in time but it's not necessarily going back in local time our time is still moving forward but the time of the plane itself is going to get reversed like the movie tenant it's moving backwards but in forward time the device operates by four-wave mixing use a photo refractive effect but without any external pumping beams or external mirrors the customary pumping

(44:07) beams are derived from the incident beam and are internally reflected inside the crystal adjacent to an edge the device is self-starting has a phase conjugate reflectivity of 30% Imaging applications are discussed guys are you ready to watch Magic all 1700 people watching this it's magic time get ready now once you see magic firsthand so here is our ordinary mirror so ordinary mirror right we've got it flips it upside down or actually it's not even flipping upside down and now actually yeah it flips it upside down it looks like right

(44:43) I may be getting this Incorrect and then we cover it up and then it it it goes away now we add the crystal to it now we have our beam going through our phase conjugate Crystal phase conjugate mirror here now let's watch what happens you ready for magic what it just fixed the

image it just built the image what is going on here this is real by the way this is not a magic trick this is real the image just corrected itself now the image is the right way around it's not upside down anymore if you think that's weird wait

(45:31) for this Watch What Happens Next let's put a shot glass over it okay we're blocking the light we're blocking the light what do you guys think's going to happen what do you guys think's going to happen here wait for it this is real time by the way this is still playing what the image just starts to appear just starts to appear going back we put our shot glass over it you can see the timer's running here in the bottom time is still moving forward the waves are bouncing through here or something it just goes straight through

(46:20) the iced shock glass and the image is right there poof slowly builds up and now we have Perfect Image Perfect Image I mean you can perfectly see it perfectly see it welcome to Optical phase conjugation chat this is real I I had a hard time believing this I could not believe what I was watching when I was watching this video hold on so so this is again ordinary mirror all sorry this is the phase conjugate image and then they put a shot glass over it and like what how long is that 30 20 seconds later 20 seconds later all

(47:08) of a sudden van Go's head appears notice over here it's still backwards it corrects the image imagine this how crazy is this I mean seeing is believing chat I mean what to me this blows my this blows my mind so we already know Magic's possible we're staring at it now it's science but it's magic because we don't really understand it I mean look how clear that is now the other thing I want to tell you guys as well is that this is how holography works holography is making a hologram they can use a 2d picture

(47:52) two-dimensional picture and you can create a 3D hologram from a 2d picture through phase conjugation and through optics for the same Concepts that we just talked about here in terms of how the light bounces back pretty wild so let's take a look at this now I'm going to skip ahead of this because I don't want to dig through all of this tonight and we're not going to go super long tonight uh we've already been going for an hour I said we wouldn't go for much longer than an hour so I want to

(48:22) show you guys two-wave mixing first so two-wave mix now this is where we're taking those scalar waves and we are connecting them and then we get our interference zone right here and depending on how we I I believe it's polarized I could be wrong I'll look up the terms make sure I get the terms correctly but you can do this two different ways one where you can build energy within the interference Zone an explosion a directed energy weapon and you can do this again at a distance thousands of miles away or it can be you

(48:52) know right next to each other like the orbs just circling around the plane or we can actually suck energy from this location now if you absorb energy you're going to get your cold explosion but that energy has to go somewhere now where is it going to go it's going to go to our fourth orb but how is it going to go to the fourth orb the way it's going to go to the fourth orb down here is if we add more beams to it so where's my fourth beam now here's where you

go this is where we get to our

(49:20) multi degenerate four-wave mixing so now imagine that we've got our three ways all three orbs are shooting a beam at the Target they're all canceling out and then we have our pump beam so we have our pump beam here that is coming in and we might be five waves actually when I really think about it so actually these ones on the right are probably a better example where you have your interference Zone and then you send your pump beam in and then you get a beam four out so if I zoom in on this one down here you can see that we got  $bm_2$

(49:54) and  $B\ bm_3$  creating our Zer Point Energy think there's probably five beams because one beam the the fourth orb is going to shoot a beam at the the the um interference Zone and then you're going to have the beam shoot directly back so you're gonna have two or three beams that are crossing to create your interference Zone and then you're going to have your pump beam which shoots in and the pump can either send energy from the location from the fourth orb to the plane or from your radar dish to your Lo

(50:24) Target location or you can suck energy out and so that's what's happening here is that you're going to see it pumping in and then you're going to have a phase conjugate reflection shooting back out now this is where you can imagine like the three orbs when they squeeze together you're having your slingshot effect go off right here and that's what our pumping is let's see if there's any more graphs for it pumping beam probe beam so yeah I don't know the exact terms here in terms

(50:55) of phase conjugate beam which one is which in this respect but that's the main idea from watching this okay so I hope everybody can understand and enjoy that now that we've understood this is how the science behind the videos works now I would have never expected that anything like that was even possible this is also how directed energy weapons work as well so let's stop sharing my screen switch it over okay uh real quick I'm going to go through some comments yeah pretty crazy so I suggest if you

(51:28) want to know more about this if you don't trust me first look up holography how to make a hologram check it out you're going to find out it uses Optical phase conjugation you can watch that video of optical phase conjugation that I found online I can't believe it only has 13 15,000 views because it just looks like magic to me and then this is what leads us to macroscopic phase conjugation you guys can go back to October or November and I was saying that this is op macroscopic phase conjugation um and that and I didn't even know how

(51:59) it worked and I was saying what it was and you can look that up and you can find out that it all uses scalar physics what we've been looking at right here okay so let's go ahead and take a look I think we have time let's we've got uh like almost 2,000 people watching so let's go ahead and do uh this last interview with um that I've got queued up now this last interview I'm going to show is uh and I think what I'll do is I'm going to probably replay one of the Thomas Bearden ones um this weekend

(52:33) or maybe go through several clips of it but I want to show this Thomas Bearden video I haven't watched this yet with uh Dr Steven Greer which goes over some of the implications I think he also talks about overunity here as well and you guys will begin to understand why I now believe that overunity and free energy are possible is that the only way this works is if there is a Fifth Dimension that we don't perceive and and so what's happening is when you when the phase conjugation happens and we create our

(53:00) scalar wave and we're interfering them the reason why we detect nothing is because the longitudinal waves are transversing through the ether to the Target location super far away um and that ether you could call it as The Fifth Dimension and there have been unification theories that have already speculated this requirement going back to kaooa in 1921 so this is not some magical belief that's out there it's been scientifically proven that we need this type of thing to happen um and so if if we have that that's what

(53:33) makes all the magic happen here and this is how you can imagine it's it's like a wormhole that we're creating we're creating macroscopic phase conjugation is fundamentally equivalent to a wormhole but it's not going to look like we see in TV it's going to look like what we saw in those videos now let's do this last one so again I haven't watch this yet hopefully this doesn't give me copyright stried we'll find out okay well there we go we're we're supporting their stuff so I think this

(54:05) is Dr Steven gre's program for serious disclosure my name is Tom Bearden uh Lieutenant Colonel US Army retired uh spent 20 years little more than that in the active military mostly in air defense various other assignments field uy you know technical intelligence assignment uh uh liazon to Canada to some um technical work going on site in U turbulent wakes and re-entry systems and so forth at the Canadian Armament research and development establishment and spent quite a number of Tours in um in basically R&D work in

(54:53) the military developing missile systems and things like that [Music] sorry this is pulling energy from the vacuum when you listen to Thomas beard and **I want you** guys to realize as well this is not somebody who's making this up whether or not he's wrong or not again I leave it to you but he's not lying about this he's he's seen this experimentally he mentions this in many of his videos as well literally worked in the in the government for or worked in the military for 20 years and then went on to be an engineer

(55:27) um and I know people that know knew him personally he died in 2022 which is very sad because he doesn't get to see the fruits of his [Music] labors for about uh 20 years or more some Associates and I have been researching very heavily into trying to extract electromagnetic energy from the vacuum now we did so under somewhat duress because the conventional electrodynamics model model does not allow this to happen in other words it doesn't allow you to extract excess energy from the vacuum and use that to

(56:03) power your load so it doesn't allow you to make a self-powering system so we took the approach that some of the phenomenology we had seen in experiments and so forth convinced

us that it was possible and there didn't seem to be any real physical reason why it couldn't be extracted if we could find the way to do it but we had the problem of why doesn't the electrodynamics allow it to be done so at the same time we also began a study of the foundations of electronics in other words what are the fundamental

(56:40) concepts that are assumed in the theory where did they come from and how did they get in there and that was turned out to be very interesting and very pertinent because electrodynamics kept getting modified so right away what is it talking about he's saying that we saw stuff experimentally that didn't seem like it was possible based on physics and science so what did he do they didn't just say it can't be possible they went and said well why are the equations the way that they are and where did they go

(57:14) they went to Maxwell's equations Maxwell wrote 20 equations that that are what we use today the basis for electromagnetics and then Oliver Heaviside came in and he narrowed he simplified them and turned them into just four equations that we use today and when he did that it allows us to understand everything that's going on right now uh why my headphones work allowed us to understand why we can stream but it took away the ability to manipulate gravity in SpaceTime because there is no such thing as nothing and

(57:49) once you realize there's no such thing as nothing now you realize that when we cancel our waves out it's not that there's nothing left over there's a scalar potential left over that's what allows us to manipulate Gravity the the sponginess that was talked about in the earlier videos is that you have this stress energy tensor going on this is what is essentially anti-gravity he's going to probably say this I haven't listened to this video yet but I've listened to enough of him

(58:14) that I know and restricted is what kept happening to it the original uh theory that Maxwell had was 20 equations and 20 unknown quantities equations what we've done is the closed current loop circuit where all the carriers have the same mass per charge ratio all the buckets have the same weight so to speak anytime you build a circuit like that it's quite easy to show that the amount of energy that circuit collects when we do this free rearing and we do increase its energy every how much it collects it will then use

(58:51) precisely 50% of that to destroy the thing that let it do that Mr it's really the dipole The Source dipole it will use that to kill itself so to speak and have no more excess energy the other half will go out to the circuit and power the loads and losses that means less than half gets to the load well to restore that Source dipole in other words so we can get some more energy in to use it cost just as much to restore it as was used to destroy it so we got to put in more than we can ever get out in the load with such a squirrely circuit

(59:27) and that's the only kind of circuit we've used in Power Systems since day one we're still building them we're still making Power Systems that deliberately kill them so we pay the power company to have a Giant wrestling match inside his generator and lose that's really what we pay them for so that doesn't seem to be the way to run a railroad it would seem to be much more

ideal to freely change the energy of the system pay a little switching cost so we get it switched over to the load and

(59:55) dump it in the load and let it go let it power the load and so you can do it so the problem we ran into was that the electrodynamics had actually been modified to throw out the very kind of systems that we had seen in our experiments evidence that could be done but violates the ordinary electrodynamics and we can do it and not violate conservation of energy we can do it in accord with thermodynamics and we can do it in accord with physics and electromagnetics now this is absolutely rigorous I don't care how many folks

(1:00:28) want to check that it will hold up it is rigorous so this was one thing we established from the study of the foundations of electromagnetics you are permitted to have electromagnetic systems that power themselves in their load and you don't have to put in the energy they take it from the vacuum the active vacuum okay so what did he just say there he just said pretty much what I said in terms of them uh figuring out how it worked and that they had to go back look at the equations and figure out I think what we're going to find out

(1:00:55) here as well is that we are to violate the laws of thermodynamics um at least as we classically understand them but what we're going to do is we're going to open our system up we're going to open it up to that ether and when you open up to that ether think of this Fifth Dimension as an ether of infinite energy think of it like an oil well like if we tap into the Earth and we make an oil well and we you take that oil we turn it into fuel we turn it into energy but it's infinite there's an infinite amount of potential

(1:01:23) energy that's out there and we can tap into it and we can even tap into how it's leaking out like think of the way it's like a rudimentary free energy device is one where we have we see the electromagnetism happening we see the interaction between The Ether and our reality we see it as what we what we experience as our reality everywhere we go and we can tap into parts of that to create something called overunity coefficient of performance greater than one but if we are able to tap directly into

(1:01:48) the source the underline ether then not only can we get free energy excess energy but we can also get a basically an unlimited amount of it this is where people wonder why would you keep this hidden this this is the thing that I've been having a crisis of conscience over because once you have this unlimited source of energy you know now we're definitely going to destroy ourselves because now any one person on this planet could destroy everything at any moment this is why you keep it hidden in addition to the socioeconomic impact you

(1:02:19) know we're keeping the oil companies Rich all I mean all the energy we use today is obsolete Coal Energy nuclear energy even even the green energies are obsolete compared to this this would just change everything Fusion Energy will become much more common if you guys have been watching the show Fallout that was on Amazon it's going to be like that and honestly it'd be cool if we went back to the Retro 50s in my opinion in terms of style our Engineers are taught to throw away about 10 trillion times for typical average

(1:02:51) case as much energy as they pull out of the vacuum without even know it in a generator and a battery and it's pouring out down the circuit and misses the circuit they throw all that away and only calculate a little bit that we catch in that circuit and in use now when we measure the circuit we obviously measure the energy being dissipated by the various pieces of that circuit well if the energy is being thrown out of there it had to get in there so obviously the measurements of the circuit will match pointings

(1:03:22) Theory because it'll match the energy that actually went in there to get dissipated like the country boy said you got a pipe here so to speak and it's got some holes in it if you measure all the water flowing out that's how much water come in it now your whole river can be around it and missing the pipe and you won't measure that so so what did you just say what did he just say right there you can have a whole river and if you have a pipe you can you won't even notice there's a river there you're just going to see

(1:03:49) what's coming through the pipe this is exactly I think my analogy I think was a little bit better where you have the oil spurting out but you have this underlying Reservoir we want the river I don't want to just make a pipe I want the whole damn River that we have built a whole science based on throwing away this enormous energy that is pulled out of the vacuum by every little old separation of charges every dipole well in the 50s in 1950s particle physicists discovered weak and others discovered broken symmetry

(1:04:20) they discovered how fundamental a process something like this dipole is where we separate separate two two opposite kinds of charges and TD Lee for example looked at it for physical charges and so forth and Lee won a Nobel Prize for it any dipole is a broken symmetry in the fierce exchange with the vacuum it's a broken three-dimensional symmetry what does this mean cutting through all the words and getting down to Country Boy language I love this guy it means that nature does not insist on conserving energy in three

(1:04:53) dimensions we do because we have a three-dimensional mind we like to think in terms of space because observation itself destroys time and what we look at is spatial so we like to think the world is made of space not space time however nature loves to work in four dimensions her fundamental law is conservation of energy must apply in four dimensions now you're not going to beat that one so never think about that but there is no law of nature that requires you to come in and say also it must apply simultaneously in three

(1:05:28) dimensions if we build some Gadget that makes it apply in three dimensions we apply an extra constraint on what nature will give us turning that around we go around building things that insist on having this three-dimensional exchange of energy we got to put it in in three dimensions for whatever we get out and lose some in the middle so we we're we got a terrible situation all the way it's called inpic engineering we always got entripy beating us to death never go over Unity forget it lose a lot we talk about you know efficiencies at

(1:06:02) 30% and so forth for our Power Systems when we talk about burning the coal and all that stuff but nature doesn't require you to do that all you have to do is break a little bit of this

three symmetry set of chains where you have tied her feet to the floor once you break the flow in three dimensions you no longer have to conserve energy in three dimensions the basic conservation of energy is an inflow from four dimensions outflow in three dimensions from the fourth dimension in converted and flowing out into

(1:06:37) three God outflow from four dimensions and inflow into three dimensions I'm really glad I have this thing that tells me that I'm muted now why is that important that's exactly what we see in the MH370 video when we see the endothermic event we are seen into that extra Dimension we are seeing that extra Dimension play out right there unlimited negative entropy completely dark and cold event that's happening imagine just like ripping away reality that's why the swinger limit is where things become

(1:07:11) nonlinear this is what it's essentially saying is it's ripping through the fabric of our reality to the nonlinear uh reality behind it like like burning a hole through a painting that's what Thomas beard and is talking talking about here that's why not everything in the world is connected but scalar physics connects quite a few things including directed energy weapons free energy and macroscopic phase conjugation moving a plane from one point to another thank you very much in the chat to Red

(1:07:40) Pill big big fan thank you guys for all you guys helping out and that one is free giant neg entropy is free nature will start reorganizing a goodly percentage of the whole vacuum for you spreading at the speed of light and will continue it as long as you leave the dipole alone the original charges and dipoles in original matter of the universe have been putting out energy and reorganizing a vacuum for 15 billion years today we're said we can't engineer neg entropy when neg entropy is the easiest thing in the world to engineer

(1:08:14) whereas entropy is the hard way to do it and that's the way we all do it so he's saying neg entropy the universe has a self-correcting meas self-organizing way about it so when you rip away that extra fabric what happens right away it closes back up again corrects itself it's the easiest thing in the world in terms of trying to engineer it so all we have to do is rip through the fabric of SpaceTime the shringer limit now we've got our access to it as we need out there uh and somebody mentioned yes uh

(1:08:44) if we can do a heat pump like this and Thomas beon talks about doing a heat pump the exact same way why can we not do an electron pump the same way there we go for my Engineers out there the bottom line of the this is if we'll initiate the negative entropy and let it go it's just like you punched a hole in the ground and you got a big gusher of oil you don't have to furnish the pressure and you don't have to furnish the oil here it comes and it comes out in real oil that you can use and the common dipole in every electrical

(1:09:16) circuit pours out energy in that fashion the problem is not how to get enormous energy from the vacuum that problem been totally solved it was actually solved in 1903 had we understood it had we understood what Whitaker wrote we didn't but now we do understand it and we do certify very r rigorously with some of the AIS papers that that is for Real the problem

now is how do we catch a goodly bit of this energy and use it asymmetrically you dump it in the load let it power that load and not use half of it to go back

(1:09:53) over and kill the little dipole so we s about then to build one that wasn't built that way you been successful yes we have been successful uh we have just built our second model the first model produced five times out what we put in uh we pay for switching go we don't put any energy into it to actually power the system it comes right out of a permanent magnet the D which is so use a magnet got five times over Unity 5.

(1:10:25) 0 that seems pretty impressive I hope that equates to 5.0 cop if it does whoa I mean no wonder this is a pretty bold claim Ado the reason for using a permanent magnet is very simple you can pass the flux back in a flux Channel back through the permanent magnet and those poles don't get destroyed they are welded into the material when you magnetize it that's not like little charges separated in electrical charges you knock the charges out and destroy the dipole so we can bypass one of the big problems with a permanent magnet we don't have to destroy the dipole that

(1:10:56) gives us one solution going in the other is how do we catch the energy well that turned out to be fairly simple we found a material which will separate the magnetic field from what's called a magnetic Vector potential the vector potential flows unceasingly from the magnet it'll flow from now for the next 15 billion years you can't slow it down you can't change as long as that magnet is there so you have plenty of energy flow the question is how to use it so we use it by diversion we reason that this flow will

(1:11:31) replenish it's like a river it's like a humongous River if we dip some energy out of it it'll replenish the hole we dipped out of at the speed of light so for all practical purposes instantly know we can dip and dip and dip we have to pay to switch to do that but we can keep dipping and the water feels as fast as we dip it then if we come down to another area and we let the water that was replenished still interact with something and at the same time we dump the water that we we uh dipped in there we will have more energy

(1:12:02) by far than what we're paying for dipping so we looked at it as an energy flow process which it is and we found a material which would do part of the dipping for us it will separate a magnetic field from the magnetic Vector potential yes there is a history a long history of overunity systems what has happened to the uh for example Nicola Tesla had one uh basically his big magnifying Transformer that he had in on Long Island was such an overunity system uh the way that one apparently worked is he got the entire Earth itself

(1:12:37) in resonance the crust of the earth as you go down in there is made of Highly nonlinear materials particularly when you get down to the per sky or whatever you call that stuff and it will act in in the bulk even it will interact in a sort of a nonlinear Optics fashion it will do phase conjugation and So eventually what it what it does is everything going on is feeding energy into the Earth starts to feed energy into that wave that he created so he gets a lot more energy in his resonant wave fed from outside from the

(1:13:09) environment in the interior of the earth and that's the way he built up a humongous wave of energy his idea was you could then put in a tap on it anywhere else on the world and extract it free and of course JP Morgan's take on that was that's foolish you can't put a meter on it so that uh actually doomed much of Tesla's career at that point when wow he just talked about JP Morgan guys JP Morgan was one of the people that was potentially investing in people like Tesla and what did he just say

(1:13:40) there said well you can't put a meter on it we can't make money off of it someone mentioned why Tesla went crazy I want to comment on that as well how can all of this be real well it is real there's people that know about it engineers and scientists and some of them do go crazy some of them kill themselves other ones get silenced why cuz they know it's real and the world ignores them everybody out there ignores them and says they're crazy says it can't be possible that's the world we live in the world we live

(1:14:12) in is a posttruth era where the only thing people to believe to be possible is whatever the authority tells them we live in a real life Matrix a real life Matrix where so many people are hopelessly dependent on the system that they will fight to keep the system the way that it is the status quo that's the reason why this has been kept hidden for so long when it goes all the way back to Nicola Tesla Thomas beard talks about thinking like that River we have an unlimited supply all we have to do is tap into it dip into it use that

(1:14:44) energy to power our system and make sure that we don't uh that we when we dip into it again we're dipping into it in a potentially different location I may to be understanding that incorrectly I'm going probably have to listen to this like five more times for me to perfectly understand it but the important part is that we have this Unlimited Supply of energy we just have to figure out how to dip into it and then how to utilize it correctly and how not to destroy ourselves I don't know if he's going to

(1:15:07) talk about it in this clip but in another clip he talks about how you can actually bend gravity with these systems you can make a bubble around this is going be dangerous to the human body if you're too close to it theoretically just because of the types of effects that are happening here imagine if you got too close to this and now your time gets sped up now you begin to age faster or slower maybe to like who knows maybe you can have a Benjamin Button situation going on I'm not even sure maybe Morgan

(1:15:34) found out that he Tesla was going to produce the energy freely small cost here at a central location everybody else could tap it for free it wouldn't have powered the whole world today it would have powered much of the world in those days Tesla also we're pretty sure put a system in a car and ran a car on it and the reason we're pretty sure is his nephew who rode in the car with him is still alive and can describe the incident and how the engine had no gas no input of power and would still run

(1:16:07) once Tesla got it started and we know it's perfectly possible Tesla apparently knew how to use this giant neg entripy process that's Universal everywhere energy is free for the

taking from the vacuum anywhere you want it we just have to learn to use that some of the breakthroughs in the past have been deliberately suppressed I will name a few T Henry Moray was inspired of course by Tesla's work and he demonstrated so many times to so many scientific and Engineering groups and people who were skilled in the art there is absolutely

(1:16:40) no question that t Henry Mor had a system that produced 50 about 50 kilow out of a 55b box this is well established as you go back and look at all kind of certified tests and everything else that he did uh there's all kinds of skull doery that happened there I don't think T Henry Mory ever got a decent chance to ever do anything with that the uh the **Russians** even tried to kidnap him at one time it reads like a James Bond movie but it's real it really happened and it really happened here in the United States what

(1:17:15) year was that this was before the war this was in the 1930s in the same general period of time one of the greatest electromagnetic fellows we ever had scientist was Gabriel cron and Gabriel cron invented a true negative resistor working on a Navy contract for standard university he was never permitted to reveal the exact way that he constructed his negative resistor but I use direct quotes where he in fact said we have a negative resistor and we can disconnect the generator from this network analyzer when we got negative resistors in there

(1:17:49) because they will power the circuit so that one was in fact suppressed I don't know whatever happened to to it but it it vanished and he never did reveal the secret of what he called his open path connecting any two points in a circuit but it is in the literature and is well documented because he was uh one of perhaps the leading electrical scientist in the United States at that time well there's another one that went down the tube uh various insundry people have made casual ones from time to time over

(1:18:21) the years I'd estimate probably 50 different inventors have made casually invented something even if they didn't understand it they did get it to go over Unity we're never able to get anything done with it uh most of the time they uh incurred a lot of enmity from the scientific Community um sometimes were really hounded and sometimes were just very naive sometimes very naive probably the best documented scientifically uh overunity system self-running self-powering systems were developed by the **Russians** before World

(1:18:54) War too it's in the FR so right there he says that like 50 people or so this was back in I don't know probably early 2000s he did this interview uh at least 50 people then he had saided done it guys there's a lot of YouTube videos out there uh most of them are probably **scams** with respect to over Unity some of them probably aren't some of them probably are are real I think that usually when you find that there's that many of something out there there's something to it Thomas Bearden was talking about

(1:19:21) people figured out if Thomas beard was talking about openly here some people figured how out behind the scenes people say go build it people are building them are you kidding me I know people who are so there's people literally advertising that they can do it the question is you getting somebody who can really do it and then the second question is what

levels of proficient of performance are they producing because there's probably several ways to pull it off and then your design is going to be uh really

(1:19:46) important why do you think the government doesn't let anybody patent over Unity device or a free energy device why do you think that because it's possible because it can be done what I've been told is that if you produce one you and the government finds out about it that they will send you something that you have to sign like an NDA says you never talk about it if you know this is possible I'm gonna just switch real quick because I want to talk very briefly about the implications we'll talk about more of it if you know

(1:20:20) that you can produce over Unity you need to understand the ser seriousness of what you are doing the seriousness of what you are doing is potentially the end of the world free energy can create a weapon of mass destruction this is not something you play around with this is not something you just oh I'm going to make this and show it off on some YouTube channels just think of the huge implications of what you're doing people might come for you the government specifically so people that do this don't do it out in the open they keep it

(1:20:53) as quiet as possible and they make a lot of money from it also if you have access to produce something like this and you can sell it for let's say \$50,000 to \$100,000 to rich people why would you want to talk about it why would I have any incentive to show the world how to do it so that they can replicate it no I would keep it for myself I would produce it for myself and I would make millions of dollars from it now you know why it's kept secret scientific literature and it's also in the Russian scientific

(1:21:21) literature the papers are there I quote them in in many of the things that I published and you can go check the papers the theory is there uh many papers are published on this in the Russian scientific literature they built what we call parametric oscillators they have an oscillator going and they change in the middle they switch the actual inductance or capacitance or both of the things so that it becomes a self oscillation device and they reached uh you know goodly power for that those days 50 and 100 kilowatt devices there

(1:21:54) are many ways of looking at uh the suppression that's occurred in this area and certainly I do not wish to talk about it myself but I've been a victim of quite a bit of suppression so has any other legitimate researcher in this area all I can do is give you my ideas and uh from drawn from my own experiences and what I think it is and where I think it's coming from today we don't have so much big kingdoms today we have big econ economic programs big economic count are basically we have cartels we have a

(1:22:30) whole set of cartels in an area interlocking corporations and behind this we have a few people who are quite wealthy and who own most things now the normal nature of the Beast for very powerful Empires let's call that an Empire it's a corporate Empire a set of Corporations Empire it's basically a cartel historically as far back as you want to go we have had cartels and anytime we have a very powerful cartel or set of people that control a lot of things that resists any means of changing its inflow of control and its

(1:23:06) inflow of funds and money and his power you know everybody's trying to be the big monkey it's really as simple as that and so the more powerful the agency the more powerful the group The more powerful to cartel the more they will Resort not only to Legal means but to Extra legal means to suppress their competition uh you know this is openly known today for example the greatest uh Espionage in the world is industrial Espionage between one Corporation and another right here in America they're the ones that hire all the spies and the

(1:23:40) Spooky equipment and everything like that by far more than the Intel agents do so that's one thing we have we have the giant industrial or really cartel economic cartels in in energy okay so we have economic cels guys he's talking about the socio economic impact of this so if you think you're going to go out and make one of these open source I guarantee you're going to get disappeared you better be on social media like I am and have a huge following otherwise you go try to make one of these by yourselves and try

(1:24:08) to disrupt the status quo and the status quo is going to push back the people in The Matrix are going to fight back that's what he's saying this is why it's been silenced this is why the people get ridiculed that's why they will send every single nut job **debunker** from the skeptical inquire to say that you're making stuff up and that you're crazy this is why people kill themselves because they get their lives destroyed and if you're somebody who's in there a lot of these Engineers are uh very

(1:24:34) socially awkward as well you know they are easily susceptible to manipulation from the powers that be keep this quiet don't talk about this in fact we'll give you a contract you can come work for us in the special access programs just sign on the dotted line right here there you go this is this is the real way of the world everybody um so I think it would be very difficult for you or anyone to try to do this but I this is the reason why I'm pushing the information out there because I I don't

(1:25:01) give a I don't give a chat um I want the world to know and you know what we shouldn't have disappeared that plane uh probably the biggest mistake that's ever happened uh potentially at least in the 21st century um if not longer is recording that because some guy with a Twitter account found out about it and now he's spamming it to uh 2337 people so this is real if you guys don't believe me go figure out how to do it yourselves guys I wish I was an electrical engineer I would produce one right now um but I'm learning that it's

(1:25:33) going to take me a while and it's not one cartel there are many many groups in energy and each of those has become very powerful in its own area and each one does not wish to see uh simple little electrical Taps pulling out enormous energy from the vacuum they would much rather see uh you burning a lot more oil and so forth so yes there's a in my view there is a very active uh suppression effort by those kinds of folks part of that goes into very unique areas they don't do it so more so much it's not totally Mafia type stuff it's

(1:26:10) not like you know you just flat get shot there's some of that but one of the main ways of suppressing it is they take a deep psychological profile of an individual that they wish to

suppress what what it means is they really wish to get him entangled in all kinds of difficulties he can't get out of now a good trait from a human being standpoint may be uh a very valuable trait to somebody who wishes to manipulate you for example suppose you're easy to approach that's a vulnerability that's a

(1:26:41) serious vulnerability so one's deep psychological profile is examined in great depth by real experts and any way that you can be gotten to where you're naive you don't have who knows international finance you can be had on a on a money laundering scheme easily and not even recognize that's what you're in uh so any way that you do not have good knowledge or you do not have ability or you have a vulnerability they call them vulnerabilities then they arrange scenarios just like you would write a

(1:27:17) movie uh in fact they do it with computers it's all computerized and in this scenario we have we write a play where this particular vulnerability is going to be exploited in the Target now they keep deep psychological profiles on lots of useful fellows uh okay I gotta talk right now holy crap yachi okay there you go uh that was very illuminating so far we're going to keep going but they keep psychological profiles on people they write scenarios like in the movies to figure out how to manipulate somebody does this

(1:27:54) remind you of Puff Daddy does this remind you of Jeffrey Epstein this is how they keep people quiet he was literally just explaining how they do it they look for vulnerabilities they've done this to me I guarantee it not only do I guarantee that they've been watching every single thing that I've been doing they've created a psychological profile for me to figure out how to discredit Ashton Forbes talking about this type of stuff that's out there make him seem like a crazy person in fact I think they've probably

(1:28:18) try to do compromising stuff to me as well it wouldn't surprise me if kim.com was in on one of these operations knowingly or unknowingly they might have just used him they just if you don't know this for the people who are listening out there kim.com finances are controlled by the United States government just listen to what I just said kim.

(1:28:39) com finances are controlled by the United States government he told me that directly he gets an allowance from the money that They confiscated from him for mega upload anybody who's getting that kind of money that is a vulnerability which was just as subscribed by Thomas Bearden and I'm an approachable guy I'm a trustworthy guy they've probably got that in the psychological profile that I'm going to trust somebody who's going to come along to me and be my friend and then what are they gonna do they're

(1:29:05) gonna stab you in the back and it's no surprise I don't think that that kim.com reached out to me out of nowhere when this thing was just taking off and this is how they get people on your side and then they just cut your legs out from underneath you but I got news for you CIA or whoever the hell is doing this crap I am ungettable I am never going to stop the only way you can stop me is by taking me out permanently that's the only way or you get me that scar Joe clone I swear to God if you can clone a

(1:29:37) Scarlet Johansson I will shut the hell up I will say that pom man of VFX is a perfect match these are people who basically have knee-jerk reactions or something or they're radical or they have some kind of way they interact which if could be connected with you would be in the area we wish the interaction to occur to get you off into something else totally different what you're doing so the next thing you know here all it takes to set that up may be a phone call and stimulate the interaction to occur and then the controllers sit back

(1:30:13) and watch the game go it's gaming but it's just like right watching a movie scenario uh one of these days we'll probably write a book on gaming and how it's done and and uh what what kind of the main games they can use but I can tell you they're very effective um you can get so many different games from so many different walks of life by so many Charming folks who are really oily characters that you would not believe it and those come at you in mass and usually they bury you they bury you off

(1:30:46) in the courts they bury you off they get you tricked into doing an illegal act how would they do that if you if you wouldn't violate the law real simple how can you be made to violate the law when you're not a criminal simple let me give you a for instance fellow comes in and he says you know we really need to get some real major financing every inventor's poor everybody's struggling nobody's got the money to build all these buildups which may cost 105,000 20,000 a piece so everybody's struggling

(1:31:13) for money so he comes in and we're going to raise this we're going to form a stock company we're going to do all these good things unbo to you he goes off to the Securities Exchange Commission and several other people Treasury Department and he says hey I think I have fallen in with the dent of Thieves of course he's the CEO Now understand because he's the guy that knows all this stuff and tell you what I'll do if uh if you'll give me immunity to prosecution I'll help you catch these

(1:31:41) Crooks because they're going to do the greatest Monday laundering thing you ever heard of it's going to come right out of one of these foreign countries going to be scrubbed and come in here to fund this effort it's going to be laundered dope money or something like that you have have no knowledge this is happening and they give him they jump at the chance they'll give him the uh immunity to prosecution that's their normal mendi they want to catch some Crooks and this guy's going to help them catch some

(1:32:06) Crooks so then he goes off and sets all this up and keeps you diluted about what's happening and you wind up in a where the thing is going to be consummated somewhere and if you consummate it you wind up behind bars for about 20 years wondering how you you got there when you never did anything to monyer anything he's the fellow who did it and who set it up and he testifies against you because he's immune to prosecution this is one of the standard games mavilia is not dead he still lives and these are the games that are played and

(1:32:44) it's particularly played in the the systems where people are trying to build overunity systems it's been very effective in stopping some of them has wow okay so what did he just talk

about there guys have you been paying attention to the James O'Keefe uh situation out there yeah imagine imagine the book on Ashton imagine the psychological profile they have on me to try to get me to shut up man wow good luck out there i' say uh but the James O'Keefe found that contractor who was contractor for the FBI in the CIA who

(1:33:19) they were trying to take down Alex Jones and they get him not directly because they he's not doing anything illegal from the government perspective they get the families to file a civil suit against them they rig the whole system against Alex Jones and they get him for what how much did they sue him for like a billion some like the GDP of some countries or something like that you know what I'm going to use though is when the if and when Arrow or anyone confirms the MH370 videos I'm going to use the Alex Jones precedent against the

(1:33:47) **debunk**ers the people that have said these videos are fake who've been lying about the deaths of 239 people I'm going to use that presson to get the families to sue those people if you are one of these **debunk**ers out there who've been trying to **debunk** the MH370 videos and you've been saying these videos are 100% fake I'm gonna use the Alex Jones Sandy Hook precedent against you to have the families take everything that you have I'm warning you right now that is what I'm going to do I just want you to

(1:34:14) know it ahead of time I'm G to use the same system they've created against them the same legal precedent as they've set going to use it against the people who are are trying to keep this secret you've been warned do you think lethal Force has been used lethal force is used I worked with an inventor for example the Sparky site is quite well known and uh he was shot at once with a silenced rifle from about a sniper rifle from about 300 yards the only thing saved his life was uh he was an old guy and very feeble

(1:34:47) there towards that part of his life and he was stumbling as he coming up the steps and he fell down He just flat fell down on the steps caught his foot and fell right forward and as his head went forward the bullet went right by where his head was and of course the Assassin was never found so there are many cases like that some are killed I believe uh marinov I believe to be a kill I don't believe marinov jumped off a building when he was excited on the way to to uh talk about his invention and so forth gave no

(1:35:17) indications of it if I can believe the reports of the people who visited where his body lay uh where his body lay on the pavement glowed and there's only one weapon on Earth that will kill a human body and leave where it lay lies on the cement let the cement glow under it and that's a longitudinal wave shooter what's called a shooter so I believe my personal belief I can't prove this in the court of law I don't intend to try but my personal belief is that marinov was killed he was probably killed by

(1:35:48) either KGB or one of their Agents from one of the other Iron Curtain curtain countries killed with a shooter thrown off the building to make it look like suicide I'm not suicidal I want to make sure that that is a 100% clear right now I also want to make it sure that if I fall over dead somewhere it's not because of the shot I never took the covid shot no sudden dying no died

suddenly for me um no other excuses or whatever if I randomly fall over Dead uh it's not an accident you guys know it for sure and yes this is the reason why

(1:36:20) I have to say that unfortunately like every single week because now listen to what you're talking about here they can take you out with a bullet promised forensics they can also take you out with a longitudinal wave a scalar wave the same thing that they use to produce energy at a distance we potentially have weapons at this point that can pinpoint it onto a human being destroy your body from the inside out make you just fall over dead no no no Trail whatsoever pretty scary the police probably knew about it that's why they

(1:36:50) let the body lay so long before they moved it they didn't want to tangle with the long it waves from it so yes there are some rather bizarre things that have occurred to some people uh as I say I prefer not to dwell on that try to get by as much of that as we can and try to dwell on the science the only way we're ever going to beat all of this stuff we have to convince the scientific community that there's real science here let me now review some of the implications of what I hope is just now emerging in these these Energy

(1:37:22) Systems where we take the energy from the vacuum turn it into normal electromagnetic energy and we catch it and use it to power our loads first of all every system we got out there has been doing this we just didn't know it we thought the generator powered the the uh external circuit it doesn't it does not power it at all all it does is we twist the crank on the generator the shaft to turn the shaft and that forms a magnetic field inside the generator and that energy in that magnetic field dissipates itself upon the

(1:37:53) internal charges to force the positive charges in One Direction the negative charges in the other and make that dipole and that's all the generator does doesn't add one watt to the power line all the coal all the oil all the dams ever built all the nuclear fuel rods ever consumed never added one single watt to the power line all they did was keep rebuilding the dipole that we have designed a silly circuit to destroy faster than we can power the loads not the way to run the railroad so we have polluted the planet we have just

(1:38:22) we're killing species we're poisoning our own lungs in our own environment uh we don't have to do that but it's a giant set of cartels it's a giant Financial set of Empires and it's going to continue this way uh unless we get the attention of the scientific Community focused on it and hopefully get some legislative action focused to force the action to develop these kinds of systems now the implications once we develop them and start to use them first first of all we don't have to have all

(1:38:56) this nuclear look how expensive and how long it takes to build a nuclear power plant then all the radioactive waste you have you know they still store the fuel rods on the sites after they're spent I don't know what to do with them so you got all kind of schemes about where you going to put them the blunt truth of right now we're storing them on site it's at the nuclear power plants uh the other thing is we don't need to pollute with all these hydrocarbon byproducts we don't need to pollute the whole biosphere like that we

(1:39:24) don't have to burn all that stuff just to make a dipole quit destroying a dipole you don't have to remake it so if we use the system where we extracted from the vacuum we can clean up this biosphere uh we can also right now one of the greatest critical things we have in my view the supply of oil is not lost but the supply of cheap oil has now peaked we are there what this means is we will continue to get some oil yes but it will be more and more and more expensive year by year by year meanwhile the demand for

(1:40:00) electricity goes up everywhere in the world which drives the oil curve again and what you have is a classic escalation of prices type situation the demand is up the supply is down the supply gets more and more expensive to try to fill it and so the cost just going to go up and up and they're not going to stop well what happens somewhere along the line of about 2008 the way I look at it and project it uh we're going to have a world economic collapse the economy cannot stand such increases as is going to come

(1:40:32) up and God help us if we have a war in the mid East nobody knows what did he just predict the economic collapse of 2008 I think he just literally predicted it here he just predicted it maybe 2006 you know instead of 2008 he predicted he predicted the 2008 collapse the housing collapse he just predicted it but I believe by 2008 we will see the world economy collapse now about a year before that he just predicted it as the economies are crumbling not everything runs up and like a square wave collapses in one

(1:41:06) instant as they start to crumble and the stress on all these populations and all these leaders and all these nations are increases so much desperate people will do anything desperate leaders particularly fanatical leaders will do anything what will happen is in their CL their conflicts will increase and escalate and they will start to use the weapons they have in those conflicts and there's about 25 Nations now according to the Secretary of Defense coin that have mass destruction weapons nuclear weapons for example for goodness sake if

(1:41:39) you don't have nukes maybe you bought some surreptitious plutonium look at what'll happen to your water supply in New York City you put a little plutonium in it so all kinds of things people that are the poor Nations that can't afford nukes have biological weapons but about 25 and it's growing all the time has weapons of mass destructions now by the way those weapons are already in our large populations this this was I think around 2002 2003 so he predicted it like five years I think before he's actually

(1:42:08) talking to step Greer I just heard Steph G's voice in the background um so he had predicted that green energy guys green energy the okay I'm going on to do my political thing here the Liberals and everybody who wants green energy like my parents make me turn the lights off every time I leave the room they get mad at me if I go to their house and I don't turn the lights off God who gives a crap about turning a light off you know how much power is going from a light bulb zero we got infinite freaking energy

(1:42:33) green energy we should have we shouldn't need a pollute whatsoever we just suck energy from The Ether come on guys what is this if you will check Colonel Luna's book Colonel

lunov is uh the highest ranking Gru Defector we ever had and his book's cleared by the CIA so what I'm saying is cleared Luna tells you how the **Russians** introduced the uh nuclear weapons surreptitiously into their operatives on the ground and secreted them in the US he tells you how it was done in the book so read the book all our big cities as

(1:43:07) far as I'm concerned and population centers already have weapons of mass destruction hidden in them we call used to call that dead man fusing and so all the nations have dead man fused one another one way or another and all the old studies showed that in a heightened tension great conflicts and high tension whenever they start popping the nuclear weapons or the weapons of mass destruction you have a very formidable thing that happens to you nobody has defenses since we have no defenses the only thing you have is like a a fencing

(1:43:40) duel you have to hit the enemy before he hits you you have to destroy him or you will be destroyed Mutual assured destruction is a funny acronym the only thing that's debatable about is whether the destruction shall be mutual or uni unitary what happens is everybody fires on perception of preparation by his adversaries and you have to fire everything you have as fast as you can as rapidly as you can as massively as you can to try to destroy your enemy and you otherwise you have no chance of survival so what we get is the great

(1:44:14) Armageddon everybody's been dreading the energy crisis going right now in my view will probably evoke a great Armageddon that we've all feared so long in about 2007 so you a little off with this part war war never changes you're probably going to hear me say that a lot going forward everyone was predicting that that the world turns out humans are kind of cowards it's the reason why we haven't had it yet nuclear weapons are actually given this technology they're a liability nuclear weapons are liability

(1:44:48) you have nuclear weapons we shoot a uh a scaler uh Electro whatever gravitic Beam at it create scal infometer create an explosion on your nuclear weapon your nuclear weapon just went off why do you guys think the nuclear weapons aren't near any population centers I would say we are disarming our nuclear weapons because they're obsolete because they're actually just a liability at this point we don't even want to have nuclear weapons the moment we shoot off the nuclear weapon if you guys watch Diana

(1:45:14) palosa palasa whatever her name is on uh Lex fredman our cber system can detect it within a fraction of a second we shoot scaler we Beam at at the faster than the speed of light boom We blow up your nuclear weapon right on top of you um yeah we're going to talk about the implications this technology solve the crisis we got about 15 minutes left to go here we back up from that it means the first quarter of 2004 these things had better be rolling off of the assembly lines like sausages or we can all forget it and go home it's too late

(1:45:45) to change it that's how short rations how short a time we have and how short the rations are because of the what I view as the stress I view this as the greatest strategic threat to survival of the United States and in fact of civilization itself that has ever existed in my lifetime now the fools May blow the world from other causes don't misunderstand me but they are

going to blow it from this cause this I'm quite certain of in my own view so uh he died I believe of natural causes 2022 rest in peace Tom Bearden this I is one of my

(1:46:20) biggest regrets in retrospect not ever having met Thomas Speen before this and known about any of these videos I've been watching these videos for the last week and a half and they've blown my mind um the only thing I think he was wrong about he was wrong about the Soviets potentially controlling the world back in the 80s Soviet empire fell apart Soviet Union fell apart from economics um and then he was wrong about the end of the world now the end of the world I imagine if you know about this we're going to talk about this at the

(1:46:47) end but imagine you know about this technology it's easy to understand how you could see the end of the world being right around the corner because when you have free energy now you have weapons that make nuclear weapons look like nothing makes it look like literally just nothing like little child's toys this is why Dr step Greer is right about a lot of the stuff that he says he's right about everything related to technology I'm 100% sure um with the alien stuff I I don't know I just don't

(1:47:12) really care honestly but the the technology stuff the implications of this technology the people that know about this technology this is why people get paranoid because they know that they can have scalar weapons that could be beaming at me right now while I'm talking to you I could fall over dead right now and they would be able to convince the world that it was just some heart attack that I had or something like that but that I would actually got zapped by a scalar weapon people freak out from that and it gets in your head

(1:47:37) that's why you have to have a very strong mental mindset in order to even be able to absorb this information so still then get in your gas powered car and go to work the next day and live your life normally it's already hard enough for me to go back to my normal job chat while I know about this kind of stuff so I **I want you** all who are listening right now 2545 people right now you are being told the **truth** right now about how this all works I don't want you to flip out about it the reality is we are going to still have to

(1:48:02) go to our jobs we are going to have to live our mundane lives but we have to change this world we have to change it for the better so it means that anything I can do to try to stop that has to be done what we need is a great Manhattan Project you can do it this is a doable we have the principles we know how to do the giant Nega entropy we have good scientists we have some sharp young grad students in postdocs they aren't allowed to work on these kinds of things for goodness sakes let's Marshall them together like we did in World War II to

(1:48:34) get the atomic bomb which we went from zil you might say in four years we had an operational bomb let's do the same thing here because survival depends on it not only of us but of civilization there's even a little evidence and I don't know really how to put this in perspective uh we had one friend for example that we worked with very closely who built practical overunity systems he demonstrated at a conference for for example an 8 kilowatt system and then very mysteriously he and his whole family disappeared we have found out

(1:49:09) since in fact not long ago that he's still around but and he's doing very well because he was retired in a very expensive suit and a very nice automobile but he and his family are okay even though they disappeared back there but here was a successful unit that just flat disappeared off the face of the earth now I assume rightly or wrongly it has to either be for the great financial Empires or it has to be for some kind of black project that somebody needed a a power system that would power itself in the load and they

(1:49:39) classified it whatever it is I don't know but whatever it is the survival of humanity itself and civilization itself is now at stake and I really believe through the opes of the US government regard regardless of what that kind of program in it anywhere may have we must bring it forward to save ourselves and save the Earth if we don't we can keep it secret or we can keep it in the control group hands and we shall all go down to Oblivion in about 2007 so what he just said right there is really important this is why we have the

(1:50:17) the Waring fact you just described why there's Waring factions in the government now take this with a huge grain of salt I don't know this for a fact but what I've been told when it comes to disclosure and this this is disclosure this is what true disclosure is the technology it's not about alien bodies and floating crafts it's about the technology and the ability of scalar physics to explain why crafts can float why we can create directed energy weapons why we can cause earthquakes why we can uh warp an object from SpaceTime

(1:50:47) itself is that there are factions that want it hidden and there's factions that want it revealed now I've been told again take us Grand salt that the factions that want it revealed are the Navy the CIA and the defense intelligence agency uh General Flynn was the director of the defense intelligence agency um Salvador pz is with the Navy he talked to us he definitely wants it out and then on the other side you have the dod and you have the Air Force now I imagine the reasons are and and this look at it this way it's not

(1:51:21) black and white it's not just good in versus evil I wish the world was that simple I really do but you have the side that says it's too dangerous we can't give this technology to The Peasants if you give this technology to The Peasants then we're going to wipe ourselves out I agree I I think we probably will I I really do um and then you have the other side which says no we have to get it out because the evil people already have it they already have it and that it'll get used on us without us even knowing about

(1:51:50) it now I would say every single person out there you have to come to your own determination of which side of that Spectrum you fall on do you think we're going to destroy ourselves or do you think that we have to have this information out to make the world a better place I struggle with this I want to make the world a better place or that's this one make the world a better place eliminate homelessness free energy all that great stuff I also don't want us to destroy ourselves and I don't want

(1:52:13) to be responsible for the destroying of ourselves which you could argue that me revealing this information is doing that I don't think so directly but you get the point my opinion

on General Flynn somebody just asked General Flynn was the director of the defense intelligence agency he followed me on Twitter he followed me on Twitter like about a month or two ago pretty weird to follow a random guy talking about planes teleporting I think General Flynn knows about this technology 100% I think he's a guy that wants it out I think he's a

(1:52:42) very intelligent individual and I think they did the same thing that General Flynn that they did to Alex Jones that they did to Andrew Tate that they did to Russell Brand that they did to Elon Musk that they turn people against them remember they develop a story they make a narrative they use your vulnerabilities against you any Vector of attack that they can come up with we need to have that in mindset while we reveal this technology because they will do it to me and it'll do to every one of you and no there's no CP on my computer

(1:53:14) or anything like that or any skeletons in my closet so if they find something then they will have planted it there and I hope that they don't but I am a little bit afraid of that as you might imagine that these people have an unlimited amount of power and they can do pretty much anything that they want if they don't have a war in the Middle East or something and do it in 2006 or 2005 I'm the co-author of a paper in the literature way back there which reports so successful in a gravity exper I'm not

(1:53:40) going to do another experiment not even going to participate in one not going to so I you know everybody's got a little bit different circumstance and my circumstance for me to go on living and stay in healthy and doing well depends on me avoiding certain areas and that's one of them but I can work in energy I can even work in the medical area but right now the medical won't do you any good if we all go down the tube exactly so energy is it what need's doing immediately I mean he just said he

(1:54:12) doesn't want to get killed do you guys hear that he just said he didn't want to get killed so even the people on the inside they realize the huge implications of what's going on and who they're up against me I don't give a I don't give a they better take me out if they want me to silence silence me on this makes no difference to me I am not emboldened in this they should have called me like eight months ago if they wanted me to be quiet about this because it's just too late it's too late time to

(1:54:38) tell the **truth** it's out there it's getting pushed deals with the scientific Community if you look at what the scientific Community is doing I'm speaking sadly but I'm speaking bluntly and **truth**fully if you will read the literature you will find it's almost business as usual they're not doing anything that has any chance of stopping this problem before the world explodes in our faces sure windmills are good burning the oil cleaner is good all of these things building a couple of more dams is

(1:55:15) good if you don't destroy too much of the biosphere etc etc building some windmills is good however that spit in the ocean it doesn't solve the problem the problem is just exactly like what we had in World War I we have a problem it's a doable it can be solved very quickly because we've got the first half of it already solved how to get the energy on the vacuum so half

of it is already done but we can't get the scientific Community to move on it to turn those young grad students loose and

(1:55:50) and those young postdocs loose the professor at the University for goodness sakes is trapped he's absolutely trapped all the universities are greedy they want the overhead money he's got to bring in extra money he's got to get patents and of course he's got to get his papers published so he's caught in a process where he must compete for the packages which are put together and come down for availability to compete for if he doesn't get those packages and win them he doesn't fund his grad students

(1:56:20) he doesn't get the overhead money he's going to be lucky if he's working for the grocery store instead of being a physicist so he's in a mad scramble to try to feel and keep running on a treadmill to meet the conditions that's been laid down on him and goodness sakes those packages already prescribe all the research he's going to do and his grad students are going to do so we've got the whole scientific Community working on the wrong problem what can the what so what could the US government do about

(1:56:47) that what we can do is do just like we did in alternative medicine or really like the Manhattan Project you can order the scientific Community to do it whether they wish to do it or not and hold them accountable from the highest level to the bottom how much money are we spending in our National Laboratories on nuclear stuff don't we think at least about 10% of that money ought to be rooted out of there and spent on nothing but this which might save us while the other stuff takes us down the tube of course

(1:57:17) we should in fact it ought to be more than that the best scientist we have the the best grad students the best post dos ought to be turned loose on this problem and that means funded and that means that we do not allow scientists to slander and liable people who are trying to do research in this area right now they do it wholesale and they do it at will now look at what they call me in print for goodness sake but the problem is the scientific Community resists change and it's doing business as usual and my bottom line is unless

(1:57:54) the legislative branch together with the administration forces them to get on this problem and solve it they will not only fiddle while Rome Burns they will help burn it if only alternative you have now of course since at this moment as we speak the government has not moved the scientific immunity has not moved so that is a fact as of this moment I'm speaking I hope that changes I'm trying to change it but right now that is a fact and right now it's a fact they're not going to move unless something

(1:58:28) happens to move them and neither is a scientific Community failing that the only thing left is the Private Industry and that's a mixed bag first of all the moment you try to do it in the Private Industry then is when you are absolutely vulnerable to all the games for example lawsuit alone can hang you where you will never come out of it for the next 15 years the lawsuit doesn't have to be justified or anything at all you can sue anybody for anything if you got enough money to file the suit and want to swear simple as

(1:59:02) that so the other thing you have is you can trigger anybody from anywhere for all kinds of radicals to come out of there and say oh you stole you used a CO of wire or you used a something over here you used some semiconductor you stole my invention and so the next thing you can be in court for 20 years on that this is a huge thing they can put you in court so people even said this about the MH370 this is probably the way that they'll try to get me is try to sue me but I'm not afraid of court I'm not afraid of court at all

(1:59:34) this goes to show the weight of the evidence regarding the MH370 case they don't want me in court if they thought that was a vector they could have used against me they absolutely would have already tried to sue me or have the family sue me or something like that but they know if this gets to court I can actually convince a jury I have enough evidence and enough logic and reason on my side and I can convince a jury and that it will become a spectacle and that the media will have to look at it that's

(1:59:59) the reason why they can't go the court route with me out there but you see all the different attack vectors some people said in the chat I don't trust Alec Jones I don't trust Flynn Andrew Tate's a terrible guy maybe the whole point is this they had skeletons in their closet they had vulnerabilities that could be manipulated they manipulated the Sandy Hook situation against Alex Jones they utilized uh the fact that Andrew Tate was uh basically like a pimp for cam girls he didn't he didn't traffic anybody but

(2:00:31) he was a pimp for cam girls and they can convince the world that the lover boy method is a thing they could turn every liberal in the world against Elon Musk in less than six months because he took away one of their sources of misinformation Twitter took it away from them snatched it guys remember how Twitter played out at first they said no you can't buy Twitter from us everybody in the world if you go look at the the history of it every no no no don't let can't let Elon Musk buy Twitter can't let

(2:01:01) him do it and then they found out that Twitter wasn't really worth \$40 billion that they've been lying about their numbers it was probably worth like 10 billion and then you know what they did you have to buy it now they said you have to buy Twitter and they sent all the attack dogs to convince everybody in the world that Elon Musk was some kind of anti-semitic they convinced the world that Twitter was going to go broke did Twitter go broke well we're talking right now on it's almost it's 2,700

(2:01:26) people doesn't seem like it's very broke to me but they convinced people that that would would happen Twitter's worth more money than **Reddit** is worth **reddit**'s stock price has only gone down since it initially went up so this is what you have to think of the world is not black and white the key is not to have skeletons in your closet that can be used against you and if you think I haven't thought about this before I started talking about MH370 then you don't know me very well I'm not

(2:01:52) somebody to be underestimated I came out as the person revealing this information because I knew I didn't have any skeletons in the closet they could use against me nothing like

that at least they might try to find some attack Vector everybody has a weakness but I'm one of the tougher ones to have I have a security clearance you can't say that I'm a spy they're the ones who vetted me I don't have any major skeletons in my closet I don't have any family that you can really hold over my head either I

(2:02:17) fought through all of these things so I just want you guys to know that as well so that if anything does happen me that it should be suspicious let's keep going all of this comes at you this is part of the delay this is the groups wanting to stay in power while we all go down the tubes they operate primarily in the private sector so you're automatically in that Arena where the real lions are after you all the time you're over there trying to find a legitimate deal okay let's talk about Venture Capital sometimes called vulture

(2:02:49) Capital but if you find a good one it's not vulture is Venture what does a venture capitalist want to do he wants to buy 30% or 50% of your company or 51 or maybe 60 he's got the money the the next thing he wants to do is he's going to move you and all your guys right out of there and he's going to put his own management team in there and he's going to run it with Bean counters if you run this one with Bean counters only you destroy the program before you start so your only choice then is to avoid venture capitalist like

(2:03:22) the plague and to try to go for licensing which means the brunt of doing the research on the front end falls on you and your miger resources which for working people is whatever you can afford out of your back pocket but if you don't do that you're not going to do it anyway how many have you seen in the past that went to venture capital route that were real how many of them made it I can name three or four that were real they're not there yet they're not going to be there they were buried so the thing that sets in you

(2:03:57) have to do it by licensing then you got to skirt you got to get the patent office the patent office says it's impossible to do an overunity system the API the physics Institute you know comes down on you and says it's absolutely against the laws of nature it isn't you know these are people who haven't even studied the problem and they know classical thermodynamics but it's against the laws of nature and it violates classical uh thermodynamics of course it violates classical Thermo you can't build one of these by classical

(2:04:26) Thermo you build it by the other kind of thermodynamics so the next thing you have is scientific communities all over look what they did to Cold Fusion There's real stuff in Cold Fusion you know 600 experiments worked for goodness sake so the thing is you're cold fusion real quick Sidetrack looking to Bob Green your low energy nuclear reactions looking at Malcolm bandle's thunderstorm generated cold fusion is also real he just he just mentioned it as well everything I'm 100% sure everything Tom

(2:04:54) beard is saying here is true 100% I mean first of all this is not a guy who's lying you can just tell this is a guy who's being 100% sincere about his his experiences uh but I didn't even know who he was and I came to all these same conclusions and it's very important we understand the mechanisms different disinformation and discrediting that they do to people

this is why a lot of people wonder like Ashton why do you not dig into remote viewing and other esoteric aspects why do you not look into 911 even if I believe 911 was

(2:05:21) caused by directed energy which I do not believe but even if I did believe that I still wouldn't talk about it because I don't want there to be any more attack vectors on me I don't talk about remote viewing because I don't want people to think oh ashen's the guy who's in the woo that believes all this fantasy stuff that's out there I'm open-minded to the idea but I'm not going to tie myself to it like a lot of other stuff that's out there everybody out there who wants to

(2:05:44) be exposed in information should be thinking about this because what we are in here is not a situation where we need to discover new science that exists that's actually not the situation we're in we are in an information War where all we need to do is expose the information that's already out there without being discredited ourselves and some people might argue that the way I interact with the trolls discredits me I'd say the opposite the one thing I want people to know about me no matter what

(2:06:13) is that I'm authentic I'm an authentic just normal guy I can get triggered by trolls and I can trigger the controls and all the things that are above all everything in between that's just that's the reality and I think the authenticity goes a very long way and having people believe whether or not they believe it or not that the evidence you're presenting is evidence that you believe in whether or not I'm right or wrong that's not the situation **I want you** to look into it for yourself and come to your own

(2:06:44) conclusions against the scientific Community is against you Lock Stock and Barrel and by the way everything is a distribution curve get off of this horse puy about scientists are always sweet nice reasonable people that is not true 10% of them are devils 10% of them are angels ought to be rewarded at ass salt of the earth but 10% of them have absolutely no ethics absolutely playing nothing but the big monkey and power game and absolutely your worst enemy in this area glorious opportunity to in other words the vultures or the there's a better

(2:07:22) word for it the wolves go around looking for the rabbits and you're the rabbit and they're the wolf so your next thing you get into is a big wolf G wolf Rabbit game with the the scientist over on that 10% so you you face all of that meanwhile you've got to go to the patent office you get to the patent office what are you looking at this is impossible this is perpetual motion you say well the atoms have been doing this for 15 billion years it's not perpetual motion but it's just long lasting

(2:07:52) but they call it perpetual motion and of course there is an unwritten law that anything that's perpetual motion shall not be even proved or looked at you can't even get a serious consideration in the patent office I speak as one who has submitted patents in this area I know what I'm talking I've defended a couple of them so what we have is a situation where the entire structure of science Industry uh the organizations of Science and the patent office are already against you if you can't get a patent

(2:08:24) how can you license so it's a real neat little thing it's old chicken and egg situation if I had the chickens I could get some eggs if I had the eggs I could get some chickens this situation is designed so you never get chickens and you never get eggs so the only thing you can do is to try to put your head down and continue with that and do one other thing communication fortunately we do have the internet internet course sure it's full of a lot of bad information it's also full of a lot of good information you

(2:08:57) just have to discriminate so then other thing you have to do to have any chance at all is communicate communicate communicate communicate which we do to the limit that we're legally able to do and not lose our patents if we can get the government to move they can cut through all of that by simply issuing the order to do it and that's what it's going to take we're going to struggle with this other but I'll make you a prediction if the government doesn't move there's a 75 to 80% chance we will

(2:09:27) fail we certainly won't make the first quarter of 2004 and if we miss the first quarter of 2004 not just us there's several other inventors and groups in the same area and have have systems that work we are not The Lone Ranger here at all I want every system out there that works and is real go going we need everything we can do but if we don't make it by the first quarter then we may as well all go home and enjoy our families for the time we have left because it's going to blow it will be too little and too late and

(2:09:58) don't come in in 2006 when any food can then see the world is fixing to blow up and say would you guys like to try this I'll say no I'm going to enjoy my family while the time I have left you blew it back in 2000 2001 you decided right then to blow it and so it's on your head and that's what will be all we can do if we don't make the schedule everybody wants a Modern Life they want to get out of the mud and the Slime and everything and have lights and have you know things that are powered and have

(2:10:30) industry and jobs and homes and schools is a common uh strivings from the human heart and to try to do that the way we're doing it will destroy the planet and we will we will forcefully destroy each other it seems to me we just ought to be wiser than that okay guys that was incredible um I'm going to play it out but before I play it out I want to go ahead and I want to cover some major Concepts here I just want to do uh kind of the closing act of what we just talked about here there is a Fifth Dimension we can produce

(2:11:05) overunity we can extract energy from The Ether like an unlimited oil well of energy it's a matter of how we uh how we uh engineer that um there is a huge disinformation campaign uh we've got ourselves into a system now where the patent office is The Gatekeepers of everything that's out there and the scientific Community is the problem the scientific Community is not on our side the scientific Community is rigid they resist change science does not happen iteratively it happens in huge leaps and that's how this stuff has been

(2:11:40) kept secret from us for all this time yes we can produce cold fusion we can produce overunity we can produce free energy and yes we can actually warp a 777 from one location to

another using macroscopic phase conjugation no I'm not a Freemason um the doe Department of energy most likely knows about all of this when I Foy them they asked why are you foing the doe about MH370 and you know what I told them because you guys are the ones who are keeping the secrets you're the ones who have the Hypersonic technology you're the ones with the

(2:12:11) plasma orbs I've seen the images on your Twitter account so I know you guys are the one who's keeping The Gatekeepers of the technology that's what I told the doe um yes the last name Forbes is Scottish that actually is where my ancestry comes from I do not have any superpowers if I did have a superpower my superpower would be intuition uh I am learning very quickly that is true as well and I I saw the landscape before in the years before this in terms of how the disinformation played out to prepare myself for this

(2:12:44) eventual day um but when I looked at those videos I had an intuition that what I was looking at there was going to check out and then dug into the evidence and I found Thomas bearded and a sea of other people that have promote stuff that's out there in the woo scientifically and found a guy that's legitimate that's honest that's consistent with other information that I've been told by other uh scientific scientists and and Engineers that I've talked to and that's how we found Thomas

(2:13:10) beard and that's how we found about scaler physics this has been a journey of Discovery for me and for m370x everybody who's been along with this now the show Fallout I recommend you guys watch the show Fallout if you played the games you definitely need to check the show out if you didn't play the games I still suggest checking it out because when we talk about this technology really it all boils down to free energy and free energy has the ability to move us into a golden age of technology and it has an ability to completely destroy

(2:13:43) us it could be the answer of the fmy Paradox why we do not see other civilizations out there in the three body problem spoiler alert in the three body problem there's a civilization and another star system that constantly gets destroyed by the systems and the and the stars that are around it you could argue that we don't need that that discovering free energy could be the answer for why civilizations constantly destroy themselves it might be why we've destroyed ourselves in the past this makes me wonder about ancient

(2:14:14) archaeology we may have come from Mars and perhaps we destroyed Mars with this type of technology and then we moved to Earth I don't know I do wonder about those types of things so the reason when you watch the show Fallout you'll begin to understand why is that we are constantly on the brink of annihilation and the most important thing that you should get out of this tonight is what side of the spectrum are you on are you on the spectrum that says we need to keep this quiet because we're going to destroy

(2:14:46) ourselves or are you on the side of the spectrum says we need to get this out because the world deserves the answer 's the **truth** if you're on the side that wants to get it out the question is how do we do that without destroying ourselves the world is not black and white it's

not good and evil Shades of Gray so thank you guys very much this was a huge stream we had 201800 people in here right now so if you're following on watching on Twitter please make sure you follow me you can see my tags up in

(2:15:14) the top just X Ashton on Twitter just X Ashton on YouTube if you're in the MH370 case you can find in my pin tweet uh the most recent version of the story that I put forth about Espionage there were some new Revelations we talked about last night which I will stream and talk about probably tomorrow or this weekend and if you go to my YouTube page you can find the videos you can find various analysis explainer videos that I've done about them uh you can find various other live streams we've did like four other

(2:15:44) live streams about Thomas Bearden and I will probably replay the psychotronics one tomorrow because it was mind blown absolutely mindblowing and that's why I wanted to look at this video here again tonight so thank you guys very much uh I appreciate you MH370 X appreciate you guys very much uh and we will talk again tomorrow have a great night everybody peace I'm gonna play us out with this clip as well once again because **I want you** guys to realize when we watch this listen to Oppenheimer listen to what

(2:16:16) Oppenheimer says Oppenheimer is a guy that realized what the world would look like in 2024 with free energy and what this might mean for us peace everybody 37 contact 12 I was muted that whole time how long was I muted chat okay I don't know if I was muted that whole time but anyway here we go 37 Conta 120 9 [Music] breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone missing [Music] [Music] [Applause]

(2:17:20) [Music] I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi arm armed form and says now I am become deaf the destroyer of worlds

Scalar Physics - Thomas Bearden Part 4 - YouTube

Transcript:

(00:23) okay I think we're yeah we're good okay sorry about that guys um microphone should be working now so welcome to the stream tonight guys uh we're going to look at the Thomas Bearden uh psychotronics video okay and it's kind of long so I just want to get right into it here tonight chat thanks for being here thanks Arwin I saw Sandy earlier hey prepi UFO nut appreciate you guys being in here we are going to watch this Thomas beard and psychotronics video um I don't know I found a couple different versions of this

(01:19) online and one of them has much better uh quality than the other one so we're going to try this one okay here we go okay guys I hope you enjoy this uh this video here Thomas Bearden on psychotronics should be awesome let's check it out let's wait no time let's do this move the chat over apologies for the quality the sound quality that's just how it is apparently James Clerk Maxwell please welcome Tom beard [Applause]

(02:31) the obvious weapons implication of what I'm talking about but I would like to address the magic unified field Theory everyone has been looking for how to unite gravitation and electromagnetics in a single theory that is engineerable that can be used on the laboratory bench and it does indeed work I will try to indicate for you exactly what gravity is sorry hang on a second I want to I don't know if this is the right video let's let's just look at this other one real quick okay here we go the obvious weapons implication of

(03:23) what I'm talking about but I would like to address the magic unified field Theory everyone has been looking for how to unite gravitation and electromagnetics in a single theory that is engineerable that can be used on the laboratory bench and it does indeed work I will try to indicate for you exactly what gravity is and exactly how to manipulate it electromagnetically and I'll also indicate for those of you that are very sharp rather precisely how to easily make anti-gravity everything that I'm saying

(04:10) has a basis on the laboratory bench but I work with inventors so I will not present a circuit I will not present even a picture of a particular piece of equipment nor will I answer such questions but the principles that I give you I will assure you you will have little problem yourself in applying if you're an experimentalist and I will also assure you that they do work in the laboratory and if all goes well and the good Lord's willing and the Creeks don't rise like we used to say down in Louisiana in about a year or

(04:52) less we hope to present the proof of everything I'm saying in vivid breathing Technicolor so without any further Ado if we can get the mechanical part going we will start to talk about what happened to this magic unified field theory that was the original theory of James Clerk Maxwell Maxwell's original theory is no longer taught in Western universities hasn't really been taught since 1900 instead the work of a single man who quote translated unquote Maxwell's work into the modern version of vector analysis Jame U Oliver

(05:38) heavyside is what is taught as Maxwell's Theory it is a subset of Maxwell's theory that is taught today and specifically is it it is that subset which only applies when there is no interaction whatsoever between the gravitational field and the electromagnetic field we're going to show you the other part that got left out first of all the original Theory the first paper that Maxwell wrote was written in 1864 during the time of the American Civil War it was a unified field Theory it did contain a an

(06:17) engineerable and workable and experimental theory of gravity but very few people recognized it for what it was Maxwell recognized it as the stress of space but didn't understand that he had also grabbed a hold of gravity itself and so because it was written in querian Vector

analysis not having been invented yet or finished it was written in the mathematics that was quite difficult to calculate in and one which had very bizarre appearances of minus signs when intuition said there shouldn't be one there and one which was devilishly

(06:57) difficult to calculate in one which most scientists found quite distasteful a quoran differs from the present modern Vector in that in addition to the three Vector components you have a scalar component for example let us take a vector  $a$  obviously the vector  $a$  today in a little normal sophomore physics we'll start out with a sub  $i$  or  $A_i$  plus  $B_j$  plus  $C_k$  where  $i$ ,  $j$  and  $k$  are unit vectors orthogonal to each other if we take such a vector for example and we cross it with itself we will produce a zero Vector resultant now I want to stop right there

(07:46) let me say that again rigorously we will produce a zero Vector resultant now the two vectors didn't go anywhere they're still acting upon each other they still there so very rigorously what we produce is a zero Vector system that is a system of acting vectors which sums to a zero resultant Vector for translation on the bottom we show the same situation in quaternion the Quon is expressed very similar to the vector except it has this little scalar term  $W$  sitting in there with one big difference when I cross for example  $Q$  Quon with

(08:31) itself I do not get just a zero Vector the vector part still goes to the zero Vector resultant but now I have suddenly the emergence of a scalar part which did not go away and the Scalar part it turns out is in fact a function of the vectors that entered into the interaction notice on the bottom line that the cross product now is the square of the amplitude of one of the vectors that's the urgency or the energy of the urgency of one vector on the other stress wise and I've retained the zero Vector because now we have to learn to

(09:14) read that exactly which is what heavyside did not do what this equation says and says very rigorously is this if these are two electromagnetic vectors or quon we started with suppose they are the  $E$  fields and the two  $e$  fields for example the two  $e$  vectors are identical and we have an operation that's making the cross product suppose that's what's actually going on what the bottom equation rigorously says is electromagnetically you have a zero Vector resultant with the system of two vectors still inside the zero Vector system and

(09:57) still acting produce ing the action  $a$  now  $a$  is proportional to the energy of one of the vectors the amplitude energy the urgency so to speak energetic urgency of one vector on the other so we've captured a form of stress and now suppose for example we're instead of dealing with static vectors we're dealing with actual sine waves again our  $Q$  cross  $Q$  is going to be  $a^2 +$  the zero Vector resultant electromagnetically I've got to say all that because I must not throw the zero Vector away it's a real thing it's a

(10:41) vacuum engine as a matter of fact it is not a zero except electromagnetically but it's doing something else in the vacuum suppose  $Q$  is of the form  $Q$  is equal to  $a \sin \Omega t$  standard kind of wave simple sine wave type entity then  $C Q$  cross  $Q$  will give you  $a^2 \sin^2 \Omega t$  plus this zero Vector how do you read that the way you read that equation rigorously you don't throw the zero Vector away it's telling you something it says I have a zero Vector

electromagnetic system whose active internal structure is giving me a scalar wave  $a^2$

(11:29)  $2 \sin^2 \Omega T$  that's precisely what that equation says now when you throw away the vectorial scalar part you throw away the scalar wave and notice that in the scalar wave the energy which is proportional to the  $a^2$  is rhythmically varying if the energy density of the local vacuum where this action is occurring is rhythmically varying then rigorously that is the definition of a local gravitational wave and there is your precise definition or derivation of scalar electromagnetics I will say one thing in

(12:16) passing and go on without further explanation because it takes a long time to explain it that particular wave the  $S^2$  wave scalar  $W$  is most useful indeed in electromagnetic healing it has the unique characteristic if you will break that wave out and look at it on your little graph plots it has a most unique characteristic that almost no other wave has a very weak wave of that exact configuration will instantly spread throughout the whole body through the bone cells through the marrow cells everywhere it won't miss a single

(12:58) thing okay let's take a look now for we're not going to get too technical here I just want to give you the concepts and the ideas and the mathematics we can all manipulate later actually I'm not the only person in this room who's working in this area by far I'd particularly like to mention the work the very important work of Dr Henry Monte who as far as I know independently discovered the same thing because on a telephone conversation he was telling me about it and I was telling him about it

(13:29) at EX exactly the same time and Dr Monte has already gone much further than we'll go into tonight on the mathematics of the whole area I expect probably that the full theory of scalar electromagnetics will probably eventually be written by Dr Henry Monte now what can you do with an electron well you can push the thing straight away you can produce a field that'll do that that's what we call an  $E$  field you translate the electron straight away or the charge that's the definition of an  $E$  field another thing you can do is you

(14:05) can produce a field which will cause the electron to interact with it and swirl around in a little swirl that is technically what we call a magnetic field a  $D$  field there's one other thing you can do suppose you do not move the electron at all but you have a zero Vector electromagnetic system remember now I've got to say some extra words I can't just throw away the zero Vector I've got to go after the gravity that's left when it's there if I have a zero Vector electromagnetic system it's a stress

(14:41) system as I show on the bottom diagram suppose all of those vectors are rhythmically varying like a  $S^2$  or a sine wave I have then a scalar wave and all that it does it squeezes the electron can we not easily imagine taking a rubber ball between the outstretched fingers of both hands and rhythmically squeezing it and relaxing squeezing and relaxing that is a scale away specifically it does not translate the particle neither does it swirl the particle it merely squeezes it so it does not give you an electron

(15:19) wiggle and electron wiggle detectors will not detect it because they detect translation Fields e fields or swirl Fields be Fields they do not detect squeeze waves as a matter of fact that squeeze W squeeze wave doesn't do much to the electrons in the shells and the orbits around an atom it goes through and is absorbed and interacts with the nucleus as we'll see later to show you that indeed Maxwell knew that he had captured the stress the medium now remember he wrote a theory based on a mechanical ether The Ether

(15:58) was a thin material uh thin ethereal material in his model so when he says a stress in the medium he means a stress in The Ether and he knew about that and here's a direct quote which you can read from the chart directly from Maxwell himself here is the finish of the quote again directly from James Clerk Maxwell so Maxwell himself realized that he had also captured the local stress of the medium in his full Theory what is really pathetic is they didn't realize that's what gravity was stress in the medium is what gravity

(16:46) is so that's very interesting way to think about it stress in the medium is gravity you need a ather ether to explain this the electron can either move directionally electric force it can can spin magnetic force or if it's sitting there stationary it's not really stationary there's a stress like a stress ball it's interesting way to think about it so Maxwell had written what really was a unified field theory of electromagnetism and gravitation in quaternium because he had captured the stress or the squeeze wave in the local

(17:23) vacuum the fluctuation or the variation controlled variation in the local energy density of the vacuum heavy side later on in fact after Maxwell's death was one of the two men that finished what today we call Vector analysis heavyd and Gibbs now heavy side's solution to the formidable and teeth nashing problem of calculation with Quan said the real problem is you're mixing apples and orang oranges and so what we got to do is get rid of the scaler component and he just saw it off and threw it away one single human

(18:06) being all Heavy s did that nobody else not a team of scientists not a board of peerreview one guy remember there are very few scientists at this time probably there were some 30 or 40 scientists in the world in the Western World struggling with electromagnetics at the time that's about all you had not many there was a short debate then remember Maxwell is long dead the Quan this were pointing out that you have not captured the complete Theory and the vector were saying yeah but boy can we calculate we can out calculate you all day long now

(18:46) this is simple it's easy to understand we got it they had a short debate most of the action occurred in the journal Nature they simply buried the Quist that's all there was to it and by 1900 you couldn't even find quaran Theory being taught anymore everything was now heavy sided version of electromagnetic Theory now what happens when you throw out the squeeze wave when you throw out the scalar component of the quantum you throw out the component that caught the interaction and interplay between electromagnetics and

(19:24) gravity now this caused Albert Einstein to make a most serious and Grave restriction and today we would call it an error on general relativity because Einstein studied Oliver heavyside

version of electromagnetic Theory so real quick history lesson right there was that Maxwell had 20 equations the heavyside Oliver heavy side came in he simplified them and then the people that were looking at analysis said well we like this better because we can calculate it makes more sense but that's not how science Works science is

(20:06) this study of observable reality the equations don't determine what's real reality determines what's real and then we have to do the equations for it so we oversimplified the equations by oversimplifying the equations this is how we've limited our understanding of gravity and how to manipulate it and in that theory you do not and cannot have electromagnetic curvature of space time let's reason together ladies and Gentlemen let's make this as simple as possible what does a normal Garden

(20:37) variety heavys side electromagnetic wave do it gets the hell out of there at the speed of light it does not stay around and oscillate the energy density of vacuum BL and it's gone it's a fastest thing in the universe that's a material type thing but what does a squeeze wave doing which is sitting in position and squeezing it sits there and it oscillates the energy density of the local vacuum the gravitational wave is what it is it doesn't go anywhere it doesn't take off at the speed of light it's

(21:16) sitting in place it's all locked together as a single system with a zero Vector translation or get to hell out of there result so Einstein then not knowing any way that you can curve electromagnetic uh curve local SpaceTime electromagnetically and by the way all curvature SpaceTime means that's a simple thing imagine that space is filled with little fantastically dense and intense spray all the time called a virtual particle flux the only problem is each little particle doesn't stay around it's

(21:50) instantly born almost instantly dies so it's like a gas that's continually each particle being continually created and annihilated so it's a crazy kind of gas flux that we're looking at that's really the modern view of the vacuum then all we're talking about is the intensity of that flux is oscillating that's all we're talking about only we polarize the internal pattern of it we can put patterns in it that's what the stress wave of the scalar M wave is Einstein then said the only other

(22:18) thing left to curve local SpaceTime is this very weak gravitational force which is some 10-42 times weaker down in the grass from where the force the electromagnetic force field the electric field is between two electrons now that's very weak 10 to Theus 42 is a very small fraction you can't find that you can't even measure it with normal instruments with except great with great difficulty so he reasoned then that that's so far down in the grass you're never going to be able to measure any

(22:52) kind of local SpaceTime curvature from that from the electrical stuff going on he also reason that such a thing that you could measure could only result from a huge collection of mass like the sun of a great star or something like that well the laboratory and the instruments and the Observer and the researcher is not going to be sitting on the surface of the sun it's a little bit

hot so he said therefore where you the local Observer is where the lab is where the instruments are there will be no local curvature

(23:27) SpaceTime so he assumed because of that that the local SpaceTime is never curved now all you energy Buffs clean out your ears and open them up wake up and listen when you make that assumption the local SpaceTime has never curved it gives you the rench frame all that nonsense you now save and cause to be applied rigorously every conservation law in that system you cannot escape the conservation of energy you're not going to get any energy from SpaceTime it's all going to run right back in there that you get out

(24:08) of there you're going to lose it so forget any kind of a free energy device where you're trying to build a Paddle Wheel in the special River as long as that Assumption of Einstein holds now if you were to curve local SpaceTime the **Russians** have long since remove that restriction from general relativity that they teach in the Western World you can't get such a paper published in the western literature many good physicists have tried if you curve local SpaceTime and this is absolutely rigorous **Russian** work

(24:44) check the leading journals and the leading academicians all I hope you heard that word all conservation laws go out the window there are no irre aable conservation laws when you have local curvature SpaceTime and that's the thing the conition that Oliver heavyside threw out of James clerk Maxwell's original theory he threw out the baby with a bath water but he made it a hell of a lot easier to calculate and understand so people began to understand it began to be able to calculate be began to build instruments and make

(25:27) great advances but meanwhile we had a severely crippling assumption made for Good Reason by Albert Einstein on general relativity and the irony of all ironies for the rest of his life Einstein was in a Vain and desperate search trying to find out how in the world to get electromagnetics back in there and he never succeeded not realizing that that little bitty assumption meant you could never do it if he had changed that one single assumption he had it all and if he had studied Maxwell's original quaternium theory he would probably have not made

(26:16) the Assumption and you would be flying anti-gravity spaceships all over the Solar System since about 1904 that's a bold claim okay we have a new breed of cat now the scaler EM wave it's rigorous you can mathematically derive it you can try it out on the LA bench and it works but it works quite different from normal electromagnetic waves so all you electrical boys got to remember now you got to learn some new phenomenology they didn't teach you this one in electrical engineering and if you look at circuits

(26:54) that work this way you electrical boy you got some electrical boys out there and you insist you're going to look at them with electrical engineering eyes you're going to go home thinking that that can't possibly work and it's all nonsense and you will never never be able to build such circuitry and such devices you've got to learn to think in a different manner the first place this wave goes right straight through the electron shells goes down the nucleus well we're

going to tamper with

(27:29) something very fundamental here let's ask a very fundamental question what is this physical reality around us how is it made everything is made from potentials according to Quantum Mechanics the most modern Theory my operators forget your force fields your  $E$  field and your  $B$  field that secondary junk that comes after the operator works on the potentials the potentials are gravitational fields gravitational potentials all potentials are but this normal thing you studied as the normal electromagnetic wave the  $E$

(28:00) field and the  $B$  field component normally reacts with the electron shells of atoms with negative charges why because all the atoms got the electrical charges negative around them in their electron shells the whole world is built that way now the electron shells can go bananas lot of interaction the average nucleus is several hundred thousand times more massive than one electron which interacts with one photon so the big old nucleus just sort of shakes a little bit in most cases and that's it so large Assemblies of

(28:38) nuclei of atoms normally very stable in this first order reality stuff physical reality as you normally see it you're looking with electron wiggle detectors from your physical system and that's what you're seeing Photon interaction with electron shells of atoms and so the world is very stable and all of the people people first start off thinking that become materialists they think everything material is real and that's it and that's Ultimate Reality and a lot of them are willing to kill you under

(29:08) certain dogmatic systems to enforce that belief kill you in order to enforce that belief all you see is reality and that's it wow that's a little scary and nothing could be further from the **truth** that is a first order **truth** but it is not ultimate **truth** this thing is real but it's not ultimately the only reality if you go down into the nucleus now and you really hit the nucleus if the nucleus moves everything goes bananas and the stable order that you observe around you goes right out the window and when you go in with the Scala

(29:50) waves that's the kind of reality you're looking at wow okay let's talk about the time because we're going to tamper with that too I told you this part gets a little complicated but I'm going to try to show you before you get out of here how to think about a time reverse wave and how to use it and how to make it work for you and do magic now a photon comes in and interacts with a negative charge and that and then the charge goes into excited state going around the atom and then drops back and decays and emits

(30:26) a photon that process of photon absorption and emission reemission from the excited state of a negative charge in an atom is what we call the positive flow of time now let's be rigorous here we're saying that the flow of time in this universe occurs bit by bit at a fantastically High Rate One near piece at a time  $\Delta T$  is not always the same size it is discreet but it is not the same size so watch you words you got to think very carefully cronon do not exist not as being one simple value it's discreet but it's quite

(31:06) variable as we'll find later if that same Photon interacts with a positive charge we already know in physics that if you invert the charge you invert time that may surprise you but it's well known in physics that is not Tom Bearden and so it gives you a little piece of negative time hey wait a minute we got a problem here they use a theorem in particle physics they found out the charge is not conserved broken symmetry parot is not conserved time itself is not conserved but it seems that the three the product

(31:43) of the three all three cannot be violated at one time that's the best shot we got at it today in particle physics that's where they're at but you can violate any two or one let me say that again you don't have to concern charge the contrary argument is but it's a little effect you say yeah baby it's a little white crow but maybe he'll grow if I can have little white crows and I can collect them and grow them I'll have big white crows in the makeer world so charge paret time if you

(32:16) inverse the thing you might get something different as a matter of fact the antiphoton which has been assumed to be the same as a photon that is a false assumption in physics and I'll show you that in just a moment well we've already said we go into the nucleus with scaler waves and we'll have a higher order reality when we do that why first place we're interacting with a neg a positive charge the nucleus of an atom is already time inverted did they forget to tell you that in your electrical class yeah

(32:51) because they didn't know that but it's true and modern physics substantiates it and we're going to find out that's why we're going to get time revers waves a little later on that we can use to do all sorts of magic things at this point then if you go into the nucleus although I show here on this diagram little balls all clustered together modern physics tells us that's not the way the nucleus is built at all it's a vast boiling smear there's not a proton there's not a neutron all that

(33:22) mess in it at all if you go in there and you catch one and you gradually catch all the wiggling fish and bring them out that's what you'll find on the average after you stop the fish but before you stop them they're waves they are not particles they're all mixed up as a big mess so you can't separate them it's a boiling mess in fact it's a trapped local potential which means it's gravitational that's what mass is that's modern physics not Tom beon but now if I can go in and have a

(33:52) wave absorbed directly in that the scale wave I just either increase or I can decrease depending on how I Bianche that potential wave that I send in there and I can raise that potential low it at will as a matter of fact if I keep radiating it and absorbed in there it'll keep building up it charges up just like a capacitor only now it'll charge either positive or negative and I'm giving you laboratory results it acts as a capacitance for scal WS now when something else comes in there and hits it another wave it'll

(34:24) trigger the thing it'll collapse and out it'll come another wave out of the nucleus there'll be a time reverse wave and all the nuclei in the universe are continually exchanging scaler

waves I don't have time to go into this aspect but I will say with a fourth law of logic which I built many years ago and proved I published a proof for it I don't have to worry about can it be proved I can demonstrate it in less than 10 seconds the fourth law of logic tells us ultimately you can only model a thing in

(34:53) terms of its direct opposite it's not geometry the modeling of the presence of mass in terms terms of the absence of mass you see my point in this case we're going to have to learn a little bit of that in our modeling Theory and we'll go into that in just a moment but when we go into the nucleus now in this boiling mess and we can actually adjust the potential we can even put patterns remember we put fingers structure inside this Scala wave it's got a structure we can build any kind of zero system different systems and patterns

(35:27) and polarizations inside there in the virtual state of vacuum that we wish to we can go notice he did a triangle formation right there for a zero State he was talking about zero point system let's look at that real quick again M and we can actually adjust the potential we can even put patterns remember we put fingers structure inside this Scala wave it's got a structure we can build any kind of zero system hello 3145 there is your answer to MH370 videos right there that you're looking at it we adjust the potential we can even

(36:13) put patterns remember we put fingers structure inside this Scala wave it's got a structure we can build any kind of zero system different systems and patterns and polarizations inside there in the virtual state of vacuum that we wish to we can go into that nucleus and it's boiling away it's just like a cathode you put a little signal in there you put a matrix that thing will organize you know about Progene you know about self organizations of Highly nonlinear systems far from thermonuclear uh thermal equilibrium

(36:50) that thing is as far as you can get from thermal equilibrium it's in a violent exchange with the vacuum itself pH cancel I just screwed up that I AC clicked when I didn't want to a violent exchange with a vacuum so he just me he mentioned ELO Ela pran we're gonna have to look at that um self-organizing systems Matrix that thing will organize you know about pre you know about self-organizations of Highly nonlinear systems power from thermonuclear okay so this is big because breaking through the swinger

(37:36) limit is creating a nonlinear system that's what breaking through the swinger limit means in terms of getting energy densities high enough to break through the Sher limit means making a nonlinear system then that's going to lead us to El Progene which I have that paper in the background here somewhere thermal equilibrium that thing is as far as you can get from thermal equilibrium it's in a violent exchange so scalar wave is far as away you can get from thermal equilibrium interesting with the vacuum itself virtual particle

(38:05) exchange it's a Progene system first class and that thing will self-organize according to the pattern you put in it I've just told you how to do transmutation of elements between isomers is very simple a man was nominated for the Nobel Prize kve in 1977 for proving conclusively the living systems with micro can transmute elements to a limited extent chickens

do it we do it okay wow I don't know if you guys are paying attention on that but he just described the thunderstorm generator and Bob greener's work cuz your system can

(38:48) be arranged in different shapes so potentially Malcolm Bendle figured one out from the double spheric IAL Whatchamacallit modules that he has on on the vortex generator so maybe that's what the letter to me was talking about again sacred geometry zero point shapes um and shapes that are potentially creating uh gravitational scalar potentials wow I feel like we've figured something out herey everything does it a little bit the average biologist still hasn't heard of that and doesn't believe it when you

(39:27) telling but it is a fact and it was replicated and that's how it's done the living system can generate and has these Electro gravitational waves these squeeze waves these scalar EM waves the part that heavyside left out living systems have generated since the beginning of time it's very weak as far as power goes but if you keep right on pouring it into the nucleus you can change the nucleus the nucleus will order and change and charge up with that pattern that's how it's done and it's

(40:03) fairly simple to be done between isomers of the elements of the Isotopes general relativity includes theine geometry now apply because when you go into the nucleus you've moved into higher Dimensions how many as many as you wish but you've got to have at least five Dimensions to capture a unified field theory of gravity and electromagnetics now when heavy sign throughout the scaler component before 1900 it meant that somebody could come along now for special relativity and put it in four dimensions but did he have

(40:37) electromagnetics in there uh-uh no you can't really fit electromagnetics correctly and have gravity in there too in four dimensions if you have a four-dimensional theory of electromagnetics you ain't got gravity if you've got gravity in there you ain't got electromagnetics it won't fit but if you have 1/ Dimension which Kusa did in 1920s you can unify again electromagnetics and gravity his paper was published on the recommendation of Albert Einstein so now we must have kusine at least five-dimensional geometry by the

(41:15) way Kuser showed that where the extra Dimension went you could model it it wrapped around each point in our three space now in that model electromagnetic waves do not travel through three space rigorously they Slither around the little surfaces around every point in three space along their direction of travel that's a quite important distinction if they penetrate the point that's gravity if they slip and Slither around it in The Fifth Dimension that's electromagnetics and that's Kusa Klein Theory not Tom

(41:47) beard they just don't make it quite that simple and clear what do we got here guess we got a space now in the past I've given you a piece of information because I didn't want you to hurt yourself I gave you spatial opposition of positive energy positive time wavs and those are very weak you get very weak gravitational effects and very weak inertial effects you won't kill anybody with that you won't kill yourself but this one is powerful specifically it can be  $9 \times 10^{16}$  times as powerful you you make a Time reversed

(42:28) wave which we're going to go into with a full explanation here you're going to get to full treatment tonight I'm not going to cut it short if you get tired just go if you want to get it stay because I'm going to make it real simple but if you take a normal wave which I've shown this little sign wave here one oscillation and you make its time reversed or time reversed replica it's exactly like it in space it fits exactly with it spatially but the time Dimension is reversed now the stress of those two

(42:58) waves that they're locked together is totally on time Dimension that's a highly compacted space Dimension and you get one going up one coming back so you get a  $c^2$  type factor out of this thing that gravitational wave and that's what it is that scalar wave can be up to  $9 \times 10^{16}$  times as strong as the one I've told you about in the past and this is the one you do if you want to do Antigravity you got your ears open you listening all you have to do to do gravity all you want in any University

(43:33) laboratory in this country is make a pumped phase conjugate mirror at 100 to 400 Hertz let me say that again and I'm not going to answer any questions on it all you have to do if you want to make all the anti-gravity you wish to make and any University laboratory in this country can do it it's simple doesn't take much power is make a pumped phase conjugate mirror between 100 and 400 Herz enough said Okay a photon is a piece of energy and a piece of time weld together no in the middle piece of what we call Action

(44:11) which has the dimensions of angular momentum we usually show that as Plank's constant  $\hbar$   $\hbar$  is always positive you got to have something called a brick call Action but the brick can be made two ways and still be positive you can make it with a piece of positive energy and a piece of positive time you well together and the product is still positive you can make it with negative energy and negative time and it's still positive now the first one is a photon and that's something that comes off of interaction with a negative charge and

(44:45) it'll give you positive time interaction as it continues it'll also give you entropy because that will tend to more and more disorder and the law of entropy the second law of thermodynamics ruthlessly applies now what's the Assumption in that law your professor never told you it had assumption because he didn't know it the assumption is it's only for positive time Critters it does not apply to negative time Critters the negative of the law applies for negative time Critters it backs up instead of tending to more and more

(45:23) disorder it tends back to order so don't you worry about the Universe running down it's running back up to order just as fast as it runs down to disorder but in negative time but the internal part of every atom is already filled with time reversed Critters now the energy of an atom of a photon rather is  $e = \hbar \nu$  where  $\nu$  is the frequency let's reason together here why did I say we got plenty of people making pump phase conjugate mirrors and these guys don't ever see any gravity why I just told you you can do it that way am

(46:06) I a fool or did they miss something if you understand that equation is it not true if  $\hbar$  retains a fixed size it can't vary in size if I have a big  $\Delta e$  I'm going to have a little  $\Delta T$

magnitude of if negative  $\Delta e$  is big in magnitude then negative  $\Delta T$  is small in magnitude they are canonical variables well if you've got high frequency by the bottom formula you've got lots of energy in a photon you got very little time change in it so high energy photons high frequency photons are not going to have very much

(46:49) negative times even when they're anti photons they'll have very little and anti-gravity depends on negative time let's us reason together if in positive time the Assumption in Newton's crazy low gravitational law attraction of mass what's the Assumption positive time anybody ever tell you that no because they never thought of it but if you reverse the time do you not back up the situation does now Mass not repel and we have just told you you can go into the nucleus and start charging the nucleus with a pattern including

(47:27) negative time we have just told you that you had to lose use low frequency why cuz you want a big  $\Delta T$  you don't want a big  $\Delta e$   $\Delta e$  gets in your way it tears you up so the Optics boys never see this that is so far in the grass you can't even measure it where they're at they never thought about doing it at 400 HZ you go home and try it in your laboratory and then sit on the side laughing for the next two 2 3 hours and how silly we all been for years and how easy it is to do it I will tell you if you pursue that you can take

(48:06) a flashlight battery and levitate a battleship and I will not discuss that further you can take a flashlight battery and you can levitate a battleship okay first of all Philadelphia Experiment second of all what you can use a tiny amount of energy so what he's saying there is that you can essent extract free energy and it doesn't even take that much energy to pull this off a battery could levitate a battleship cuz then you're going to ask me about The Philadelphia Experiment and I'm going to tell you I don't know

(48:40) anything about that once in a while I got to lie a little bit once in a while I got to lie a little bit once in a while I got a lie a little bit I will tell you if you pursue that you can take a flashlight battery and levitate a battleship and I will not discuss that further cuz then you're going to ask me about The Philadelphia Experiment and I'm going to tell you I don't know anything about that once in a while you got to lie a little bit unfortunately okay as  $\Delta e$  goes up  $\Delta T$  goes down the magnitude the

(49:26) absolute value we're going to be interested when we talk about gravitational inertial effects things like that we're going to be interested in big pieces of negative time low frequency photons stay away from the Optics boys they're in the wrong regime they're doing good work but they're in the wrong regime let's see then what happened further with some of this well comes along the greatest electrical Genius of all time Nicola Tesla what does Tesla do he discovers the scalar EM wave he

(49:56) called it his standing Coler wave let's run that by again standing Coler wave does it make sense now a squeeze wave which stands in place he discovered that out in Colorado Springs before 1900 he has such a rapid progression of his understanding of this and his development of material he also discussed time reversal we'll get into that later he found that out he started

building on Long Island a situation to power the whole world and tonight I'm going to explain to you precisely and exactly how that works and

(50:32) I'm going to tell you there's a thousand papers in the literature that prove the fundamental mechanism works and if you believe you can get that mechanism in the earth and you have just shown that it will work well direct put in time reversal he didn't predict a positron he predicted a Time reversed electron and lo and behold they looked around and they discovered the critter so all of a sudden we had time reversal in physics only we reversed the whole particle nobody's doing the photon now because they said well you

(51:08) time reverse Photon wiggle this way or wiggle back that way still looks like a sign which same thing and they missed it right there glusa Cline Theory came along in the 20s after general relativity had come along we talked about gravity and anti-gravity were worked out based on only the attraction of mass electromagnetic is left out that's the missing ingredient everybody's hunting for how to get it back in Einstein failed in his vigorous search for it the rest of his life and the reason was they didn't

(51:37) worry about negative energy and they didn't worry about negative time how many physicists have thundered about the second law of Thermodynamics and not a damn one of them has realized that it assumes positive time only does not assume negative time time reversed Critters well a magic thing happened in World War II now we're going to tell you some of the rest of the story that we haven't told you before in World War II a funny thing happened radar came into being and everybody's using radar like

(52:11) mad the German wolf Pikes were murdering the ships we put a radar in an airplane we found out you could track the Periscope when the ubot came stuck his eyes up to look when he put his snorkel up to breathe you could track a snorkel and all of a sudden we had a hunter killer team and we were bombing to living hell out of those OTS and the pride of the German Navy went to the bottom boom and one in a month went by they didn't sink a single ship and they lost a hell of a lot of you boats cuz every time he looked Boom come greetings on his

(52:47) head this is true in an absolute Panic the Germans placed the finest brains and they had the finest brains in those days in Europe the finest mathematicians and the finest physicists and the finest brains on that problem they originated what today is really called rigorous radar cross-section Theory radar absorbing material they Advanced radar cross-section which is the heart of modern radar Theory and countermeasure Theory further According to some real radar expert friends of mine than we are today just a little further than we are

(53:23) today in the US and at the end of the war that entire team team went to the Soviet Union again let us reason together what do you do they coated by the way their snorkel with the ram material and they coated their periscopes and their they didn't get any reflection back and so we couldn't track them again they went right back to shooting down or torpedo in the ships okay let's reason together again what do you do with the radar absorbing material it's in the open literature you do something like carbon

(54:00) dope with various materials and what you do is you slow the wave down you can get at least a whole wavelength or the correct portion of the wavelength in there and what you do reflect back you get it out of phase cancel make make that zero Vector right electromagnetic zero Vector you don't have no electromagnetic reflection they don't wonder about it or try to detect it or have any to detect if it's a gravitational reflection so it disappears off your radar still sitting there still absorbing the energy now you will find out later that

(54:31) when we absorb two waves in a nonlinear material  $180^\circ$  out of phase that's called a pump wave and that's the first thing you do to get to start to make Amplified phase conjugate waves you start to get anomalies when you radiate with another wave bang you get this big Amplified response Bo comes out of the material why where the devil did that come from not supposed to be there at all by electromagnetic Theory when you radiate such a material over multiple beams you have what today is called pumped phase conjugate four-wave

(55:05) mixing and you get amplification of the tickling wave and you get high amplification of it and you get it with a Time reversed wave as we'll find out later I'll show you how that works so the anomalies were there now in in Huntsville Alabama we have the head of the rocket team retired Dr Long Dr Long knew those members of the German radar team and he has confirmed they had anomalies but after all these years he doesn't remember what it was he had his hands full with big Rockets we got the rocket team you

(55:36) see but it says that the Russians had those kind of anomalies that led the Pumped four-wave amplification of time reversed waves in radar at the end of World War II and by 1950 they built an operational Radars they've got the finest mathematicians and always had the finest nonlinear mathematicians on it and they started whole weapon system in radar by 1950 and they got it from the German radar team they did not start it in nonlinear Optics now we were not clever enough or smart enough to discover the time reversed electromagnetic

(56:13) wave after developing all the formidable weapons I've talked to you in the past about around 1969 70 or so the Russians cautiously released this stuff a paper showing the time reversed wave in the optical frequency why why in the optical frequency they didn't want you to get any gravity hell if they' have released it at 400 Herz you had any gravity already so I didn't want you to have that stay away from that go up there where it doesn't harm anything gravitationally and see if we know about

(56:47) it we showed we didn't nobody reacted so they sent a couple scientists down to lence Livermore laboratory and briefed them on it in 1972 this is time reversed waves and our guys with great El laity said OHA we me thinks there's something here I've been hit over the head with a brick bat so they started vigorously working at it in nonlinear Optics it's a general solution to the wave equation now we haven't got the foggiest notion today what generates a Time reverse wave but boy do we know how to write an equation

(57:16) we take the wave equation write Aster in one term that's it that's all of it it writes a Time reverse wave so we think we understand it we can write the equation we can solve the equation

and got the fish notion what causes it to be born but if it is it'll follow that equation that's where we are today we're going to go further than that because you need skater electromagnetics go further so for the people in the chat when he was talking about radar he's kind of he was talking about Stealth he

(57:44) was about getting the the radar beam to hit your object at the right wavelength where it gets completely canceled out and then nothing comes back so then you're invisible so actually when people were talking about Stealth and cloaking that they're talking about the same thing the concepts are interrelated they're completely interrelated uh because that technology is what leads to gravity manipulation based on scalar physics wow couple of more technical thing then we get into Fun cartoons Philadelphia

(58:19) Experiment is probably true well the change is composed of action two canonical variables energy times time I just wanted to refresh your mind here and we can have either negative or positive now I want to show you how it works in cloa theory cloa Clin Theory everything comes in five Dimensions the potential is really in five Dimensions but this little old surface around every point in our SpaceTime as you shrink to a point does not the surface area vastly increase isn't that the law that the surface area around the volume increases

(58:50) the smaller the thing gets by the time you get down to a point you got a real humongous surface area for electromagnetics to slip around and not have to penetrate the point so everything escapes electromagnetically real easy slips around a Fifth Dimension never penetrates never makes gravity so electron gets it and boogies out of there so most of the five Dimensions is normally bled off on the left as fast as you form the potential which is a five-dimensional pressure so to speak zip boom it's gone in Fifth Dimension

(59:20) electromagnetics and that's all there is to that so if you can force it to go into the 4dg field you got to first block this terrible Escape for example between two electrons only 10us 42 of it gets out as gravitational a penetrates the point but if you could block that arrow on the left and force a lot more of it to go over there into the actual three space that's in our 4D manowski space then you get lots more gravity lots more inertial field that's all you got to do to build a initial field generator but you got to block the M

(59:55) field how you going to do that well you do it real simple normally it goes boom out there as electromagnetics not much left as gravity a little bitty tiny hiss over on the side to make it Kitty cartoon but impress the point but if you block the escape's electromagnetics block the big door you'll get a big boom out over there and you get lots of inertia and lots of gravity and you can engineer that on the bench at real the great Cosmic engines of the universe operate inside Vector electromagnetic Vector zeros that's

(1:00:25) where the gravitation is gravitation is infolded electromagnetic forces locked together with a zero e field and B field resultants electromagnetics is the unfolding of the locked in electromagnetic stress of the vacuum it's all it is and by the way that's rigorously in agreement with modern physics except we can have a structure to it whereas they normally have it as a

random structure they don't use the fact that you can deliberately do it because why heavyside taught him to throw away the zero electromagnetic Vector

(1:01:04) resultant because he had thrown away the gravity with that system okay to get distance effects we all know how to put photons through there and hit something out there at the distance or hit it with matter but the best way to do it is to do it with potentials not with force fields and photons and matter that's potentials potentials were thought to be mathematical figments until quantum mechanics prove they are the real things and it's the electromagnetics that's a derivative and interference is what gives you

(1:01:37) everything and the potentials that's the magic first you got to make potentials if you make these the zero Vector electromagnetic systems are artificial potentials they have an internal structure of stress but they have no gradient they're not flowing out with a translation vector or a swell vector if you interfere two of those at the distance you recreate electromagnetic energy depending on how you bias the beams you create the thing higher than the normal energy so energy flows out of that interference Zone if you Bias it

(1:02:08) lower it'll create energy lower so it'll suck energy out of there and by the way it come right back down the beams back in your transmitter you better dump it somewhere but let's look at some characteristics now of he just he just told us he just told us the answer um it is what it's EX exactly what JK Philly fan said um four wave mixing interferometry listen very closely chat to what he just said the crazy part is that we can only know this is real because we've seen it on two videos and those two videos are

(1:02:43) 100% accurate scientifically to Thomas bearden's uh physics that he's been mentioning right here listen to the part where he says where does it go the question is right when you absorb the energy uh from this Vector uh potential here this Vector potential when you can either pump energy in or you can suck energy out so in our video we're seeing an endothermic event an absorption of energy where does it go the answer is you be you don't use two beams you use four beams three you have three orbs

(1:03:17) those are three beams that are shooting and then you have one fourth orb somewhere else which is creating the fourth uh uh what is it fourth wave mixing interferometer and this is an interferometry pattern right here and again like you said you can do it like this you can do it like this and then you can have another one where there's a fourth one this is how Dave knew about the fourth one since you recreate electromagnetic energy depending on how you bi the beams you create the thing higher than the normal energy so energy

(1:03:44) flows out of that interference Zone if you Bias it lower it'll create energy lower so it'll suck energy out of there and by the way it come right back down the beams back in your transmitter you better dump it somewhere it it will come straight back down the beams and come into your transmitter so if you're sucking it out it's going to go right where the beams are at so you need a fourth orb that is basically the direction of travel and that energy is going to go to the fourth orb that's where they're all going to show up so

(1:04:11) energy flows out of that interference Zone if you bias it lower it'll create energy lower so it'll suck energy out of there and by the way it come right back down the beams back in your transmitter you better to dump it somewhere got to dump it somewhere let's look at some characteristics now of time reversed waves because here's where the real magic is this is the magic we've been looking for we go ahead it first like the nonlinear Optics boys if you have a piece of plastic that's nonlinear hunk

(1:04:37) of junk 10cent piece and coming in from the left over here is the dotted line a wave front that I show is E1 it comes in and it strikes this nonlinear medium and it travels on through it and it starts break getting distorted as it goes through the ra wave front starts getting distorted because it's a nonlinear distorting medium it comes out the other side and you see it's now all Wiggly and distorted but another magic thing happens which we didn't know we had to Discover It mil Soviet literature and

(1:05:06) then they had to kick us in the ankles to get our attention to make us realize what they'd said then we went to work on it the medium also generates a second wave that's a Time reversed wave E2 that now appears spatially in Phase everywhere that other wave appears forward backwards everywhere else it's normally a very weak thing we'll find out you can amplify it real easy but it is totally and exactly and precisely in Phase it has an invisible trace of where this other wave came from and where it's

(1:05:38) going and it boogies out of there to appear right in that exact same place in space but in time it's reversed it's a stress in time the two together will form a real good gravitational wave if they're equal spatially they don't know that in Optics because at the wrong frequency they never see the gravity aspects they don't have it in Optics this is a quote right out of a standard textbook that says the same thing the diagram said and I won't bother to let you read the thing it's it

(1:06:05) says exactly the same only very technical okay let's amplify the thing we take our same piece uh plastic material hunk of junk we'll put in a wave A2 and a wave A1 normal nice Garden variety electromagnetic waves nice little sign wave let's play like but we put them in so they're in the medium and  $180^\circ$  that sounded like that Ram material didn't it only now I'm working at Optics just wanted to point that out and passing and so now in the medium what do we have it is it not a nonlinear

(1:06:38) medium all your electrical engineers is that not a modulator let's hear it yes it locks the two waves together they don't just mix and run through one another they become one system you got to have a zero Vector locked in modulated system not mixed wavs mixing don't do it it's got to be modulated got to be a nonlinear medium okay waves A1 and A2 spatially  $180^\circ$  out of phase now do they not lock together and form a zero Vector resultant e field and B field yes they do is that not a Scala wave now you can

(1:07:13) argue a little bit if you want to about what happens to magnetic field if that bothers you so it's going to shift  $90^\circ$  forget it just stay with the E field the point is you can make a scaler

wave and it will go now into into the nucleus and they call the combination of those two waves the pump wave and what are you pumping the nuclei of the atoms in the material what are you doing to the nuclei of the atoms in the material you're charging them up to a higher or lower potential in excited state as the case may be doesn't

(1:07:44) matter and here you go and then suppose you come in here with a little weak A4 wave these are the numbers that they use A1 and A2 is a pump A4 is the input this thing operates like a triode A1 and A2 the pump wave makes the nucleus a cathode A3 go uh A4 goes in on the grid A3 comes out as if it were a signal coming off the plate and you can have all the energy in A3 that you up to what you've got in A1 and A2 and A3 is time reversed which means what it means wherever A4 came from in the universe out there from some distant

(1:08:30) point this thing has a memory and it takes off boogie through space precisely fitting the path that A4 took all the way back to that point be at six holy crap chat he just explained teleportation so the pump wave would presumably be from the fourth orb it sounds like and then that's going to descend it straps the plane straight back to the fourth orb am I understand that correctly chat wow and A3 is time reversed which means what it means wherever a came from in the universe out there from some distant point this thing has a

(1:09:17) memory and it takes off boogie through space precisely fitting the path that A4 took all the way back to that point be at 6 ft in the laboratory be it 6,000 M away or 600,000 mi in the perfect case if that's an over the horizon radar signal A3 boogies back up did he just say Over the Horizon radar what year was this the 80s he just said over Horizon radar precisely fitting the path that A4 took all the way back to that point be at 6 ft in the laboratory be at 6,000 mil away or 600,000 miles in the perfect

(1:10:06) case if that's an over the horizon radar signal A3 Boogie back up to where it bounced off the ionosphere boogies on back over to where we tracked a rising rocket whoa we can use Over the Horizon radar on that okay we're going to listen to it one more time I I think that was just I think we just hit the jackpot the answer is four wave mixing interferometry maybe you can even do five wave mixing I don't know maybe you have three orbs and then you really have five waves where the fourth orb is pumping uh in the energy

(1:10:46) into the the three orb system and then that you get a reverse time reversed wave going back towards the fourth orb means what it means wherever A4 came from in the universe out there from some distant point this thing has a memory and it takes off boogie through space precisely fitting the path that A4 took all the way back to that point be at 6 ft in the laboratory be it 6,000 mil away or 600,000 mil in the perfect case if that's an over the horizon radar signal A3 boogies back up to where it bounced off the ionosphere boogies on back over

(1:11:29) to where we tracked a rising rocket like the Delta rocket in 86 talking about challeng if I am popping a pulse suppose I put 100 megaw do it whatever you want to in A1 and A2 in a pump wave I can get out up to a 100 megaw in wave A3 do you see that everybody understand that boom out comes 100 megaw in A3 in the oscillation condition A3 100 megaw now backs up

it does spatially the exact thing different from a normal wave it converges along its Trail not diverges all of the power goes right back the trail right into the

(1:12:20) missile if it's slowly rising and if you're 150 ft over to the side of the missile you won't see anything you will think it originated inside the missile and so the Delta rocket died with two mysterious surges of power in it that cut the damn booster off and they had to destroy it that's exactly what destroyed it right there we'll talk about some other things later now do you see that this thing is useful for weapons if you understand conjugation you can design yourself every weapon I have in fedy

(1:12:52) Lance and the words phase conjugation do not appear in the book by Design not by accident and I can't tell you how many times I've been beaten up verbally and abused by physicists and Engineers who didn't know what the hell they were talking about and they didn't have the foggiest uh understanding of time reversed wave now let's lay one issue to rest the average physicist who knows about this in the face of a thousand papers already in the you're proving this experimentally and everything else

(1:13:27) theoretically does not believe it's a Time reversed way Jack you hear that Jack he's talking to you Tom beard is talking to Jack from the past maybe this is the phone call that Jack got maybe he's getting one right now he doesn't even realized it Tom Bearden was speaking to the Future here proof is right here guys literally telling Jack he doesn't know what he's talking about for Jack sarfati physicists don't understand this uh only Engineers do even though we've described the

(1:13:57) characteristics oh well it's a wfront reversal we prefer to say you can't go backwards in time you can't go into the past immediately he reveals his ignorance let's reason together I said this wave was time reversed did I say that every single particle of mass in the whole cotton picking Universe was time reversed and backed up to a previous state of the universe which is what the past would be nobody said any such thing the theory doesn't predict any such thing and if he thinks that's what I'm

(1:14:30) saying he doesn't understand time reversal and he doesn't understand wow wow what a revelation he just explained why it doesn't allow you to go to the Past you cannot travel to the past with this because it's not that every particle in the universe is time reversed it's just the area around the object itself even the particles within the object if you make a bubble around it even the particles within it are still going to be moving forward but from a perspective of its weird local SpaceTime you're going to

(1:15:08) have this reverse time reverse wave that's being produced and that's what's going to create your gravitational wave where it's going to allow it to the whole thing to Ripple somewhere else this is what teleportation is it really is a form of advanced cloaking it really is actually I think that now at this point it's a difference without a distinction um when you think of using this type of advanced cloaking what cloaking even really means is that you're talking about producing scalar

(1:15:37) waves and when you're doing that you're actually producing gravitational potential and when you do that now you have this ability where you can warp your object this is why the Philadelphia Experiment why the plane why the boat warped away from the bubble inside the the object itself when it has those um electromagnetic what do they call the gaers turned on when this function is turned on the local SpaceTime is going to get time revers going to speed up they're going to go wherever they want from their perspective it may look like

(1:16:07) they were just traveling normally but from the perspective of everything else out there it's going to look like this object just teleported mechanics and he doesn't understand physics and he's put a label around his own neck and on his own forehead not me he has done it so much for Los Alamos and Lawrence Livermore yes indeed I have the papers I have friends who send me the copies of letters of the names they call me so much for Los Alamos and La Li more Laboratories now so we have a Magic wave in the real

(1:16:49) world you have some change like in the ionosphere some Distortion of the exact path itself the medium because there's is a finite time involved and so you'll miss a little bit maybe you get 90% or 80% of it in there that's good enough for government work that'll destroy a missile that'll destroy a bomber running down takes it off down a Runway before it ever takes off but this thing is Magic because now I can make a Time reversed wave I want to give you a way to visualize a Time reversed wave and

(1:17:20) settle this issue of going back to the past **I want you** to imagine a movie of scenes going on here and in this scene somewhere amongst all the surroundings and all and buildings and all this there is a wave generated okay and you're watching this wave go your magic so you can watch it real slow and you're watching it Go and suddenly we say now that wave and that wave only is reversed in time we can't see time quantum mechanics tells us it's not an observable you can't detect it even in principle what we will see is the

(1:17:54) spatial aspect we will see it crawfish backwards spatially we'll see everything else continue so what would I physically see and observe I'd see the whole rest of the world going along in positive time I would see this crazy wave suddenly stop where it's time reversed and start to crawl fish backwards and crawl back right along its path meanwhile everything else is going on just like it was that's all time reversal is think of it as space reversal it's it's the movie tenant man Dave told me this like the movie tenant

(1:18:25) he obviously knew a lot about Thomas beard and huh but it carries negative energy and that's magic as we found out because you can get inertia and gravity from that if you get down at the right frequency optically you negative energy chat the event we' see in the video Never Get It radar you'll never get it okay let's continue to show you how strange a breed of cat this time reversed wave is I want to compare in normal mirror to a Time reversed mirror a phase conjugate mirror they call it look at this in the top one

(1:19:02) I show you a standard mirror over right from a point source the light from it scatters across the surface of the mirror and has the standard diverging pattern reflection as I show

there that's it's Optical geometry everybody knows that normal reflection so if you're doing that light scattering from the toe of your shoe across a mirror there's one point where you get the right right angle comes to your eye so you can see your toe you can see your knee you can see your clothes and everything and

(1:19:30) you stand there and look in the mirror and you're quite happy with that let's look at a face conjugate mirror the light from the source which may be the toe of your shoe scatters across the surface of the mirror from every point on the surface of the mirror it reflects right back to the original point it crawfishes backward Boog Boog Boog right back to the point what could you see if you looked into your mirror could you see your toe all that light goes back to your toe could you see your knee the only thing

(1:20:01) you could see would be the two black retinas of your eyes nothing else wow it's a quite different breed of cat this is out of the standard literature by Pepper that's not Tom Bearden it's a quite different breed of cat from an ordinary EM wave and you must understand that it does not behave the same and I want to quote pepper on something else because I want to point out to you there's a whole new physics here there's a whole new world pepper said the real and the major discoveries in Phase conjugation and time reverse

(1:20:33) waves are yet to be made so have at it young fell there's a 100 Nobel prizes waiting on you anti-gravity free energy violation of all the conservation laws control of it overcoming SpaceTime moving in hyper Dimensions materialization dematerialization transmutation of elements reversal of disease what what what did he just say what did he just say chat and time reverse waves are yet to be made so have at it young fell there's a 100 Nobel prizes waiting on you anti-gravity free energy violation of all the conservation laws control of it

(1:21:11) overcoming SpaceTime moving in hyper Dimensions materialization dematerialization transmutation of elements reversal of disease reversal of Aging you name it it's there the absolute control of physical reality you can go into the straighten your equation you can change the probabilities before they even occur and determine whether they shall emerge as physical reality or not the world is your Apple for God's sakes get in there and work okay what it is what it is it's a Time reverse wave it carries negative time

(1:21:55) it carries negative energy they say it has a healing property it restores the order that for Distortion crept in and then Scientific American pepper publishes a beautiful picture absolute marvelous work showing phase conjugation of the distorted image of a cat and the thing backs up into a nice beautiful picture of the cat again no problem it does distortion correction it moves from dis order back to order it has negative entropy so much for the hopelessness of the second law of thermo they always assume positive time here's a critter

(1:22:29) moves a negative time it's time reversed and holy Optical phase conjugation proves this Optical phase conjugation proves this concept the video I showed where the image uh where they distorted with the shot glass and they put it on there you're seeing Optical phase conjugation in that you're seeing uh negative time you're seeing this all proven in that scenario

negative entropy where the image gets restored even though it's being distorted through the shock glass takes care of the hopelessness of the second

(1:23:06) law and recreates hope for everybody now why the hell do you age you age because most of the stuff going on is positive energy W you got all those electron shells around your atoms if you could capture the delta in the spectrographic pattern there there are spectrographic ways spectroscopic ways of doing this very detailed wave front analysis usually by digital synthesis not for a synthesis do it in impulse waves and use one more law here's one from Bearden it ain't in your textbook please remember this because the

(1:23:54) previous speaker had an example of it looking at you if you take Randomness like the virtual flux of vacuum and you impose upon that the structured potential the artificial potential the scalar emway very technically it produces what today we call chaos technically I'm not using chaos in the general sense I'm using chaos in the technical sense but that's a science today but it blows ordinary science and the chaotic patterns that she showed using 1000 or 11 10,000 second and then adding them what you were doing

(1:24:36) is getting back at the digital synthesis of what's really there in the signal you body's been using that living systems has all the time that's the way to go she's right exactly on the track that's exactly the way to go anyway you age because of your electron shells and your atoms but if you map the delta between the Aging cells and the younger cells and if you time reverse that Delta and if you radiate the body with that time reverse Delta you will have a signal which will move the body gradually from age back to

(1:25:15) youth let me say that again in case that went by you you capture the Aging pattern that's like the Kash work you time reverse that pattern you have the Rejuvenation pattern and if you bathe the body and continually charge it up with that pattern it will gradually spread out through Dr Pop's communication system and he discovered in the body the virtual state is scalar and you will rejuvenate the body some Benjamin Button stuff right here if you capture the delta in a diseased cancer cell simply subtract the scalar pattern

(1:25:52) of the normal cell from the disease pattern and you'll have the Delta then if you reverse time reverse the Delta you will now have the specific healing pattern for that specific illness in that specific body it was done it's been proven it was called prior mid to mid 60s to mid 70s and was ruthlessly thousands of cases of terminal Cancers and leukemias in lab animals I'm not joking about that rigorous opes with some French scientists including Robert Cier head of the biology section and the Perpetual

(1:26:28) Secretary of the French Academy the story of all of that is in my new book called AE biological warfare as is all the physics there's a chapter called extraordinary physics covers all this mess and there's a chapter called extraordinary biology covers all the biology please read that part of it because it lays a foundation for the electromagnetic healing of disease that's the purpose of the book The subtitle used to be in electr gravitation because almost half the book is on electr gravity okay you can do some other marvelous

(1:26:58) things now here's the magic one if you make time reversed waves their characteristic was they do not diverge they converge they retain a laser like being well if you can make with standard practices a hologram at 3 ft in a laboratory by the way this does it in real time you don't even have to make a hologram first with a couple of beams this is in the literature this is not Tom Bearden they say very gently it's distant independent distant independent distance independent sometimes we can talk we learned that

(1:27:34) last week uh I think faster possible but if it's distance independent and you can do it at three feet in the laboratory I can do it at 15,000 mil in the field with a radar and it's so hard to build a scalar radar that it just takes a plumbing section in the wave guide and a switch to throw and you get a scalar Beam not a normal beam and if you interfere that two scalar beams and you're responding you create a Time reverse wave in each beam from two Radars in response to some signal either passively received or reflected like

(1:28:18) from the over the rising radar from a distance Target you can put a 6 in or 3in ball of light inside that Target at 15,000 mi in the latter part of November a shuttle launch at night was the third shuttle they tested these weapons against there is the strike of such an electromagnetic missile which I published the picture Bob Gladwin took it in 30 lamps there is a ball of light hanging up which they use to switch from and shoot from a standard artillery technique shift from a registered Point hanging up seen by hundreds of

(1:28:52) people photographed by George sukri I printed out photograph and it's all in the book they offset it so they wouldn't kill the shuttle now I'm going to tell you something else two weeks later we didn't react didn't know what's going on by the way 12 minutes after that shuttle got down range there was humongous explosion over the site heard 600 miles up and down the coast made to local papers didn't make the national news they don't know what the hell's going on hundreds of

(1:29:17) Engineers with a whole Sky blowing up over their damn heads heard for 600 miles said what is that and the standard thing was we don't even recognize this stuff when it's used over our own head now two weeks later I'm going to tell you another little story because I got a new piece of data for you the same over the rising radar called a woodpecker using time reversed wave real time distance independent holography all those terms come out of the literature not Tom beardon only they did it with Radars first

(1:29:54) and they're doing it today an RC8 started down the runway at Gander Air Force Base Nu jet engines on big high reflectivity nice signal to an over the rising radar you've got your micro microwatt Tesla said I have an invisible wire started the interferometer interfered with the combustion of the engines as she's taken off they then struck that airplane with an electromagnet missile just like I told you about now let us reason together if they did do that the missile penetrated the airplane on one side went right straight

(1:30:34) through out the other side and it set fire to all of the inside at that point all the Plastics were violently and explosively set a flame that would have had to happen there is a hole in the

right fuselage ahead of the engine we ignited the batteries we ignited the batteries using scalar interferometry we I didn't just didn't think about this till just now this is what we did to the batteries we started the fire on the batteries he just explained it you shoot the beams at the plane you ignite the batteries that are in the cargo hold

(1:31:18) intentionally stacked up together next to the the electronics Bay boom batteries ignite start on fire was not chemical explosion because they check set a flame the missile penetrated the airplane on one side went right straight through out the other side and it set fire to all of the inside at that point all the Plastics were violently and explosively set a fire that would ever had to happen there is a hole in the right fuselage ahead of the engines was not chemical explosion because they checked it for that no

(1:31:50) chemical residues and there's another hole in it where' come out yeah but you had to ignite the Plastics if you had ignited the Plastics you would have had a violent out flux of orange flame the windows would have been glowing orange out and that was seen the three eyewitnesses the interference would have been interfering with the combustion and one eyewitness that had passed directly over his head said the engines were laboring they did not develop full power everybody knows it was Ice it's been

(1:32:20) validated that they checked the ice on top of the wind got back in the airplane for left that's false and here's a clincher if the Plastics were on fire the Plastics out gas one of the products from those kinds of plastics is hydrogen cyanide and the people in that part of the plane would have had to breathe hydrogen cyanide and die before the airplane sunk to the ground and crashed now here's what the US government and a Canadian government have withheld from you and they withheld from the board doing the investigation

(1:32:53) which is a legal offense and criminal and they ought to be hauled into court and who's responsible for it ought to be put in the penitentiary for conspiracy in a murder case now they did autopsy chat he just said that by zapping the plane like this zapping airplane like this it's going to release hydrogen cyanide killing everybody on board the plane except for potentially people had their masks on I think everybody died so why would they teleport the plane they killed everybody they killed everybody on the

(1:33:34) plane they can't say anything about it because it would give away scalar interferometry fire the Plastics out gas one of the products from those kinds of plastic they did not develop full power everybody knows it was Ice it's been validated that they checked the ice on top of the wi got back in the airplane pull the left that's false and here's a clincher if the Plastics were on fire the Plastics out gas one of the products from those kinds of plastics is hydrogen cyanide and the people in that part of

(1:34:08) the plane would have had to breathe hydrogen cyanide and die before the airplane sunk to the ground and crashed wow now here's what the US government and the Canadian government have withheld from you and they withheld from the board doing the investigation which is a legal offense and criminal and they ought to be hauled into court and who's

responsible for it ought to be put in the penitentiary for conspiracy in a murder case now they did autopsies on all of the remains but about two there wasn't

(1:34:42) enough left to do there and about one half of those people were dead of hydrogen CI before they hit the ground so we've got the picture of the strike of an electromagnetic missile 2 weeks earlier we got the picture of the distant holography two weeks earlier we got the whole where to hit the airplane we got the orange glow from the fire we got the fire we got the hydrogen cyanide we got half the dead people the Soviet Union killed a d airplane holy chat we killed everybody on the plane they didn't teleport the plane to save

(1:35:21) the people they teleported the plane away to so there' be no evidence so that nobody would be able to tell what happened to it maybe they saved some of the people the letter to me is real the letter to me is either somebody who knew about Thomas Bearden somehow and all of this and is presenting some kind of lar based on Tom bearden's physics or this is real this is so freaking crazy there's only that's the only two ways about it the letter to asht and forb said everybody on board was dead the nephew the pilot the nephew of the

(1:35:57) pilot was told that his everybody on board was collateral damage we don't know where the families when they all moved on they were told that they were killed they were killed by us we shot the infometer beam at the plane ignited the batteries caused hydrogen cyanide to spill through at least part of the plane killing most if not everybody and those people were already dead then we warped the plane away cuz nobody's going to we need nobody to ever find it and the only way that we have any idea about this ever happening would

(1:36:29) have been the Perfect Crime but somebody **leaked** two videos on the internet that's the only way we know about it holy just I can't believe we just had another Epiphany right now this is this is the craziest story ever we're going to talk a little bit about this after I'm actually kind of shook right now chat I'm kind of shook right now a A can figure this out I'm actually afraid for the people investigating with a they're either going to get silenced or they're going to get silen

(1:37:03) silenced um I might have like literally put people in danger over this this is a massive conspiracy and cover up and if this technolog is real you you heard what we can do with this technology I mean we're talking about teleporting objects we're talking about being able to shoot blasts of energy over long distances you can see what it did he just explained exactly how it can kill everybody on the plane it's a 99.

(1:37:31) 9% certain conclusion let's continue that's the characteristics and let's talk about Tesla's magnifying transmitter I want to show you quickly how it works but **I want you** to know this you know about Nicola Tesla everybody here knows about Tesla we don't have to talk about Tesla to this audience i e yes here no you know what he did you know what he was buing on Long Island the famous magnifying transmitter take the Earth treat it momentarily as an isotropic nonlinear medium hey nonlinear baby remember that

(1:38:04) word it's going to come back to us he was going to be putting in a signal into the Earth he had a tremendous ground plane down there if you pump up and down like this you pump this way into the Earth as well as pumping up into the elevated capacitance I mean every fool knows that right so yeah you got a signal going in the earth what happens to that well you believe Newton's third law right by the way we can derive that from this and I found out Fineman thought of it first and I was delighted I had one piece missing of

(1:38:34) what happened in the nucleus until my utter complete Delight when Mon's already work that out beautifully and showed me last night much to my great appreciation so he filled in the missing piece that I couldn't find out how to fill in Henry already had it okay so we have a wave occurring in the earth you heard of vacuum F and all those good things that all gets generated and it gets generated out of phase it's a Time reversed wave that's what's causing this Newton Third Law I tell you we can do

(1:39:05) that I don't have time to do it and what happens is we have then a scalar WAV it's nonlinear medium the back EMF the forward EMF locked together is a zero Vector system and that's electrogravitational you got a scalar EM wave now spherical wave goes into the Earth you now got the pump wave that's the if you put in the back EMF locked together as a single system you got a pump phase conjugate spherical mirror Earth do you see that at whatever frequency he was going to be using and he was using frequencies

(1:39:36) at which the Earth is resonant so you will get a standing scalar spherical wave through the nuclei of the Earth this goes through the nuclei don't bother with them electron shells like that well the Earth is already highly stressed what's stress what's mechanical heat stress every kind of wave you're going even the mechanical stress Quantum mechanically a little electromagnetic virtual particles going it's electromagnetic at base the electromagnetic stress feeds this wave remember I talked about stressing

(1:40:08) the nonlinear nucleus this is a different kind of nonlinearity the heat stress and the mechanical stress the electromagnetics we got exactly the same situation that we can absolutely cause earthquakes with this earthquakes earthquakes is actually a trivial application of this I don't mean to to put things down but causing earthquake related to this is trivial if we can warp a plane from one location to another using pumped phase conjugation um this is scary I might never get another plane ever again boiling like M it's a cathode and

(1:40:47) it's a trout and we putting in the grid signal and that whole sucker now all the power gets in the earth lots more power is in there from the amplification furnished by the Earth it's a pump phase conjugate mirror as a matter of fact self pump it starts to resonate itself and build up builds up to a nice value lots of power in it so what's going to happen now that it's a pumped phase conjugate mirror with scalar resonance which is what we finally get to what's going to happen when I self pump the

(1:41:23) heat and stuff is what furnishes the self pump wave we don't have to furnish anything but The Little Wave to get it initiated when I put in a little input signal to another input

somewhere else around the world here Bingo I get back the Amplified phase conjugate replica big Amplified power there's a thousand papers in the literature prove pumping and self-pumping systems they prove the amplification they prove the nonlinearity so so if you believe those mechanisms then it ought to be possible to do that and you can do that anywhere and

(1:41:59) you can power the whole earth from the internal heat and pressure that you're tapping and what was so beautiful about what mon teeth had he explained that all the disorder went to the electron shells and all the order comes out on the time reverse wave and it's beautiful it's perfect what he's worked out now what comes out is a nice coherent wave almost like a laser at all these points you could power the whole earth with this system except there's a little fla with it the Earth is not quite an isotropic

(1:42:30) medium the Soviets have already proved and the westing house has proved that if you use the beat frequency between two waves the Earth will think you transmitted a s wave at that beat frequency and they'll go through as a sign wave and do what I've said and the Soviets proved if you use circular polarization you will have standing wave Solutions it's all there in bits and pieces in the literature so if I take the linear Optics work the pump phase conjugate mirror work the way Tesla active built the thing I take the beat

(1:42:59) frequency knowledge and I take the ccop polarization knowledge you can do what I had on the diagrams and the thing will work and you can power the whole from one transmitter there Eric I don't know if Eric's in the chat he just he just explained how where the extra energy is in Antarctica that they can't find so I remember the clip of Eric Hecker saying that there's either another nuclear reaction another nuclear reactor on on in Antarctica which there's not there's a treaty against it or there's another

(1:43:29) exotic power source they can just pump the energy straight out of the earth infinite energy as much as they need that's what he just described right there uh enough to be able to uh control 500 5,160 DS at 2,000 volts each easily and probably just have a capacitor that can charge it [Music] up Star Trek chat and that's the secret of Tesla's magnifying transmitter that cat had discovered what today we call phase conjugation and pumped for wve mixing it was workable my conclusion is Tesla knew about it only he didn't use

(1:44:07) those terms he had discovered phase conjugation and time reversed wave and Frank golden showed in 1985 27 such channels exactly like that put into the Earth by the Soviet Union and I looked at it on the oscilloscope they were 12 khz apart they were taking power out of the earth enormous power 12 khz and Power in that whole big system for gbop in and around Mayday 1985 gbop had been in power just a short time that was the stated time they were going to be ready to have all this ready they stated 1972 they made the schedule

(1:44:44) they were using Tesla's magnifying transmitter the Earth Sun and Moon are formed in a Triad linked by such scaler wave resonance and you better watch what you do on the earth with this Mass massive stuff or you will tickle the Sun and if the sun burps and spits out a mighty hiccup of fiery molten material you may really have the Book of Revelations and the Holocaust

coming at you don't laugh what we looked at in and around May the 1st 1985 if Miss triggered could have done precisely that every time the Soviet

(1:45:24) Union energizes these big continent Busters they risk the total survival of the human race now we're going to add one law one rule we're going to take CPT and we're going to add all the other stuff in I will give you a new rule it's called CP EGS charge parity time energy gravity entropy but now we got a rule how to use all of it put together the rule is here's the normal normally we interact with electron shells that's negative charge par is normal space parity time is plus time time flow energy normal positive energy

(1:46:02) gravity is the normal kind which means attraction of mass and entropy is a tendency to more and more disorder that's normal physics normal reality but when you use time reversal if you reverse the rule is this if you reverse one of those things you reverse all of them all the rest wow now you can do in gravity you can do entropy and you can do negative energy if you short out a massive amount of negative energy in the laboratory you get a brilliant flash that'll blind you for a couple of days and the thing will

(1:46:37) freeze ice around it it doesn't heat cool okay priority lab I want to tell you he just explained the flash in the MH370 videos I I he I didn't really catch it but he just explained it chat this is wild I can't believe this video is so good now you can do andg gravity you can do entropy and you can do negative energy if you short out a massive amount of negative energy in the laboratory you get a brilliant flash that'll blind you for a couple of days and the thing will freeze ice around it it doesn't heat

(1:47:17) cools okay priority lab I want to tell you about healing cancer it's a massive flash of negative energy causing the cooling effect that we see that's the Flash and the cold it's both of them negative energy he just said it right there 125 uh I guys this this might be one of the most important lectures that have ever been posted on the internet yeah I can't even joke about it I'm like it's just too already did this is his little setup he K healed all the rats and the lab animals with Up Above This Big call here

(1:47:54) there is a rotating plasma fed by 17 frequencies up in the gigahertz band yeah he knew he knew for sure plasma a one thing that do face conjugation we know today they didn't know it in the West in 1965 Pur and so he has a Rippling magnetic field strong magnetic field which by magnetic resonance will get him into the nucleus of all the atoms by nuclear magnetic resonance why in the nucleus because he's got to get down where the negative energy stuff and the negative Time stuff is in gravity is that's where the control system of the

(1:48:26) immune system and the living systems are living systems have had to use Nega entropy to keep producing the same kind of species pattern otherwise the law of entropy would eat them alive after about three generations you couldn't transmit the pattern anymore there wouldn't even be species you have to use negative entropy and that's why living systems use negative energy negative time and scaler waves he produces the in a phase conjugate pattern he's learned what the right mixture is to give him the anti-

(1:48:58) pattern for that cancer he comes right back down through gets down into the bone cells everything else bathes every cell in a little animal and reverses to cancer if you D differentiate a cancer cell turns back to a normal cell now Robert Becker should have the Nobel Prize for proving how little weak Pico ERS of current heal bone it takes the red blood cell Shooks off the hemoglobin the thing regrows the genetic nucleus with all the genetics turns into that kind of cell that's called dedifferentiation going back to a more

(1:49:34) primitive cell that any what's needed so it it then crawls around and turns into the kind of cell makes cartilage that ain't what's needed so then it crawls around and changes into the kind of cell that makes bone and heals these horrible bone fractures and he proved that in vitro with frogs actually to heal bone terrible bone fractures should have a Nobel Prize nobody had the foggiest notion that was the blood red blood cells responding to Pico amps of current tiny current so small you can't hardly

(1:50:02) measure can you not do Pico amperes with this thing in the body of course you can can you not drive Sals through that whole structure of course you can you can do electromagnetic healing of any kind of cellular disease known to man you don't have to understand the cause you just got to capture the Delta and time reverse it and do that to the body and you'll cure it and that's why they wiped out priori and that's why they suppressed that machine because a dead cancer patient is 167,000 bucks multiply

(1:50:31) that by 500,000 a year in the United States and you'll see why they don't want to cure cancer so how they going to cure AIDS they're going to give it to the same Bunch that's refused to cure cancer for all these years how many AIDS patients are going to die before they do this this is proven it worked it's real it's still in the French hardcore medical literature there's no reason for these 500,000 people dying every year and for the age people dying \$100 million and three years will cure all of those

(1:51:04) diseases they're not going to spend it that way they're going to give it to that crew you can't make a vaccine and they're going to spend billions and bankrupt the old medical system and they're not going to cure it that's the way to cure it that's my new book thank you for your attention [Applause] Encore Encore I'd be giving a standing ovation I'd be doing a standing ovation right now Encore holy crap H how did I never get to meet Thomas Bearden still drink of water I would literally kill somebody to meet

(1:51:56) Thomas beard Andrea Puar once accused me of sounding like a Baptist preacher and I'm afraid I did tonight I want every video ever about Thomas thank you very much for your attention this is this is by far the biggest Revelation uh in the entire case that we've ever had if the videos were not not real then there would be no Thomas Bearden out there there wouldn't be some guy who's a lieutenant colonel electrical engineer who's literally been describing every single aspect of the videos down

(1:52:34) to the tiniest detail um including the flash we I can understand the battery fire now as well which I never thought I'd be able to explain um somebody asked first of all somebody made

a great point which is that people this is not a liar if you think that's a liar when you're watching that then you really are not a good judge of people whatsoever there's you might say he's wrong but I don't don't see anyone saying that either or able to prove that but that is impossible to lie to that level of

(1:53:04) detail I mean he's given you all of the details that are all verifiable evidence information um why he was not on alived he died two years ago um but nobody would have they they weren't afraid of him because there had been videos out there the MH370 videos that prove Thomas beard incorrect have been out there and nobody took him seriously we needed those videos to have video proof of what he was saying because the science is locked up in special access programs in the United States this explains also our hard TRS

(1:53:45) podcast guests Dave constantly talking about you have to look at the papers in **Russia** look at the papers in **China** because it's all suppressed in the United States this is even where other people that have talked to have said um people that I've talked to on my podcasts uh said the inertial mass reduction that's the part that they're hiding that's the part that Congress is hiding that's out there um now Eric Decker was in the OR Hecker was in the chat as well and he said he had talked to

(1:54:21) AO a is going to be able to confirm the videos are real they're going to be able to confirm them there's no doubt about it uh so we need to get ahead of that right now um what would be the next play if you're the CIA and you are trying to cover this up you killed a whole Plane full of people you warped it away why did they warp it away so let's just let's just run this down so the plane gets ignited by the scaler in aerometer potentially from Radars that are super far away they they hit the plane in fact **Russia** or

(1:54:54) **China** could hit the plane and set it on fire as well that's also now back into the mix I think it's unlikely based on **China's** response says **China's** response says that they most likely did not start it unless there's some weird angle I'm not seeing there we start the fire plane freaks out turns around we warp the plane away because we killed everybody we can't leave any evidence of it um there's no evidence of a missile although I would still just let it crash as is the thing I just let it crash you

(1:55:25) know um but we were filming it with the drones so we saw it so we to we're the ones implicated for sure we use uh four-way or potentially even five-way pumped phase conjugation to warp the plane to a different location um now if you're the intelligence Community the play now is you're caught you're 100% caught we we've got them dead to wrs not only do we have more evidence of any court case ever we' proved all the **debunk**s are objectively false uh those **debunk**s most likely came from intelligence

(1:56:01) agencies uh they're the only ones who I mean you'd have to be absolutely desperate to try to cover these up if they are they're kind of stupid because they forgot that you can't have a 2d picture in a 3D uh fully 3D rendered environment which is what you need for two angles so they screwed up their **debunk** wasn't even that good they may have been s had that uh Cloud

picture out there since 2016 when the videos first showed up so that they could try to **debunk** them or something like that now the next play to me because if the

(1:56:32) arrow person the person I'm talking to at Arrow most likely has no idea this is real either and they're going to fall down the rabbit hole because they're going to realize the information I'm giving them is verifiably accurate and that Edward C Linn went to prison over those videos he's going to be able to figure it out and the next play that is you have to silence that person you have to you know what I would do if I was the intelligence commune what I would do is I would use AI to make to do what uh kim.com said make the

(1:57:06) video without the orbs and without the zapping it I would use AI to make another video and then what I would claim is yeah yeah yeah we were tracking it we were tracking it but the orbs and the zap are fake that's what I would do and release a video of that you admit to the fact that you were tracking it in the location where turned into the South Indian Ocean which is what we have them on record showing I would make a video without the orbs without the zap in it and I would say somebody faked this maybe a government person did maybe

(1:57:34) **China** did it for disinformation and then show the the real video which is the one that they would fabricate and maybe you don't even need two maybe you just need just the satellite one because then it's it's too complicated the more videos you fake the more things people are going to find discrepancies in so you make just a satellite video with the the orbs without the zap in it using AI you push that out you release that to me through a you say a found this video and turns out yeah we we were tracking

(1:58:05) it but we didn't phase it away that's silly haaa that's how you potentially try to make it go away from this point because they're they're caught they're just caught red-handed we we know how the science works the science is something that I would never have even known was out there and everyone would have dismissed that science probably for for another 10 years without these videos uh so if they do that now we know cuz that's the play that's the only play otherwise you're just dead to rights

(1:58:32) there's no denying this and we've got the engineer who works with who worked uh on special access programs Thomas Bearden we've got Dave Rossi who is on records saying he thinks it's real and explaining it the same exact way he's even the one that came up with the four orbs thing how do you guys think Dave Rossy came up with the four orbs scal inom and we have the letter to Ashton Forbes which explains all of this the letter to me is explaining all of this down to the fact that the passengers were

(1:59:05) killed I I just I don't know this is crazy this is actually crazy hm yeah this makes me kind of hate Humanity as well and in fact like this I'm going to be real with you guys chat all day today uh I've been struggling with this now because the implications of this it's one thing to talk about it and to be like sure in your own mind that this stuff played out I mean the amount of investigation I think some people in the chat have been here so long that you're like up there with me in terms of you know how much evidence

(1:59:53) there is it's an incredible amount you've watched a lot of my interviews I've done over 70 podcasts and interviews and gone through all the evidence and the way of the evidence is so massive but it's another thing where you you can now explain exactly how and you start to understand the implications of this like he just listed them all off we can hyperspace things dematerialize rematerialize you can cure Cancers and diseases um and then you have free energy free energy is that's the ultimate one where

(2:00:28) free energy changes everything and if you can have free energy and unlimited energy it's it's not even just about the socioeconomic impact it's about the fact that we are going to destroy ourselves with this technology like that is the ultimate conclusion we will destroy ourselves with this this is why people that produce overunity devices don't talk about it you know why because they understand the seriousness of the situation they understand that if Isis gets this technology or whatever the next Isis is

(2:00:57) instead of cutting people's heads off on television on on social media they're going to blow up the whole planet they're going to cause an earthquake and I don't know pick your favorite City this is uh this is huge we're talking Star Trek stuff here and the question is are we even ready for it like I actually at this point like I'm I'm I'm effed like I'm not suicidal I want to make sure everybody knows that even if I'm like depressed about the situation with this I'm not

(2:01:30) suicidal but everybody's going to want to kill me pretty much I mean let's just be honest intelligence community that did this I'm probably the bane of their existence right now people are afraid of going to prison over this if it's them or me they're going to make sure that it's them making it um not just our intelligence Community but now imagine foreign intelligences foreign intellig this guy this random guy Ashton Forbes on a Twitter account started figuring out what the super weapons and Hypersonic

(2:02:02) weapons are not only am I a threat to our intelligence Community I'm a threat to the other intelligence communities what if if you're **Russia** or you're **China** and this guy named Ashton Forbes is out there and he's explaining how all the super weapons work well he can figure that out for you he can figure out your stuff as well if the intelligence communities pick me up and help me work with them I'm a threat to all the other countries that are out there as well I might never get on a plane ever again I

(2:02:28) don't know that would protect me but it's just wow man yeah and scalar waves are dangerous free energy devices that bend gravity from the clip that we looked at yesterday that can bend gravity um it's dangerous to be around that it's going to mess with your body I honestly hope the intelligence communities are stupider than I'm giving them credit for CU if it was me I'd be very afraid of myself just just throwing that out there um I'm going to show the email uh there's not much more in the

(2:03:02) email that I didn't already show but at this point uh I'm just sitting here thinking like uh you know I don't know how this is going to play out if if AR is going to Gaslight me or whatever I I don't know um I don't think they are they respond guys that I got from a shook me today what

I expected a to say to me is no we checked and there's nothing we didn't find anything um yeah I hope I'm wrong and I hope that I'm not effed and that and that they don't care um is this enough

(2:03:49) information I'm trying to make sure I'm not doxing anybody uh cuz I told this person I wouldn't dox them I do have to confirm this person's real although I just from the interactions I have my email and the Aro person it'd be pretty damn weird if they were committing a felony and and impersonating a Federal Officer but I will find out um just double check him before I show this so I expected AO to come back and say yeah no just Gaslight me you know like they would just Gaslight me and that's how I know that the person I talk

(2:04:27) to is not compromised yet uh but that they are going to fall down the rabbit hole from this because they probably don't realize this stuff's real either [Music] um okay so here's the email uh that I got you can see I got this morning m Mr Forbes my apologies for the slow responses AO is researching several topics at the moment some of A's initial Research into MH370 has revealed the US government's search efforts after The Airliner disappeared from radar uh guys read between the lines read between the lines here I

(2:05:21) believe the Genesis and authenticity of the videos may be helpful I believe the Genesis and the authenticity of the videos may be helpful can you confirm the date that the videos were posted on the reg side and on YouTube channel and yes a quick follow-up call may be helpful now I didn't dox anybody here uh normally I wouldn't post communication like this but this communication is probably the biggest break in all of MH370 since the plane disappeared this is an admission that the United States government was

(2:06:16) potentially tracking the plane nobody has known that that has not been something that's ever come out in the media this should basically be front page news regarding the the air plane going missing this is the most evidence that anybody has ever pulled from the United States government about what they know about the plane ever they even want to know about the authenticity of the videos to me this says we looked we looked at we looked at what cers video looks like and it looks just like that to me that's what this

(2:06:55) says when you read between the lines this says yeah we looked up initially to see like does the cers video look like that or does the Drone video look like that yep it does so we need to talk to you again cuz we need to know more about how those videos got out there if you're a **debunker**er you're on suicide watch right now because now the question is for the **debunkers** watch the **debunkers** flip the script and now say the a can't be trusted remember how much the **debunkers** were jerking off a when they came out

(2:07:29) and said there was nothing anomalous remember how much they were jerking them off if Aro comes out and verifies the videos the MH370 videos you're going to see people's heads explode it's going to be like that Meme of the dude's heads exploding with the **debunkers** cuz they're going to flip the switch and now immediately claim that AO has been compromised that they're F blah blah blah these videos the MH370 videos are full disclosure this is full

disclosure it doesn't tell us whether or

(2:07:59) not there's aliens here but it tells us we 100% have anti-gravitational technology and scalar physics type technology plus it means that the intelligence Community planted the SAT the picture the satellite picture if these videos get confirmed think of the implications for people like Jonas D Jonas D potentially could face criminal charge for pushing a fabricated satellite picture not just criminal charges but he would get every last penny he ever has would get sued from the the families every last penny Mick West his whole

(2:08:34) life would be over Mick West is all in on debunking these videos if these videos get confirmed by Aro Mick West's life is over you guys realize the implications of this this is why I say if you are one of these Nut Job Reddit debunkers who are out there you better think twice man you better start thinking twice you better take a real good look at this email that I just got and you better think twice about what you say publicly on on a public forum I am if these videos get confirmed I am absolutely sending the families

(2:09:08) after the people that tried to debunk them to take everything that you have especially the people that said the family should sue me I'm sing the family's after you anyone who tries to debunk these videos make make 100% sure you are 100% sure about that cuz if you're wrong they're coming after you just a heads up make sure you take a good look at this email you guys better pray to God that this email is some kind of elaborate hoax where somebody is impersonating the Pentagon and a military officer so yeah and Eric in the chat

(2:09:50) says I started figuring things out in the early 2000s yeah Eric I definitely need to talk to you man I think we need to have a private conversation first and then maybe we do a a podcast we can even do a double stream podcast I don't really care to me at this point this isn't about me making money or anything I just want to talk to other people that understand the physics and the implications and have a conversation where people can realize that our authenticity in terms of uncovering this type of stuff um because Aro can be a a

(2:10:20) resourceful tool but this is a propaganda War as you guys can see I mean the information's been out there and it's been out there for a long time and people need to see it from people who are authentic uh and not from people that are out there like grifting in the UFO community and stuff like that so yeah the scary part is even if this um even if AO were to come back and say the videos are real the debunkers will like come up with some weird explanation for why they're still not real like they're

(2:11:00) never going to admit they're wrong there's no standard by which the debunkers would ever admit they're wrong which is ironic because you have a lot of people who come to me and say oh well what will you do when they find the plane you know that's the favorite thing that everybody likes to say how about what will you do when the AO says the videos are real that that's really what C's video looks like and that's really what mq1 cra drone looks like and that the United States was really tracking

(2:11:24) the plane what would you do in that hypothetical scenario **debunkers** are you going to admit you wrong and just for the record and this is a a little bit presumptuous here because of course we still have a long way to go with this I don't want any apologies from anybody I don't want any apologies from anyone if we get disclosure from this I don't want Jeremy Corbell apologizing I don't want the **debunkers** apologizing I just want them to rethink their life's decisions and everything they know about

(2:11:55) the world to be true or not and I want them to be better people in general that's all I don't want them to apologize to me I'm not not interested in apologies or whatever I just want people to like not be losers all the time so okay guys I'm going to go to sleep this was a pretty crazy space pretty crazy stream I mean um I didn't plan on going through the a stuff at the end end but after watching that and seeing all the explicit details especially around the four-way interferometry also another note guys in

(2:12:31) the chat can you um look up free scale semiconductors why did they call it free scale what's the history behind the name free scale semiconductors does that actually stand for like free energy scaler physics what does that actually stand for why did they come up with free scale I'm that's very weird to me so if you guys can figure that out if anyone out there can figure out why it was called free scale there might be another connection there um just looking through my Clips here um The Philadelphia Experiment

(2:13:05) could very well be real I think I just hard for me to imagine it's not we have Thomas Bearden saying that he knows it's real on the record there um there's still quite a few science terms that I need to check out I'm probably am going to post something about pumped phase conjugation if you guys find any good resources for any of the stuff that we just mentioned here let me know I think there's a CIA document about negative entropy and negative energy we may want to take another hard look at that as

(2:13:39) well okay guys this is crazy uh this is crazy man anyway I hope you guys have a good night um let's think about tonight let's just be thankful let's be thankful for every thing we have in this world and let's just think deeply about the considerations and implications of this type of Technology being real uh I think it's so massive again it's one thing to know the videos and stuff are real it's another thing to know that the science is real and understand the science and to be able to understand what the

(2:14:14) implications of the science are it's so massive that you can begin to understand why there's this huge uh erted effort to suppress the the stuff in the UFO Community suppress the science what have you is that it all it all goes back to free energy so have a great night everybody we'll do more tomorrow uh thanks everybody thanks m370x love you guys peace everyone

(01:48) [Music] 120 breaking news tonight A Malaysia Airlines flight with 239 people on board including four Americans has gone [Music] missing I remembered the line from the Hindu scripture the Bhagavad Gita Vishnu is trying to persuade the prince that he should do his duty and to impress him takes on his multi-armed form and

(02:54) says now I am become death the destroyer of worlds hey everybody good night and welcome to the stream hope everyone's doing well tonight welcome everybody Welcome Aaron welcome Johnny welcome station sham 6 Alex carton DeVos Darby Crash braa Brien Sandy welcome hey Heather birdie nice to see you John hold uh mystical Wonderland good to see you as well seen a lot of familiar faces in the chat salty decimator Kathy D um who else did we get here Evan Howell good to see you uh Gerald nice to see you out there as well Johnny party

(03:42) uh xxxxxx good to see you guys so guys you know what I think and hey Joe how's it going going to see you there Andie jalapeno awesome uh I might be drama out I might be drama out stay and Jason good to see you uh I was just in one of these uh UFO Twitter drama streams and you know it stopped being funny I don't know if you guys have seen the South Park episode where uh the people have butts on their faces and Cartman sees them and everybody's expecting Cartman to laugh and make fun of them and it just it just breaks him I think I might

(04:21) have hit my point where the UFO drama has broken My Funny Bone now I can't I can't laugh at it anymore it's sad it was so entertaining for so long anyway okay guys um cheers got the martini going also real quick personal note uh I am exhausted I've been wiped out from doing my job and um doing interviews and doing podcasts with other people including my own podcast trying to edit the stuff I'm super far behind I'm getting my stuff out there so I apologize I'm doing my best out there but it's as a oneman show doing

(05:06) all this is is a lot so tonight we're just going to hang out we're gonna watch Thomas Bearden we're GNA watch his rare interview that he did there's some I I watched a little bit of this before so I've seen some of it it's pretty good and we'll go through it so thank you guys for being here let's get to the show full screen I am going with the big headphones tonight even though I've got my earpiece cuz I want to I want to hear it and we will take a look but also if you guys are interested

(05:36) in a lot of this I am going to clip up some I think I've got some notes on clipping some of this stuff uh let me just take a look think I do uh yeah somewhere I got to figure out where they are I'll probably just take some notes during this whole thing why is it so loud oh I think I know why there we go okay um no still loud weird I just hear myself super loud for some reason

maybe that'll change it no okay oh there it goes okay it fixed itself weird okay guys let's do this thing uh real quick I guess I'll do a

(06:25) couple questions this is locked Martini yeah what happened UAP mic I don't know some drama all the all the damn weirdos and people in UFO Twitter Community are like turning on each other and it was funny for a little bit but now it's just kind of sad uh what is my job my job has been it Healthcare been doing it healthcare for like 18 years I'm really good at my job actually um and it it sounds a little egotistical but it's just the **truth** is I'm I'm probably one of the most skilled people at what I do

(06:56) on the entire planet um just cuz I've been doing it for so so long and uh takes a lot of analytical mindset to pull it off but uh I you know I don't know I the **truth** be is that with all this stuff that's happened you know there's a lot a lot of opportunities and it's hard to go back to a normal job when you have been looking into science and physics that's out there I think a lot of people if you're new as well before we dig into this uh might think that oh you know Ashton's just gone down

(07:27) the esoteric Rabbit Hole or what have you um no that's not the case this uh this stuff is true this this science is real that's the part that's the craziest part about it so uh you know you've probably seen some of my posts I'm not being overly dramatic I'm just telling the **truth** we can manipulate gravity we can uh we can move objects from one location to the other in the blink of an eye uh we can do stuff that seems like magic and I it's not just my belief uh we've seen it on multiple videos uh we

(07:58) have engineers and scientists who work for the government who's basically either overtly said that or indirectly and then when we went and researched the history of it we found that there are scientists that have been saying it from at least 1985 or before that and it the and the best part is that it all checks out there's once Iview asked me Ashton why don't you write a scientific paper and the crazy part is I don't need to they're already all out there the Aaron Hoff bone papers already out are

(08:26) already out there uh the paper that I showed earlier today Victor Loch uh Iacos sorry I think I said his name incorrectly of high temperature super conductivity it's all out there the craziest part about the whole situation is the science is just out there all we need is for people to look at it that's it I haven't discovered anything new I haven't uh revealed any new physics that nobody knew about the stuff is the crazy part has all been out there before so the scary one thing I want to say the last thing before we dig into

(09:02) this is that the thing about it is that we have to be careful about jumping down into all the different rabbit holes that are out there so you know I people again are trying to get me to look at a 911 conspiracies they're trying to get me to look at mh37 or mh17 and try to tie that stuff together um there's people who want to talk to me about you know connecting all the different esoteric aspects to the this as well that stuff might be true I don't know but again like I've always said guys this is

(09:34) already too much I already have a harder enough time getting people to believe information that's factually true and factually out there and supported by verifiable evidence so I do hope that when we people finally come to terms with the idea that there's an extra Dimension that scalar physics is true that we can teleport an object that people then begin to think about some of those other things and wonder if they're true and the reality is I probably won't ever into them cuz I this is this is

(10:02) enough man I've got one feather in my hat in terms of MH370 I don't need uh I don't need to figure out all the conspiracies in the whole world but it does make me question everything and I think that we should always have that critical mindset in terms of questioning everything about our world okay you guys ready by the way it's pleasure to do this somebody say something about Tim pool yeah there are a lot of dots guys but we we we need to be critical minded people and very Vigilant in terms of

(10:34) connecting those dots and making sure that when we connect the dots we're not just using our own confirmation bias to connect them and that they're actually supported by factual information if we do that then I think it's fine um but if we are just sitting out there trying to confirm and connect stuff that might not be connected then that makes it really difficult oh wow hey Shelly wow that's a big donation thank you very much um Shelly says first time catching you live I enjoy all your research and thank you for sharing it on

(11:02) X you rock thank you Shelly that's that's really sweet I appreciate that um I haven't said this in a long time but um you know thank you for the donations anybody that puts those donations out there if you are a type of person that you know there's a lot of people that are struggling in this world and if you need your money please keep it for yourself absolutely but any donations you do uh give to me I will probably use to help increase the production value I have already um kind of hired some

(11:27) people on a pro bono not a pro bono basis but on a side basis ad hoc basis to help with some of the aspects that I that I'm struggling with with respect to beefing up the stream so that we can stream these on X at the same time as on uh YouTube because I want to have it look a little nicer before I do that but that is coming in the next week or two and I may be looking to hire somebody on the production side to help edit the um hard truths podcast and clip like I don't know three segments from each one

(11:55) or something like that to post on social media haven't decided um but if you are interested and that kind of thing you can reach out to me via DM or what have you I can't pay too much off the bat but if it were to get into something else then you know it might morph into a better job I'm not sure okay yeah and uh last question before we dig into this is um per pery uh and and once again thanks again Shelly uh pery asks have I watched the one called psychotronics no that one's probably going to be on another night I

(12:24) do have that One queued up in the background here somewhere uh and I don't think I've watched that one just yet and I have watched most of this so this one will be good so let's

just get into this guys we've got a lot to do because I would like to see Tesla get some decent press yeah that's what we to do I hope we just that well my name is Tom Bearden I'm a retired lieutenant colonel presently also rather suddenly retired from Aerospace with the Aerospace uh uh steep down uh widespread

(12:56) throughout the country uh I've been doing research for many years into uh several areas one own some of the work of Nicola Tesla one on the area of uh trying to produce both a theory and some practical results for overunity electrical machines uh small amount of work in anti-gravity and in some medical applications primarily in a new kind of electromagnetics I once said Tesla was a d otomy certainly Tesla had certain idiosyncrasies which have been played up and usually any creative genius does if you accept those and don't dwell

(13:39) on those Tesla was a magnificent genius in my opinion I think he was so far ahead of his time in what he could do and what he understood not necessarily in the language and the phraseology we use today but in his own language and his own phraseology uh I think he was well ahead of the times 100 years ahead of his times and uh maybe in this conversation we'll even go into that if Nicola Tesla okay is what you said he is why is he so relatively unknown to the general public through a whole series of events um you know Tesla in his life story

(14:21) admitted one time he had been a gambler and then he quit because he was a compulsive Gambler the last great gamble that Tesla took he lost and that of course was his great installation uh on Long Island Warden Cliffe he had uh at that time put everything he had into you might say one Kettle uh it was funded by Morgan there was some struggle between Morgan and another uh Finance year who were were in a great struggle with each other they had affected the stock market it created inflation and everything plus Tesla had

(14:56) done a very strange thing as as a gambler he knew that Morgan would never give him his \$150,000 that he needed to do the installation that he really wanted to do which was going to cost more than that by some amount so he had designed a smaller installation of two transmitters when he briefed Morgan and he briefed him only on the communications aspect of it Tesla had foreseen as many people had at that time but he had clearly foreseen the broadcast industry sending uh pictures and Sound and Music and so forth and
